THOMAS NAST, THE ILLUSTRIOUS CARTOONIST OF "HARPER'S WEEKLY," WHOSE GENIUS OVERTHREW THE TWEED "RING," AND FOR YEARS WAGED A MEMORABLE FIGHT IN THE COUNTRY'S POLITICAL WARFARE

DRAWN BY G. DE GRINN

177019

a deliberate intent. . . . commit a flagrant breach of duty, and violate a solemn promise to uphold the Constitution.

The apprehension and dismay aroused by the virtual acknowledgment of a willingness to abuse the powers of constitutional construction confided to the United States Supreme Court are not the only recent indications that the tide of public sentiment has begun to turn against the President. The weapon of ridicule is more deadly than any that THEODORE ROOSEVELT encountered at San Juan. His prestige would shrivel in an hour under a douche of derision. Mr. ROOSEVELT's day will be over when he can no longer persuade any considerable section of the American people to take him seriously. The total collapse of his silly attempt to revolutionize by personal fiat the orthodoxy hitherto accepted by his countrymen excited at first satisfaction, then amusement, and, at last, contempt. If anybody really read the voluminous special message which was reported verbatim in the New York Evening Post, and which professed to record the innumerable first-hand observations alleged to have been made in the space of forty-eight hours, he must have noted, partly with mirth and partly with disgust, the strange and unsavory uses to which Mr. ROOSEVELT's conception of Presidential duty led him to apply the Presidential nose. The notion that a battleship and an armored cruiser were needed to convey to the Isthmus of Panama the Federal Chief Magistrate, in order that he there might make a conspicuous employment of his efficiencies, has provoked considerable hilarity. Quite as much diversion as indignation was provoked, also, by his request to be invested with dictatorial power in the matter of punishing and dismissing officers of the army and navy. As for his summary discharge "without honor" of three companies of a negro regiment, the Senate is so far from considering his message on the subject final that it has accepted by unanimous consent Senator FORAKER's motion to direct, instead of requesting, the appropriate committee to investigate the affair. Only the other day, too, a committee of the Senate dryly but severely censured the Secretary of the Interior and the Secretary of Agriculture for suspending on their own authority a law of Congress governing the allotment of four million acres of land in the Indian Territory, a proceeding for which, of course, they could be impeached, but which, it turns out, they performed in accordance with a peremptory order of the President. These performances, coupled with the fact that, since the opening of the present session of Congress, the Chief Magistrate seems to have been afflicted with a mania for sending cynical messages, has left onlookers in doubt whether they ought to grovel or grin at the suggestion that Mr. ROOSEVELT is suffering from an acute attack of megalomania.

We have hitherto taken for granted that representative men at the South will be practically unanimous in opposing any tendency to abdicate State laws by increasing the powers of the Federal government. The assumption has been confirmed recently by many newspapers of that section. Thus the Atlanta Journal would evidently challenge the Republican party to a contest on the distinct issue whether the people of the country want to retain the Constitution in force or not; whether they want this Republic to continue to be such a one as its designers intended, or whether they want it ultimately to drift into something else, while retaining the same name. The Birmingham (Alabama) Independent holds that it remains to be proven that the general government would be more effective in correcting abuses than the States have been. The Columbia (South Carolina) State regards as fatal the drift of the day under a Republican régime, and declares that the only course of safety is the overthrow of the party of centralization. The New Orleans Times-Democrat states that perhaps nothing so audacious, so dangerous to the Republic, as the drastic transformation of the Constitution by judicial construction has ever before been even suggested, certainly never by a man of the official station of Secretary Root. Finally, the Baltimore Sun points out that, with the present number of States, no amendment to the Constitution can be ratified without the assent of some of the Southern States, and it remarks dryly that, as a rule, those States are not so enthusiastic over centralization as Mr. Root is. So far, so good. Now, however, to our astonishment, comes Mr. DE ARMOND, a distinguished member of the House of Representatives from Missouri, which, if not geographically a Southern State, used to be one technically, being a slave State. It is not clear, indeed, why his demand for a convention to amend the Constitution should have been put forth in the House, seeing that Congress has no power to convolve

such a body, except upon the application of the legislatures of two-thirds of the States, but possibly he thought that his remarks, uttered in the Federal capital, would have a wider circulation than if they had been addressed to a State Legislature. What amazes us is the changes in our Federal organic law which Mr. DE ARMOND would have brought about by a constitutional convention. There is, of course, no limit to what a constitutional convention, once in being, could propose, but the adoption of his proposals would require ratification by the legislatures or State conventions of three-fourths of the States.

It is quite conceivable that each of the changes mooted by Mr. DE ARMOND would find advocates in such a body, but it would surprise us to see some of them supported by spokesmen of the Southern States. We would not, indeed, deny that a great deal may be said for Mr. DE ARMOND's suggestions, that a constitutional convention should propose amendments providing for the election of United States Senators by a direct vote of the people—every Southern State would be behind him there; providing, next, that the President and Vice-President shall be chosen by a direct vote—the office of Presidential elector has long been merely perfunctory; providing, further, that the Presidential term shall be lengthened to six years, and the President rendered ineligible for reelection—with an eye to recent experience, and looking at the matter by and large, we think that the South might swallow that; providing, also, that the beginning of the Presidential term shall be so altered that the President and other people may not be exposed to the trying weather usually experienced in Washington on the 4th of March—everybody would like that, but a constitutional amendment is not needed for the purpose; and providing, lastly, that Congress, like every other legislative body now existing, shall convene shortly after the election of its members, instead of normally waiting thirteen months—that, also, is a change which would commend itself to sensible people at the South as well as at the North, but here, again, a constitutional amendment would be superfluous.

We ourselves, also, should heartily favor another of Mr. DE ARMOND's proposals, namely, that a constitutional convention should frame an amendment embracing female suffrage in our organic law. To our mind, it is little short of monstrous that our Federal Constitution, as amended, should establish negro suffrage and leave women disfranchised. We can appreciate, however, the motives for opposition to such an amendment on the part of many champions of State rights, themselves favorable to woman suffrage, who object to any further interference to a State's control of the franchise than is embodied in the Fourteenth and Fifteenth Amendments. But how much would be left of those State rights if a constitutional convention should smother, and three-fourths of the States should adopt, Mr. DE ARMOND's other proposals that Congress shall be authorized to enact a uniform marriage and divorce law; to regulate or prohibit the liquor traffic; and, finally, to enact a law whereby the Federal government, under suitable regulations, might insure the lives of American citizens? If these successive encroachments were brooked, the assumption of Federal ownership of railways within States, as well as interstate, would follow as a matter of course, and State lines would soon become traditional. If such changes can be mooted by a Democratic representative from a State which formerly was a hotbed of State rights, what might we expect to hear proposed in a constitutional convention by a Populist or a Socialist? It is a wise instinct which hitherto has withheld the American people—even amid the storm and stress of civil war—from calling a convention to amend the Federal Constitution. Such a convention would have plenary powers of proposal, and, moreover, it would have the right to decide whether its proposals should be passed upon by State conventions instead of by legislatures. It would probably be easier to secure ratification of revolutionary amendments from State conventions than from legislatures, yet we can hardly bring ourselves to believe that, under any circumstances, the more drastic of the changes advocated by Mr. DE ARMOND would receive the requisite number of assents.

The President seems to be in a defiant mood with reference to Senator FORAKER's proposal to have Congress investigate the discharge of three companies of the Twenty-fifth (negro) Regiment of Infantry. He is preparing, we are told, to meet one of Senator FORAKER's charges, namely, that the evidence on which he acted was inadequate, by sending to Brownsville Mr. M. D. PERRY, assistant to the Attorney-General, for the purpose of

procuring additional affidavits regarding the homicide of which negro soldiers were accused. His critics, of course, will say that he is proceeding on the principle of hanging a man first and trying him afterwards. The President may find it difficult to defend himself against Senator FORAKER's second charge, which is that, in discharging the three companies without giving them a trial, Mr. ROOSEVELT acted contrary to law. The fact that General Lee discharged Confederate soldiers under somewhat similar circumstances is, of course, not relevant; neither can a like act performed by General GRANT be accepted as a precedent, because a Federal statute forbidding such an automatic exercise of authority has since been passed. Mr. ROOSEVELT is said to have made up his mind, however, that, even if Congress should decide that his discharge of the three companies was unjustified by evidence and unwarranted in law, and should proceed by a joint resolution to order the reinstatement of the discharged soldiers, he would still remain inflexible. He would veto the joint resolution, and, should it be passed over his veto by a two-thirds vote in each House, he would still refuse to obey it, on the ground that the Supreme Court has held that the Federal Executive cannot be coerced by the Federal Legislature in the matter of appointments. Should, however, the supreme Federal tribunal reverse that decision, or hold that the present case did not fall under it, he would, of course, bow to its decision. As for the notion that the House of Representatives might be provoked to impeach him, he laughs at it. It is, of course, scarcely conceivable that the present or next House of Representatives would venture to draw up articles of impeachment against so popular a President as is Mr. ROOSEVELT, or that, if it did, two-thirds of the Senate would adjudge him guilty of high crimes and misdemeanors.

There is one point which Mr. ROOR neglected to mention—or perhaps he had forgotten it—in his speech before the Pennsylvanians. In his plan which ALEXANDER HAMILTON read before the constitutional convention, and concerning which he made what his admirers call “the greatest effort of his life,” he urged that the President be empowered to appoint the Governors of the States, and that they should have a negative in all State legislation. Why would not this meet Mr. ROOR's view? While on this subject, it may be well to quote what was said, in reply to HAMILTON, by JAMES WILSON, who has recently been resurrected by the President, and others, “I am for a national government,” he said, “but not one that will swallow up the State governments; these are absolutely necessary for purposes which the national government cannot reach.”

The belated charges against General PRINGLE are at least as unpopular as that officer's recent promotion. It is much too late to accuse an officer of misconduct with a woman after the woman he is accused of deserting has been married to another man, and he himself has married another woman. If the facts in the case (if they were facts) were known to the War Department, they might have afforded a strong argument against giving the accused officer extraordinary promotion, but even if they had arrived in time, they would hardly have defeated his confirmation by the Senate. Judgment upon the morality of men serving in the Philippines cannot be fairly passed except by men who have served in the Philippines. Service far from home and in the tropics seems not to be conducive to maintenance of strict standards of deportment. Things must be taken not only as you find them, but where you find them. The worst of tropical dependencies is their demoralizing effect on the exiles who hold them.

It is so long since authors, publishers, and composers have been trying to make an international copyright bill, and to perfect the domestic law, that the subject is not attracting all the attention that it ought. Perhaps, however, one of the most enlightened bits of news that has flown out of Washington of recent years is the suggestion that the provision for which MARK TWAIN has been contending is generally thought to be sound by members of the House of Representatives. This provision is to change the law to give to an author property in his work during his life and for fifty years after his death. To the ordinary mind, if we grant that an author ought to have any proprietary right in the works of his genius or talent or industry, as the case may be, it would seem as though that right should not be limited in time. If the book, or the piece of music, or the picture is his at all, it ought not to be taken away from him at any period by the state, or from his heirs after him. We are assuming now, of course, that

the old-fashioned laws of property continue to prevail. As a matter of fact, however, or of law, the higher works of the mind have never been on the same footing as works of the hands, or as works of cunning or subterfuge or intrigue or dishonesty, or, on the other hand, of honest shrewdness and ability. And we cannot say that this was so because the early legislators had so great regard for spiritual and intellectual things that they could not bring themselves to dignify them, or insult them, by treating books and other forms of art as mere property. They simply thought that the world was entitled to take all it could get for nothing, and the votes and influence of authors did not use to be so great as they are to-day. But in Queen ANNE's time light began to dawn.

We can say what we will about this Congress, and compare it with others in a way that is uncomplimentary to our immediate representatives; but apparently the world has been moving on ever since CLEVELAND's day in Washington, and the minds of men and of lawmakers are looking differently, because more generously, at the question. When Mr. CARLISLE was Speaker of the House of Representatives, the authors and publishers and composers, all united, came very near to securing the passage of the first international copyright bill, but they failed because they could not get a vote. Opposition to the measure was strong and bitter, led by ROBERT Q. MILLS in the House of Representatives, and by BICK in the Senate. Both of these men were opposed to any copyright or to any patent. They thought that what men wrote or composed or painted or carved, or what men devised or invented, should be given to the public free. This was an extreme view, and evidently it has passed away, although some of its evil progeny may still be dancing in remote minds. When Mr. CARLISLE tried to give the authors a chance to have the rules suspended, one Monday morning—for there were more than two-thirds of the House in favor of the bill—one man defeated him and the rest of the enlightened world by calling for the reading of an enormous bill; this reading occupied the whole of the day and put off international copyright. It is worth while to recall the name of this man; it should not be allowed to sink into oblivion; it was PAVSON, of Illinois. At that time no one dreamed to ask for what MARK TWAIN asks now; it was thought that the legislative world was not intelligent enough to tolerate such a request. It is doubtless a recognition of a great truth that that opinion about Congress has changed, so that it is thought wise to ask for a law which will make an author's right to his book almost as sacred as a man's right to a bolt of cloth.

The gossip would have us believe that even all of the late British ambassador to the United States was due to the high-born and energetic wife of a late official of the British embassy, who formed and cherished, in the days of her Washington, very positive opinions as to the propriety of Mr. MONTAGUE DURAND for the important place which he has occupied. No whisper of suggestion that that opinion was shared by anybody in the United States whose opinion was important has been reported from any quarter. In Washington, Ambassador DURAND has been liked and very much respected. The machinations attributed to Lady SEAN TURNLEY were actuated, if we are to credit the gossip, by the failure of the ambassador and his family to treat that lady with the distinction that she conceived to be due to her exalted social standing. The example we have lately had of the mischief an uneasy and clever woman may make in the diplomatic service makes our minds more than usually hospitable to such a tale as this. It is even reasonable to believe that things may happen to other governments that are almost as distressing as what lately happened to ours. Nevertheless, let us not swallow all that gossip whole. “Hucklerish!” the British embassy is reported to call it, adding that it was to the working of politics, and not to Lady SEAN, that the ambassador's recall was due. A thing that gives credibility to that view—whether or not it came from the embassy—is the choice of the new ambassador. A government that would recall an ambassador merely because a casual ear-ache-doubtless was not pleased with him would hardly have had gumption enough to replace him with a man so exceptionally acceptable to wise Americans as Mr. JAMES BRYCE.

A Swiss gentleman named BUCHANAN is inquired, by what must be regarded as a false view of the proper environment for brain-workers. He has issued an invitation to those who “feel a craving for retirement and isolation” to join in the formation of a

community. This is to be a kind of Brook Farm with physical toil omitted. It will be recalled that labor with the body was to be made as dignified as labor with the mind, in that interesting New England community. But the Swiss gentleman proposes a retreat for "a congenial group of tired workers, literary men, journalists, artists, scientists even, to enjoy fraternal intercourse in an atmosphere of tolerance, liberty, and friendliest brotherhood." Incidentally this happy community may publish a magazine or books. Brook-Farmers would have quarreled with one another very vigorously, if they had not tired themselves out in the fields during the day, before they came together to yawn in the evening. It is probably true that the Swiss gentleman will soon find the "brain-workers," if he gets them together, eager to fly back to town after they have had a "much-needed rest." It is probably true that most good literature—except GOLDSMITH'S poems—never inspired in town, although they may have been written in closets or in country houses. "In Menziesland" was written in Ebury Street, London, and, for a time, reposed there on a shelf, TENNYSON having deserted his lodgings and having left his forgotten verses on a shelf in his endwise closet. The Swiss gentleman cannot keep his brain-workers always tired, and if they try to live together, seeing us one else, after they are rested, the community will be far from pleasant, and they will go back to their Ebury Streets, to find there old verses, as TENNYSON did.

Mr. WHITELAW REID is having a very pleasant time in Great Britain. He recently received the freedom of the city from Dundee, in Scotland, and he made an address on "How the United States Faced its Educational Problem." It was a good address, and Mr. REID told Great Britain some things about primary and secondary education which the Lords would just now do well to heed. A little more education would do none of us any harm, and while we need more all the way up, Great Britain needs a good deal more at the bottom. It is disheartening, however, to one who hopes to see, not how we fared, but how we have conquered our problem, to read ARTHUR BENSON'S confession in *The House of Quiet*. Here is the son of an Archbishop of Canterbury, a distinguished scholar of Cambridge, a fellow of Magdalen College, who derives the kind of teaching they used to have, and still have, in the English public schools, and says that he "left Cambridge a thoroughly uneducated man, without an idea of literary method, and condemning accuracy and precision in favor of brilliant and heady writing." At the same time we read that the Rhodes scholars from the country in Oxford are not so well trained in our colleges as are the English BENSONs; that they are overgiven to athletics; and yet, so far as Maenchenhette is concerned in this, athletics is unrecognized in the selection of the scholars. All this would, indeed, be depressing if we did not recollect TENNYSON and HALLAM and TILAKERAT and MENCHUN, and a lot of other Cambridge men, and if we had not recently been reading BENSON himself, and if we did not recall our own effective college men, one of whom is President. Perhaps BENSON expected the harvest too soon after the sowing of the seed.

The day before Christmas, the President sent a little message, not to Congress, but to the people of the United States. He said that in a district in China covering over forty million square miles and supporting a population of fifteen millions, crops and thousands of dwellings had been destroyed, leaving millions of people on the verge of starvation and thousands of their homesless. An urgent appeal for assistance, he said, had been made to the United States. The papers tell daily of the severity of this famine. The way to help these distressed Chinese is through the Red Cross. The treasure of the New York State branch of the Red Cross is Mr. JAMES H. SCHIFF. Contributions for Chinese relief may be sent to him at 300 Fifth Avenue, New York.

It is almost impossible now to get a treaty through the United States Senate. It would not make this difficult but necessary process any easier to have it demonstrated that treaties are liable to involve interference by the Federal government with State control of schools.

Personal and Pertinent

THEY say out in Ohio that Senator FOSBARKER is not only the most brilliant man at their bar, but that he is able to get along without

the strategy of reading the evidence in a case. One lawyer said recently that FOSBARKER was retained in a case on which the other counsel had expended a good deal of time and study, for it was one of those intricate testimonial questions which the Middle Ages handed down to better modern minds. When the argument came on, FOSBARKER asked his associates for the privilege of closing. He had not devoted much time to study of the case, but he listened to the other speeches intently, and made the best argument of them all.

The relations between the TAPP brothers—WILLIAM H. and CHARLES—are a constant theme of conversation in Cincinnati. The citizens and citizens are indulging in the pleasant occupation of talking about their neighbors' children. CHARLES is not only older than WILLIAM, and much less impressive, but he is the son of Justice TAPP'S first wife, while WILLIAM is the son of the second. The elder son is the proprietor and factotum of the *Times-Star*, which is devoted to the questionable fortunes of "Boss" Cox, whom WILLIAM, the Secretary of War, has engaged in battle, with the result of an seriously wounding the "boss." That a good deal of the plunder of the city, at least temporarily, has been removed from predatory clutches. The sight of the two TAPP brothers struggling on different sides, one for the virtuous and the other for the vicious, has so seriously disturbed the neighbors that they are always ready to talk about it. They say that it all came about through the greed of a near connection of CHARLES TAPP'S, who, in his life, turned the page. CHARLES was placed in charge of it, and in conducting it was saved by high ideals, but suffered a pecuniary loss. And this last indiscreetly occasioned scolding remarks from the proprietor that were so exasperating that CHARLES turned over the paper to the "boss" and to other vice. The money reward quickly followed. The brothers continue in their several Cincinnati ways. As WILLIAM remarks to his friends: "We are loving brothers, but we remain so by avoiding conversation on the local politics of Cincinnati, which, like some others of our cities, would not be a bad place if it had no government."

FRANCIS E. LEUPP, the Indian Commissioner, who has just been telling tales about Indians at Harvard University, has had an interesting hodge of experiences. After he escaped from college, he studied law at Columbia College Law School, and intended to be a lawyer. How serious his intention was is indicated by the fact that he spent a large share of his time in saving the backs of envelopes for future brief paper. But literature caught him very early and he wrote a story called "A Baby and a Snow-storm," which was published in the *Golfay*, of which LEUPP then became one. At this time he had a less literary sense, a keen appreciation of humor, and he loved to read books; but one day the *Evening Post*, when BRANT was editor, caught him and hired him to write agricultural notes. As time went on, he sank deeper and deeper in journalism, until he became a Washington correspondent. In that position he so industriously and shyly led a life of drudgery that he became a serious reformer. Fortunately he took a liking to the Indians and their affairs, which gave to President ROOSEVELT an opportunity to save him by making him Indian Commissioner. It is clear, from his recent remarks at Harvard, that his mind is recovering its youthful tone, and that humor is once more appealing to him. The white man whose forgotten literary tastes can be restored by an India has something in him. "A Baby and a Snow-storm" was a good story. Some day we may have another bit of fiction from LEUPP—perhaps about "An Indian in a Walcott" or, *The Triumph of Civilization over the Savage Tribes*.

OSCAR STRAUSS, the new Secretary of Commerce and Labor, ought to be of great service in his position. NEVITT was any one more independent of partisan or religious bias. He is a Jew and a Democrat—or he has been a Democrat. Perhaps he is more of a Jew than he is, or was, a Democrat. He believes in his people and their religion, but he is also a foremost champion of religious liberty, disclaiming to a sentiment that men are lost who follow their consciences to the point of disagreeing with him. His chief dignity among the Americans of the past is ROBERT WILLIAMS, about whom he has written a book, and after whom he has named a son. He has also established a prize at Brown for the best essay on the subject of religious liberty. He is the possessor of a pretty large and comprehensive mass of clarity, logic and common sense enough to cover not only a multitude of sins, but a multitude of virtues also. He has associated a good deal with the people of all faiths in religion, in economics, and in politics. He has not only served well both a Democratic and a Republican President as minister to Turkey, but whenever it has been asked, and that is more than once, he has given his reason to both parties. It is possible that Mr. ROOSEVELT was first attracted largely to him by a new interpretation of international law. Mr. STRAUSS and others were discussing with the President the Panama incident, and debating as to what became of the old treaty which bound the United States and Colombia, giving power and privileges to the former at and over Panama. Mr. STRAUSS sent forth doubts, if there were any, observing that the "conventions of the old treaty ran against the new." It is very often that a man who can quickly find a previous precedent in the division of an administration.

REMINISCENCES OF FIFTY YEARS OF "HARPER'S WEEKLY": 1857-1907

RECOLLECTIONS OF AN EARLY EDITOR

By HENRY MILLS ALDEN

MR. ALDEN WAS EDITOR OF "HARPER'S WEEKLY" FROM 1863 TO 1869

FOR a great publishing house to establish a weekly paper which should, among other things, freely discuss political questions would have been at any time in our history a daring proposition. A publisher of books naturally desires to conciliate the favor of all classes of respectable people and of all parties. We can therefore easily imagine the consternation of his three brothers when Mr. Fletcher Harper, in 1856, put to them just that disturbing proposition. They had learned by experience what seriousness might be engendered by religious antagonisms. The senior partner had within a few years been elected Mayor of New York city on an issue which arrayed against the house a large body of Roman Catholics. This the four brothers had bravely and uncompromisingly met. But to all but one of them the fluctuating fortunes of political warfare seemed to involve the instability of their business enterprise. They were the publishers not only of books but of a successful Magazine, which had won unprecedented favor in every section of the country, but which henceforth must risk the fate of a hostage in the enemy's camp.

Moreover, it was the most critical period in the political history of the country. For that very reason Fletcher Harper thought that side should at once be taken, as soon they must be, and that the house should promptly choose its colors and stand by them. Silent

it could not remain in such a storm as threatened, therefore it should speak in no uncertain voice. He insisted to the point of venturing to undertake the proposed journal on his own account, and inevitably his brothers yielded. They had always been united—they could have no separate fortunes; they would stand or fall together.

HARPER'S WEEKLY was started January 3, 1857, and its first page was devoted to an argument for Compromise and Union—a sweet and reasonable proposition which would have proved a solvent if reason and not passion had ruled—if the elements had been soluble in a world of "sweetness and light." But for the time the WEEKLY had the vantage-ground of a pacific policy which commanded respect, since the newly organized Republican party, just beaten at the polls, not only deprecated a resort to arms, but had no reasonable hope of electing a President in 1860—which, indeed, it finally succeeded in doing only through the division of the dominant party; and even then, with Lincoln in the White House, no powerful army could have been marshalled by the divided North for purposes of coercion; nor, indeed, could coercion have been adequately accomplished, by the inclusion of the still doubtful Southern States, but through the precipitation of actual war by the firing upon Fort Sumter.

The WEEKLY, then, for four years (1857-61) justified Fletcher

HARPER'S WEEKLY.
JOURNAL OF CIVILIZATION.

Vol. I.—No. 1.]

NEW YORK, SATURDAY, JANUARY 5, 1857.

[PRICE FIVE CENTS.]

THE study officials of the United States Treasury concluded their test of expanding the vote given in the 1992 election. The results stand: none.

As issued	1,000,000
Preferred	2,557,142
Common	675,142
Total	4,232,284

For their millions of copies, not to be a failure, but that determined to a certain extent, the policy of the nation for the next 25 years, small or tremendous the portion.

[illegible][illegible][illegible]

It is worth said in fact, the election is not the triumph of a party. It results in the triumph of a party, but it is the triumph of a far higher thing. It is the triumph of a principle, an ideal principle, the principle lying in the basis of that government—the only principle in which a free system, as opposed to systems of force, is at all close, we must say, the principle of peaceful antagonism of contending forces as interests—the principle, in a word, of Constitutionalism.

It is the balance of young and ardent men to look with autonomy on the idea of compromise. To them it seems to involve dishonor and in the heat of conflict grows real men thoughtful values have sometimes passed "the day of compromise to be put." In these are not later witnesses of immaturity.

of taxation. When the day of compromise passes away, the day of force and violence begins; when the sin of compromise in this country shall out, it will not be a matter of civil conflict, and, in all probability, of blood.

[illegible]

Look as it is, reference to religious affairs. In France, in the 16th century, for fifty years the Catholics had control of the government, and evoked all idea of tolerance. For fifty years the country was dominated with a terrorism of blood war, until a great man arose, and Henry IV. compramis the question by the Edict of Nantes. That edict gave France a century of repose and order, until his royal grandson, Louis XIV., repealed it in 1685. The immediate consequence was the loss of the Covenant, the more events that accelerating pains of the Church, which, it is generally known, she has since then, led to the French Revolution.

In that Revolution again the wise men of the time sought a compromise between the principle of despotism and the principle of absolute freedom. It was rejected, second, derided. What followed? Seventy years of war, murder, rapine, revolution, and now, to the end of these seventy years, the greatest nation is bowed down by a tyranny more ignominious than any that preceded it.

[illegible]

As regard to our verisimile, it is how of value to show how engineers, how completely is given out, how it depends on, how it states of overcompensation, and by compensation alone. It even there was a necessity to who is the little applies it is to this. Look at the wonderful children, and also the amazing inventing of our compensation elements. Our climate is such a form as we see in a single word, our philosophy and our very life. We realize are at the extreme North, the little things I wish to show and, we must. All

[illegible][illegible]

Deveraux never missed the graceful fringes of the union, bent only to keep the peace that solves by the very necessity of their position, and by their more numerous made much and unavailing representations of the great times of Compromise and Union. A majority may well have and discontinue them. Thus time the whole country long in support to the duration of Pennsylvania, and the result now makes it probable that no member of the democratic party, probably a citizen of Pennsylvania, or prominent and popular to the President's office, could be elected as New York, or more likely of late almost of the center. But it is a great mistake that in the hour of the economy, it is should be, but the great conservative element of the national

What, then, does the election show? There is a sharp preponderance of new party, as usual, among the voters. The Negro gives any assessment of the party he favors. The conservative, the old party, as we have said, the strength of no party. It is the triumph of the principles of compromise and Union. It is a disavowal by the conservative governing power of the country, that the vast numbers entrained under this Government can be pressed on to still greater sacrifices. It is a warning and a rebuke—that the Government must be safely surrendered to the extent of any changes desired or principles—dis or we have no right to insist on them. It is a rebuke to the leaders of the extreme of the party.

epirrhia, Indiana, and Illinois, and the Congressional district supervisor, almost equally important, of New York and Ohio, have denounced the question. Whether right or wrong in their judgment, that the future should not declare—but we are confident that this decision has been governed by a devotion to the great ideas of fraternity and union.

We cannot be dumb that with an immense majority of the American people, North, South, East, or West, attachment to the Union is the paramount idea. The Union is only another name for freedom, progress, and civilization, and so much is regarded.

[illegible][illegible]

Thus, then, is the life of the atom—It is Compendious and Uxian. It is a bold and naked Post to foreign powers; It is harmony and concordance within. It is a protest against the admission of all quarters, against the extreme opinion of all sections. Whether the result will prove that this spirit lies below the proper form and shape, God and the future alone can tell. But nothing short of more pervasive justice can refuse to lend ground for confidence in the fact that the great executive powers of the country are to be wielded for the next four years by a man of approved experience and unimpeachable integrity, as familiar with the Old World as he is with his own, selected from one of the great

conservative shades of the 1940s, captured by his ideal posture, his age, and his expression, from the extreme opulence of the robes of a partisan, and where only possible real interest is in contact with nature. With the greens, the progress, and the happiness of the American people. It under these circumstances the previous result of Union, wrapped, progress, Union, shall not be missed, why, at the end of four years, with our national good-humor, conservatism, and peace—we will try it again.

A REDUCED FACSIMILE OF THE FIRST PAGE OF THE FIRST
NUMBER OF "HARPER'S WEEKLY"

IT SHOWS THE FAMILIAR HEADINGS WHICH, SLIGHTLY MODIFIED, IS STILL IN USE, AND PRESENTS THE OFFICIAL FIGURES OF PRESIDENT BUCHANAN'S ELECTION, WITH AN EDITORIAL REJOICING THEREIN, AND SIGNED "CONFIDENCE AND TRUST." THE ACTUAL RISE OF THE PAGE WAS ELEVEN INCHES BY SIXTEEN INCHES, AND CONTAIN THE DOUBLE PURPOSE OF COVER AND FIRST PAGE.

Harper is his establishment of it, since in its support of a policy generally prevalent in the North, and opposed in the South by only a weak faction, controlled by a few ambitious leaders, its position rather helped than injured its publishers. After that period had passed and the war was on, there being no longer two parties, but only two armies, its political procedure was as safe as it was inevitable. As it had supported the Union by its efforts for compromise, it now supported it by upholding, not a party, but an administration pledged to the maintenance of the Union. Thus, after the war, it was easy for it to take a wholly independent position in all political contests.

If the WEEKLY helped the publishing house—as any periodical does a publisher—by becoming a leader to its business, giving it also not only a voice in the utterance of public sentiment but a free fighting arm, and, by the general excellence of the paper in matters disconnected with politics, advancing its literary importance, it had itself a corresponding advantage in having a great publishing house at its back—an advantage which at that time no other periodical of its class had, and very few magazines. This gave it stability and responsibility. The high character of the book publications issued by the house for nearly a generation, especially the "Fanny Library" series, and the reputation won already by HARPER'S MAGAZINE, gave the WEEKLY a ready welcome in American homes. It was convincingly what it professed to be, "A Journal of Civilization." The page-lag plea for compromise which opened its first number was followed by an elaborate essay on "The Family, the Church, and the State." This elementary preamble, grave in substance but without the pith and felicity of expression which has usually characterized essays in this periodical, and written probably by one of that group of writers which gave a ponderous dignity to the old "Editor's Table" in HARPER'S MAGAZINE, was hardly necessary, though fit and natural. It might well be expected from a house whose first published book had been *Demosthenes' Works*, and which had issued Hannah More's works in three quarto volumes—in small type at that. But apart from a few sober essays of this kind—which were characteristic of the time—the WEEKLY was replete with entertainment, humor, and the excitement of fiction.

The Harpers had established intimate communications with English novelists, directly or with their publishers, securing advance sheets of the most important current fiction, paying for this priority—which was all they could pay for—and their WEEKLY as well as their MAGAZINE enjoyed the fruits of this valuable commerce. It was thus that Dickens and Walter Collins and Charles Reade, then at their best, were frequent contributors. Fitz-James O'Brien, Elizabeth Stuart Phelps, Harriet Prescott, Constance Fenimore Woolson, and Fitz-Hugh Ludlow contributed short stories; and there were others whose "short love stories" satisfied even Mayor Harper's desire for that species of fiction.

But I am anticipating, leaping forward too rapidly to the time with which I am personally better acquainted. Before the war there

were not so many American short stories in the paper. A large proportion of space was given to extended sketches of travel, with lively illustrations, and to essays in a light vein, however utilized the motive might be, and often the motive was wholly laudicrous. Several columns were devoted to "Literary Criticism," and more than a page to summaries of "Domestic Intelligence" and "Foreign News." There was also a "Weekly Market Summary." Not unfrequently there appeared a notable poem, like William Allen Butler's "Nothing to Wear," and Fitz-James O'Brien's "Tale to the Arctic Explorer Kane." It was truly in the war that Ethel Lynn Brown's popular poem "All Quiet on the Potomac" was published. The authorship, like that of another famous literary poem, Watson's "Beautiful Snow," was claimed by other writers. The social quality of the paper was maintained at a high standard by young writers who were worthy successors to the Salmagundi coterie, and the successful rivals of N. P. Willis, who was then contributing to the *Home Journal* his "Letters to Invalids" and "Portraits of Living Characters." A good type of these young writers was Fitz-Hugh Ludlow; but unrivalled among them was George William Curtis, who was then the "Easy Chair" of the MAGAZINE. He was the most constant contributor in this kind of essays. As a rule, the names of contributors were not given either in the WEEKLY or in the MONTHLY. What was printed passed to the public on its intrinsic merits.

It would be quite impossible for readers of to-day to reconstruct in their imaginations the social régime of New York city before the War of Secession—it was so quiet and simple. The robust of the citizens—men like A. T. Stewart, who was a scholar as well as a millionaire—entertained their most distinguished guests at dinners in the old-fashioned English townhouses. Forty-second Street, then being built up, was the northern limit of the city proper. There had been enthusiastic public receptions given to distinguished literary Americans, like Irving and Cooper, on their return from extended sojourns in European capitals, and to eminent literary visitors from abroad, like Dickens and Thackeray; but the greatest distinctly social function of that period was the ball in honor of H. R. H. the Prince of Wales—the full-page illustration of which, published at the time in the WEEKLY, is reproduced in this issue.

It was in the winter of 1863 that I became editorially associated with the WEEKLY. Mr. Curtis, whose social and political paragraph had for some time appeared under the caption of "The Lounge," was given full possession and control of the editorial reins of the paper at the same time that I undertook what might be called the general editorship—the selection of stories and poems, the summarizing of domestic and foreign news, and the comment to accompany the illustrations. My predecessor, John Henner, a gentleman of literary tastes, had become engrossed in Wall Street affairs to such an extent that he felt obliged to give his undivided attention to them. He had never attached much importance to that encouragement of

American literary contributors which can only be given through a careful reading of the matter submitted by writers whose best efforts had been stimulated to rivalry by the forthright fiction then being published in the *MOVEMENT* and *WEEKLY*. Mr. Bonney was content to order short stories from writers like Nora Perry and a few others who had proved successful in that field. Hitherto perhaps this policy had not been so harmful as it was now sure to be, if continued.

The war itself had been a fresh inspiration to other writers and was awakening new talent of a high order. Miss Constance Fenimore Woodson in after-years wrote me: "The war was the romance of my life." It would have been a fatal mistake on the part of any editor not to take note of this emergence of new writers who were to furnish to American periodical literature its most distinctive and interesting features. And at that time those writers were producing poetry and stories which, in hue and texture, were pure and poetical of this western world.

It was in this way, perhaps, since I then became reader of manuscripts offered for both *MAGAZINE* and *WEEKLY* use, that I was to be most useful to the house, and in some substantial way to literature itself. Two members of the house, Fletcher and Joseph Wolsky, were quick and effective in their grasp of the already successful authors at home and abroad. My initiative was the more interesting one of discovery. To discover the emergent author and to keep in sympathetic touch with him has been my life-long profession. The results have been satisfactory, since the last forty years have witnessed the abundant harvest of American literature.

Other editors have shared with me the zest and the fruits of such adventure, but I am tempted, in this retrospect of my connection with *HARPER'S WEEKLY*, to adorn my cup with this one particular feather, because in every other respect I was so insignificant. The man who originated the *WEEKLY* really conducted it as long as he lived. Every Monday morning he brought me the edition of the illustrated pages of the next number of the paper, leaving to me the supply and adjustment of the text for all the other pages, except this portion occupied by Mr. Curtis's editorials.

The pressure of war matter had long ago driven out of the paper the grave essays and the sketches of travel, considerably reducing also the space allotted to the summary of general news and to notices of books. Mr. Curtis, in his own field, was absolutely independent, having the complete confidence of his publishers, even when, with his new strength, he might hold a position somewhat at odds with their own. He was there, happily, fully commissioned to fight their battles in his own way. Once I remember, when his enemies in his own party intimated that his publishers were not in sympathy with his convictions, they headed the *WEEKLY* with a manifesto signed by the house not only expressing their full support of his position, but declaring that they would rather not publish the paper at all than do so at the sacrifice of principle to merely partisan views.

It was Mr. Curtis's privilege to write his editorials for the paper in the *convenient* season, choosing some day early in the week for this purpose. A desk was set apart for him next to the foreman's. He had already marshaled the editorial ele-

ments of his editorial comment, and the form was as readily at his command as was that of any of his more elaborate public speeches and of his most casual conversation. Mr. Curtis survived the first generation of Harpers. After his death, in 1892, the Hon. Carl Schurz was a regular contributor to the editorial columns of the *WEEKLY* for many years. He had fought alongside of Mr. Curtis for the cause of civil service reform, and was so completely in harmony with his political course that no man could have been more fitly chosen to continue his work.

During a portion of my six years' connection with the paper I was relieved by W. F. G. Shanks, and afterward by John Y. Foster, from the more onerous duties of editorship—retaining only my functions as manuscript reader and general literary adviser of the house—in order that I might bring more rapidly to a conclusion my work on "Harpers's Historical History of the Republic." Mr. Shanks, who had been an efficient war correspondent in the Western campaigns, and who had been personally acquainted with all the distinguished generals engaged in them, was a valuable contributor, as was also Mr. Foster—later the able editor for many years of *Frank Leslie's*—because of his intimate knowledge of current politics and his journalistic experience on the staff of the *New York Advertiser*.

When, in 1869, I assumed the editorial charge of *HARPER'S MAGAZINE*, my place on the *WEEKLY* was taken by S. S. Conant, who held it for several years. The subsequent editors were Montgomery Schuyler, John Flood, Richard Hawley Davis, Henry Leomin Nelson, and John Wendell Bangs. Since 1892, George Harvey, president of Harpers and Brothers, has been the editor of the *WEEKLY*, not only conducting it with as strong a hand as its founder, but associated with it in a more intimate sense as a constant contributor to its varied comment—at some periods writing all of it.

HARPER'S WEEKLY has never been merely a weekly newspaper. From its connection with the history of the country at its most critical moments it has had more than any other journal of its class, the character of a national institution. In its early career the feature which impressed me most strongly was the work of its artists. The kind of work they did was brought into existence, as a sort of dry ground, by *HARPER'S MAGAZINE*. The note was struck in the early files of the last century by "Fort Crayon," and was prolonged by a succession of characteristic draughtsmen from Augustus Hopkin to Ed Fyttinger and Thomas Nast, and is still pronounced in the drawings of W. A. Rogers. As in the case of English contemporary artists, like Cruikshank, Leech, and Do Mazoir, its main characteristic was humor—single humor when its aim was amusement, humorous satire when ridicule was more direct and effective than any argument, as in Thomas Nast's picturesque but terrible arraignment of the Tweed Ring.

Of course, in wartime, this note was subdued, but certain characteristic and graphic touches remained, which have, by their indelible impression upon the imagination, made the *WEEKLY's* reproduction of pictures sketched on a battered battle-field, by such artists as the Waags and Theodore A. Davis, immortal—so that to-day and for all time to come they, more vividly than any historical description, revive the stirring scenes of that eventful period. These

CAPTION: "A BRIDGE ON THE GULF OF CALIFORNIA"

poignantly interesting pictures were relieved by Sol Eytinge's masterly full-page drawings illustrating festive domestic moments in the life of a "darky" family, and by those of an equally humorous type—that were possible—from other artists directing certainly equally humorous aspects of the contemporary comedy of our American life.

Well! we may have had most of our fun in those times, when there was most to move us to tears. Another group of artists—Abbey, Rhinehart, Fyle, Thosdorp, and Remington—succeeded those quaintly humorous draughtsmen, and have given us another and higher kind of satisfaction with their finer and greater art, of which the WEEKLY has had its abundant share. It would be inevitable on my part were I to omit to give credit to the first great art-editor of the paper, as also of the MAGAZINE, Mr. Charles Parsons, for his admirable work

on these periodicals during a whole generation. Of the two groups of artists I have above characterized he was friend and guide and inspiration.

What impresses me most in the paper to-day is its pitiful and luminous earnestness on every feature of contemporary interest, and the many-sided manner which its illustrations hold up to us, reflecting every phase of our progressive American life. The striking incident is not lost sight of in this presentation, but the main current and its ever-changing drifts—that is the great and permanently interesting theme. I note also that the firmness—whether short story or serial—is new, as it has been from the beginning, representative of the best imaginative work of the time, the vivid and harmonious complement of what, in every other field, the WEEKLY is doing to justify its original title as a *Journal of Civilization*.

THE FIRST NUMBER, JANUARY 3, 1857

By EDWARD S. MARTIN

HARPER'S WEEKLY: A JOURNAL OF CIVILIZATION.—Neither labor nor expense will be spared, "runs the prospectus," "to make it the best Family Newspaper in the World—one whose cheerful and genial character will render it a welcome visitor to every household, while its constant devotion to the principles of right and justice will win the approbation of the wise and good. Its object will be to set forth sound views on political, social, and moral questions, to diffuse useful information, and to cultivate the graces and amenities of life."

So much for the general intention. The advertisement, printed on page fourteen of the opening number, adjoining a column of other advertisements, goes on to various particulars of purpose: so, to give a full and impartial summary of all the different kinds of news, to record everything worth recording, and "present an accurate and complete picture of the age in which we live." "Taste, the imagination, and the feelings," were also to have due share of attention, and its regular contents were to include tales, incidents of travel and adventure, sketches of character and social life, and essays upon art and morals. Announcing arrangements made with the best American writers, the publishers noted that there was room enough in their paper for ample selection from the best literature of the Old World, and that they would keep a vigilant eye on the issues of the English, French, and German periodical press, the best productions of which they cordially promised to transfer to their paper.

And they pointed out that the new WEEKLY was not intended in any way to supersede HARPER'S MAGAZINE, and that it would contain sev-

teen pages of the size of the *London Illustrated News*, and would appear every Saturday morning at five cents a copy, or \$2.50 a year, "clergymen and teachers supplied at the lowest club prices."

Thus gathering from the advertisement the particulars of plan and scope we turn over the leaves of the first number to see how far they were realized. First numbers constitute by themselves separate and interesting class of literary and typographical products. "Nascitur, non fit," applies a good deal to first numbers. They are born, and until they are born even the parents cannot tell absolutely what they will be or how they will look. Everything about a first number has to be thought out; nothing can be left to conform to custom. The *Harper*, when the WEEKLY was started, were already the experienced parents of one periodical, and brought full knowledge and ample facilities to the starting of another. Nothing rushed, crude, or unfinished, therefore, was to be looked for in their new first number. Such as it is, it is a finished, workmanlike product. The typographical model was, probably, the *London Illustrated News*. The first page, reproduced this week, shows the familiar heading which has come down unchanged. The new Family Newspaper starts off with the official figures of Buchanan's election, and defines its political position in a grave and able four-column editorial in favor of Compromise and Union. Its sentiments are those of conservative patriotism. It rejoices in Buchanan's election as the orderly triumph of that spirit of wise compromise which alone, in its opinion could save the Union without war. "If this," it says, "be not a spectacle . . . congratulatory to the reader of the blood-be-

The first "Comic" Printed in "Harper's Weekly"

This illustration, from the issue of January 3, 1857, illustrated the following joke, which was printed in the periodical.

POLICE CONSTABLE (to Boy). "NOW, THEN, OFF WITH THAT HOOP, OR I'LL PREACH A GOOD SERMON TO YOU!" LADY (who imagines the observation is addressed to her). "WHAT A MONSTER!" (Lifts up her Crinoline, and hurries off)

grand pages of history, then we should be glad to see one more so furnished by our reader of the elder world. The congratulatory spectacle, as we know now, did not make good, but the WEEKLY was entirely right in that first intention in holding that only in newspapers was there a possibility of saving the Union without a war. "He who thinks," said, "that a peaceful separation of the Union could be made is totally ignorant of the true state of the country."

As an example of an illustrated publication, the first number of the WEEKLY is not unimpressive. The paper had for the most part to develop the pictorial talent to which it gave a market, and to train its own artists. It began at once, with credits that gradually appear, and by the time the first war came it was able to put a corps of artists into the field, but at the start it was a good beginner, and helped itself liberally—according to the intention given in its prospectus—from the pictures in the foreign illustrated papers. John Leech was the best contributor of pictures to its first issues. Of the six illustrations in that number, one, a comic sketch, was certainly his, and translated from Punch. Another came, probably from the same source, if not from the same hand. Four pictures, one, a remarkable marine view, accompanying a story about "A Police Officer's Seven Thousand Mile Chase" in California after an Ohio fugitive, may have been original house-made drawings. The attention at the start was, perhaps, not so much to make a pictorial publication as to illustrate and lighten the family newspaper with pictures. But the picture side of the enterprise gathered strength fast, and before the year was out the pictures had more than quadrupled in number and crowded successfully for space in the family newspaper.

In the first number the written pieces had things very much their own way, and very readable pieces they still are. Following the political discourse on the first number, there is a story of a domestic and social subject. One on Dear Woman treats of extravagance in dress and equities what might be the rest of the apparel that a rich woman in 1857 might put on her back or hang in her wardrobe. It was a piece of ridicule, besides jesting, irony, veils, handkerchiefs, fans, and esculapine shawls, the moral essayist ended her with fifty dresses, of which he says that "since they go on increasing in expensiveness until they had but to outbid the dress of St. Peter's, it is difficult to embrace them within an estimate, or within anything of fixed proportions." Guessing, however, that there might be fifty of them, each containing twenty yards of stuff, some of mixed antique or stamped velvet, and others of the simplest material, he estimated that the most expensive would cost one hundred and fifty dollars, and the least expensive twenty, an average of fifty dollars each, or twenty-five hundred dollars for the lot. The thought of fifty new gowns, many of them "best gowns," for twenty-five hundred dollars would be very grateful to the spirit of a fashionable New York woman to-day. The hats of the belle of '57 were to cost \$100, her whole outfit, including \$100,000 worth of jewels and \$200 in laces, fans, and shawls, was computed in cost \$17,840.

It is amusing to find in the next moral essay, about benefiting life, that the moderns think the Americans are inferior given to money-making, "not as true or as laborious as the Europeans, nor as wise as our good-gods fathers." Simplicity, the essayist says, is what we need, "intelligent and living simplicity would cure half our ills." The simple life was already discovered in '57, and has doubtless been rediscovered at intervals of about five years from that day to this. That was a pious year, as will be recalled, and grew very favorable to simple living before its course was run.

Next comes a translation from Bruce by "a party of New York young ladies, each of whom quoted a line." The poem is of the kind which must have constituted a journalistic "best" by the new weekly on the *Row Journal*. Follow two columns of "Chat," which show, about the boys being at home for the holidays, Tallberg's newspaper, three writers of art, literary and artistic interest. Then comes a poem by Maria Angeline Tupper, some cleverness of that day, about the Atlantic telegraph, and "Baron Munchausen" contributes a characteristic interview about travel in America. So far all the pieces are evidently written for the new paper, but of what a original and what is borrowed there is no indication except an textual evidence. Three columns of book reviews, and a page and a half of Domestic Intelligence and Foreign News very well condensed and presented, were also evidently prepared for the new family newspaper. So was a department of Notes and Queries, a first-rate letter from "Our Italian Correspondent," a Christmas poem, notes of Art and Science and "Times Was said Otherwise" (improving jokes). About the stories there is room for doubt. There are two, each more than a page long, and the setting in each is English. The two-page inter-

An Early Example of Nast's Cartooning in the "Weekly"

THIS "MONEY-BAG" PORTRAIT OF TRIST IS CONSIDERED ONE OF THE GREATEST EXAMPLES OF AMERICAN CARICATURE

(From "Harper's Weekly," Dec. 10, 1857, p. 11)

a piece of the wire "now being manufactured in London, with an interesting north curiosity." In the *Foreign News* the Treaty of Paris (after the Crimean war) was under discussion. Dr. Livingston was on his way home to England after seventeen years' absence in Africa. "Great honors await him." The United States steam-ship *Sea Devil* had just landed Commodore Townsend, Harris at San Francisco, and had been there, not a little to the discomfort of the Japanese Government. "On Saturday, 28th, a large meeting was held in the Broadway Tabernacle to express sympathy with Walker and his men in Nicaragua."

The advertisements in an old newspaper being long the vanished just even more vividly than its news paragraphs. Even the market reports are affecting to the scandalous. Particulars at Washington Market were sold (wholesale) in 1857 at 8 cents a pair, and prairie-hens at 75 cents. Quail were \$4.50 a dozen, turkeys were ten cents a pound, and saddle of venison was twelve cents.

There was a fashionable druggist in Franklin Square who was a produce advertiser of various countries, and Corwell, a retail book-seller, had moved up from Beaver Street to keep a store in "Harper & Brothers' new edifice." The publishers of the other weekly and monthly periodicals advertised in the new paper. The *Home Journal* announced that N. P. Willis proposed to "give more of the LETTERS TO JULIUS, which his experience has enabled him to write, and which have been so widely quoted," and that "T. B. Aldrich has in preparation a Prose Poem, to be entitled *For Honor or Giles Loring*, to be published in numbers from week to week." Mr. Aldrich was already recognized as an expert poet, though he was not yet old enough to vote. The *Christian Era*, edited by the Rev. George E. Ellis, sent in from Boston its claims, backed by strong arguments, to public attention. "The American Comic Paper, The New York *Penny*," advertised that it was "contrabanded by the best wits of the day," and had engaged the best artists, and was given "from one to twenty caricatures and Comic Illustrations in each number." Robert Bennett printed two columns and a half of the first chapters of Emerson Bennett's thrilling Indian tale of 1812. "The continuation of which can only be found in the New York *Leader*," for which great family weekly paper only, wrote Emily Fern and Sylvanus Cobb, Jr. and to which "nearly all the eminent writers in the country, such as Mrs. Seymour, Mrs. Emma D. E. Southworth, and Alice Cary, contribute regularly." Philadelphia, in the new weekly, advertised *Peter's Magazine*, the more that had been advertised in each number in the days of the civil war, and at greater length and with livelier solicitation. "The *Dialer Newspaper*, made up with special reference to the family circle, using monster machines equal to printing 20,000 copies per hour," undertook to publish the largest weekly paper, which cost twice as much. The family paper at that time seemed to feel that competition was the life of trade, and doubtless it was, as it is the story-telling habit, once fixed on a large public, becomes inviolable.

The *Advertiser Magazine* was still awake, and advertised a "Grand story by that precocious young writer T. B. Aldrich, to be called *The Spirit of the Times* was published by George Wilcox, New York," which was "Mrs. Browning's new poem," and Leonard Smith, of 111 M Street, advertised his reports of the British periodicals and the *Advertiser's Guide*.

Dead of it. Fifty years is a mere time of that as time goes, but to see it and periodicals and the public taste go, it is truth a proper space.

"HARPER'S WEEKLY" AND THOMAS NAST

THE RECORD OF A SERIES OF HISTORIC POLITICAL VICTORIES

By ALBERT BIGELOW PAINE

ILLUSTRATED FROM NAST'S ORIGINAL CARTOONS

It seems unlikely that the future will produce a pictorial journal to rival the position held by HARPER'S WEEKLY in the story of this nation. It was born when great forces and fancies were on the eve of chaos; it performed a vital function during a long period of reconstructive restoration; it was the medium through which a great weapon was given to a great people who stood in some need of it—a weapon for assault and for defense, developed by severe conditions and the reign of organized evil—the American Political Cartoon.

There were already two illustrated weekly papers in New York city when, on January 3, 1857, the first copy of HARPER'S WEEKLY was offered for sale. These were *Frank Leslie's Illustrated Newspaper* and the *New York Illustrated News*. The big Sunday newspapers did not exist in those days, and though New York was not then a great city, and the entire nation polled but four million votes, there was thought to be room for a third picture-paper. So HARPER'S WEEKLY came to occupy that room.

It was not much of a "picture-paper" in the beginning. In the first issue there were only a few small illustrations and two "comics"—outings that even resembled a cartoon. Indeed the *American Cartoon* had but a paltry existence then. Only three symbols—"brother Jonathan," "Missus Columbo," and the "American Eagle," the bare A B C of its alphabet—had been invented, and they spelled but meagerly the nation's story and its needs.

It was Thomas Nast who was to complete the pictorial alphabet of symbols and the massed ideas which would give to America that powerful agent for good or evil, the Political Cartoon.

Thomas Nast was abroad during the earlier stages of the war crisis. He had been sent by the *New York Illustrated News* to picture the great Hovnan-Soyers ring racket which took place near London early in 1860, and a little later he had joined the Garibaldi expedition which was to free and unite Italy. The Garibaldi campaign came to a successful close with the end of the year, and February, 1861, found Nast back in New York, eager and qualified for war illustration. For a year he remained with the *News*, with a brief period at *Leslie's*, his work consisting chiefly of battle pictures, many of them redrawn from sketches sent by artists in the field. He had seen war and could handle intelligently the hasty and often crude sketches sent from the front. Yet he was far from satisfied with this sort of work. He

wanted to create pictures of his own. Some imaginative war drawings sent to HARPER'S WEEKLY were promptly accepted, and in the summer of 1862 he was assigned to regular staff work. And so quietly enough began a pictorial epoch, the combined career of a man and a paper which was to endure almost unbrokenly for a quarter of a century, and stand without parallel for moral and political importance in the history of nations.

HARPER'S WEEKLY had already become the greatest picture-paper in the field. There were an art-director and a number of capable men on the regular staff. Almost from the first Nast was allowed to follow his own ideas—was permitted to make pictures rather than illustrations. Fletcher Harper (whose special province the WEEKLY was) took an immediate and deep interest in the industrious and capable boy—he was still that, for he was barely twenty-two—and to the confidence and courage of Fletcher Harper the national importance of Nast's subsequent great work is chiefly due.

Nast's pictures immediately took on a character of their own. They were not caricatures in those days, but imaginative scenes of war, full of fierce and stirring patriotism. To him it was not a time for burlesque, but for solemnity and pathos and for striking home. Winslow Homer had contributed several of the double-page war pictures, really beautiful drawings of better technique than Nast could hope to master. But it may be that in their very grace of execution they lacked force. Certainly they did not stir the blood and arouse the spirit of battle as did the pages of Nast which followed them. Crude, elemental, sometimes brutal, these pictures of Nast's went straight to the mark.

"Nast, how does a field look after battle? Can you draw that? Suppose you make it night," said John Bonner, then art-manager of the WEEKLY.

So a solemn, gruesome double-page of a battle-field at night was added to the series which went men forth to die in the nation's cause. "From a roving hand with a swift pencil for aid he had become a patriot artist, burning with the enthusiasm of the time," wrote James Parton later, and he was permitted to vent that enthusiasm in the way he best understood. Other drawings showed guerrilla raids in the West, the seeking of peaceful villages, the life in the prison pen—all the horrors of civil war.

A series of semi-allegorical pictures, full of homely pathos and

NAST'S FAMOUS CARTOON, "LET US PREY"

From "Haverly Weekly," of Sept. 1, 1874.

THEY TALK THE WHOLE MORNING PURSUANT TO THE OLD PLAN. THYER RIGHTER IS THE CONFIDENT FEATURE IN THE PICTURE. HE IS BEHIND HIM (FROM LEFT TO RIGHT) JARVIS, AND HIS ASSOCIATES ARRENT, CONNOLLY, AND HALL.

melodrama followed these more vigorous portrayals, and these would seem to have been equally effective. Indeed they won for the artist his first real fame. One of the earliest of these, entitled "Christmas Eve," achieved a popularity which was rare with difficulty comprehend to-day. In a large Christmas wreath was shown the soldier's family at home—the children in bed, the wife gazing at the window. In another wreath was the absent one by the camp-fire, fondly regarding the picture of his loved ones. Smaller bits surrounded these, well drawn and full of sentiment.

The picture does not stir us deeply to-day. It seems old-fashioned and sentimental. But it was not obsolescence in thirty-three, and the sentiment it awakes was love of home and country, with that and heart-hunger and tenderness which comes when dear ones are absent in the dark hour of danger. Letters from every corner of the Union came to the Harper office with thanks for that inspired picture. Within the year the name of Nast was known throughout the country, and the HARPER'S WEEKLY was pictures were universally welcomed and preserved.

It was during the Presidential campaign of 'sixty-four that Nast did his most effective war cartoons from the political point of view. The Democratic convention held in Chicago had declared the war a failure, and had held for Compromise with peace at any price. In the WEEKLY office the day of Compromise had long since passed. The war must be pressed home to its logical conclusion. The first of the Nast cartoons, entitled "Compromise with the South," represented the still defiant Southern leader, Jeff Davis, clasping hands with the cringing Southern soldier over the grave of "Union heroes fallen in a useless war." Columbia is bowed in sorrow, and in the background appears a negro family, again in chains.

The success of this picture was startling. An increased edition of the WEEKLY was printed to supply the demand, and the page was also used for a campaign document, of which millions of copies were circulated. In October appeared the second destructive cartoon, a great double-page which depicted in Nast's most ferocious manner just what the Chicago platform meant. Nobody can estimate what those two cartoons did for the majority of Lincoln and Johnson. The WEEKLY, in an article later, referred to them as "prodigious batteries whose influence upon the glorious results of the campaign was undeniable." The war pictures continued until the conflict ended and the land echoed with the bells of peace. Abraham Lincoln said:

"Thomas Nast has been our best recruiting sergeant. His emblematic cartoons have never failed to arouse enthusiasm and patriotism, and have always seemed to come just when these articles were getting scarce." And General Grant, when asked, "Who is the foremost genius in civil life developed by the rebellion?" replied, "I think, Thomas Nast."

Truly that was a time of prompt and superlative recognition—the heyday of individual warfare. Horace Greeley was the Tribune, the Tribune was Greeley. James Gordon Bennett was the Herald, the Herald was Bennett. Now, pictorially at least, Thomas Nast had become HARPER'S WEEKLY, the WEEKLY was Nast.

From this time forward the importance of the WEEKLY's cartoons in politics cannot be overestimated. Nast, young, intrepid, and in deadly earnest, rode up and down the lists like a paladin, destroying whatever lay in the path of national progress. His caricature work began with Andrew Johnson, whose stupidity and ineptness appealed to Nast's sense of humor, as the war had not. He had always made comic drawings, now he applied this faculty to political satire, and the "King Andy" cartoons won immediate and world-wide recognition in a new field, and placed HARPER'S WEEKLY at the head of American caricature. The Johnson cartoons are as good today as they were the moment they were drawn, and the portrait likenesses are amazingly good. They were never caricatures in the exaggerated sense; characteristics were slightly emphasized, that was all, and Nast's portraits never required tags or labels of identification.

The Seymour and Blair cartoons followed the Johnson pictures. George William Curtis was by this time political editor of the WEEKLY, and in conjunction with Nast waged vigorous and triumphant war. Editor and cartoonist did not always agree—indeed they frequently and firmly disagreed. Curtis was for less vigorous measures than Nast—less destructive blows. Nast used a gleaming battle-axe and

An influential Cartoon from an early issue of the "Weekly"

TWEED IS SHOWN AFTER THE CITY ELECTION OF 1871, HITTING AS
CALVIN MARION AMONG THE RUINS OF CARTOONAGE

greatest work still lay all before. There followed a year now when the best of the Harper cartoons bore chiefly upon foreign affairs, the Franco-Prussian war, and some of these were highly notable and of international importance. But they were forgotten and over-shadowed by the series which immediately followed, for with 1870 began a pictorial crusade which remains without parallel in the annals of civil reform.

With the beginning of that year, the government and finances of the city of New York were in the hands of as daring and corrupt a band of political brigands as ever looted treasury or made a body politic staid and deliver. Tweed, Severy, Connolly, and Hall, the famous "Tweed Ring," were in absolute power. Their headquarters was Tammany Hall. Their symbol was the tiger. They held or controlled all the offices; they suborned or intimidated the bar, the bench, and the press. The politics of New York city and State were wholly in their grasp, and they had their eyes on the government at Washington. Every public contract passed through their hands, and by absurdly magnified bills and dummy entries they depleted the city treasury at the rate of a million dollars a month for a period of three years. Their numbers were legion, and they were so well organized and far-reaching was their power that it seemed for a time that no worthy champion could be found to battle for the people's rights. Now and then some politician or paper found courage to denounce the plunderers, and was quickly silenced. Yet all unknown to the Ring a storm was gathering which would wreck his edifice of fraud and sweep it out of power. Near the end of 1869 a small picture, a cloud no bigger than a man's hand, arose upon their horizon, a cartoon by Nast denouncing the Ring. Fletcher Harper had made up his mind that his paper should do what it could to rid the city of a nest of vultures, and Nast's inherent longing for anything that resembled a combination for unfair advantage, combined with his fierce and fearless and vindictive methods of warfare, made him the supremely chosen instrument for the work in hand. He was told that he might have free hand and wage such war as suited his talents and his moods.

Through 1870 the storm dropped in, but it was seen only from the skirmish line, and the Ring members themselves, perhaps, laughed at their amusing portraits. Early that year, the New York Times, under George Jones, an able and fearless man, joined the crusade, and these two papers consolidated their forces for the political campaign of the coming year.

As the months passed along and the assaults continued, the Ring became irritated. The murmur of the people grew louder and more annoying. Perhaps these pictures were no joke, after all. In the first cartoon of 1871, Nast showed "Tweedshire and Tweed-edum." Travel and society, giving open scandalously from the public money to the needier of their followers while they set aside still greater sums

for themselves. Tweed's fifteen-thousand-dollar diamond, which was to become historic, was depicted in this caricature. The picture was a small one, but it created a big mischief.

"That's the last straw," Tweed declared when he saw it. "I'll show those d—d publishers a new trick."

He had already threatened those with an action for libel. He now gave orders to his Board of Education to reject all Harper's books for school-boys and to throw out those already on hand. More than fifty thousand dollars' worth of public property was thus destroyed, to be replaced with books from the New York Printing Company—a corporation owned by the Ring.

The Harper firm held a meeting to consider this serious blow. The majority of the members would have been willing to discontinue warfare on so mighty an enemy. Father Harper never wavered. When at last the argument became rather bitter, he took up his hat and said:

"Gentlemen, you know where I live. When you are ready to continue the fight against these scoundrels, send for me. Meantime, I shall find a way to continue it alone."

They did not let him go, and the fight went on. Nast now flung himself into the maelstrom with all the ardor and violence of his intense nature. Cartoon followed cartoon, each more terrible than the preceding. He pictured them as thieves, as villains, as gilded-boys, he clothed them in prison stripes. Hall's spectacle, Beevor's stock of hair, the gross fatness of Tweed and Connelly, became familiar to children in the streets. Then the Times got hold of the tabulated proofs of the Ring's pilferings and spread their broadcast for all the world to read.

The items of their stealings were so gross as to be absurd. "Forty old chairs and three tables, for the new Court-house, had cost the city \$179,729.60. One item of stationery was charged at \$186,495.61. Plastering in the new Court-house had been paid for at the rate of fifty thousand dollars a day for an entire month, and a charge for thermometers was put down at \$7500.00! The list was long, very long, and these are only a fair example of the charges."

"What are you going to do about it?" Tweed had said a little earlier, and Hall, always gay and bonhomie, had laughed and declared that it would "all blow over. For," he asked, "who is going to sue?"

But there was no hope that it would "blow over" now, and it was evident that the people were preparing to show what they would "do about it." The Ring writhed under the pictures that even their literature following could understand, and Nast's personal safety was threatened. But the terrible weekly exhibit did not cease. The Ring determined to buy Nast.

"Let's stop them d—d pictures," said Tweed. "I don't care so much what the papers write about me as my constituents can't read; but, d—n it, they can see pictures!" So an agent of the Ring, a man whom Nast knew, came to his house and tactfully offered him a large sum, eventually increased to five hundred thousand dollars, if he would give up this "Ring business," and go abroad "to study art."

Nast shared the discussion by saying:

"I made up my mind not long ago to put some of those fellows behind the bars, and I'm going to put them there."

And he kept his word. Just before the November election, Tweed appeared the greatest of all Ameri-

can cartoonists, the first embodiment of the Tammany symbol, the Tiger, crushing down Liberty, in the old Coliseum of Rome. Underneath it was the legend, "THE TAMMANY TIGER LOOSE." What are you going to do about it? On the home-bound train that night there sat in front of Nast a man with the paper open in his lap. He looked at this marvellous picture long and hard.

"What are we going to do about it?" he muttered. Then he struck the paper a blow with his fist. "We are going to fight you!" he said.

With the election a day or two later the Ring was swept out of power. It crumbled into fragments and exploded. With its confederates it came to grief. Some died in exile, others in prison. A few were allowed to return and testify against their fellows. Tweed, captured, was allowed to escape, and was recaptured through a subsequent Nast cartoon. He died, poor and alone, in Ludlow Street jail. In his trunk was found carefully preserved every great cartoon Nast had drawn of him. The pictorial episode, which must remain forever unique in history, was complete.

There is far too little room in the limits of one article to recall even so briefly all the WREXHAM cartoons. Following the fall of the Ring came the great Greeley campaign. Horace Greeley had joined the mavericks in the Senate who opposed Grant, and, always a possible candidate for any office which might offer, he had now become an aspirant for the highest post in the nation. With his usual talent for veering, he had placed himself in a position where the several discontented elements of both parties might with some show of reason accord him their support. He had been the most malignant and deadly enemy of the South, yet he was now ready to accept its franchise. He had an immense personal following which he believed could be converted into political support. Of course he was mistaken. His career had been one of brilliant variations and distinguished eculatitudes. His own printed utterances reprinted categorically because at once his accusation and his conviction. While Grant was charged by his enemies with almost every crime in the calendar, it was only necessary to recall and illustrate Horace Greeley's own printed utterances to present unanswerable arguments as to why, of all men in public life, the Tribune editor was the last to be selected by any party as its Presidential candidate. Nast did not spare Greeley. He had always regarded the Sage of Chappaqua as an old humbug, and Fletcher Harper did not disagree with this view. Curtis discounted Nast was for reconciling the disgruntled factions of the party. When Nast again and again scored Greeley, Sumner, Schure, and others of the faction, he at first protested, then pleaded for his friends. It was to no purpose. Curtis's policy of reconciliation had nothing in common with Nast's policy of annihilation. Nast was allowed to fight in his own way and his warfare continued to the bitter end. It has been charged against Nast that he came in with a ferocious and a fertile old man. On the contrary, Greeley was not yet sixty-two at his death, and certainly during the earlier months of his campaign was anything but feeble. Even had both charges been true, he would have been all the more unfit for the high office he sought; and continuously unimpaired in his own warfare, he could hardly have hoped for mercy in return, especially as Grant, always Nast's hero, was continuously revised and caricatured as a drunkard, a knacker, and a thief. Horace Greeley died a few weeks after his defeat, a victim of disillusion, disappointment, and overwork.

"The only Thing they Respect or Fear"

THIS WAS ONE OF THE GREATEST OF NAST'S THREE-RING CARTOONS. TWEED IS SHOWN TAKING OFF HIS HAT, IN MOCK GRAYARDS, TO THE GALLONS, WHILE OAKLEY HALL, SWEET, AND CONNOLLY ARE CHINGING UP FEAR.

From "Harper's Weekly" of October 20, 1871

WHO STOLE THE PEOPLE'S MONEY? - DO TELL. N.Y. TIMES.

'T WAS HIM.

This cartoon, from the "Weekly" of Aug. 19, 1871, shows the Ring and its various Confederates after the "Times" Exposure, each accusing his Neighbor of Theft.

THE FIGURES IN THE FRONT ROW, FROM LEFT TO RIGHT, ARE TWEED, SWEENEY, CONNELLY, AND HALL.

The cartoons had nothing to do with it, except as they aided in his overthrow.

It was during the next off-year campaign (1874) that the Republican Elephant symbol made its first appearance in the cartoons. It was first created to represent the Republican Vote, a great and unwieldy creature beguiled by the Democratic Fox and frightened by the cry of "Conservatism" against Grant into a hither-and-thither. The Tiger, as we have seen, had become a cartoon property three years before, and had passed into immediate and general use. The Elephant became instantly popular, and the Democratic Donkey, which Nast had employed in various ways, until in 1870 it was used finally and definitely as the party symbol, was welcomed and permanently adopted by the political picture-makers.

While we are on the matter of these symbols, we may mention some of the others invented by Nast. There was the Rag-baby which, in 1875, Senator Thurman found on his door-step, and the Infatuated Baby—a nursery-bag that blows itself up until it bursts—which had put the nation in a flutter in "seventy-three." Then there was the "Bumard" Silver Dollar, the Divided Greenback, the Cap of Labor, and the workman's Empty Dinner-Pail. All of these, and others, have passed into general use since. Each was an individual expression of some existing idea or condition which by strong, sure evolution found absolute embodiment and became a pictured fact. We can no more efface them now than we can alter the characters of our spelling-book. To HARPER'S WEEKLY and to Thomas Nast the nation is indebted for these symbols which have given the American political cartoon a foremost rank in the art of nations.

HARPER'S WEEKLY and its cartoons played a chief part during the campaign of 1876 and 1880. The Republican National Committee thanked Nast for his services in the Hayes-Tilden campaign and tendered him a check for ten thousand dollars, which was brought to him personally by one of the secretaries.

"You may tell the committee," said Nast, "that I am very grateful for the recognition, but I have been paid by Harper & Brothers, and I cannot accept it."

When the secretary returned with the check, Senator Chandler was astounded. Mr. Hayes smiled.

"Nast was the most powerful single-handed aid we had," he said.

In the campaign of 1880, Nast refused to introduce Garfield into the pictures, though he did not hesitate to satirize Hancock with telling effect. Nast was never satisfied with Garfield's Crédit Mobilier explanation, and he did not then highly regard Arthur. After the election, when the Garfield-Cooking feed seemed about to disrupt the party, and Vice-President Arthur made a trip to Albany to confer with Senators Platt and Conkling, apparently for the purpose of winning them back to the administration, Nast cartooned him as a bootblack polishing the disgruntled Senators' shoes. The artist

lived to deeply regret that cartoon, for when Arthur succeeded to the Presidency he proved so able a chief executive that he won the respect and even the love of his enemies.

The sequel of the Albany incident occurred on the eve of the national convention of 1884. Arthur had become Nast's candidate for the nomination, and he was also favored by certain members of the Harper firm. With J. Henry Harper, Nast called on President Arthur at the Hoffman House for the purpose of urging him to make a more definite personal effort to win the nomination. They believed that a combination might be made which would defeat Blaine, whom they bitterly opposed, and leave the victory in Arthur's hands. The President listened to their suggestions and admitted that he greatly desired the honor of the nomination, yet he would make no special effort to obtain it.

"I will accept it, of course, if it falls to me," he said, "but I can do no more. I ought not to do that. I am far from a well man, and it is likely I shall not survive the administration. No, I can't do any more. I can't do it!"

Nobody spoke for several seconds; then Arthur regarded Nast gravely.

"Do you recall that once you caricatured me as a bootblack," he asked, "polishing the shoes of Platt and Conkling?"

Nast nodded unhesitatingly.

"I do, Mr. President," he said.

"It hurt me," continued Arthur. "It hurt me terribly. Yet you were quite right—far more so than you knew—though not altogether in the way you thought."

Then he related the circumstances of a political bargain whose harvest had been party disgrace, which had ended with national tragedy.

"With the Maine election of 1880," he said, "matters began to look bad for our ticket, and Mr. Garfield agreed with me that we must in some manner enlist Conkling and Platt in our cause. I advised that we come to New York to see them, and we did so. Meantime they had heard we were coming, and had taken train for Albany. They refused to meet Garfield, who then suggested that I see them and make any arrangement that would bring them into line. I saw them, and they at first declined to believe in my assurance of Garfield's good faith. 'Gentlemen,' I said, 'I pledge you my word as a man of honor that Mr. Garfield made me that promise, and I will undertake to see it carried out.'"

It was then understood among us that Conkling and Platt should control the New York patronage, and it was with this assurance that they worked for the ticket. Grant came back from the West and took the stump with Conkling, and everything was done by Platt and Conkling as agreed. You know what happened after the election.

(Continued on page 30.)

AN AUTOBIOGRAPHICAL VIEW OF THE "WEEKLY"

By W. D. HOWELLS

THE men who were young when the first numbers of HARTER'S WEEKLY appeared were much older than these elders could have imagined. Some of them were, in fact, as much as twenty or twenty-five years old. One whom I knew best was in his twenty-second year, and he was by no means the youngest of his acquaintance in a pleasant little Western capital: students of medicine and law and theology, and even the new science of journalism. They were all persons of a certain literary culture, with the generous wish for more, who, when they were not meeting the young ladies of their circle at dances and picnics, were calling upon them in the evening with an intimacy now unknown, and exchanging with them impressions of the books or the magazine they had last read. They read HARTER'S MONTHLY mainly for a novel called "The Newsmen," then appearing in it; and they read the *Atlantic Monthly*, for the sake of feeling themselves a little higher in the air; and some of them read the English reviews, and *Blackwood*, and, with a somewhat troubling qualm, the *Saturday Review*, then so new and terrible; also, *Household Words*; and a very charming periodical, too short-lived, called *Once a Week*, in which there were all sorts of agreeable tales and sketches, and poems suited to their impressionable time of life. The range was restricted, according to the modern notions of reading, but perhaps within it there was as much good portage for the mind as there is in the vast array of periodical literature, which now offers an acreage of fodder just copulation to a famine apparently insatiable.

After fifty years it would be hard to say how long the name of HARTER'S WEEKLY preceded its appearance among these readers, but it could not have been very long, and it was a well-remembered fact when I came to join their circle, and bring to it a stock of literary enthusiasms which I am glad to say promise to outlast my time in its original abundance. For me, it was, or would have been enough to know, upon the most reliable literary, that the editor of the new publication, which we felt to be quite equal in esthetic quality to *Once a Week*, was that beloved George William Curtis who had laid his spell upon our hearts in his *Prize* and *J* papers, and on our consciences in his appeal for bleeding Kansas. To hear that he wrote not only the editorials of the new *Journal of Civilization*, but also the light and graceful essays of "The Locomotive" in it, made one's cup run over, and gave one the sense of being in some of the greatest literary secrets of the time. The note of that time was anonymity, and to say that you knew who was the author of this or that article or poem or story was to seduce yourself one of the elect who had access somehow to the sanctuary. Perhaps you did not know, but had only confidentially heard; it was enough; in such a matter you could not measure terms. We sought the note of anonymity from the English, whom we viewed modestly to emulate in all esthetic things. Rivalry was too bold a thought for our priority; but we had then a humorous journal which we hoped was as good as *Punch*, when we were very daring, and which was only too certainly the same as *Punch* in many of its satirical attitudes. *Vanity Fair*, however, could not help being native, at its best, in joke and picture; and here now in HARTER'S WEEKLY was a publication which, without trying to be like the *London Illustrated News*, was quite as eager in an endeavor to hold the mirror up to passing events, to contemporary celebrities, to imaginary characters in verse and prose, and was at the same time native, and willing to be more native. How good those old wood-cuts were, in which half a dozen engravers engraving like one rendered in a composite block a fire of our own still raging, or caught with their unrelenting eyes of our trains in the very net of going over a bank or breaking through a bridge! Were they better than the half-tones of the present day? We thought so then, but perhaps that might have been because we had then no half-tones to compare them with.

In spite of Mr. Curtis's authority and his noted principles, the WEEKLY was of a tempered cast of antislavery opinion, and it could not be said to glow with anything like fervor till the great parties joined issue in the struggle which eventuated in the civil war. After that it was all of one Republican mind till the time of the great

readers followed him. But I am not going to trace the public history of a journal which, somewhat shortening its trapezoid and changing the fashion of them, is still of an active force in civic affairs. Yet it would be disclaiming acquaintance with it altogether if I failed to note its excellence under the management of Mr. Henry Loomis Nelson, or to remember that the great and true Carl Schurz continued the tradition of those masterly leaders which were really as well as technically leaders.

A mystical fact of journalistic psychology, which I have elsewhere noted, is that the spirit of a strong personality in the founder or among the founders of a periodical seems to remain with it, perhaps waning rather than waxing in some cases, but in nearly all an appreciable presence. Possibly this is a subjective effect with the reader, but I think not, and I believe it now it was the evil will of HARTER'S WEEKLY to turn yellow, the white traditions of its earlier days would show through and keep it from being anything worse than a pale effluvia. It continues, and it must continue not only for the purpose of its actual management but by the impulse of its origin, a force for good in public affairs, of decency in manners, of conscience in morals, which without unconsciousness of purpose may be trusted in all crises on behalf of the right.

In literature it has never ceased to be an incentive and an example, and a study of its rich past would be full of surprise as well as of pleasure. Few distinguished writers of the last fifty years have found it inhospitable to their talent, and it would form almost a record of the best that has been done in fiction during that period. To establish one's claim to remembrance with the least of those great ones might well tempt one to that vice of autobiography to which few of us can claim to be superior, and to which I will now yield as gracefully as I know how. All beginnings are obscure, and I will not be sure that I began contributor here with something as unworthy of its high shades as a farce, but it seems to me that it was so. It was in a Christmas number, almost as good as the present, twenty years ago, that my name appeared, and from these holiday columns at once won the popularity with amateurs which is so much more flattering to the pride than to the pocket. Even within a few columns of its appearance was such that the editor wrote me for another in terms of praise so unwary that I promptly advanced the rates upon him. I was down in Italy that year, and one has always so much more courage at a distance. I said that most of my farces had been winter-killed in that severe climate, and I was obliged to ask more than was congenial to me for the only one that had survived. He took it at my price, but by a juggle which, in spite of frequent experience, I do not understand yet, the piece was conjured into the shade of the editor of the *Weekly*, who thereafter took all my farces. I continued to advance the rates upon him from time to time, and if I never quite attained my ideal of a rate with him, it was rather his fault than mine.

If I am proud to remember that two of my novels were printed in the WEEKLY, it is partly because I did not feel them to have been unworthy of the place. I have ventured to think that they were two of my best, and if this is not saying much, it is at least the most I can say for them. But the first demand for me the novel experience of a serial running its long course through a periodical with no sign of consciousness from the press that it was doing anything of the kind. Perhaps it was because the press does not condemn to notice what is passing in a weekly newspaper, a congener of its own, but in my modesty I chose to think it was because my work was unwelcome; I think differently now. The editor made no sign of condemnation either, and I would not have had the courage to put up the rates on him for another novel if I had been in Kansas, much less in Italy. I did with all my might. What was my astonishment, then, my stupefaction, when this dead serial rose in its indignation of being got upon its feet, and walked off faster and further than any other novel, save one, that I have written. The mystery is one I will not attempt to explain, and like other miracles it refused to repeat itself. The next novel that I printed in the WEEKLY struck a very fair gait when it came to life in a book, but it was not the pace of the earlier

George William Curtis
FROM A WOOD-CUT MADE DURING HIS EDITORSHIP OF
"HARTER'S WEEKLY"

champion. It was a good piece, however, and I would earnestly advise any one now writing a novel—and there must be more than one doing it—to print his or her fiction in the WEEKLY, if he or she can.

If the present management will allow me to burn a little incense to it as near the editorial page as this, I will say that the high grade of the WEEKLY in fiction has been admirably kept; and I do not say this because I have myself at this moment a novelette serializing in its columns. For the sake of my thesis I would rather it were not; but happily I can allege other proof from my recent experience in looking through the various Harper periodicals for the material of those Harper Novelties which so small a public knows I have been editing. It is a delightful, refined and superior public, by no means in these things one desires quantity as well as quality. What I meant to say, however, was that I had found the short stories in the WEEKLY of recent years often as good as those in the MONTHLY—that is to say, the very best of any short stories going. They are not, perhaps, as psychological always as the MONTHLY's stories, but this difference may not always be a defect.

One start an autobiographer, and there is no saying where he will stop, especially if he can pretend to be talking about something besides himself, and I have this advantage in the present case. The history of the WEEKLY involves my own still farther than I have already said, for at one time, quite within the memory of men now living, if their memory is good, I wrote a critical and sociological department in these pages. Criticism is the least repaying, morally and spiritually, of all the different kinds of literary work. Unless you are satisfied with whatever you do, and are very easily satisfied at that, you never satisfy yourself in it. But somehow, in that well-nigh forgotten department, I had more pleasure than the life writing usually gives me. Perhaps, as I have suggested, I was too easily pleased; but now and then I was aware of saying something true, something fit, concerning the pretension of the books

poising under my eyes, of which I hope I shall have the merit, as against those sins which no reviewer can hope have failed to be recorded against him. I have still a sense of being left absolutely free by the higher powers, and with the secret dread which freedom inspired there was a joy which cannot be forgotten. Here and there it was my good fortune to befriended an obscure and struggling authoring, who, when he came to his growth, did not always forget that I had been his friend; though such things now and then happen. Even a bit of perilous opinion outside of literature was sometimes allowed me; I was once suffered to intimate, for instance, that socialism did not mean the division of private property, and even to question other delusions of the capitalist heart; there really is such a heart.

In fact, and this is the application of a text which I fear the reader will have found too personal, the genius of the WEEKLY, as well as of the other Franklin Square periodicals, seems to me to have been always Freedom. In moments of very imaginative vision I have sometimes seen Franklin Square, or its periodicals, in the likeness of that Anglican Church which seems, rather more than another, to have been tolerant of so many shades of belief, from a high Ritualism down to the depths of lowest Evangelicalism. I fancy that the liberality there is really of an arch-conformist temper in letters, with a settled belief in the sacredness of the status, and that if it failed to the prompting of more ecclesiastical and it would long ago have related me to the secular arm for my many literary and economic heresies. But under the shelter of its protecting arm almost any sincere conviction is safe, and as I have almost and its inspiration and aspiration is Freedom, limited, of course, and I doubt whether some things ought to be as free as others. I think this is what makes the WEEKLY, after fifty years of use and ornament, a living force, and I think it is expensive—another pinch of increase for the actual régime—of the continuous spirit of the journal which, with all its faults, is now, as it was in the beginning, a Journal of Civilization.

"HARPER'S WEEKLY" AS A "FIGHTING ARM"

By HENRY LOOMIS NELSON

EDITOR OF "HARPER'S WEEKLY" 1864-1868

IN 1864, when I became its editor, HARPER'S WEEKLY was still one of the strongest of the fighting powers for the insurgents, and especially, in that year, for the Independents who believed in Grover Cleveland and his works. After George William Curtis's death, the house of Harper resolved to maintain the traditions and to uphold the character of the editorial page which he had edited. There was no hesitation as to what should be done. The combative and reforming political side of the paper was not to be abandoned, and Curtis's policy was not to be changed.

It ought to be said here that it had long been obvious that the publishing house might well consider the propriety of changing—perhaps of rejudging—the editorial method of the paper. There were many reasons in favor of making all the printed pages of the WEEKLY, so far as these were not descriptive, literary. If the possible revivals of a purely literary and pictorial paper were alone to be considered, the commercial argument might well have turned the scale in favor of dropping the editorial page. It was undoubtedly paginated, and it was entirely free from the unintellectual vice of partisanship. Worse than this, it had once led the Republican party, and had then committed the grievous sin of letting a party nomination for the Presidency, as it had even before then enormously aided to make Grover Cleveland Governor of New York. There is nothing distracting to a daily newspaper in this sort of thing: no daily newspaper that is generally recognized as possessing mental equanimity is expected to follow party leadership. But, for some reason or other, a weekly paper in the strenuous times of the early '80s was not expected to offend the surviving prejudices of the war, the period of which it had presented in such admirable pictures, and which its editor had cheered on with a pen so eloquently stimulating. Then there were other reasons uttered, or advanced (some reasons may with special propriety be said to be advanced because they possess so obviously the shy and experimental characteristics of a skunkish-life that it defies feeling its way); and reasons may be surmised up by saying that they took for their motif the suggestion that between pictures and wood-engravings—soon to be photographic reproductions—there was an incongruity, an insignificance that, of course, always disgraced the mind, and perhaps stirred up the temper, of those who disagreed with the editor.

But, indeed, there was a good reason why political editorials might well have been dropped; and perhaps they might have been dropped. In fact, if the Harper generations had not been marked by obstinate ways and an exceeding great loyalty to any course of conduct that they had deliberately adopted because they thought it to be right. To return to the objector's manner of thinking, there was no longer the need that there had been for the WEEKLY's editorial page. It had nobly performed its patriotic duty, and other presences are now uttering daily and weekly the political truths of peace, while most of those who were well considered by the thinking were taking the sure view of moral questions, even of economic problems, which had been advocated by Mr. Curtis. Then, again, the WEEKLY's editorial page had spoken Mr. Curtis's soul. Through the page he had come to be more than its editor. He had been a party leader,

and now that the party's propaganda and the party's candidates were set to his last, he was the leader of the great unwarlike and pure-minded political workers and thinkers who had ever appeared in American politics. Perhaps this novel qualification so far, at least, as to say that the "Anti-Slappers" of 1862, who would have had the encouragement of Curtis, who deliberately gave up all opportunity of political performance, were the equals in uprightness, in almost idealistic devotion to civic duty, as were their prototypes among the Republicans.

Although the editorial page as the voice of Curtis, it spoke the conscience of the house of Harper. When Curtis returned from the convention of 1881, which nominated Blaine, he had no knowledge of the state of mind that he would find prevailing at Franklin Square. But before he had reached there, the Harpers who were then in control of the house had resolved, with a unanimity that astonished the editor among them, that they would rather give up the publication of the paper than support Blaine, and they left that the hope of the position which had been maintained before the convention compelled them to do one thing or the other. Curtis was, after all, writing in their name. He was known as the editor of the paper. The thoughts which he expressed were his as fully as were the words in which he uttered them. The page spoke his mind, his conscience, and his eloquence, but the house supported him, and if it had not he would not have had his pulpit.

The campaign against Blaine was entered upon in the full consciousness that rebellion against the national ticket would result in a very serious money loss. After that, it was clearly impossible to hope to prevail upon the Harpers to give up what Allen used to call the "fighting arm of the House." A firm of publishers who are ready to sacrifice many thousands of dollars rather than abandon the cause in which their editor had led under their banner, could not be persuaded to abandon the cause now that the editor was dead—lying, as they say, in the harness.

The men of the three generations who exercised supervision over the WEEKLY and the other periodicals published by the firm were, one after the other, Fletcher Harper, Joseph W. Harper, and J. Henry Harper. Curtis was in intimate and confidential relations with all three, as is revealed by the correspondence between himself and them, a correspondence which shows the essential sympathy that existed between the writer and the publishers, and the properly dominant influence of the writer in his own sphere. That there were differences sometimes in matter of course; that they were settled invariably in such a manner as to leave Curtis's page the expression of himself is a fact which must know only in the hearts of many editors whose relations with their publishers are very far from being what Curtis's were with the Harpers.

It is true that I am asked to write about the period of my own editorship, and that I seem to be writing about Curtis's editorship. But the WEEKLY as it was after Curtis's death in 1892 cannot be understood unless we understand the WEEKLY that he left, and the attitude of the firm towards it. Curtis's friendship for the elder Fletcher, of the first generation, was best expressed in a note which

he wrote to his friend, Charles Eliot Norton, on Fletcher's death. It is unnecessary to quote the note, or to say more than that it contained a tenderness of allusion to the dead which is an assurance of a deep affection between the man who wrote and the man of whom the writing was. There seems never to have been a doubt in the minds of any of these three Harpers about the WEEKLY's page of opinion. So that, in 1862, the first thought of the two survivors was to find some one who would carry on the page as Curtis had conducted it, and one whose name would mean to the independent political thinker, voter or not, man or woman, that the spirit of Curtis was to continue to animate the WEEKLY. Loyalty to the memory of the man who had made the page, in whom they trusted, and with whom they sympathized, by the side of whom they fought, not passively, but actively, existed; but it was not a conscious possession of these two Harpers, one of the second and the other of the third generation. It was as involuntarily theirs as was the breath of their nostrils.

So it was that Carl Schurz came to write editorials for the WEEKLY while Curtis lay in his last illness, and continued to do so for a time after his death. It was a most intelligent and fitting selection, that of the man who had been Curtis's close friend since the Grant days when the one was a Senator and the other was chairman of a commission that began the admirable work of civil-service reform, to which both contributed so much successful energy, each one to the end of his days.

It was thus that the WEEKLY continued to be the "fighting arm of the house." Looking back at the strife which it waged, a strife that sometimes distracted souls that "liked the paper for its pictures," it is possible to say that the WEEKLY never advocated any thing of which Curtis would have disapproved. It is true that it did not advocate all in which he believed; it did not, for example, continue to advocate woman suffrage, but its editor had so deep a respect for the memory of Curtis for his significance to the WEEKLY, sharing thus the general and friendly Harpers' opinion, that it was admitted to the paper that antagonized Curtis's view. And there was much pressure, indeed, brought to bear, in 1894, by women against woman suffrage, when the strong attempt, which we all recall, was made to secure in the proposed new Constitution a provision granting to women the right to vote.

In the years which followed Curtis's death the paper fought many battles, and it continued to fight hard, thus winning both friendship and enmity. It continued a leader in the army of independence, and being consistent—consistent with itself as it was, and consistent with itself as it had been under Curtis—it could never consciously support either party. As it advocated the truth—the truth as it saw it and had seen it from the days of its birth—it could not be always Republican or always Democratic. It was a champion of civil-service reform, and a champion of all politicians of whatever party, who were endeavoring to evade the law which public opinion had compelled them unwillingly to adopt. It was, as it had always been, one of the most insistent advocates of international copyright. But these questions, both of which have been with us so many years and are likely to be with us for so many years to come, were overshadowed, during the few years of the time which we are now considering, by two episodes in our national history—one was the new historic attempt to prevent upon the people to establish what its advocates used to call the homestead standard; the other was the great war which has made a President and has set up the government of the United States over colonies, or dependencies—call them what you will, since this writing is not controversial. These questions were not partisan, although some partisans have profited by reason of them. The turmoil of the war against the establishment of silver non-metallics under a false designation, restored the oblique sunlight atmosphere to the WEEKLY—not to its editorial page alone, for the cartoons of Rogers on this occasion succeeded those of Nast of the earlier period, and they rose to their opportunity quite as frankly, and rendered service quite as forcible. We stood behind Cleveland when he insisted upon the repeal of the McKinley law, and we fought with all our might, with pen and picture, against Bryan and for McKinley, in 1896, not favoring McKinley's tariff policy, as Curtis had not, but favoring actual money, as Curtis would have done. This campaign was very absorbing. Perhaps it was marred by much exaggeration; perhaps the fears of men verged on unreasonable

panic. But the WEEKLY's contribution to the music of the band was as vigorously played as that of any of its associates, and it was grateful to its constituents, among whom again were many of those who had followed Curtis in the war, in the reconstruction period, and in the contest for decent government, but who, since the Blaine episode, had had more regard for its artistic taste than for its political judgment.

The paper did not confine itself to arguments and appeals to the people in general. This was an era of processions and badges, and in the great parade of the gold men—who pinned brass bugs on their coats as modest insignia of their opinions—the WEEKLY led the Harper army up Broadway. Doubtless Curtis, too, would have marched under the lead of the ex-cavalier and whose literary value was now forever fixed. It was a day when all men, the most reserved, sedate, even shrinking, were possessed by a frenzy to be counted against Bryan.

Then followed the preparatory days of the Spanish war, and now the WEEKLY did its utmost to prevent the conflict. It did not believe in expansion. It thought that we had enough to do at home, and that we would not well perform the tasks of empire. The thought of the Republic engaged in the task of ruling other people was repugnant to the paper which had struggled for the enfranchisement of the slave. The old arguments are familiar. They are not stated here, or alluded to, in order to revive the controversy, or to point with pride to the fact that the evils which we predicted, the possibility of which was scornfully denied by the "manifest destiny" people, are now accepted by them—scornfully manifestly—as the inevitable consequences of our great conflict. In this period, the paper was naturally marked by some exuberance, the paper spoke for the Harpers as well as for the editor, and, generally, it may be said that there was there a publication which had opinions to express, and which expressed them in a manner that was intended to be serious, whether the editor was more intelligent and cordial sympathy than had the editor of HARPER'S WEEKLY.

It is as pleasant to look back to those days, not so far, after all, in the past, as it will be to those who have followed to indulge in reminiscences of their own times. The big family of Harpers that we all were is one of the pleasantest of the memories—the partners with all the others engaged in doing the work in which all were interested—obedient to the old rule of the civil law which expressed so well the cooperative principle—*Quod omnes . . . tangit ab omnibus approbetur*. There was just that much of happy friction which is the consequence of public life together to the same end, without which no errors would ever be corrected and no course would ever be straight. Possibly some of the more stringent business minds of other establishments derided the tea which used to be drunk in these days in the editor's room every afternoon, but the hour was a pleasant one, and if it is thought to have been wasted time all that we can do to indicate our tastes and our occupations is to print to the paper as we made it. Is there too much Babel in its columns? They were filled, outside of the editorial page, which grew under the misfortune to have to be measured by a high standard, by Hervey and James and Mark Twain, and by Martin, whose regular department was not divided in our time, although John Cortin's dramatic department—his very first—furnished the cause for the gentle stimulation. Henderson and Coffin and others were our music and art discourses, and when the bloody time in Cuba came, the cheerful Harding, Davis, John Fox, and, above all, Frank Millet, told us of the doings of the army and navy. Millet coming from London in answer to a cable asking him to go to the Philippines. It was one summer morning that he landed in New York, and there was just time for him and the writer to take lunch at the Century as he rushed to the Forty-second Street station to take the first train for San Francisco, the only train that would catch the transport upon which he was to sail to Manila with General Merritt.

There might be much more said of the WEEKLY, much that would seem like tattling to those of whom the WEEKLY has never been a part; but there surely can be no objection to my saying, for myself and for the faithful friends who worked with me, that to us there will never come a day of toil, joyful as it may be, that can take away, or obscure, the pleasure of the days in Franklin Square where we worked in the house of Harper in causes that seemed to us good, and for objects that appeared to us worthy.

RECOLLECTIONS OF A "HARPER'S WEEKLY" CARTOONIST

By W. A. ROGERS

IN order to tell the story of some of my early assignments as a "special artist" for *Harper's Weekly*, it will be necessary to give the reader a glimpse of the old art department as it existed at a remote period during the last century. This also has the advantage of giving an antique flavor to my story consistent with a fifteenth-anniversary number. When I entered the department I was under the supervision of Charles Pearson, a man of fine intellect and wide sympathy and discernment.

He did for the men who came under his influence pretty much what Mr. Blawie has done for the people whom we now know as stellar lights in theatrical skies. He picked out with unerring judg-

ment the points of excellence of each new recruit, and cultivated those qualities with soldierly care.

In those days news events were illustrated through the medium of drawings on wood, which had then to be slowly and laboriously cut, line for line and tint for tint, by skillful engravers. This necessitated a division of labor by both artist and engraver in order to prepare the plates in time for the day of publication. After an outline had been made by one of the artists, the block was taken apart into as many, perhaps, as eighteen pieces, and each man given his portion to work on. This sounds like a very mechanical, artistic way to produce a picture, but it was so such work as this that Edwin

One of Mr. Rogers's Best-known Cartoons
THIS CARTOON, SHOWING MR. BRYAN INSPIRED TO HALVE A SILVER
DOLLAR HOISTING ON THE NECK OF A WORKINGMAN, APPEARED IN
"HARPER'S WEEKLY" OF AUG. 22, 1890

A. Abbey, Arthur B. Frost, and Charles S. Reinhart, and a score of others whose names are household words, received much of their early training. Of course all these men were working outside the art department, from nature, whenever the opportunity offered, but the interchange of ideas and methods, as the little blocks were passed backward and forward from one man to another, were invaluable to the young artist.

Then with it all and through it all were the guiding words of advice and experience from Mr. Parsons. I have often compared the outcome of this old method of work to the excellent results obtained by the old-fashioned cross-stitch school, where all the young scholars bear the older ones revise their lessons, and thus, if at all alert, learn half their next year's tasks in advance. So it was that I had the inestimable privilege of hearing and seeing Mr. Abbey "revise." Although a very young man at that time, he was beginning to do his great work on the Herriot series, yet he did not hesitate to lend a helping hand at a "news" block when he was needed. As I said before, Mr. Parsons had a faculty of finding out a raw recruit's good points, and, as I thought at the time, he most unfortunately discovered that I could draw very round wheels, and I saw myself in danger of being handed down to posterity as the wheelwright of *HARPER'S WEEKLY*. I was kept at the most grinding mechanical work by that dear and wise old man for what seemed to me an interminable period. Once in a long time I was permitted to go out and try my wings; but, after a day or two, I was back at my wheels or fan-crowds or architectural details.

My first assignment of any importance came during the administration of President Hayes. I was sent to Minneapolis to portray the incidents of his visit to a State Fair held there in the late summer of 1878. This I did to the best of my ability, and was preparing regretfully to return to New York when a card was handed me at my hotel inviting me to call at the office of one of the directors of the fair. At the address given I found a grizzled old soldier. His first words sent a shiver of blood to my finger-tips. "Young man, how would you like to see the real Northwest?" Then he continued: "You are a long way from New York; why not go a little farther? With that parcel of yours you can make a record of your trip which will be very valuable not only to you but to the country through which you travel." This is about all I recollect of his conversation, except that, when I replied I would have to write to Messrs. Harper & Brothers for permission, the old gentleman sat up, looked me straight in the eye, and said: "If you want to go, telegraph them you are going. Come in and see me to-morrow."

I went out of that office with visions of the wild life of the plains dazzling my sight; but then the call of duty came, red, severe, "back to the round wheels, back to the grind of Franklin Square." Still, New York was a long way off; and I stood at the gates of the Northwest, and the old soldier was holding them ajar.

Promptly at the opening of business hours on the next morning I appeared at the old gentleman's office. He was expecting me, and he asked me no questions; instead, he handed me several large envelopes which he said contained letters to commissioners of military

posts, owners of stage-routes, post-trailers, and so forth. "You needn't bother looking these over now," he said, "but they may be good things to have with you later on." Then he went over with me a map showing the "Bad Lands" of the Upper Missouri and the then new country of Manitoba, with its great lakes and rivers, and its Hudson Bay ports, with headquarters at Fort Garry. The record of this trip, which I started on next day, is "another story."

Suffice it to say I saw all the picturesque side of frontier life as it existed then, with its soldiers, Indians, and plainmen on the American side, and trappers and voyageurs on the Canadian border. Three months of freedom I enjoyed among the red-roofed huts of the Bad Lands and the waterways of Canada. Twice a telegram, repeated, countermanded, covered with mysterious signs of forwarding and receipt, caught up to me. Under all the hieroglyphics I could dimly see the words, "Come back at once. Harper & Brothers." But the spell of the wilderness was on me, and I only replied, "Please send one hundred dollars."

During all this time I accumulated an increasing roll of sketches. My note-book had early been filled to overflowing, and wrapping-paper, purchased of post-trailers, had taken its place. The frost and snows of the late autumn at last drove me back to New York. I had played hocky often enough at school to know what sort of reception awaited me at Franklin Square; and when I saw Mr. Parsons's fare, with sorrow and displeasure written all over it, I was not surprised. He informed me that "the house" was extremely dissatisfied with my behavior, and personally he was very gravely disappointed. As he turned away, he said, "I am going downstairs to make as strong a plea for you as I can, but I do not hold out any hope that your services will be retained."

The moment he left his little office I lugged into it the most disreputable, travel-stained bag ever seen in that neighborhood; and while that kindly gentleman was pleading my cause before, I plastered his sanctum from mantelpiece to floor, covering desk, table, chairs, and all, with sketches of everything I had seen on my runaway trip. I was just opening another mud-stained parcel when Mr. Parsons, who was very near-sighted, returned. There was a sorrowful expression on his sympathetic face, which suddenly changed to a dead one. Then, as he saw the mass of material I had brought back, his whole countenance cleared, and the enthusiastic, appreciative spirit of the man shone in his face. We planned pages and double pages and more pages for the *WEEKLY*; finally, Mr. Parsons brought out from Mr. Allen's safe the MSS. of several articles on "The Homestead Hudson Bay Company," which had been laid aside for lack of suitable material for illustration. I had the pictures for these, too. Thus my runaway assignment, to which I assigned myself, ended happily for all concerned; and, to show how they appreciated a good joke on themselves, Messrs. Harper & Brothers sent me with almost a free hand, the next year, to Colorado.

The Silver State was then booming with a mining fever that eclipsed anything since "forty-nine." I saw, depicted before my eyes in real life, many of the characters and details of the stories of Bret Harte. On this trip I illustrated five articles for *HARPER'S MAGAZINE*, beside making a number of drawings for the *WEEKLY*.

A Cartoon of Influence in the Presidential Campaign of 1896
OVER THE TITLE, "THE BEAULT PUBLISHING CO." MR. ROGERS DEPICTS
THE ACTIVITIES OF THE TWO PRESIDENTIAL CANDIDATES AT A
CERTAIN PERIOD

The saddest as well as the most difficult and trying assignment that ever came to me was in connection with the assassination of President Garfield. Unhappily, the assassination of a President is not so remote a happening but that the emotions excited in every breast throughout the country by this hideous crime are known to all. Think, then, how delicate was the task of getting an authentic sketch of the stricken President without wounding the susceptibilities of those around him. This I did by going straight to headquarters, frankly and simply, on the ground of a nation's interest and sympathy; and the sketch was made with the consent of the family and the attending physicians.

On his great tour over the country during his first term it was my privilege to accompany President Cleveland. The hospitality of a whole nation was lavished on the President and his young and beautiful wife. On this trip Mrs. Cleveland was assured a hundred times of a unanimous election if she were running for President. I am sure our honored ex-President will pardon, after the lapse of years, a little inside history, even a little joke on himself, connected with this journey. But first let me preface it by use myself.

We had sprung around half of the circle—Indianapolis, Chicago, St. Paul, and St. Louis, and finally reached Memphis, where we were literally overwhelmed with Southern hospitality. They simply could not do enough for us, and the very stranger one met on the street insisted on entertaining us in some way. Just before time for our train to leave town I was called upon, at my hotel, by a gentleman who said he was commissioned by the Blank Brothers to present the three members of the press accompanying the President with three bottles of very old whiskey, "made in Maryland by their grandfather before the war, sir," and from a value which he carried he produced three bottles in bright yellow wrappers. My baggage was already on its way to the train, and I had with me not only my overcoat and a small hand-satchel. I parked one bottle in the satchel, and the other two I carefully placed in the pockets of my overcoat, which I carried inside out over my arm. No carriage being obtainable at the hotel door, I started to walk to the train, endeavoring, meanwhile, to look as unobtrusive as possible.

Half-way down the block I was overhauled by a beardless old gentleman with long white mustache and a grayer, who said he had seen me with the President, and knew I was one of "our honored visitors from the North," and wound up by expressing the pleasure of buying me a drink. I replied, while the bottle in my coat merrily clinked together, that I never drank. "Then come, sir, with me to a friend of mine around the corner; he has some fine old Maryland whiskey made before the war. And I will ask you, sir, to convey a bottle of it to our honored President, who, I am sure, drinks at least a little for his stomach's sake." I feared I would have to have time to catch the train; but the old gentleman said he would slow me a short cut to the station, and insisted that I carry the bottle from "an old Confederate veteran in his honored President."

There was no escape. So around the corner to Blank Brothers we

went, and I was presented with a bottle in a yellow wrapper to carry to the President. There was no place left to conceal this bottle, besides, it was a present for the President of the United States; so, with the little satchel in my left hand, my overcoat carelessly thrown over my left arm, a large, yellow-wrapped bottle in my right, and accompanied by a third old gentleman who was very much down, I arrived at the rear of our special train. Here a dense crowd blocked the way. To my dismay Mrs. Cleveland was the first to spy me, and at her suggestion I was rescued and brought on board by two stalwart train porters, one of whom insisted on taking my coat, out of which protruded two yellow-wrapped bottles, closely matching the third in my hand. "For the President," Compliments of the Blank Brothers," was all I had breath to say; and the one bottle concealed in my hand-bag was all the three "honorable correspondents" got for their share.

We proceeded from Memphis to Nashville, and thence to other Southern points. On the way over the mountains we had some trouble with our heavy Pullman cars, the light passenger locomotives being hardly powerful enough to haul the train. On one occasion we had stopped for a change of cars at a little mountain village, and the citizens, knowing that we must stop, had arranged a reception to the best of their knowledge and ability in honor of the President. There was no depot, only a platform, and they had laid on this a red and yellow rag of the fairest tints obtainable, and two new red-plush arm-chairs. Between the chairs was a little roundstand, shining with new varnish, and on the stand a figured glass vase in which stood a few flowers. While the engine was being changed, the first citizens of the village approached the train and invited the President and Mrs. Cleveland to alight and enjoy the hospitality of the hamlet. I don't know whether or not the President, if by himself, would have gone down and sat on that red-plush chair, but Mrs. Cleveland never hesitated a moment, and he had to follow. By no sign could it be discovered that she considered the spectacle of two people sitting out in the glaring sun on red-plush chairs as anything out of the ordinary. The train halted and switched about after the sinuous way of railway trains, and we on board obtained sundry glimpses of a very serious-looking gentleman and a very beautiful smiling lady enthroned in red plush, and being stared at by a circle of bushy mountain people who apparently could not get up courage to approach and speak to them. Then we hurriedly pulled away, and on and on we went, through a deep cut and down a steep grade, until one of the correspondents approached the conductor and inquired when we were going back for the President. "Great Scott! sir," exclaimed that official. "Isn't he aboard?" Not until the bottom of the grade was reached did the train come to a stop, and then the miserable little engine could not back it up again until we ran out a mile farther to get a good start. An hour later, when we once more ran alongside the platform, the President was napping his brow wearily. Mrs. Cleveland, however, had by that time captured every vote in the county.

REMINISCENCES OF A RECENT EDITOR

By JOHN KENDRICK BANGS

EDITOR OF "HARPER'S WEEKLY" 1888-1891

THE request of the present editor of HARPER'S WEEKLY, that I prepare a short reminiscence article on the subject of my editorship of the periodical over which he presides with such grace, is proof positive to me, if any were needed, that no matter how many may try to reform, nor how honestly he may refuse to see that he is wrong, his position as editor is bound to rise up to plague him. After several years of freedom I had by slow degrees come to forget that I had ever been the editor of HARPER'S WEEKLY, and when, in the course of my wanderings throughout the land, I have encountered here and there a twinkling eye directed towards me, I have permitted myself to think that this was rather a sign of welcome recognition than a possible criticism of my tenacity in endeavoring to walk the thorny path of editorship in the shoes of George William Curtis. "All is forgiven," I have gratefully whispered to myself. "My vigorous pursuit of WEEKLY laurels is forgotten and I may now look forward to an old age untroubled by the slings and arrows of outrageous critics." And then comes Colonel Harvey's invitation to rise up and perpetuate the story of this crime against civilization, the reader, and myself, upon the anniversary pages of the WEEKLY, and couched in such terms that it were childish to refuse! Nor do I wish to refuse. To decline the privilege offered me of joining in doing honor to an American institution which has survived in spite of me, would be as ungracious as the act of the rejected mother who walks at the golden wedding of the best girl of his youth. I merely wish to preface my recollections of the particular period under discussion by saying that I never asked Colonel Harvey to make me the editor of HARPER'S WEEKLY; that his rejecting me of the editorship of *Literature* and placing me in charge of the WEEKLY was comparable only to the inhuman act of the parent who yanks his small son out of a warm bed in midwinter and sends him out into the snow to see wood, and that despite the sufferings of the two years following my appointment, I have long since forgiven him for his nefarious act.

Appropriately enough, my editorship of the WEEKLY began in December. The year was 1888. A more concentrated culmination of things could hardly be imagined. It was not only the freezing end of the year, but the equally frigid end of a century. The situation in the fire-old house with which I had been connected for a period of twelve years, a house that has ever stood for the best in American letters and life, was most aptly to be described in Riley's famous line,

"The frost is on the punkin, and the fodder's in the shock."

Hence it was that with apprehension in my soul, deep sorrow in my heart, but with fire in my "nerve," I accepted a chair which had not been fully occupied since George William Curtis passed over into the great unknown. Mr. Nelson had come pretty close to filling it; a group of very noble gentlemen in direct succession had done their best to occupy the whole of it without materially straining the structure or loosening its joints; and then with three hours' notice I found myself "horsted" with a claim admitted and recognized by the powers that were, and still are. My first sensations when I recovered from the shock of the appointment, and realized where I was, were very much like those which I imagine an immigrant who has taken up a South Dakota claim of 160 acres of land singly and alone feels when the magnitude of his undertaking first dawns upon him. There was I plunged down by Fate aided and abetted by Colonel Harvey—and let me observe parenthetically that that is a fearful combination even with Fate off on a vacation—in the centre of what I may call, merely for terms of measurement, an intellectual job-link, with no positive task for the gaudy and with all the rest of myself, hardly more than a crupper equipment. Nevertheless, the work was mine to do by a rail which at Franklin Square, to-day is then, is frequently confounded with the divine, and I went at it with all the energy that the shock of recent events had left me, encouraged always by the thought that above me, alongside and below were strong sturdy hands that would prove sustaining in the hour of trouble. With

A Sleep and a Forgetting

By William Dean Howells

A Story in Four Parts—Part Four

ILLUSTRATED BY SYDNEY ADAMSON

VII—(Continued)

WHEN they had left the higher level of the hotel and begun their elation through the long street of the town, Landeur noted that she seemed to feel as much as himself the quaintness of the little city, rising on one hand, with its narrow alleys under successive arches between the high dark houses, to the hills, and dropping on the other to the sea from the commonplace of the principal thoroughfare, with its pink and white and saffron houses and shops. Beyond the town their course lay under villa walls, covered with vines and topped by pavilions, and opening finally along a stretch of the old Cornice road.

"But this, but this," she said, at a certain point, "is where we were yesterday!"

"This is where the doctor was yesterday," her father said behind his cigar.

"And wasn't I with you?" she asked Landeur.

He said playfully: "Today you are. I mustn't be selfish and have you every day."

"Ah, you are laughing at me; but I know I was here yesterday." Her father set his lips in patience, and Landeur did not insist.

They had halted at this point because, across a wide valley on the shoulder of an approaching height, the ruined village of Posnana showed, and lower down and nearer the sea the new town which its people had built when they escaped from the destruction of their world-old home.

World-old it all was, with reference to the human life of it; but the spring-time was immortally young in the landscape. Over the exposures of green and brown fields, and hovering about the gray and white cottages, was a mist of peach and cherry blossoms. Above these the low olives thickened, and the vines climbed from terrace to terrace. The valley narrowed inland, and creased in the rudeness of the hills drawing mysteriously together in the distance.

"I think we've got the best part of it here, Miss Gerald," Landeur broke the common silence by saying. "You couldn't see much more of Posnana after you got there."

"Besides," her father ventured a pleasantry which jarred on the younger man, "if you were there with the doctor yesterday, you won't want to make the climb again to-day. Give it up, Nannie!"

"Oh, no," she said, "I can't give it up."

"Well, then, we must go on, I suppose. Where do we begin our climb?"

Landeur explained that he had been obliged to leave his carriage at the foot of the hill, and climb to Posnana Nuova, by the donkey-paths of the peasants. He had then walked to the ruins of Posnana Vecchia, but he suggested that they might find donkeys to carry them on from the new town.

"Well, I hope so," Mr. Gerald grumbled. But at Posnana Nuova no saddle-donkeys were to be had, and he announced, at the café where they stopped for the negotiation, that he would wait for the young people to go on to Posnana Vecchia, and tell him about it when they got back. In the mean time he would watch the game of ball, which, in the piazza before the café, appeared to have engaged the energies of the male population. Landeur was still inwardly denouncing when a staid, peasant girl came in and announced that she had one donkey which they could have with her own services driving it. She had no saddle, but there was a pad in which the young lady could ride on it.

"Oh, well, take it for Nannie," Mr. Gerald directed, "only don't be gone too long."

They set out with Miss Gerald reclining in the kind of litter which the donkey proved to be equipped with. Landeur went beside her, the peasant girl came behind, and at times ran forward to instruct them in the points they seemed to be lacking at. For the most part the landscape opened beneath them, but in the more distant hills it climbed into Alpine heights which the recent snow had now set to the gloom of their pines. On the slopes of the nearer hills, little towns clung here and there; closer yet fountains showed themselves among the caves and ovens.

It was very simple, as the life in it must always have been; and Landeur wondered if the elemental charm of the scene made itself felt by his companion as they climbed the angles of the inclines, in a silence broken only by the picking of the donkey's hoofs on the rude masonry of the pavement, and the posting of the peasant girl at its heels. On the top of the last upward stretch they stopped for the view, and Miss Gerald asked abruptly, "Why were you so sad?"

"When was I sad?" he asked in turn.

"I don't know. Weren't you sad?"

"When I was here yesterday, you mean?" She smiled at his fortunate guess, and he said: "Oh, I don't know. It might have begun with thinking—"

"Of old, unhappy, far-off things,
And battles long ago?"

You know the phrases used to come sailing over that peaceful sea younger from Africa, to harry these coasts, and carry off as many as

they could capture into slavery in Tunis and Algiers. It was a long, dumb kind of misery, that scarcely made as vivid a history, but it haunted my fancy yesterday, and I saw those valleys full of the fight and the pursuit which used to fill them, up to the walls of the villages, perched on the heights where men could have built only for safety. Then, I got to thinking of other things."

"And thinking of things in the past always makes you sad," she said, in pensive reflection. "If it were not for the weeping of always trying to remember, I don't believe I should want my memory back. And of course to be like other people," she ended with a sigh.

It was on his tongue to say that he would not have her so; but he checked himself, and said, honestly enough, "Perhaps you will be like them, some time."

She started him by answering irrelevantly: "You know my mother is dead. She died a long while ago; I suppose I must have been very little."

She spoke as if the fact scarcely concerned her, and Landeur drew a breath of relief in the surprise. He asked, at another fragment, "What made you think I was dead, yesterday?"

"Oh, I knew, somehow. I think that I always know when you are sad; I can't tell you how, but I feel it."

"Then I must cheer up," Landeur said. "If I could only see you strong and well, Miss Gerald, like this girl—"

They both looked at the peasant, and she laughed in sympathy with their smiling, and beat the donkey a little for pleasure; it did not mind.

"But you will be—you will be! We must hurry on, now, or your father will be getting anxious."

They pushed forward on the road, which was now level and wider than it had been. As they drew near the town, whose ruin began more and more to reveal itself in the noxious walls and windowless enclosures, they saw a man coming toward them, at whose approach Landeur instinctively put himself forward. The man did not look at them, but passed frowning slowly, and muttering and grumbling. Miss Gerald turned in her litter and followed him with a long gaze.

The peasant girl said gaily in Italian, "He is mad; the earthquake made him mad," and urged the donkey forward.

Landeur, in the interest of some lastingly forbade himself the luxury of anything like foreboding, but now with the passing of the madman he felt distinctively a lift from his spirit. He no longer experienced the vague dread which had followed him toward Posnana, and made him glad of any delay that kept them from it.

They entered the road and narrow street leading directly from the open country without any suburban limitation into the heart of the ruin, which kept a vivid image of unimpaired medieval life. There, till within the actual generation, people had dwelt, winter and summer, as they had dwelt from the beginning of Christian times, with nothing to intimate a disaster or civil salvanco. This street must have been the main thoroughfare, for stone-paved lanes, still narrower, wound from it here and there, while it kept a fairly direct course to the little piazza on a bright in the midst of the town. Two churches and a simple town house partly enclosed it with their nearest and scattered facades. The dwellings here were more ruinous than on the thoroughfare, and some were tumbled in heaps. But Landeur pushed open the door of one of the churches, and found himself in an interior which, except that it was roofless, could not have been greatly changed since the people had flocked into it to pray for safety from the earthquake. The high altar stood unshaken; around the frons a succession of statues crouched perched under the open sky, in celestial security.

He had learned to look for the unexpected in Miss Gerald, and he could not have said that it was with surprise he now found her as capable of the emotion which the place inspired, as himself. He made sure of saying, "The earthquake," you know," and she responded with compassion:

"Oh, yes, and perhaps that poor man was here, praying with the rest, when it happened. How strange it must all have seemed to them, here where they had lived so safely always! They thought such a dreadful thing could happen to others, but not to them. That is the way."

It seemed to Landeur once more that she was on the verge of the knowledge so long kept from her. But she went confidently on like a sleep-walker who saves himself from danger that would be death to him in waking. She spoke of the earthquake as if she had been reading or hearing of it; but he doubted if with her broken memory this could be so. It was rather as if she was exploring his own mind in the way of which he had more than once been sensible, and making use of his memory. From time to time she spoke of remembering, but he knew that this was at the blind speak of seeing.

He was anxious to get away, and at last they came out to where they had left the peasant girl waiting beside her donkey. She was not there, and after trying this way and that in the tangle of alleys, Landeur decided to take the thoroughfare a-hike; they had come up by and by trust to the chance of finding her at its foot. But he failed even of his search for the street; he came out again and again at the point he had started from.

"What is the matter?" she asked at the annoyance he could not keep out of his face.

He laughed. "Oh, merely that we're lost. But we will wait here till that girl chooses to come back for us. Only it's getting late, and Mr. Gerald—"

"Why, I know the way down," she said, and started quickly in a direction which, as they kept it, he recognized as the route by which he had emerged from the town the day before. He had overheard the sense of the nursery being used by her, as if being blind, she had taken his hand for guidance, or as if being herself disabled from writing, she had directed a pen in his grasp to form the words she desired to put down. In some mystical sort the effect was hers, but the means was his.

They found the girl waiting with the donkey by the roadside beyond the last house. She explained that, not being able to follow them into the church with her donkey, she had decided to come where they found her and wait for them there.

"Does no one at all live here?" Lanfear asked curiously.

"Among the owls and the spectres? I would not pass a night here for a lemonade. My mother," she went on, with a natural pride in the event, "was lost in the earthquake. They found her with me before her breast, and her arms stretched out keeping the stones away. She vividly dramatized the fact. 'I was alive, but she was dead.'"

"Tell her," Miss Gerald said, "that my mother is dead, too."

"Ah, poor little thing!" the girl said, when the message was delivered, and she put her basket in motion, chattering gaily to Miss Gerald in the bosom of their common reptilianhood.

The return was down-hill, and they went back in half the time it had taken them to come. But even with this speed they were late, and the twilight was deepening by the time the last turn of their road brought them in sight of the new village. There a wild noise of cries for help burst upon the air, mixed with the shrill sound of maniac gibbering. They saw a boy running toward the town, and nearer them a man struggling with another, whom he had caught about the middle, and was dragging toward the side of the road where it dropped, hundreds of feet, into the gorge below.

The donkey-girl called out: "Oh, the madman! He is killing the signor!"

Lanfear shouted. The madman flung Gerald to the ground, and fled shrieking. Miss Gerald had leaped from her seat, and followed Lanfear as he ran forward to the prostrate form. She did not look at it, but within a few paces she clutched her hands in her hair, and screamed out, "Oh, my mother is killed!" and sank, as if sinking down into the earth, in a swoon.

"No, no; it's all right, Nannie! Look after her, Lanfear! I'm not hurt. I let myself go in that fellow's hands, and I fell softly. It was a good thing he didn't drop me over the edge." Gerald gathered himself up nimbly enough, and lent Lanfear his help with the girl. The situation explained itself, almost without his incoherent

additions, to the effect that he had become anxious, and had started out with the boy for a guide, to meet them, and had met the lunatic, who suddenly attacked him. While he talked, Lanfear was feeling the girl's pulse, and now and then putting his ear to her heart. With a glance at her father, "You're bleeding, Mr. Gerald," he said.

"So I am," the old man answered, smiling, as he wiped a red stream from his face, with his handkerchief. "But I am not hurt—"

"Better let me tie it up," Lanfear said, taking the handkerchief from him. He felt the unrefined quality in a man whom he had not always thought heroic, and he bound the gash above his forehead with a reverence mingling with his professional gentleness. The donkey-girl had not ceased to cry out and bless herself, but suddenly, as her cure was needed in getting Miss Gerald back to the litter, she became a part of the silence in which the procession made its way slowly into Pomasia Nuova, Lanfear going on one side, and Mr. Gerald on the other to support his daughter in her place. There was a sort of muted outcry of the whole population awaiting them at the door of the *konada* where they had halted before, and which now had the distinction of offering them shelter in a room especially devoted to the poor young lady, who still remained in her swoon.

When the landlord could prevail with his fellow townsmen and townswomen to disperse in his interest, and had imposed silence upon his customers' inchoors, Lanfear began his vigil beside his patient in as great quiet as he could anywhere have had. Ours during the evening the public physician of the district looked in, but he agreed with Lanfear that nothing was to be done which he was not doing in his greater experience of the case. From time to time Gerald had suggested sending for some San Remo physician in consultation, Lanfear had always appeared, and then Gerald had not persisted. He was strongly excited, and anxious not so much for his daughter's recovery from her swoon, which he did not doubt, as for the effect upon her when she should have come to herself.

It was this which he wished to discuss, sitting fallen back into his chair, or walking up and down the room, with his head bound with a bloody handkerchief, and looking, with a sort of alien picturesqueness, like a kindly brigand.

Lanfear did not leave his place beside the bed where the girl lay, white and still as if dead. An inexpressible compassion for the poor man filled his heart. Whatever the event should be, it would be tragical for him. "Go to sleep, Mr. Gerald," he said. "Your waking can do no good. I will keep watch, and if need be, I'll call you. Try to make yourself easy on that count."

"I shall not sleep," the old man answered. "How could I? Nevertheless, he adjusted himself to the hard pillows of the lounge where he had been sitting and dozed among them. He woke just before dawn with a start. "I thought she had come to, and knew everything! What a nightmare! Did I groan? Is there any change?"

Lanfear, sitting by the bed, in the light of the winking candle, which threw a grotesque shadow of him on the wall, asked him.

He had released her from his arms, but she held his hand fast

Drawn by Sydney Adamson

After a moment he asked, "How long did you tell me her swoon had lasted after the accident to her mother?"

"I don't think she recovered consciousness for two days, and then she remembered nothing. What do you think are the chances of her remembering now?"

"I don't know. But there's a kind of psychopathic legio— If she lost her memory through one great shock, she might find it through another."

"Yes, yes!" the father said, rising and walking to and fro, in his anguish. "That was what I thought—what I was afraid of. If I could die myself, and save her from living through it—I don't know what I'm saying! But if—but if— if she could somehow be kept from it a little longer! But she can't, she can't! She must know it now when she wakes!"

Lanfair had put up his hand, and taken the girl's arm, and was quietly between his thumb and finger, holding it so while her father talked on.

"I suspect it's been a sort of weakness—a sort of wickedness—in me to wish to keep it from her; but I have wished that, doctor; you must have seen it, and I can't deny it. We ought to bear what is sent us in this world, and if we escape we must pay for our escape. It has cost her half her being, I know it; but it hasn't cost her her reason, and I'm afraid for that, if she comes into her memory now. Still you must do— But no one can do anything either to hinder or to help!"

He was talking in a husky undertone, and brokenly, unconvincingly. He made an appeal, which Lanfair seemed not to hear, where he remained immovable with his hand on the girl's pulse.

"Do you think I am to blame for wishing her never to know it, though without it she must remain deprived of one whole side of life? Do you think my wishing that can have had anything to do with keeping her— But this faint may pass, and she may wake from it just as she has been. It is logical that she should remember; but is it certain that she will?"

A murmur, so very faint as to be almost no sound at all, came like a response from the girl's lips, and she all but imperceptibly stirred. Her father neither heard nor saw, but Lanfair started forward. He made a sudden clutch at the girl's wrist with the hand that had not left it and then remained motionless. "She will never remember now—here."

He fell on his knees beside the bed and began to sob out. "Oh, my dearest! My poor girl! My love!" still keeping her wrist in his hand, and laying his head tenderly on her arm. Suddenly he started, with a shout, "The pulse!" and fell forward, crushing his ear against her heart, and listening with borne of, "It's beating! She isn't dead! She's alive!" Then he lifted her in his arms, and it was in his embrace that she opened her eyes, and while she clung to him, exclaimed:

"My father! Where is he?"

A dread fell upon both the men, blighting the joy with which they

welcomed her back to life. She took her father's head between her hands, and kissed his bruised face. "I thought you were dead, and I thought that mamma—"

"But that was long ago, wasn't it?"

"Yes," her father eagerly answered. "Very long ago."

"I remember," she sighed. "I thought that I was killed too."

"Was it all a dream?" Her father and Lanfair looked at each other.

Which should speak? "That is Doctor Lanfair, isn't it?" she asked, with a dim smile. "And I'm not dreaming now, am I?" He had released her from his arms, but she held his hand fast. "I know it is you, and papa; and yes, I remember everything. That terrible pain of forgetting is gone! It's beautiful! But did he hurt you badly, papa? I saw him, and I wanted to call to you. But mamma—"

However the change from the oblivion of the past had been operated, it had been mercifully wrought. As far as Lanfair could note it, in the rupture of the new revelation to her which it scarcely needed words to establish, the process was a gradual return from actual facts to the things of yesterday and then to the things of the day before, and so back to the tragedy in which she had been stricken. There was no sudden burst of remembrance, but a slowly unrolling of the reality in which her spirit was mystically fortified against it. At times it seemed to him that the effect was accomplished in her by supernatural agencies such as, he remembered once somewhere reading, attend the souls of those lately dead, and explore their minds till every thought and deed of their earthly lives, from the last to the first, is revealed to them out of an inner memory which can never, any jot or tittle, perish. It was as if this had remained in her intact from the blow that shattered her outer remembrance. When the final, long-shoulder home was reached, it was already a sorrow of the past, suffered and accepted with the resignation which is the close of grief, as of every other passion.

Love had come to her help in the time of her need, but not alone; she had helped her live back to the hour of that supreme experience and beyond it. In the absorbing interest of her own rescue, the shock, more than the injury which her father had undergone, was ignored, if not neglected. Lanfair had not indeed neglected it; but he could not help ignoring it in his happiness, as he remembered afterwards the self-reproach which he would not let the girl share with him. Nothing, he realized, could have availed if everything had been done which he did not do; but it remained a pang with him that he had so dimly felt his duty to the gentle old man, even while he did it. Gerald lived to witness his daughter's perfect recovery of the self so long lost to her; and with a joy more explicit than their own, to see her the wife of the man to whom she was dearer than love alone could have made her. He lived beyond that time, rejoicing, if it may be so said, in the fond memories of her mother which he had been so long forbidden to her affection to recall. Then, after the spring of the Riviera had whitened

than the injury which her father had undergone, was ignored, if not neglected. Lanfair had not indeed neglected it; but he could not help ignoring it in his happiness, as he remembered afterwards the self-reproach which he would not let the girl share with him. Nothing, he realized, could have availed if everything had been done which he did not do; but it remained a pang with him that he had so dimly felt his duty to the gentle old man, even while he did it. Gerald lived to witness his daughter's perfect recovery of the self so long lost to her; and with a joy more explicit than their own, to see her the wife of the man to whom she was dearer than love alone could have made her. He lived beyond that time, rejoicing, if it may be so said, in the fond memories of her mother which he had been so long forbidden to her affection to recall. Then, after the spring of the Riviera had whitened

into summer, and San Remo had, as well as it could, its sunny place behind its pine and palms. Gerald suffered one long afternoon through the heat till the breathless evening, and went early to bed. He had been full of plans for spending the rest of the summer at the little place in New England where his daughter knew that her mother lay. In the morning he did not wake.

"He lost his life that I might have mine!" she lamented in the first wild grief.

"No, don't say that, Nannie," her husband protested, calling her by the pet name which her father always used. "He is dead, but if we were each other to his loss, it because he was given, not because he gave himself."

"Oh, I know, I know!" she smiled. "But he would gladly have given himself for me."

That, perhaps, Lanfear could not have denied, and she had no wish to do so. He had a presence of happiness for her which the future did not bear; and he divined that a woman must not be forbidden the extremes within which she meant to rest her soul.

THE END.

Discreet

THINK is a Chicago lawyer who, for collocations ever, has a positive genius for malapropos suggestion to his witnesses on the stand.

Recently this lawyer was counsel in a suit for divorce, wherein he was examining a witness, who had taken the stand in behalf of the plaintiff.

"Now, madam," began the attorney, who is always saying the wrong thing, "repeat the shattering statements made by the defendant on this occasion."

"Oh, they are unfit for any respectable person to hear!" gasped the witness.

"Then, madam," said the attorney, coaxingly, "suppose you just whisper them to his honor the judge."

Followed Directions

LATE many others who have achieved greatness, or have had pretense thrust upon them, the General of General James F. Smith, Governor General of the Philippines, is innocent of minute adornment. According to a story which the General tells on himself, if so happened that on one cold, foggy morning, when the General (then Attorney Smith) reached his San Francisco office, he was in anything save a good humor.

One of the first things that attracted unfavorable attention was a fresh piece of fly-paper lying on his desk.

"Here," he asked, addressing his stenographer, "what is this doing here?"

"Why, you told me to put it there yesterday," retorted the stenographer.

"Well, take it away," ordered Smith, gruffly.

"But where shall I put it?"

"I don't give a hang," said the not yet great lawyer, "so you put it where I can't see it!"

The stenographer, whose proportion of Irish blood was equal to that of her employer, picked up the offending fly-paper, balanced it a brief moment thoughtfully on one hand, and then—snapped it carefully on the back of Smith's hairless head.

After which she seated her hat and coat and wandered out into the cold, foggy morning as search of another position.

When Oliver Johnson Made a Hit

It was Oliver Johnson, of Indianapolis, who made the speech, at the time that he was Vice Consul-General in London. He made it at a commercial banquet, at which there were present some of the most important and stupid members of Parliament and representatives of high finance in all merry England.

To illustrate a point he was endeavoring to impress upon his auditors, Mr. Johnson related an anecdote. It concerned a Yankee sewing-machine agent, who was looking over some boxes at a sales-table with a view to making a purchase. He was shown a box of novelties that year, in its prime, according to the vendor, had been able to treat in 2.38. Then

a half-grown rolt was brought out, and the dealer assured the prospective purchaser that in another year the animal would be able to do a mile in 2.10.

"Gosh darn it!" said the sewing-machine agent, at this juncture, "I don't want a horse or a gun-to-be. What I want is an ice-cream."

Here Mr. Johnson paused for the laugh that this story generally created, but the others at the table, with one exception, gazed steadily at him and wondered why he should stop speaking and not sit down. The exception was a somewhat boisterous gentleman of middle age, whose seat was next to that of Mr. Johnson.

The boisterous gentleman roared with delight; and ever and anon, throughout the remainder of the speech, broke out into wild guffaws, to the amusement and annoyance of his companions, but to the gratification of Mr. Johnson, who was pleased that even one of his hearers had been able to perceive the point of the anecdote.

When Mr. Johnson concluded his address and resumed his seat, his enthusiastic neighbor threw an arm over his shoulder and whispered into his ear.

"I say, old chap," he inquired, eagerly, "what is an ice-cream?"

The Transformation of Waterloo

THE battlefield of Waterloo is changing hands. A syndicate of British officers is in negotiation for the purchase of the plateau of Montgomerie, whose orchard was the scene of some of the severest fighting in the battle.

For sale as well are the museum of relics, and the Mount St. Jean farm, on which property, near the Hotel de Coennes, a plot of ground has been already bought by Count Cavens for the erection of a monument to Victor Hugo. This purchaser defrays, besides, the cost of a memorial to the Belgian General Van Merlen, that it is intended shortly to have placed close to the mound of the Belgian Lion. Which last commands the battlefield from its position on the hill where Wellington's reserve stood ready to receive the French as they charged up the slope. Altogether Waterloo may soon look like a cemetery.

UNSWEETENED CONDENSED MILK

PERNIX BRAND EVAPORATED-CREAM is ideal milk, collected under perfect sanitary conditions, condensed in vacuo in the proprietary of cream, preserved by sterilization only. Suitable for any use, and adapted to all purposes where milk or cream is required. "A"

ADVERTISEMENTS

Pears'

The public's choice since 1719.

"Your cheeks are peaches," he cried.

"No, they are Pears," she replied.

Pears' Soap brings the color of health to the skin.

It is the finest toilet soap in all the world.

Solving Business Problems

THIRTEENTH PAPER

To the old-time manufacturer who graduated from foundry, lathe, or bench, the office end of a factory is given a low second place in its relation to the shop.

The modern proprietor reverses this order and says, "Put a good superintendent in the factory, but watch the office yourself, for the office, more than the factory, is the keystone of the arch."

Intelligent office accounts will reveal the strength or weakness of the manufacturing department, even when an adequate system of factory costs is not maintained, but a factory may be systematized to the finest point and still lose money because of laxness in the office administration.

The ideal combination is, of course, through detailed records of both ends of the business, an interweaving that one checks and proves the other; but when this is not practical, put the office right and the factory cannot go far astray.

A large manufacturer of such and doors in Milwaukee employed the Baker-Vanier Company to systematize its office records. The system devised only touched the factory sufficiently to form the necessary connecting link between production and distribution, and to record as assets the visible property, including plant, stock on hand, etc.

All expenditures are analyzed and distributed to their proper accounts. No purchase ledger is kept, but all invoices received are numbered serially and recorded on an accounts-payable sheet, the number only being entered, and are vouchered for payment by check.

The recapitulation of commodities purchased must check with the record of invoices paid or payable.

Each month the total of accounts unpaid is secured, this information being collected independently from the unpaid-invoice file, and recorded on the balance sheet as a liability. This total is therefore a check on the ledger record of unpaid invoices.

Sales, whether made by office, by road men, or by mail, are itemized by departments and products, and recapitulated in various ways monthly. Charge accounts against customers are made from duplicates of invoices which are made up from shipping or delivery tickets. Accounts receivable must correspond with the sales record, and the total sales by departments check with the total sales by commodities and with the record of revenues from sales.

Provision is made for recapitulating any feature or department of the business that is of sufficient importance, whether it be monthly expenditure for telegrams, postage, legal fees, patents, and the like, or the annual cost of plant betterment, salesman's expenses, etc.

Every detail of the business is recorded in the regular routine of accounts in such a way as to be in its proper classification and easily accessible.

Errors are by this means largely prevented, and when they do occur are automatically discovered and quickly traced and rectified.

Name and address will be given to responsible inquirers by Baker-Vanier Company, Chicago and New York.

NOTABLE FIGURES IN THE HISTORY OF "HARPER'S WEEKLY"

Rubbed the Wrong Way

An adjuster from a big Philadelphia insurance company was recently sent to Harrisburg to adjust a loss on a building that had been burned.

"How did the fire start?" asked a friend who met him on his homeward trip.

"I can't say with certainty, and nobody seemed able to tell," said the adjuster. "But it struck me that it might have been the result of friction."

"Why, what do you mean by that?" asked the friend.

"Well," said the insurance man, severely, "friction sometimes comes from rubbing a semi-insured dollar policy on a five-thousand-dollar building."

Two To One

THE unseasoned humor of country journalism, says William Allen White, are often more amusing than the best efforts of the alleged "lusty man."

According to Mr. White there never appeared in a Kansas paper the following "personal column":

"Our prominent townsman Theodore Minkton is seriously ill. He is being attended twice a day by Doctor Smith, in consultation with Doctor McGinn. The recovery, therefore, is in great doubt."

Pay, Pay, Pay!

As she was leaving, two hours after luncheon, her husband said, wistfully: "I liked by the way you must pay toll, my dear!"

"Pay toll? What for?"

"For the bridge, of course."

What Else Could He Do?

It is a part of a Congressman's make-up to remember the faces and names of people whom he has met, but Mr. Lewis C. Livingston, of Georgia, utterly lacks this faculty. He told the following story to a couple of friends in his committee-room at the Capitol a few days ago:

"I was coming down in the elevator over on the Senate side yesterday, and at one of the intermediate floors a man whose face I knew as well as I know my own got in. He bowed me very warmly at once, asked after the House affairs, and was very gracious and friendly. But call his name I couldn't for the life of me. I got a note of a letter to him, asking if he was going up to see the sights of the Senate. He gave a chilly laugh, as if he thought I was joking him. Finally I told him, in an apologetic way, that I couldn't recall his name. He looked at me amazed for a second, and then said very quietly that his name was Fairbanks."

"Well, what did you do?" asked the listener, laughingly.

"That's all I just got out of the next floor for four I would ask him if he had ever been in politics."

Illustrated

A TEACHER in one of the primary schools of New York recently read to her pupils "The Old Dutch Bucket."

After explaining the song to them very carefully, she asked the class to copy the first stanza from the blackboard, where she had written it, and try to illustrate the verse by drawings in the same way a story is illustrated.

In a short while one little girl handed up her slate with several little-drawn two legs, a neck, half a dozen sides, and three buckets.

"I do not quite understand this, Maimey," said the teacher, kindly. "What is that copy?"

"Oh, that's the well," Maimey replied. "And why do you have three buckets?"

"Again asked the teacher.

"One," answered the child, "is the golden bucket, one is the iron-bound bucket, and the other is the moss-covered bucket that hung on the wall."

"But, Maimey, what are all these little dots for?"

"Why, those are the spots which my infamy knew," innocently replied Maimey.

The one seasoning that invariably improves the flavor of Game, Fish, Soups, Gravies and many other dishes is

"HARPER'S WEEKLY" AND THOMAS NAST

(Continued from page 18.)

tion. But there is one thing you do not know. It is true I went to Albany again—I did so far-dressed from the dignity of my office as to go to see Platt and talking—but I did not go to consult them. It was worse than that—much worse. I went to Albany that last time because they sent for me to come. I went on their order to come and explain why I had not made good my pledge. They knew I would not refuse to come, and I did go, and I limited myself for not having been able to keep my pledged faith. Now you understand why your picture was even more than you could know.

During the final sentence the President's voice had broken, and when he finished, the tears were streaming down his cheeks. A gentleman of gentleness—all and always near the doorway of death—the memory of his broken pledge and his humiliation he could not easily recall.

Conkling and Platt had resigned from the Senate when the President had failed to accord them the State patronage, and Nast had recorded the episode in the famous set of "Last Head" cartoons. President Arthur's revulsion had flooded the matter with new light. To Conkling, at least, the cartoonist was more friendly from that day.

The Blaine-Cleveland campaign (1884) was the last great episode in which the Nast cartoons played an important part; indeed it was the last campaign in which any one cartoonist, or editor, has wielded absolute and unquestioned power. Editors and picture-makers have been too numerous since then, too much a part of some great journalistic machine with a general policy for each member of it, for us to be able to trace individual influence and results.

But the campaign of 1884 was essentially personal from every point of view. It was Blaine's personality which caused HARPER'S WEEKLY with Curtis and Nast to reject the "Man from Maine," and it was the

personality of the cartoonist and the editor that figured prominently in the bitter vindictive fight on both sides which followed. Curtis scored Blaine in the editorials, Nast "banqueted" him in the cartoons, and, in turn, these two were discomfited, caricatured, and held up to public scorn. Indeed, HARPER'S WEEKLY may be said to have led the Mugwump party, and it is quite certain that Grover Cleveland could not have been elected without the terrible Blaine cartoons.

But the WEEKLY pictures were by no means always partisan, nor even political. Nast contributed many satires on social evils with notable results. His annual Christmas pictures were hailed on both sides of the water, and the HARPER'S WEEKLY SANTA CLAUSES became the accepted type of the Christmas saint.

When certain panmischueous legislators of both parties attempted to reduce the appropriations for the army and navy, Nast produced his splendid "Sicklemen Army and Navy" series, in the confusion of the misguided economists, just as he had laughed away the cry of Canadian against Grant. For his services to the army and navy he was presented with another fine silver vase, "the gift of 3,449 officers and enlisted men," the only instance of public recognition by the army and navy of a private citizen.

Nast severed his connection with HARPER'S WEEKLY in 1887. The old order of warfare had changed, and he could not accord with the new régime. During the twenty-five years of his active service, the "Journal of Civilization" had published no less than three thousand of his cartoons, and not one of them was ever drawn for evil, or against his convictions in a cause. The moral political influence of those pictures can never be calculated. As stated in the beginning, the period of association of THOMAS NAST with HARPER'S WEEKLY constitutes a pictorial epoch which remains without parallel in all history.

REMINISCENCES OF A RECENT EDITOR

(Continued from page 23.)

a superior officer with the wisdom of a serpent to consult in times of emergency and subordinates to blame when things go wrong, failure may be possible, but it is seldom probable, and I found comfort in that reflection, and so with Colonel Harvey overboard, Mr. Albert Lee as a sort of managerial buffer between myself and the consequences of such inquiries as I might be guilty of, Mr. J. Henry Harvey as constant and loyal apologist at court, and Mr. William A. Rogers always alongside with strengthful and constructive suggestions, I set forth upon my twenty months' cruise in seas sacred to the memory of genius.

Without wishing in any way to criticize or to reflect upon the predictions of those who had preceded me in the care of the WEEKLY, of those men for whom I have the highest respect, and some of whom I hold in affectionate esteem, my first effort was to relieve the pages of that Journal of Civilization of a tone and editorial manner which had caused it to be in some quarters as "the Weekly of a Journal of Civilization." Doubtless there was much in our national life at that time that was worthy of the severest reprobation, but it seemed to me to be equally true that there were also to be found here and there tendencies that were worthy of occasional commendation. There was a bright and hopeful side of life as well as the dull, drab, depressing aspect of it, concerning which our readers were entitled to be informed. Bitterness journalism I held to be but an acute and dyspeptic form of yellow journalism, and I realized also that with a certain daily evening correspondence securely entrenched in its position of common-sense of the nation, acting as a sort of General Hervey for the community, there was no use in striving for its heretofore laurels. Consequently, by degrees, I withdrew the WEEKLY from that particular competition, and advanced the theory, as a sort of innovation, that life was worth living, that there were honest men in public life who could be found if one set earnestly about finding them, and that even in Congress there was a discriminating eye there was a heaven of intelligence large enough to be discernible—and I am not sure even now that that attitude was not correct. In any event, I ventured upon that line of thought and conscientiously maintained it to the end of my term of office, somewhat less ably, perhaps, but still to the best of my ability. I venture sometimes to think that in so doing I broke the ground, even if I did not pave the way, for the present highly influential, eminently sane and judicious, handling of the WEEKLY's editorial pages—a handling worthy of its best traditions.

As the days passed there was gradually revealed to me a fact which I think most editors of weekly publications will acknowledge to be beyond question, and that is that after all an editor is merely the medium through which the times reveal themselves. The question of what to put into the weekly page is of less importance than that of what to leave out. The editor has the task of presenting fully the interesting developments of a period of national or world growth or reform prepared to find material to spread over the twenty-four or more blank pages that must be used weekly, but, on the contrary, is more frequently embarrassed than not to find room for topics of public interest that should either be discussed or presented as news matter. In my own particular case I not infrequently felt the need of an editorial thrashing-machine which should winnow the overwhelming harvest of events, separating the wheat from the chaff, and while I have not always been quite sure of the efficacy of prayer, I often took my chances and bawled out a sincere supplication that to me might be granted the wisdom to discern which was which. The air at the beginning of the new century was charged with an electrical inheritance from the old. Great things were doing in all parts of the world, and America's share in new problems was not only the make, but the make's sake. The war with Spain was barely over, but with the consequences of it we were fared to have, and alongside of these war itself seemed almost as difficult to handle as is a

strawberry festival in comparison with the proper organization of the New York police force. The progress of affairs in the Philippine Islands, the administration of affairs in Cuba, the conflict in South Africa between the Boers and Great Britain—all these were subjects of pictorial and narrative interest to the readers of the WEEKLY, the presentation of any one of which it was impossible to determine, and they therefore had to receive, and did receive, about equal attention, although there were times when it seemed as if the limitations of space would be stretched far and away beyond their capacity to react into the normal. At the same time marvelous industrial developments of the highest interest to the public were taking place in the United States, and this situation on our own spot were indisputable, and they too were called for in pen and picture—and all through this stressful period Theodore Roosevelt was Governor of New York and in a fair way to become something else, nobody knew what. Adequately to cover such a perambulation as this was almost enough to tax the capacity of any editor, and in consequence the imperiousness of another sort, Transvaal wars, Philippine and Cuban done to distract the attention, and yet even Mr. Roosevelt was not ignored and the wonderful elasticity of the WEEKLY's pages was not once stretched to the point of breaking.

One incident of the British troubles in South Africa in the spring of 1890 furnished me with an editorial experience which, as I look back upon it, was about the most difficult I ever had. Through the enterprise of Colonel Harvey an arrangement was made with the London Times by which the WEEKLY was to enjoy the distinction of presenting to American readers the reflections of Mr. Rudyard Kipling upon the African situation. The WEEKLY for that issue had already been made up, full to overflowing, and was for the most part of the press, when the first of Mr. Kipling's blazons arrived—by cable. Three thousand solid words of portentious interest and not an inch of space in which to place them, and the copyright had unduly used of it. That problem was easily solved by a resort to a four-page supplement, suitably embellished with illustrations, but the other question, as to what the three thousand words meant, that was an editorial puzzle. For every word of the article came over the cable without a capital, a comma, a period, or even a semicolon from start to finish, plus the inevitable errors in phonetic transcription. I yield to no man in my admiration for the genius of Rudyard Kipling, and I would cheerfully join a vigilance committee whose avowed object is the skimming of the Yale professor who recently announced in a lecture that Mr. Kipling made a mistake in getting well after his first allusion in 1890, but I frankly confess that I have never again to have to edit one of his called stories. It required a genius equal to his own as to capitalize and punctuate that article that it would read like the real thing, and I doubt if I succeeded. I never dared to send the article after it was published, and Mr. Lee read the proof as that to this day I am not sure whether or not I got the story straight. It made a very pretty supplement, however, and as far as I have been able to judge it has not weakened Mr. Kipling's firm grip upon his public, with the possible exception of a sporadic inferior professor whose opportunities for exercising his vocabulary overabound his literary attainments.

The ensuing summer brought with it our quadrennial Presidential contest, and as if he were not already doing all that he could to transform the WEEKLY from a perusal of normal men into an exercise of titanic, not to say Britanic proportions, did Parker Tamm decide to step in and try to bring about a more conservative result. The WEEKLY found no difficulty in choosing sides in either contest, and devoted its best efforts, prior to and editorially, in the case of Mr. McKinley in both. It likewise simultaneously supported Governor Roosevelt in his contest for the Vice-Presidency against Mr. Stevenson, and it was not until the election was over that we knew that Mr. Stevenson had been an acceptable Vice-President once, but, while Mr. Roosevelt's claims to the office on a mere question of fitness

were doubtless, we nevertheless started our own heart and soul for his election, believing that whatever he might do to the other, the other would do him good. As I go over my McKinley-Bryan editorial pages in retrospect I cannot find anything in them to be proud of. On the contrary, I am inclined to wonder if they were not really helpful to the other side, for with the enthusiasm of a fervent convert to Bryanian principles who felt the need of squaring himself with himself for denying his own party name, I fear that I rather spirited ink at Mr. Bryan than used it in impenetrable and judicious argument. I understand of the points at issue was nowhere in evidence, and the opposition candidates were belabored instead of carefully punctured like leaders, as they should have been. The swing price of the Weekly's matters at that time lay in the virility, keenness, and aptness of the cartoons of Mr. Rogers, which more than made up for my own editorial shortcomings—as, indeed, they did always from the beginning to the end of my period of ownership.

The campaign of 1900 over, there was a temporary lull in the overhanging risk of evils for a month or two, when public interest centered largely upon the doings of the Administration in Cuba. We had correspondents at Havana, reliable at first, to whom we looked for authoritative information as to the precise conditions there, but early in January, 1901, it became evident that there were decided differences of opinion between two of our contributors on more questions of fact. Colonel Harvey, upon being appealed to for advice, suggested we go to Havana myself to find out as best I could what were and were not the rights of the matter, and inasmuch as I had learned by this time that a suggestion from that source was the equivalent of a general order from the Supreme Court, I packed up my grip and went. A month and a half on the island served to fix certain definite impressions in my mind as to the intensity of American official work there, and upon these I based the bulk of my attention for several months to come. I like to believe that the resulting series of articles upon Cuban affairs, based upon personal observation, and published in a journal of the WEEKLY's estimate, served to secure a working residence in the excellent results of General Wood's administration.

Meanwhile, during my absence, my chief had himself come under the tidal influence of editing the WEEKLY, and upon my return to my desk I found an "intellectual feast" going on in my apartment which portended a material if not a spiritual regeneration for me. But I lacked either the tact or the willingness to see it, and after a summer of continued effort at editing a kind of journal which represented neither my own nor my chief's ideals, but a sort of waddling compromise between the two, ending in the preparation of the memorial number to the late Mr. McKinley, with a righteousness by no means uncharacteristic to the natural decency of the situation, I received and accepted my resignation sent to me so kindly and tactfully by Colonel Harvey that I have always felt grateful to him for it.

So much for my brief editorship of HARPER'S WEEKLY. In connection with the other staunch friends I appear in this golden anniversary of its birth, and my only regret at the moment is that the readers are that I shall not be here to help celebrate its one-hundredth anniversary, although I have hopes that when the day comes I shall be acting as the duly recognized foreign correspondent of the journal which Colonel Harvey did at that time by editing it—well, wherever he goes. I have my life as on this subject, but this is neither the time nor the place to expound them.

AVE HARPER'S WEEKLY!

Not the Same

As before Major Schurz, while a guest at a crowded reception, sponsored a man whom he knew but who failed to recognize him.

"I'm Major Schurz," said the Major.

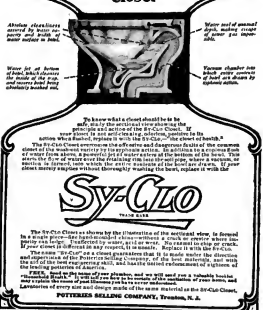

The other man looked at him indignantly.

"Well, sir," he cried, "what if you did make my name?"

"Don't you know better than to talk shop in public?"

The quick-witted Major "caught on" at once and quickly produced his card in explanation.

What to Demand in a Closet

Abolish cleanliness caused by water on floor and brush of water surface in bath.

Water not at bottom of bath, which causes the inside of the tub, and covers bowl being absolutely soaked out.

Water not of usual hot, and is not of water gas impurities.

Warm chamber too hot, and is not of water gas impurities.

To know what a closet should be to be safe, study the sectional view showing the principle and action of the Sy-Clo Closet. If your closet is not self-cleaning, odorless, positive to its action when flushed, replace it with the Sy-Clo. The Sy-Clo Closet removes the offensive and dangerous fumes of the common closet of the washroom variety by its syphonic action. In addition to a response from the flow of water over the retaining rim into the water pipe, where a vacuum, or suction, is formed, into which the entire contents of the bowl are drawn. If your closet merely smokes without thoroughly washing the bowl, replace it with the Sy-Clo.

TRADE MARK

The Sy-Clo Closet as shown by the illustration of the sectional view, is forced in a single piece—its base is not a crack or crevice where dirt or water can lodge. Imperfect by water, acid or wear. No seams to chip or crack. If your closet is different in any respect, it is unsafe. Replace it with the Sy-Clo. The name "Sy-Clo" on a closet guarantees that it is made under the direction and supervision of the Potteries Selling Company, of the best materials, and with the aid of the best engineering skill, and having the endorsement of a lifetime of the leading potteries of America.

FREE. Send us one of your plumbers, and we will send you a valuable booklet "Plumbing Booklet" which will show you the merits of the installation of your Sy-Clo, and Lavatories of every size and design made of the same material as the Sy-Clo Closet.

Runabouts

COLUMBIA ELECTRIC CARRIAGES present the highest development of electricity as a motive power for vehicles. They are as simple, practical as human staffs, backed by unlimited power and range.

judged by the cracking test of daily use by thousands of tire-increasing men and women in all important centers of population, both at home and abroad, these 14,000,000 daily riders are their title to leadership. No others have as high a reputation or run closer an exclusive chain of trust.

The reason for this reputation is not far to seek. Made by the oldest company in America, producing electric stirrings, the Columbus range is the result of the wisdom and experience of a company in this line of industry for over a century. The design of the Columbus is thought of by leading specialists, the Columbus Corporation have always been noted for their uniqueness of style. They stand out foremost in electric kitchen construction.

Manufactured in a factory possessing exceptional facilities, they are as nearly perfect in simplicity of construction, efficiency and dependability as it is possible for the most recent skill and the most sophisticated tools to make them.

Viewed from every standpoint they are without comparison. "Is a class by themselves," is the universal verdict.

That is why such an increasing number of Columbia Electric Cargages is now a feature in arcades and places far on all the fashionable thoroughfares of the world.

They are called the alibi verbs for good reason. Nothing without alibi. You learn vibration only and easy to

control they must in their varied styles create frequenting of private carriage services—such as taking the place of an ordinary carriage with three wheels, of horse

Descriptive Matter on Request

Almost 80 percent of the world's population is under 30 years of age. The world's population is growing rapidly, and the number of people under 30 is expected to increase even more rapidly. This is a challenge for the world's leaders, who must find ways to provide for the needs of this growing population. One way to do this is by investing in education and training. This will help to create a skilled workforce that can meet the needs of the world's economy. Another way to do this is by investing in infrastructure. This will help to create jobs and improve the quality of life for people around the world. The world's leaders must work together to find solutions to these challenges. Only then can we ensure a bright future for all.

CAMP LIFE IN THE WOODS

Tricks of Trapping and Trap-Making

A comprehensive volume on building camps, canoes, traps of all kinds, all the professional tricks of trapping, bait recipes, and methods of caring for furs. Numerous illustrations embellish the text, and information is given about the habits of birds and animals.

A treasure-book for sportsmen, young and old, and of convenient size for carrying on trips.

Illustrated. 300 Pages. Price \$1.00

HARPER & BROTHERS, PUBLISHERS, NEW YORK CITY

There Will Be No Typical American

By Emmett Campbell Hall

THAT there will never be a physical type divisionally American, almost invariably proved to the casual observer, as in the lands of the Nordic, French, or Italian breed, is the consensus of opinion among scientists who have made study of race evolution, and this is due to the fact of the extreme difference in the mixture in the atmosphere found in different sections of the United States. Indeed, in the course of generations, the human stock of America will produce such local physical characteristics found in such other nations. Floridians will acquire the statures and coloring of the Welshman. Already the southern of New Mexico and Arizona is developing towards the Arab type.

The theory of physical development and average race height being controlled by an amount of moisture in the air would seem to be well substantiated by observation of various nations; the temperature as registered by the thermometer would appear to be absolutely no factor. The Laplanders and the Bushmen of Africa occupy the extremes of thermometer range, and yet breathe the atmosphere of a like degree of moisture—a very high saturation—of a like stature, among the smallest men

dry a man's head, among the various people of the earth. Embracing a like wide range of temperature, but similar degrees of atmospheric moisture, the territories occupied by the Patagonians, the inhabitants of Polynesia, and the natives of the Sandwich Islands, all are of tallest stature. The Esquimaux, the Frenchman, and the Russian are of the same average stature, breathing atmosphere of the same degree of moisture. The extreme dryness of the air in which the Spaniard and Arab have lived has produced a similar physical development in these races.

Following out this natural law of physical development, the natives of Maine and Alabam should, in the course of generations, develop the same average height, there being about 80 degrees of moisture in the air of each of these States. Sixty-five to seventy per cent. of moisture would appear to produce the tallest average in the United States, that being the degree of saturation in Kentucky, Kansas, Minnesota, Indiana, Nevada, and California, in which States the average height is greatest.

In nervous temperaments even more than in physical development is the effect of atmospheric moisture apparent; on the wet coast, country are to be found the most solid types, while in the high, dry western land there is a high degree of nervous activity.

A moisture map of the United States might also be used as a temperature map, and for the reason that alcohol sets upon the system in a dryer. In wet atmospheres, where the system has moisture to spare, the effect of drinking is scarcely to be noticed. It is a man thing to see a Floridian, in his native country, intoxicated. In a dry climate, the effect of liquor is immediate and great.

Many experiments have been conducted with a view to ascertaining the effect of lowering and raising the degree of moisture in-droes, regardless of temperature as indicated by the thermometer. The degree of personal comfort so far as heat and cold are concerned may be anywhere between 60 and 85 degrees above zero, young people being comfortable at lower, and old people of higher degrees. The range of moisture for comfort is from 40 to 80 degrees of saturation.

In the experiments—made in classrooms without the knowledge of the students—the temperature would be kept at a normal degree, and the moisture reduced to 30 degrees, corresponding to the atmosphere of desert regions. The result was a high degree of interest on the part of the students, a dry-

berking caught, and an inclination toward pessimism and ill temper. By increasing the degree of moisture to 65 per cent, within less than the spirits of the class would be raised to fully their normal condition. Increasing the degree of moisture gradually resulted in a cheerful and optimistic state of mind on the part of the students. The total of the experiments would seem to indicate that the perfect atmospheric condition is when the relative humidity shows 65 to 70 degrees of heat with the atmosphere saturated from 45 to 55 degrees.

It is therefore obvious that to avoid *derogation* of mental effort and *derangement*

of the nervous system, most trying on every function of the body, a reasonable degree of moisture in the air must be maintained. In few living-rooms or offices is this done, as the process of heating destroys the natural moisture.

In order to have the moisture of 40 inches when it is 70 to 75 out of doors the outside air entered, he colder than 30° F., or he raised higher than 65° F. indoors. If the thermometer reads lower than 30° out of doors, and it is desired to raise the indoors temperature to 65° or higher, artificial moisture must be supplied, and this is easily done by placing a vessel of water in the room, where it can evaporate. Most heating-stoves have a receptacle intended to be so utilized. If the outside air is as cold as ten degrees above zero, and of a degree of moisture average in the United States, the ordinary furnace, steam-heat, or hot-water plant will deliver this air to the living-rooms at 70-degrees temperature, with but 10 per cent. of moisture in it.

A temperature of 70 degrees, with only 10 degrees of moisture, is about equivalent to that of the Sahara. It is not surprising that people living in such an atmosphere should develop "nervous" and leatherlike skin. Almost every sickly has a better skin than her mother, simply by reason of the fact that she spends her time in a moisture-laden air. She is more staid, because for mental activity the kitchen air is overestimated. There is a happy medium to be attained. A half-pint of water evaporated in a room the temperature of which is 65 degrees will bring the air up to 30 degrees of saturation.

Eliminating all question of health in connection with the degree of moisture in the house, there is the element of economy. Absolutely dry air cannot be heated. A room having only 15 or 20 degrees of moisture in its atmosphere is bound to be cold. If a kettle of water be boiled in such a room until a pint of water has evaporated, the temperature will at once begin to rise, though no more heat is being used than was before turned on.

Best Shots in the Army

The workmanship of the officers and men of the Regular Army is a source of gratification to the entire country, and particular pride must be felt in the shooting made during the past year. A statement by the War Department shows that of all the establishments, the ones attaining the highest average for the year was First-Sergeant Martin B. Dunbar, Company E, Fourth Infantry, with a score of 821. The second-best rifle score was 820, by Sergeant James A. Lankens, Company N, Twentieth Infantry.

With the rifle the infantry outshot the cavalry, but with the revolver the horsemen had the advantage. The best rifle score made by commissioned officers was 802, by Captain Frederick C. Steiner, Twenty-second Infantry, and 792 by Lieutenant Henry Fisher, Tenth Cavalry. The best pistol shot in the army is Captain James A. Cole, Sixth Cavalry, who scored 287. The second-best was Corporal Oscar G. Robinson, Troop D, Ninth Cavalry (score 285). Captain A. J. McNab, Twenty-seventh Infantry, was the second-best shot among the commissioned officers, and Corporal Horace Jefferson, Troop B, Ninth Cavalry, the second-best among the enlisted men.

His Choice of Reptiles

"Boots has given up Scotch, and drinks rye instead."
"What for?"
"He said he could stand snakes, but not plaid ones."

Wanted Liquid, not Willows

REPRESENTATIVE JOHN SHARP Williams tried on an Alabama derby who, after listening with great attention to the talk of a political aspirant, was asked what he thought of the speech.

"Well, sir," replied the negro, doubtfully, scratching his head, "I guess it was a good speech, all right; but as the man said he had 'been out here of heavy rain would do his business in this section more good."

339 Broadway, New York, N. Y.

FLORIDA'S GREATEST HOTEL

Even in historic Florida, there is no beauty that equals the **TAMPA BAY HOTEL**. This is the supreme achievement of American Hotel, artistry and fine capital in production as well as cost.

From active of tropical garden to great Moorish Spanish style in the center, overlooking the golden bay of Tampa, come forth the views.

The **TAMPA BAY** is Florida's greatest hotel, the most beautiful, most luxurious, most fascinating in every way with its details. It has few a minute the most and is also lavishly finished.

It is not like the Florida West Coast? There are more days of sunshine there than anywhere else in our country. There is always a breeze from over the sea.

California in Midwinter

Stop fighting the elements in a zero temperature. Try a battle with the waves, or the enjoyment of numberless other sports in sunny California.

The Rock Island's brand new

Golden State Limited

takes you from Chicago or St. Louis to the Golden State in less than three days. Run over the scenic Southern Route of lowest fares.

The equipment of the train is entirely new. Pullman's latest patterns—Maple-Leaf Dining and Buffet-Car—also Drawing-room and Compartment Sleepers.

There is no other train over any Southern route to California that can compete with this.

Desire detailed booklet then

Swinburne's Lyrical Poems

This collection includes Swinburne's earliest volume, "Poems and Ballads," in which appeared the famous "Laus Venere" and other lyrics that created a literary sensation in England. To them have been added many later poems. Collectively they are admirably representative of Swinburne's genius.

A Club Cocktail

IS A BOTTLED DELIGHT

Most Americans are connoisseurs in cocktails—and a connoisseur's taste demands uniformity in the flavor, strength, and quality of his favorite drink. There's only one kind of uniformly good cocktail—CLUB COCKTAILS. Bar cocktails are slapdash guesswork—good by accident—bad by rule—but never smooth or uniform in a cultivated taste. CLUB COCKTAILS are scientifically blended from choicest liquors, aged and mellowed to delicious flavor and aroma. Insist on CLUB.

Serve varieties—each as perfect.

On all good grocers and dealers.

COMMENT

SECRETARY TAFT's declaration of his attitude towards the Republican nomination for the Presidency is just such a disclosure of his state of mind as an honest gentleman might naturally make, but as few men ever have made in relation to the Presidency. Every word of it obviously came from the big Secretary's inner consciousness and has on it the marks of a vigorous and confident candor. When he says that his ambition is not political, he says what might be scoffed at, coming from another man, but not from him, because it only puts into words what has long been understood. When he says he is not seeking the Presidency, he will be believed. But he will run if he is invited—which will not happen, he thinks, "if for no other reason, because of what seems to me to be objections to my availability, which do not appear to lessen with the continued discharge of my official duties." One can see the Judge smile as he wrote this sentence—the smile of a candidate indifferent enough to the outcome to be able to enjoy the humor of a situation that seems unfavorable to his chances. But is it unfavorable? Are TAFT the man and TAFT the cabinet officer so inextricably mixed up that there is no separating them? In the public mind possibly they may be, but in individual minds it is so easy to distinguish between the two that it is hard to believe that they are inseparably confused. Even in a bad light the Judge looms up much too substantial to be mistaken for anybody's shadow. After all, what is most significant about his declaration is that it implies that he will not retire to the bench until after the next Republican Presidential candidate is nominated.

Assuming, for the sake of argument, that Secretary TAFT may be eliminated from the list of Presidential candidates, whom do we find remaining? In the first place, there is Vice-President FAIRBANKS, who is certain to be backed by his own State, Indiana, and who, if certain current rumors may be trusted, can already count on the support of more than one Southern delegation. Moreover, he would be acceptable to the "stand-patters." But so, for that matter, would be Speaker CANNON, who has a much stronger hold on a popular audience than has the Vice-President. Speaker CANNON, however, sided openly and energetically with Mr. ROOSEVELT in the railway-rate affair, whereas Mr. FAIRBANKS was not compelled to commit himself. Then, again, the Vice-President is sixteen years younger than the Speaker, and he would appeal to the State pride of two commonwealths, for although he is a citizen of Indiana, he was born in Ohio. From another point of view Mr. FAIRBANKS would seem more available than Mr. CANNON. Since the civil war Illinois has never been carried by the Democrats in a Presidential year, except in 1892. Indiana, on the other hand, has been carried by them three times. But the Republicans are far stronger in Indiana than they were in 1892, and the State which next year they will regard with most anxiety is New York. For that

reason, if Mr. HUGHES should gain both distinction and popularity in his role of Governor, and should be backed by a unanimous delegation from the Empire State, he would be apt to be considered very seriously in the next Republican National convention. His rise, of course, would be sudden, the most sudden known in the State of New York, but not very much more so than that of SAMUEL J. TILDEN. The fact that last November all of the Democratic candidates for State offices except Mr. DEWEY were elected, is sure to make the Republican National convention attach supreme importance to the selection of a nominee qualified to carry the Empire commonwealth. In a word, Mr. HUGHES has a great opportunity. Whether he shall turn it to account will depend entirely upon himself. He will not get much help from some of the persons who he imagines to be his friends. He never would have been elected Governor had he not taken the campaign into his own hands.

The United States Supreme Court is getting perilously near to a duty which has been waiting for it for some time. The real question first went to the court from Alabama, and involves a new interpretation of the Fourteenth Amendment. The question is, in essence, whether the Federal government can interfere to punish directly by its own courts the members of a mob that has lynched a negro, or by overthrowing the State law has denied justice to a citizen. The facts presented to the court are substantially as follows: the State was doing its utmost to protect from mob violence a negro who was under arrest. The mob overpowered the sheriff, broke into the jail, and lynched the prisoner. This, it has always been held, constitutes an offense against the State, and is, therefore, punishable by the State. This has not been changed by the Fourteenth Amendment, but it is assumed, as it has been often held, that the United States is charged with the duty simply of protecting individuals against the action of State authorities, and against State legislation that denies to any citizen the equal protection of the laws. It is now contended, on the contrary, that the United States may interfere whenever a citizen is denied the equal protection of the laws by reason of the overthrow, temporary generally, of the State's authority. That is, if a mob overcomes the sheriff and takes a prisoner from the authorities, thus, in effect, denying him a trial under the law, it is held that the State has practically denied the victim the equal protection of the laws. It is, of course, the State's law that has been violated by the mob, and it has always been the theory of our government that the State must enforce and defend its own law; but under a new theory the United States may take jurisdiction whenever a mob prevents the State from acting, as whenever it takes the law into its own hands. This would give to the United States complete jurisdiction to try, in the first instance, the members of all mobs who take prisoners from the custody of a State. This new doctrine is awaiting the decision of the court, and it has been waiting a long time.

A decision of the Supreme Court which was handed down just before Christmas may have some bearing upon the probabilities of the final action of the tribunal. An accused negro sought the protection of the United States jurisdiction, and had applied to the Circuit Court for a writ of *habeas corpus*. Pending the appeal the negro was taken from the jail and lynched. Eighteen citizens of Chattanooga, with the sheriff and seven of his deputies, were proceeded against for contempt of the United States Court in interfering with the applicant for the writ while the matter was under advisement. The sheriff and the deputies are accused of not seriously endeavoring to protect JOHNSON from the mob. The Supreme Court has now decided that the accused persons of Chattanooga are in contempt. Whether there will be a decision on the application of JOHNSON is doubtful, owing to his death, and there is necessarily no connection between this case and that in which it is asserted that United States courts may try and punish the members of a mob who offend against the law and the authority of the State. But the one calls up the other, and suggests the thought, in view of recent utterances in favor of constitutional amendment by construction, that the court is tending to hold with the contention in favor of the original jurisdiction of the United States against mobs that interfere with the rights of citizens. Such a decision would most certainly deprive the States of a power that is a necessary incident of sovereignty, for if a government has no jurisdiction to vindicate its own laws, and to punish those of its citizens who defy them, it is supreme and subordinate involved. And what would then become of the citizens of the Supreme Court looking that the Fourteenth

Amendment forbids State action only, and is not directed to individuals?

The British Admiralty are the objects of much severe criticism for proposing to keep a large number of ships out of commission for economic reasons. Nevertheless, building goes on. Just after Christmas it was announced that the contract for the third battleship of the *Dreadnaught* type, to be named the *Sagami*, had been placed with the Americans. The persistence of the English in building and maintaining a large navy affords a very impressive lesson—a lesson which, judging from his present attitude, has had a marked effect upon the attitude of Secretary BONAPARTE. In a recent letter, Mr. ARNOLD WHITE, who will be pleasantly recalled as a former London correspondent of the WEEKLY, gives some of the results of the British navy's activity. He is authorized to speak, for of all the writers for the English press Mr. WHITE has been the foremost in urging naval activity. He speaks of the increased discipline, efficiency, and contentment of the personnel of the service; he says that "at battle practice the average ship to-day shoots better than the best ships four years ago"; and he asserts that Germany has been built to a standstill. This is precisely what he says: "The Kaiser's naval policy has broken down; and so far from the German *Dreadnaughts* being laid down, as stated by Mr. H. W. WILSON, within a month from November 15, the plans have not yet been settled, and even the armament was not ordered a few weeks ago. The big ships will not be laid down for some months. Why? Because the policy of our Admiralty has compelled a halt in Germany." All of which is interesting, even entertaining, and may be important.

It is satisfactory to learn from the *Sax's* London correspondent that although, by common consent, British newspapers are silent on the subject, the mistake committed by Lord LANSDOWNE in not providing that the Anglo-Japanese Alliance should be inoperative as against the United States is keenly regretted in government circles on the other side of the Atlantic. It is frankly admitted that the failure to provide against such a contingency as a war between the United States and Japan was a grave oversight. We infer that a suggestion made by the *North American Review* has been practically adopted, for we learn that the Japanese government has already been quietly informed that under no circumstances would Great Britain contemplate any such unforeseen development of the obligations imposed on the signatories of the treaty of 1905. It is taken for granted, we are told, by well-informed persons in London, that no British government would be mad enough, by cooperating with Japan against America, to give Germany the long-coveted opportunity to join forces with the United States.

Japan's claim, that the children of her subjects resident in this country should be admitted to the schools attended by pupils of Aryan descent, is based on the assertion that her treaty with the United States contains the "most favored nation" clause. The assertion seems well founded; and it is also true that our treaty with Japan gives American citizens sojourning in the Mikado's empire all the privileges enjoyed by subjects of the most favored nation. The phrase "most favored nation," however, has a very different meaning, according as it is applied to the United States on the one hand, or to Japan on the other. In our country the privileges enjoyed by subjects of the most favored nation—England, for example—are very great. In the Mikado's dominions, on the other hand, the privileges enjoyed by foreigners, even the most favored, are relatively few. On this point, an American merchant, who has been doing business in Japan for more than twenty years, has written an interesting letter to the *New York Herald*.

He points out that in Japan foreigners are not allowed to own real property, or possess any mining rights. If, in order to do business, they place property or securities in the name of a Japanese, and the said Japanese absconds, the courts will not treat the act as a criminal one. Again, foreigners are not allowed to attend Japanese schools, whether these are meant for old or young pupils. They are only permitted to reside in certain localities. They cannot leave a treaty port except with a permit, which it is becoming more and more difficult to obtain. To the theatres the Japanese are admitted on the payment of sixty sen (thirty cents), but a foreigner must pay two hundred sen (one dollar). The hotels are conducted on a similar plan of discrimination. We should note further that as regards ordinary taxes,

foreigners are made to pay twice as much as are the Japanese, and although the treaties provide that foreigners shall not be subject to war taxes or duties, these were levied, nevertheless, during the late contest, and the resident foreigners deemed it prudent to pay them. Finally, the *Herald* correspondent asserts that justice cannot be obtained by a foreigner in the Japanese courts except before the highest tribunal, and that consequently every case in which a foreigner is concerned has to be carried by him to the Supreme Court. These facts, if facts they be, would seem to justify the conclusion that the Japanese do not want foreigners in their country, and, consequently, have no moral right to object to the exclusion policy advocated in San Francisco. Moral right, however, is one thing; treaty right is another. There is no doubt that our treaty with Japan gives the Japanese privileges in this country which our own citizens do not enjoy in the Mikado's empire. By way of confirming the *Herald* correspondent, we may mention that the lately published letters of LAFFORD HEARN bear witness to the discrimination practiced against foreigners in Japan, and to the feeling of dislike with which they are popularly regarded.

DAVID STARR JORIAN says that the man who talks of war as a necessity in commercial competition, whether he talks in Japan, California, or Washington, is a public enemy. The school question he finds to be a side issue in the greater one of immigration. Japanese children have never made trouble in the California schools, not even "the few grown boys who try to learn English in the grammar grades, though there it might be well to shut out." California is suffering for want of common laborers, and the fruit-growers, farmers, railroad-builders, and capitalists generally would be glad to have more laborers from China and Japan. The laboring-men fear the competition of Asiatics. The Californians in general have no feeling against Japanese laborers, but they do not want too many of them, and the supply is inexhaustible. Japan has no mind to let her citizens rank as inferiors in any country as the Chinese do in the United States. She would not endure an exclusion law such as operates against the Chinese, but she will keep her laborers at home if our government desires it. She is already doing so. Since 1901, Dr. JORIAN says, not a single Japanese of the laboring class has been allowed to leave Japan for the United States. But they go freely to Hawaii, and once there and beyond home control, they come, often at the rate of a thousand a month, to San Francisco. If this immigration is more than California can stand, the remedy must be either by a general exclusion law which will apply to all nations, or by diplomatic negotiations with the Japanese government.

On December 21, the Chamber of Deputies, by a vote of 413 to 166, passed the bill supplementing the act separating Church and State in France, which was rendered necessary by the Pope's refusal to allow French Catholics to form the *associations catholiques* prescribed by the statute, and by his subsequent order forbidding priests to give even the notice of an intended public meeting prescribed by the act of 1881, which is binding upon all Frenchmen. This bill, which since has been passed by the Senate, provides for the immediate and unconditional transfer of all church lands, funds, and other property to the civil power, which will proceed forthwith to distribute the assets among departments and communes. Excepted from such distribution, however, will be church edifices in which religious services shall actually be held. The bill goes on to say that such services may be held whenever, under the law of 1881, a notice of an intention to hold public meetings shall be given by two laymen, of whom one shall be a resident of the parish; and it adds that one such notice shall hold good for a year. It further authorizes prefects and mayors to designate priests to officiate in edifices consecrated to religious exercises. This provision, if it be correctly reported, looks like an attempt to create a division, like that which existed between constitutional and "refractory" priests during the Revolutionary period and up to the conclusion of the Concordat in 1801. It remains to be seen how many, if any, designated priests will consent to act.

Meanwhile, as was pointed out by M. BRAVEN, the Minister of Education and Public Worship, the Pope's refusal to abide by the Separation Act of 1905 has much simplified the situation. There is no longer a religious budget, and the priests are no longer functionaries of the State. The church edifices, however, are open, and the country is calm. Priests who have defied the law of 1881 have been rarely, and never severely, pun-

ished. To the Catholic Church will be granted liberty under regulations to which the Protestant and Jewish churches have readily conformed. Nothing, M. BRIAND said, would be permitted to provoke the government to intolerance. As we have formerly remarked, the question whether it was expedient for the Catholic Church to make the best of the Separation law of 1905 is entirely distinct from the question whether that law was founded in equity. We, ourselves, have thought that law inequitable, in view of the solemn promise made by the National Assembly, at the time when the immense property of the Church in France was confiscated, that the State would assume the cost of public worship and the maintenance of the bishops and clergy. That promise was confirmed by the Concordat of 1801, in consideration of which the Papacy waived its claim to a restitution of the sequestrated property. But equity is one thing, law is another. There is no doubt about the legal right of the French Parliament to enact a statute binding upon all Frenchmen. French Catholics, therefore, cannot be permitted to set themselves against the law and at the same time abide in France. They are at liberty to denounce the Separation Act as inequitable, but, like French Protestants and French Jews, they must obey it.

The news from Russia is again becoming interesting. We were told some weeks ago that the STOLYPIN ministry has decided that the elections for the next Duma should be held in the latter part of January, but it has now been settled by an imperial ukase that they shall take place on February 19. The Premier evidently desires as much time as possible in which to weaken the anti-government forces, of which he still dreads the Constitutional Democrats most; and he also needs time to promote the success of his attempt to win the greater part of the peasant electors to the support of the government candidates. Diverse administrative measures are being taken to diminish the numbers and the influence of the Constitutional Democrats—or Cadets, as they are nicknamed—in the next national assembly. The latest moves of the kind have been directed against Professor MUKOMANOV, who was the presiding officer of the last Duma, and against Professor MILUKOFF, who expected to become the leader of his party on the floor of the coming Duma. The government has now declared both ineligible to election to the Lower House. Many of their former colleagues have also been declared on one pretext or another, not only from standing as candidates, but even from voting at the elections. Moreover, the Constitutional Democrats have been forbidden to hold meetings, and printing establishments have been prohibited under severe penalties from publishing their campaign literature.

We adhere, nevertheless, to our prediction that such precautions against an anti-ministerial majority in the next Duma will prove unavailing, unless the Premier's well-conceived efforts to propitiate the peasantry prove successful. He has not only prevailed upon the Emperor to turn over many millions of acres of the Crown estates and the so-called *appanage* lands, but, through the Peasants' Bank, he has bought a large number of estates from private landowners. In order that needy peasants may procure allotments of these lands immediately, he has arranged that the Peasants' Bank shall lend them the purchase-money at a low rate of interest. That is the agrarian feature of the programme. The political feature is the transformation of the communal system, under which the tillers of the soil have hitherto lived, into individual peasant proprietorship. Hereafter every adult male peasant will be the individual owner of the land which he cultivates, and will be responsible only for the tax levied thereon. Under the communal system, a peasant was discouraged from putting labor and money into his holding, because at any moment it might be transferred to another cultivator by the elders of the commune, and because, however industrious and thrifty he might be, he was responsible for the unpaid taxes of lazy and prodigal neighbors. These are great boons which the Premier has conferred upon the peasantry, but the Constitutional Democrats may outbid him by offering to give the peasants land for nothing. We shall not now have long to wait for the outcome of Russia's second experiment in representative institutions.

The New York Herald published, on December 20, a letter from its Havana correspondent which deserves to be read with interest in connection with Secretary TAYLOR's report of the incidents preceding and attending our temporary intervention in Cuba. According to this usually well-informed correspondent, it was not patriotism, or a love of the Cuban Constitution, or disgust at out-

rages committed at the ballot-box, which caused the Liberal leaders to organize the late insurrection. The stake for which they played is now disclosed by the offering for discount in Havana of new claims for pay of soldiers of the 1895 revolution, the pay demanded to be provided for by the next Cuban government. At the present time it is impossible to compute the amount which the Liberal leaders propose to abstract from the treasury in this way, but, as the time for filing the new claims is to be extended over a period of two years, we may take for granted that the total will undergo remarkable diversion. The Herald correspondent opines that \$50,000,000 would be a modest estimate.

It is well known that Cuba has already paid out \$57,000,000 for soldiers who were alleged to have served in the war with Spain. How much of this vast sum was paid to soldiers who actually served under the Cuban colors, and how much to speculators who bought up claims more or less illusory for a fraction of their face value, could doubtless be revealed by the Treasury officials, if they chose to throw light upon the matter. It is of record that, at the time of our previous occupation, the controlling politicians of the island offered to favor annexation if the United States would pay off the Cuban forces. It was calculated at the time that only \$11,000,000 were due. Our government had no desire to annex Cuba, but, as a peace-offering, it made the Cuban soldiers a present of \$3,000,000. That should have left the Cuban treasury only \$8,000,000 to pay. No sooner, however, did Cuba acquire independence than her statesmen decided that \$55,000,000 were needed to reward 50,000 veterans. General Gomez, when the figures were reported to him, declared that not more than a quarter of the number had ever come under his notice, and he pronounced it, moreover, a reflection on his honor that, with such a large body of troops, he had not driven the Spanish authorities from the island. In time, the aggregate of soldiers to be paid was increased to 60,000, and, as we have said, \$57,000,000 were raised for the purpose, partly by a foreign loan, partly by an internal loan, and partly by means of cash in the treasury. Now it seems that the Liberals, who expect to control the next insular government, have discovered an additional multitude of unpaid soldiers of the war of 1895, and the claims of these men in buckram are already, as we have mentioned, offered for discount in Havana.

Not satisfied with the fabrication of a supplemental host of unpaid soldiers of the revolution against Spain, the Liberals, according to the Herald correspondent, have planned to introduce in the Cuban Congress, as soon as they get control of the insular government, a bill to pay the insurgent, or so-called "Constitutional," army which was raised to bring about the present American intervention. A week before Secretary TAYLOR reached the island, the number of insurgents was computed at about seven thousand. As soon as the provisional government announced that the insurgents would be allowed to keep the horses they had stolen, their number grew to fifteen thousand. Now, with pay in sight, the number is said to have reached already twenty-five thousand. The intention is, seemingly, to extract for these new heroes about twenty million dollars from the Cuban treasury. We see, then, how profitable it is to organize an insurrection in Cuba. Not only do you bring about American intervention, and secure for yourselves, by a new general election, all the offices, but your raw levies are sure to be paid munificently at the cost of the insular exchequer. On the whole, it is a very pretty game that Cuban insurgents have played. We are of the opinion, however, that it cannot be played twice. The next time an American military force has to go to the island, it is likely to stay there.

The addresses recently delivered in New York before the various sections of the American Association for the Advancement of Science acquired a certain measure of authority from the name and standing of the distinguished Association whose members listened to them. The discourses of most of the lecturers were passed by the committees before they were delivered, but only to make sure that they were sensible enough to pass muster. The opinions and the statements of the lecturers were their own, and by no means endorsed by the Association. In one case when a lecturer's remarks proved to be unbecomingly his piece, that was not the case with Mr. HENRY LAURENCE CARR, who spoke before the Economic Section of the Association, on the Cyrenaica of Wealth. What he had to say was interesting, and we presume the Association would be very reluctant to guarantee the accuracy of his statements. As reported in the

Evening Post, he said that whereas fifty years ago there was not more than fifty millionaires in the country, owning, with the help of the half-millionaires, not more than one per cent. of the wealth of the nation, and whereas sixteen years ago the very rich people owned not more than fifty-six per cent. of the national wealth, "to-day a bare one per cent. of our population owns practically ninety-nine per cent. of the entire wealth of the nation." This is interesting if true, but is it true? Any thoughtful person who lets his mind dwell on it must doubt its truth and wonder on what statistical foundation, if any, it rests.

Our neighbor the *World* says it isn't so, and goes on to delve a little into figures. It finds that the total wealth of the country is estimated at one hundred and six billions; that the farms are worth twenty billions and have over 3,700,000 owners; that the per value of the railroad stocks is about six, and a half billions distributed among 327,851 stockholders; that we had in 1900 about ten billions invested in manufactures with 700,000 owners; that over three billions of saving-bank deposits are owned by 7,700,000 depositors, and that the policy-holders of the life-insurance companies have two and a half billions to their credit. All these specified billions come to only a little over forty-two billions, and if one per cent. of the population owned all of them there would still be sixty-four billions left for the rest. To be sure, there are many forms of wealth not included in the *World's* items—mines, jewels, plate, breadstuffs and crops, oil, cattle and merchandise generally. To be sure, too, we have no great confidence in the estimates quoted in the *World*, but at least the distribution they suggest is not nearly so preposterously improbable as that offered by Mr. CALL. The *World* says that Mr. CALL gets his figures from certain calculations propounded by Dr. CHARLES B. SPARKS. They are familiar, but do not improve in credibility on acquaintance.

Proceeding from this assertion that ninety-nine per cent. of us only own one per cent. of the property of the country, Mr. CALL pointed out that "as a result of this wealth concentration industrial society is practically divided into two classes, the enormously rich and the miserably poor." Perhaps we would be so divided if there was any such concentration as Mr. CALL asserts. The fact that we are not is itself enough to disprove Mr. CALL's figures, and that we are not is obvious to anybody who will open his eyes and look about. Both groups—the enormously rich and the miserably poor—exist in this country, but both are small. The great bulk of the American population belongs to neither of them. There never was a time when it was so easy to get money in this country as now. The trouble, for those who would be rich, is to save it. What can be done both in getting and saving, by persons starting under the greatest disadvantages, may be learned from the article in the January *McClure's* on the progress of the Russian Jews in New York.

"It seems to me," says Mr. STUTTEVANT FISH, "that we already are embarked on a long-needed moral financial reformation which, like the religious reformation of the Middle Ages, will, through much cruelty, work out good in the end." Traffic managers and freight agents will agree with Mr. FISH about the cruelty. A good many of them think, as he does, that present trials will work out good in the end, but all agree that the trials are very severe. The trouble, as they expound it, is to know what the new law about freight rates means. The law has not yet been interpreted by the courts. The traffic managers and railroad men are very earnest in their efforts and desires to make their schedules and conduct square with all its provisions, and freight rates are exceedingly complicated, and a multitude of points arise in connection with them in which the application of the new law is a highly perplexing question, to which different lawyers give opposing answers, and which the men most concerned can only guess at. When the Interstate Commerce Commission is asked to interpret mooted points, its usual answer, we understand, is that its petitioners had better go ahead and do the best they can, and that if they violate the law they will incur in due time from the Commission. This is imperfectly satisfying to the perplexed freight men, who see a horrid prospect of fines, and even imprisonment, if they guess wrong as to some matter about which, for the life of them, they cannot find out beforehand what is right. Therein lies the cruelty of their position. They speak kindly, as a rule, of the members of the Interstate Commerce Commission as men, but are somewhat dolorous in their estimation of them as railroad experts.

A good deal of sense was talked at the Convention of the American Physical Education Society. It seems from it as though eventually the business of play might take its proper place in the college curriculum, and then play will cease to be a business. One speaker said that the intense interest in college athletics comes from two causes,—the perfectly natural human desire to play, and the much less meritorious but largely prevalent desire to watch the spectacle. The result of the gratification of this latter desire, he said, led naturally to the commercialization of which we hear so much. By commercialism he referred to "gate money" and its various incidents and consequences. Another speaker, a professor at Amherst, said that athletes stood lower in his claims than non-athletes by from one to six per cent., and this talker received the support of a professor from Bowdoin. There are one or two truths connected with this subject of which all who are connected with college, especially intercollegiate, athletes know and understand. The first is, that the college athletes do not, as a rule, start as well as the non-athletes in their college course, because their school athletics have interfered with their preparation. The second is, that the athletes do not do so well in college for the reason that too much time for physical work is demanded of them. This demand is the more exacting because college athletes are in the business of winning victories, and their fellow students demand too great a sacrifice of them in order that they may win, "for the glory of the college." There is little recreation in college athletics, and too much wear and tear of nerves and muscles. In the third place, and sometimes "for the glory of the college," the faculties help along the mental downfall of the athletes by failure to exact even the small amount of work which is demanded for pass examinations. It is not likely that athletic cautions will be much improved in our colleges until we are induced with a desire for sport for sport's sake; and that time is likely to be somewhat long in coming. In the mean time we ought to recognize the fact, for it is a fact, that the college athlete himself is improved intellectually and morally by going to college. It will not destroy this general rule to show exceptions to it.

The Texas primaries which were to decide the question of who should be United States Senator have spoken for the reelection of BAILEY. Mr. BAILEY may have been too retiring, but the Democrats of Texas evidently do not believe him to be corrupt. They know him to be able, and they admire him. It would be a loss to his party, to the Senate, and to the country if Mr. BAILEY were to be taken from the Senate. There is no one in the South, and there is no Democrat in the Senate, who is so strong and well equipped a champion as Senator BAILEY of the Federal republic such as we still have, against a national republic, like France, such as is threatened us by "construction." It is sincerely to be hoped that the country will not be deprived of his services.

There has been mourning for Mr. CASANTY, and with abundant reason. The late president of the Pennsylvania Railroad was a noble and engaging figure of a man. He loved to work, he loved to play, and he loved to speak the truth and do it. He had great abilities and charming amenities. It warmed the heart to dwell upon his qualities and his career. He was a sportsman who loved horses and bred them; a general who planned great campaigns; an administrator, wise in considering the concerns of one of the great railroads—perhaps the greatest—of the world. But the best of him was the combination he presented of aggressive ability with aggressive integrity. He not only set out to do right himself, but to make the Pennsylvania Railroad do right. To make a great railroad do right is a huge contrast, and it has been a particularly large contrast during the last fifteen years. That Mr. CASANTY succeeded perfectly with it is not probable—and, indeed, some casualties that were discovered in connection with his road are known to have caused him great distress. But he did stand out, a splendid figure, for honesty in business and honor between men. When he came out of partial retirement, seven years ago, and abandoned ease and amusements to be the head of the Pennsylvania road, what he really did was to enter the service of the public. He was a great public servant, faithful, responsible, and true to the greater master, the people of the United States, as well as to the stockholders of his road.

There has been so much anxiety in various quarters to have Mr. GEORGE W. FERGUSON indicted for something that the belated and apologetic action of the Grand Jury in his case can hardly cause surprise. Not so with Mr. FAIRCHILD, who must have been picked out for indictment as the man best able to stand it.

Woman's Part in the Ascent of Man

In the famous essay on "The Subjection of Women," to which we have formerly referred, Mill pointed out that by admitting women to the franchise we should double the mass of mental faculties available for the higher service of mankind. Where there is now one person qualified to benefit the human race, and promote the general improvement as an administrator of some branch of public affairs, there would then be a chance of two. Mental superiority of any kind is everywhere much below the demand; there is such a deficiency of persons competent to do excellently anything which it requires any considerable amount of ability to do, that the loss to the world by refusing to make use of one-half of the whole quantity of talent mankind possesses is extremely serious. Mill admitted, indeed, that this amount of mental power is not totally lost even now. Much of it is employed, and would in any case be employed, in domestic management and in the other occupations open to women; and from the remainder, indirect benefit is in many individual cases obtained through the personal influence of individual women over individual men. But as things are now, these benefits are partial; their range is extremely circumscribed; and if they must be recognized on the one hand as a deduction from the amount of fresh social power that would be acquired by giving freedom to one-half of the whole sum of human intellect, there must be added, on the other, the benefit of the stimulus that would be given to the intellect of men by competition with the intellect of women: or—what Mill thought a truer expression—by the necessity that would be imposed on men of deserving precedence before they could expect to obtain it.

It may help us to appreciate the magnitude of the benefits which a nation, considered as a whole, would derive from the stimulus imparted to the intellect of women by the concession to them of political rights, if we recall the services which women have rendered to civilization in the past. There seems to be no doubt that we owe to women those inventions but for which our civilization could not have been advanced. We refer to the invention of fire, the invention of pottery, the invention of spinning and weaving, and probably, also, the invention of agriculture. To women these inventions may be credited both on deductive and inductive grounds. It seems, on the face of things, impossible that in the primitive cave-dwelling the adult male, whose energy and vigilance were needed incessantly at the mouth of the cave to repel the aggression of wild beasts or of his more formidable fellow men, could have found the time and patience required for the discovery of fire, or of the process of moulding out of clay food-vessels and drinking-cups, or the industry to be employed in the primitive processes of spinning and weaving. The woman alone, confined for the most part by her maternal duties within the cave, had leisure for such achievements, and her maternal instincts would supply her with the strongest motives for evolving them. She would need fire to keep her child warm; clay vessels to hold his food and drink; and, finally, clothing to protect him when exposed to inclement weather at the door of the cave. But for the toil of brain and hand to which woman was prompted by the impulses of motherhood it is probable that mankind would have remained in the hunting and fishing state, dependent on the caprice of the chase for a precarious support. This conclusion, but for which we are fed by a priori, or deductive, reasoning, is confirmed by observation and experience. The Greek legend ascribed the gift of fire to a male, but the folk-lore of many other peoples assumes that invention to have been of feminine origin. Thus the Maoris relate that MAUI had fire given to him by his old blind grandmother MARIKURA, who drew it from the nails of her hands. Wishing to have a stranger one, MAUI pretended that it had gone out, and so he obtained fire from her great toe. Native Australians say that a good old man named PENNETH opened the door of the sun, whose light then poured on earth, but that KAKAKAKAK, his good daughter, was the fire-bringer. The production of fire by friction is indicated in the myth that while she was destroying serpents her wooden staff snapped in two, and where it broke a flame burst out of it. It is well known that the Romans attributed the gift of fire to Vesta, and confided the care of the sacred flame to virgins consecrated to her service. As regards rudimentary pottery, spinning, and rudimentary weaving, or the allied processes of knitting, netting, looping, and plaiting yarn, we find the practice of these arts relegated to women among primitive peoples, such as are encountered in the interior of Africa. It is also by women that an elementary agriculture is performed in some of the most primitive communities with which we are conversant. In many surviving examples of the initial stage of civilization the women are expected to feed and clothe the family, while the men are relied upon to defend from violent attack. We scarcely need recall that to this day in France, Belgium, and some other parts of Europe, the peasant women take as active and as fruitful a part in husbandry as is taken by their husbands and brothers.

It is not alone, however, for many material and fundamental contributions to civilization that we are indebted to women: we owe to her almost exclusively the altruism which is the honor of the modern world, and for the germ of what we must go to other sources. The immensity of the obligation contracted by the human race to woman from this point of view is nowhere set forth so effectively as it is by Dr. HENRY DEUNMOOD, in his well-known Lowell Lectures on "The

Ascent of Man." The author of those lectures pointed out that no greater day ever dawned for evolution than that on which the first human child was born. There then entered into the world the one thing wanting to complete the Ascent of Man—a tutor for the affections. Maternity had previously existed in humbler mammalian forms, but not yet motherhood. To create motherhood and all that ensues itself in the word a human child was required. The creation of the mammalia had established two schools in the world, the two oldest and best-equipped schools of ethics that have ever existed, the one for the child, who must now at least know its mother, the other for the mother, who must now as certainly attend to her child. The only thing that remained was to secure that they should both be kept in these schools as long as it will be possible to detain them. The next effort of evolution, therefore, was to lengthen the school age of the lair and to give affection time to grow. No animal except man was permitted to have his education thus prolonged. Many creatures were allowed to stay at school for a few days or weeks, but to one creature only was given a curriculum complete enough to accomplish its altruistic end. Why, it may be asked, has it come to pass that whereas in the course of some weeks a baby monkey is able to leave its mother, a human infant is unable for many months to feed itself or protect itself. Why is it that the human infant long lies like a log on the forest bed, while its nimble animal cousin crawls to him from the bush above? The question was answered by JOHN FUSAT, who shows what the delay means ethically: how necessary it was for the moral training of the mother that the human child should have the longest possible time by its mother's side, and how, from a physiological viewpoint, the delay was needed to develop an added and greatly superior piece of machinery, a human brain.

Up to the evolution of the human infant animals were in a hurry to be born, and children thirsted to be free. There was no helplessness to pity, no pain to relieve, no anxious watching; to the mother no moment of suspense—the most educative moment of all—the spark of life in her little one was her joy. Lamentation, a word, had no chance till the Human Mother came. To her alone was given a curriculum prolonged enough to let her graduate in the school of the affections. Not for days or weeks, but for many months, the cry of her infant's helplessness went forth. She must stand between the flickering flame and death; and for years thereafter, until the budding intellect can take command of itself, this maternal love dare not grow cold, or pause an hour in its unselfish ministry.

Thus, then, as Dr. DEUNMOOD demonstrates, is what the savage mother and her human babe brought into the world. When the first mother bore her first child, she brought into the world as long as her infant's love; when, for a moment, she forgot herself and thought upon its weakness or its pain; when, by the most imperceptible act or sign or look of sympathy, she expressed the unutterable impulse of her maternity—the touch of a new creature hand was felt upon the world. However relatively short may have been the earliest human infancies, however feeble the sparks of unselfish sentiment they fanned, however long heredity took to gather fuel enough for a steady flame, it is certain that, once this fire began to warm the cold hearth of Nature and give mankind a heart, the most stupendous task of the past was accomplished. The softened pressure of an unselfish hand, a human gleam in an almost animal eye, an movement in an articulate voice—these things seem poor indeed, yet in such faint awakenings lay the hope of the human race. As JOHN FUSAT puts it: "From of old we heard the unspoken, 'Except ye be as babes ye cannot enter the kingdom of Heaven.' The latest science now shows us—though in a very different sense of the words—that unless we had been as babes the ethical phenomena which give all its significance to the phrase, 'Kingdom of Heaven,' would have been nonexistent for us." FUSAT goes on to show that without the circumstances of infancy we might have become formidable among animals, but without the sense of sleep-witnessed, but exempt for these circumstances we should never have comprehended the meaning of such phrases as "self-sacrifice" or "devotion." The phenomena of social life would have been omitted from the history of the world, and with them the phenomena of ethics and religion. That is to say, if to man has hitherto been mainly assigned the fulfillment of the first great function, the struggle for life, woman has been the chosen instrument for carrying on the struggle for the life of others. The man's life has tended towards selfishness; the woman's life towards unselfishness. While the former has kept individualism alive, the latter has kept altruism alive. Thus, by a division of labor, appointed by the will of Nature, the realization for the Ascent of Man were laid.

If, now, we turn from prehistoric to historic times, we find that the influence of mothers on the early character of their acts, and the desire of young men to recommend themselves to young women, have been important agencies in the formation of character, and have determined some of the chief steps in the progress of civilization. The moral influence of women has had two modes of operation. First, it has been a softening influence, those who are most liable to be the victims of violence having tended naturally towards flinching in sphere and mitigating its excesses. The other mode in which the efforts of women's gentleness has been important is by giving a powerful stimulus to those qualities in men—courage, for example—which, not being themselves trained in it, it was necessary for them to cultivate in their protectors. Unquestionably the influence of women counts

for a great deal in two of the most marked features of modern European and American life, namely, its aversion to war and its addiction to philanthropy. It should need no argument to prove, however, that the best of our part which women already take in the formation of general opinion, would be modified for the better by the more enlarged instruction and the practical co-operation with the things which their opinions influence, that would necessarily arise from their political emancipation.

The Legendary Personality

It is unmistakable that there are certain personalities which lend themselves easily to legend. A sort of romantic mystery glows like a mandorla about them, and the tales that cluster around such memories tend all to emphasize in the character something aloof, alien, and but half comprehended, something about the temperament which showed that the man was passing through life as a pilgrim, observing curiously, isolated, minutely and widely, but always as an outsider, as one not wholly contained in this passing experience, but as having responsibilities and treasures at home.

"The interesting thing about the great," said a worldly and sophisticated man once to an expansive girl who was explaining herself, "is what we can know, but the interesting thing about the average is what we can't." It is indubitably true that the interesting things for us about a great man are the points of contact, the details wherein he meets us, where we feel our kinship to him in his actions. But this is interesting only because we feel, too, his point of departure; because we know that he lives a life apart, a life above and beyond us,—that life into which through given signs he allows us such intermittent glimpses as we deserve, such faint hint of its mystery, its silence, its turning of an angle away from the light of the present day, as we can grasp. DANTE is greatest in that part which issued forth from our world and continued with heaven and hell, but we are closer to him when we gather up the fragmentary tales of that human love which he made the point of departure. SHAKESPEARE is greatest in that world unto himself alone where he saw wondrous visions of men and women acting and reacting upon each other, beckoning new events to birth, enriching human experience. Overwhelmed by the richness of that intellectual life apart, man rather than any straw which unites the sea of visions to ordinary, active mankind.

But in the average man whose whole life is apparently running parallel to our own, the main interest is such tiny fragment as he turns aside, keeps hidden from the public eye, the part whereabouts none may enter. It is not only the supremest privilege that courts a legendary accession; but wherever there is a strongly marked individual taste, a satisfying life of isolation and habitual reserve, greedily human curiosity is aroused to see what treasure is hidden, what lovely delight this man has, and three gathers up the hints, the anecdotes, the parables that reveal a character.

PATER had a personality of the sort that lends itself to anecdote and legend. Although, perhaps, we must admit that he had not imaginative freedom and liberality, he was yet so different from average man that men instinctively sought to break down the barriers. He was a man who demanded and who, partially, at any rate, achieved beauty in the daily walk of life. Like his own MARICE he too had acquired the art "of so relieving the ideal of poetic traits, the elements of distinction, in our every-day life—of so exclusively living in them, that the unadorned remainder of it, the mere drift and debris of our days, came to be as though they were not." Such single-eyed pursuit of beauty was in itself enough to throw a nimbus around the man, to separate him from the average whose goal is bread and shelter, or worldly goods and honors. It is therefore a question whether or not we are to be grateful to Mr. A. C. HENSON for explaining our belief in some of the favorite anecdotes of PATER and for carefully moderating others. As they stood they were illuminating, and gave an almost intimate glimpse into that reserved character who set beauty high above use, and art above patriotism. The tale of his failure to give marks to certain essays, for the final grading of students, and his reason for failure to meet the obligation, was delightfully characteristic and amusing, and it is almost a pity to explain the story away. As it used to be told a score of years ago it ran, that PATER, being one of a committee to pass on examination essays, professed when it came to the giving of an account, to be wholly unable to say anything at all, shaking his head wearily at restrained questions, and answering, "No, nothing struck me; nothing struck me at all; all the essays were very much alike." Finally his colleagues suggested that if they read about the names of the men who had submitted the essays to might be able to give some opinion. He submitted, finally brightening vividly at the name "Sanctuary," and saying, with soft glee: "Ah, yes, I remember him. Give him a first. I liked his name so much." The tales of his special tolerance toward the pen pals, undergraduates, too, are delightful, whether apocryphal, as Mr. BROWN says, or not. Being consulted upon measures to be taken against students who persisted in fondling in the quad, he objected that on the other hand "they do light up the tower of St. Mary's beautifully."

There is another tale of his saying, when some special bit of rowdy-

ism of the students was reported to him, that they reminded him of "playful young tigers that had just been fed"; and once he cautioned the college dignitaries lest their disciplinary measures should "transform with roses into cabalages in rows."

This tendency to regard light things lightly, and to observe always the passing beauty upon the surface of things, reminds one of the title of an essay of LEONARDO's, "On the Flight of Birds and Other Such Matters." Indeed, between these two men there were many points of temperamental likeness. Both endeavored under varying forms to offer the real in terms of ideal beauty. Both felt with a poignant yearning upon pain that in the swift mutation called life there is ever an instant of supreme loveliness to be culled by those whose senses are disciplined, whose spirit is prepared. Both cultivated a certain austerity of choice in life which should make them worthy the initiation into moments of supreme enjoyment. One can almost completely apply to PATER that Platonic sobriety under which LEONARDO described himself as passing beneath overhanging cliffs on his way to a great cavern, and while on benched knees peering through the darkness he was overcome by desire and fear—fear of the menacing darkness of the cavern; desire to ascertain what wonders might be therein.

PATER, too, might have joined in those two related ejaculations of LEONARDO's: "I wish to work miracles!" and the pathetic and powerful reflection: "Thou, O God, select us all benefits at the cost of our soul! As a day well spent makes sleep seem pleasant, so life well spent makes death seem pleasant."

Both, too, are alike in that their searching and their goal were far from the thronged highway, and that their best gifts must be given by way of the elict and the consciousness to the thriving populace for whom the supreme usefulness of beauty is so far more conjecture, and who know beauty only as degraded by considerations of use.

Personal and Pertinent

CHARLES FRANK NORTON, who is about to read a paper in Cambridge at the hundredth-year celebration of LONGFELLOW, lives in his paternal mansion among the trees in Cambridge. The place is called on notes-page Shady Hill; by the populace of Cambridge, like CHARLES W. ELIOT, WILLIAM JAMES, and other neighbors of that kind, it is called Norton's Woods. Mr. NORTON used to be with LONGFELLOW, the leader and inspire of the Dante Club, or class, of Cambridge—and his prose translation of the Divina Commedia vies with LONGFELLOW's poetical translation, which even an unbelatedly undergraduate can read with pleasure. Mr. NORTON may be called old, for he is just over the seventy-nine-year line, but he does not look it, and he is very far from taking the part. He sits in his large library, the books in which are to go to Harvard University after his death, and discourses most entertainingly on his own subjects, on books, on pictures, on his old friends, among whom the chief were LOWELL, LONGFELLOW, and TUNIT, and upon the politics of to-day, including the administration of THEODORE ROOSEVELT, who does not seem to like the old professor as he deserves to be liked. In his blue coat, humbly smoking, and smiling persuasively, the only evidence of his age is his own insistence upon it, for he tells you that he is too old to read modern literature. He was once professor of the history of art at Harvard, and he used to say that any man who took his course was worthy of a mark of sixty for that single reason, and why not? for even those who took the course for a "map" learned at least how a gentleman talks on a gentleman's subject.

The lawyers have a high respect for Mr. TAYT as a judge, and they tell us that when he was on the bench his circuit court was as good as any in the country—some say the best. It has always been his ambition to be justice of the Supreme Court, perhaps chief justice. In ordinary cases he would administer the law, and he would control his court. But in constitutional cases he would "construe" power into the Federal government in a way that would satisfy the most imaginative centralizer. He wanted so much to remain on the bench, and to go higher, that he was very nearly refused to go to the Philippines, because to go to Governor he was obliged to cease to be judge. But as he said himself, McKinstry amused his "constitutional" and ever since then he has been in politics. Wherever he wants it, he will command the solid Yale vote, and there are very few people who come in contact with him who escape his engaging ways of frankness. He has never lost his ambition, however, to be the chief judge in the country, and he has naturally been inclined to doubt his availability. He has been obliged to take a gloomy view of his political prospects to meet a perfectly proper domestic pressure, for he is as firmly believed in at home as he is at Yale, and that is a tribute which cannot be paid to most husbands who have pulled in a crew. Apparently he did better after his war on Cox of Cincinnati, for friends in Washington and elsewhere were frequently told that the domestic opposition to Mr. TAYT's succeeding Justice HARLAN or Chief-Justice FULLER if the chance came had been withdrawn. And yet Mr. TAYT would run for President with the full consent of all who are near and dear to him, as with his own concurrence, if the Republican party should refuse to agree with him as to his availability.

THE RIGHT HONORABLE JAMES BRYCE

THE SUCCESSOR OF SIR HENRY MORTIMER DE LAUNDELL AS BRITISH AMBASSADOR TO THE UNITED STATES

THE NEW BRITISH AMBASSADOR

By CHARLES JOHNSTON

THE new British Ambassador comes to us well recommended. He has made not one reputation, but half a dozen reputations. In a singular way he is fitted to represent the British Isles—for he was born in Ireland and is a strong Home-Ruler; he was educated in Scotland, and has for years represented Aberdeen in Parliament (the constituency which makes the proud boast that it has not one illiterate voter), and, thirdly, he was called to the bar in England, has represented a London constituency in Parliament, and has for years held one of the most distinguished posts at the most venerable English university. Mr. Bryce, thus amply fitted to represent Great Britain and Ireland, may further be sure of a welcome in the great Republic to which he is accredited. Not only has he written one of the best books ever penned on the life and institutions of America, but he is sure of an even warmer welcome from the fact that he speaks throughout that great work in a tone of warm admiration of the American woman. He is solid with both sides. And one may say that there is not a section in the community on whose welcome James Bryce has not some special claim. There is the great body of the nation, to which *The American Commonwealth* recommends him. To the Irish-American he comes as a staunch Home-Ruler, who never for a moment wavered in his convictions. To the German-Americans he may possibly boast that he is an alumnus of Heidelberg, that he is a lifelong student of German literature and history, that, in his first political campaign, he had the honor, shared by few British members of Parliament, of addressing the German electors of East London in their own Teutonic tongue. To the French, he can point to his splendid study of *Charlemagne, the Holy Roman Empire*, and say that few historians have done more single justice to the great reviver of the Roman Empire. The Italians should welcome him as a great student of Italy, from the days of Julius Caesar up to the present day. He may fraternize with the Swiss, if we have any among us, on the high ground that, for years, he was one of the most ardent climbers of their lovely mountains, and a former President of the Alpine Club. The Hungarians will remember, with a glow of satisfaction, that he has explored many of the remote corners of their beautiful kingdom. The Slavs know of him as a traveller in Poland. The Russians may recall, with admiring envy, that he has the honor of having climbed Mount Ararat, alone and unaided, while the chosen Comrades and Kurds who made the start with him were selling work out on the lower slopes of the mountain. To Scandinavians, he may talk of his explorations in Iceland, where he trod in the footsteps of the daring Vikings of old, and his claim to have proceeded thence to America is better authenticated than that of Leif the Lucky or Eric the Red. Thus holding a chain on so many sections of our community, Mr. Bryce may still outstrip this record, and point to the fact, which should endear him to twelve millions of our citizens not included in any of the above categories, that he has written a splendid work on Africa. When one thinks over the long list of this great man's achievements, of which we have mentioned only the fringe, one is reluctant to believe that a single mortal achieved it all unaided, and within the Biblical limit of three-score years and ten.

James Bryce was born in Belfast, on May 10, 1838, and he may share with Lord Kelvin the honor of being the most distinguished son of the northern capital of Ireland. But unlike Lord Kelvin, Mr. Bryce has for a quarter of a century been a convinced Irish Home-Ruler, and this may remind us of the fact that, during the last hundred and fifty years, some of the strongest and most ardent Irish Nationalists have been sons of Conservative Ulster.

Mr. Bryce went from Belfast to Glasgow University, and there he gave evidence of possessing a rare degree of moral as well as physical energy. Whatever subject he touched, he made himself master of. Nay, more, he illumined every subject with new intellectual light. The originality of view was as notable as his accuracy of research. It became evident that such exceptional powers required the highest training the nation could offer, and we presently find James Bryce at Oxford, gaining a name for thoroughness and brilliancy of presentation. He wrote the *Arnold Prize Essay* in 1861, being then twenty-six years of age, and this essay was highly praised, and made the nucleus of a book, *The History of the Roman Empire*. Freeman said of it that it raised its author at once to the rank of a great historian.

After graduating at Oxford, in 1862, James Bryce went to Germany, and studied at Heidelberg, striving to perfect himself in German, which he had already studied pretty thoroughly. We next find him in London, studying law. Called to the bar in 1867, he practiced for some years in the London Law Courts, and sufficiently distinguished himself to be called to Oxford, as Reader Professor of Law, in 1870, a position which he held until 1881. All through his work, one finds strong legal insight; indeed it has been said of him that in his histories he is a jurist rather than a historian, and readers whose minds are not apt of keen and exhaustive analysis may think that some of his elegance and interest are, perhaps, sacrificed to thoroughness and accuracy. It is to this keen legal insight, this strong sense of actuality, however, that Bryce owes his great reputation as a writer on historical subjects. And it is a singular proof of the power of his

mind, the abundance of his moral and intellectual force, that his two chief works are equally excellent, though dealing with themes so diverse as the Holy Roman Empire and the American Commonwealth.

No man was ever less of a dry-as-dust analyst, a mere Hecateanish raker, than this distinguished son of Erin. On the contrary, he might establish a first-class reputation on his record as an explorer and traveller had he never written a page of history. So much of his descriptive work is fascinating and vivid, that it is difficult to make a choice; he is as charming when he describes the lava-fields of Iceland as when he paints the dry sadness of the veldt; he writes as delightfully of the Danube Valley and the Carpathians as he does of Oregon or Boston. Yet it seems to me that the gem of all his descriptive writing, and the crown of his exploration, was that solitary ascent of Mount Ararat, where, pushing through the clouds and up the lava slopes, he at last stood on the white summit, mentally tightening the Spanish sash around his waist, and gazing down at the vast valley of the Araxes below him and the unsundered green sky overhead. Yet, perhaps, his untimely would lead Mr. Bryce to protest that that is a very good color for the sky. It is delightful to find this world-famed historian bringing down from Ararat what he asserts, with humorous seriousness, to be a genuine relic of Noah's Ark.

Thus did James Bryce make two reputations. Returning to London, he published the account of the Ararat ascent in 1877, and straightway prepared to make a third reputation in a totally new field. The great chasm between Parnell and Gladstone was in full progress when James Bryce stood for Parliament in 1880, choosing as his constituency the London borough of Tower Hamlets. He was at this time forty-five years old, and immediately after his election he became a marked figure in the House of Commons, and one of Gladstone's strongest and most influential associates. In one of his best essays, "How We Became Home-Rulers," Mr. Bryce has described with masterly eloquence that great epoch of struggle between the two nations, when England at last broke up to the fact that Ireland was in earnest. It is a characteristic of a man that he determined to explore Ireland for himself, and that he went across the Irish Sea in December, 1880, and studied the working of the Land League at first hand, under the guidance, in part, of Michael Davitt. And there are few better written chapters in modern history than Bryce's account of the sessions which bridged the period from the election of 1880 to the days of the Home Rule Bill of 1885. In 1882 he and some of his more daring Liberal colleagues were already becoming converts to the principle of Home Rule. "It may be a bold experiment," they said to one another in the lobby, "there are serious difficulties in the way, though the case for it is stronger than we thought two years ago. But if the Irishmen persist as they are doing now, they will get it. It is only a question of their tenacity." And there is fine humor in his description of the "unbalancing change of front" of the Conservatives, from Lord Salisbury and Mr. Russell's time, when, after the failure of the first Home Rule Bill had put the Tories in office, they adopted the chief measures of the Liberal policy, Ireland bringing in a Land Bill more sweeping than Gladstone's, and Salisbury talking of the Austro-Hungarian Dual Monarchy as a probable model on which might be established the relations of England and Ireland.

But we must turn from this fascinating and still uncompleted chapter of modern history to other sides of the many-sided man's activity. In Parliament, he made a great name not only as a staunch advocate of justice for Ireland, but also as Parliamentary Secretary for Foreign Affairs. The Foreign Secretary being in the Upper House, the burden of all discussion of Britain's foreign relations fell on Mr. Bryce. And in all cases he rose to the occasion; his knowledge of French and German and Italian, of the history and law of the chief European nations, made him one of the ablest ministers who ever filled that post. One attempted to compare James Bryce with that other great Irishman, Edmund Burke, who, like him, made a high reputation for writings concerned with both Europe and America; who, like him, showed how history can be illumined by philosophy. But there is one marked contrast; the treatment of the two principles by the House of Commons. Burke is rightly esteemed for his poetry, but his contemporaries never understood him. When he rose to speak on the floor of the House, the members poured forth into the lobby, so that the silver-tongued orator, rival of Demosthenes and Cicero, came to be called "the dinner-dish of the House of Commons." With Bryce it was exactly the opposite. When it was announced through the lobbies that Bryce was speaking, instantly every member, of whatever party, was up and alert, hurrying back to his seat; and all listened with equal devotion, not so much to his eloquence, though that was great, as to his practical wisdom, his keen intellectuality. This was true during Gladstone's last ministry, when Bryce had a seat in the cabinet as Chancellor of the Duchy of Lancaster; it was not less true during the Salisbury and Balfour ministries, when he strongly attacked the South-African policy of Joseph Chamberlain. Finally, when the Liberals returned to power, this resolution of Burke's was given the force of making Bryce, in Ireland, and the one event which accompanies his coming to Washington is that he has left that vital task incomplete.

HOW THE AMERICAN IS CHANGING HIS OCCUPATION

By F. W. HEWES

HAD there been no change in proportional employment since 1870 we would have three and a half million more farmers than we have to-day. On the other hand, we would have eight hundred thousand less manufacturers, two million less persons in trade and transportation, and a half million fewer in professional work.

Much has been written about the deserted farms of New England, and the flocking of farm lads from everywhere to the cities, to engage in other occupations than that of their fathers.

Reliable history says that shortly before the Revolutionary War ninety-seven per cent. of our people were farmers. One hundred years later (census of 1870) less than forty-eight per cent. (47.4%) were engaged in agriculture. At that rate, another seventy years would close out the industry altogether, but it is not going on at that rate now, and what is more, it is not going forward nearly as fast as seventy years ago.

The upper line of the diagram of Relative Proportions tells the story since 1870, and it looks very much as though the next census may show a comparative halt in the change from farm to city occupations, for the last ten years shows very little loss. Does it indicate a reversed swing of the pendulum?

To rightly understand the situation, we must look at the actual number of farmers, as well as at the percentages, for, in spite of the decreased percentages, the farm workers have increased in numbers from nearly six million (5,922,471) in 1870, to over ten million (10,381,265) in 1900. Nor does that tell the whole of that side of the story, for those thirty years represent a period of the most remarkable advance in the use and efficiency of farm machinery ever known. Therefore it is probably safe to say that a million farmers to-day are quite the equivalent

of two million, thirty years ago, in the planting and harvesting of food crops, and those are important items in agriculture. At any rate, our farmers are supplying the nation (that is now almost twice as large as thirty years ago) more generously than ever before, and in addition they are sending away more than twice as much to supply other nations as they were sending thirty years ago.

While the supply of food and of clothing flows is unimpeded, that of brain and brawn is more so. The reduced proportion of farmers has not reduced the relative supply of material products, but, rather, that relative supply has been increased. Has it reduced the rural supply of brain and brawn that is the real foundation of national endurance?

It is now, and ever has been, from the farms that have come, by large odds, the major supply of our captains of government, captains of manufacture, captains of transportation, and captains of intellect in all our great activities. From colonial farms and cabins sprang such leaders as Adams, (Wis.) and Patrick Henry. From farmers' stock all of our earlier and many of our later Presidents were drawn.

The training and influences of nature incident to farm life are of vast importance in the development of American boyhood. The early rising, the steady training of muscle, heart, and lungs that comes of sowing and plowing and harvest time, of breaking ridges and driving flocks and gathering fruits, of hunting days and fishing days and wrestling bouts, together with the plain yet savory foods such as abound in most American farm homes, build a physical foundation fit to stand the furthest strains that come to the captains of the nation in winning their marvelous, successive victories.

The sweep of the winds, the songs of the birds, the beauty and fragrance of the wild flowers, the glory of sunrise and of sunset and the very silence of the open limitless country, build into the life of expanding childhood and of opening manhood a touch of reverence and of generosity to which the artificial environment of town life is a compulsory stranger.

The broad view of field and forest, of plain and of mountain, the great stretches of cultivated areas, the long country roads, going on and on forever, the ceaseless flow of springs and streams, the quiet, constant growth of crops, the direct and unconventional argument of plain-speaking neighbors, build into man's life a breadth of view, a sense of correlation, and a steadying power that can come from no other source.

Add to this the fact that the rural schools are better now than ever before, the rural homes have more books and newspapers, and as many a farmer's beside the multi-educating telephone is adding its insistent training power to mental development, and we are justified in judging that the intellectual development of the rural forces are quite as much increased as those of the material side. Therefore we are further justified in concluding that the sources of efficient leadership are not diminished by the relative shrinkage in agricultural employment.

So much for the change in agricultural occupation—a loss of nearly twelve per cent. in thirty years in relative numbers, a gain of seventy-five per cent. in absolute numbers, and a probable gain of 150 % in absolute efficiency, both material and intellectual.

What about that twelve-per-cent. relative loss of numbers? Where have these three and a half million farm lads found their industrial homes in the great families of national occupations? There are four other chief groups of "persons employed in gainful occupations." Of these, manufacturing leads, as is shown by the second line of the diagram of Relative Proportions. That line records a relative gain of nearly three per cent. in the thirty years (21.6 % in 1870 and 24.4 % in 1900). More than three per cent. from 1880 to 1900. Since that date a small relative loss. So small a gain in the thirty years will doubtless be a disappointment to many readers who during the past twenty years have read of the wonderful strides made by manufacturing in the United States. We must therefore look at the absolute as well as the

relative side of the subject, as we did of agriculture.

This shows a little over seven million persons (7,065,902) in 1900, as against about three million (2,707,421) engaged in manufacture and mechanical employments, in 1870, and a product increased from a little over four billion dollars in 1870 to thirteen billions. Again, there is no escaping the fact that improvements in machinery have more than made up for the relatively small gain in proportion of total wage-earners. However, this surprisingly small net gain of persons accounts for about one-fourth of the boys that have left the farms since 1870.

The next smaller group of wage-winners ("Domestic and Personal Service") shows so little change in the thirty years as to make it evident that very few of the farmer boys have chosen employment in that group. It may, therefore, be neglected in this consideration.

The next smaller industrial group ("Trade and Transportation") shows the greatest gain of all. More than half, nearly two-thirds, of the missing farm lads have chosen employment in the enormously developing mercantile and transportation industries centering in the chief cities and branching out into the smaller towns and hamlets of every part of our great domain.

The professional workers, although comprising the smallest group, have attracted practically all of the rest of the missing farm boys. About one-sixth of them have entered "Professional Service"; that group that includes literary workers, lawyers, physicians, teachers, clergymen, legislators, and others who contribute directly to the

and a half million (3,401,000) more farmers than there are. Of these ascending farm lads, over three-fourths of a million (841,000) are in manufacture. Almost exactly two million (2,006,000) are in trade and transportation, and a little over a half million (523,000), in professional service.

In spite of the relative loss of numbers, the potentiality of the agricultural element has rather gained than lost in both physical and mental force. Quite as evident is the potential gain over gain in numbers, in manufacture, in trade and transportation, and in the professions; for the gain in the number of workers, large as it is, cannot account for the remarkable output of results that have contributed so mightily to the eminent position now held by this nation among the world powers.

potentiality of the civilizing forces of the nation.

To show the absolute increase of workers in each group of industries, and to compare these advances, a second diagram ("Comparative Growth") is printed. Two striking facts appear: 1. Agriculture drops below the position of total population, thus again indicating its relative loss. 2. The two groups having the lower numbers of workers have each gained almost three hundred per cent. in the thirty years.

Now to recapitulate: From 1870 to 1900 agriculture has made a net proportional loss of nearly twelve per cent. as among all "persons engaged in gainful occupations." That is, if the same proportion of all income winners were now (1900) farmers, as in 1870, there would be nearly three

ADDING TO THE TERRORS OF WAR

By J. E. JENKS

THIS government expends a very small sum each year for testing the new devices of a possible military value. A permanent board of army officers, known as the Board of Ordnance and Fortification, is supposed to have the duty of encouraging inventors and assisting in the development of their inventions. Congress has appropriated very little for any such purpose, and last year only \$5000 was expended by the board, which, with its accumulated allotments of previous years, has now on hand more than \$100,000. Comparatively few experiments are made, and the vast number of suggestions are apparently shelved without much more attention than polite acknowledgment to the authors.

The board has refrained from pursuing the question of aerial navigation since its experience with Prof. Langley of the Smithsonian Institution, whose death was undoubtedly hastened by the public ridicule heaped upon the scientist during his headlong efforts to develop a flying-machine. Prof. Langley operated under the auspices of the Army Board, the members of which later appeared to regret the encouragement and aid they had given him, added to which were the much magnified ignorant newspaper humor, and the unjust Congressional criticism of Langley and the War Department for their joint attempt to solve the problem. Prof. Langley, in the course of his experiments, invented an engine which was a marvel, and which is an important and enduring contribution to the science of aeronautics. But since that time the Army Board has fought shy of the flying machine, and to-day refuses to go on record as even remotely specifying the question whether such mechanism shall possess in its experimental stage to entitle it to the official consideration of the authorities.

While this attitude of the Army Board has discouraged the flying-machine inventor, it has not diminished in the least the amount of original ideas which are submitted to the military experts for their consideration. Nearly all of these ideas are intended to add to the

efficacy of the implements of battle and increase the terror of war. Perhaps an exception should be made in favor of an ear-protector, the invention of a New York man, adapted for use by those who are on duty in the turrets of battle-ships and those who are stationed at the coast fortifications. Ordinarily, the blast of a big gun has an effect upon the drum of the ear; it is at best unpleasant, and sometimes it proves disastrous, as in the instances of men who have lost their hearing. The ear-protector is a little celluloid bulb so pierced that it may be placed in the ear and protected from the noise and shock while not interfering with the hearing, an advantage, of course, over the crude method of stuffing the ears with cotton, as that nothing can be heard, and when orders can only be appreciated by pantomime.

Some of the other inventions which have not been favorably received may be regarded as having a tendency to encourage peace, since they would introduce into warfare factors of devastation which would be their diabolical results promote international disarmament. Of this class must be considered those bomb-dropping devices which, if successful, would destroy whole armies; the inflammable projectile, capable of burning up a camp; the nitroglycerin missile; a scheme for pouring burning sulphur into trenches, and kindred methods of wholesale civilization and obliteration. There is, too, the usual proportion of armored cars, including the highly protected motor which shall penetrate the enemy's lines and afford its steel-shielded occupants a chance to pick off the opposing marksmen and methodically strew high explosives along a death-dealing route. One of these horrible cars makes the famed Juggernaut look like a toy train. One of the conditions which seems to be fully met by incipient invention is the use of smoke for various purposes, including that of a shield which will permit approach upon an enemy without his discovery of the advance.

The country does not look yet, with all the cry for universal peace, the means of increasing the ravages of war.

TWO SHAHS OF PERSIA

By FRANK MARSHALL WHITE

ALTHOUGH the shahs of Persia have made great advances in civilization since Futeh-Ali sent an envoy to cement friendly relations with Europe, in 1819, and the contrast afforded between father and son by the visits of Nasser-ed-Din and Mirzafer-ed-Din to London and Paris, within the last twenty years marked a long step in evolution, there was still something to be learned in the entourage of the king of kings, as to the Occidental point of view, when he was on his travels abroad during the present century.

In 1819, Mirza Aboul Hasan Khan made his first visit on behalf of Futeh-Ali, proceeding to Paris in state with a letter to Louis

XVIII. In order that there might be no doubt in Europe as to the standing of the Persian monarch, Mirza was ordered to stipulate that the ruler of France receive the message standing, and that at any subsequent meeting the Shah's envoy sit beside the king, or else in front of him. As Louis' feet and legs were so swollen with gout that he was unable to stand at all, and as Mirza was bound to carry out his instructions in the letter on pain of having his head cut off on his return to Persia, Futeh-Ali's negotiations got no further than the first stage, since the French court had no desire to be accessory to the envoy's desecration and decided that the simplest way to avoid complications was to dispense with the interview.

When Nasser-ed-Din made his third visit to Europe, in 1889, he was accompanied by an impish small boy named Asia, who added considerably to the gaiety of those nations his master visited that year. It was said that an eminent Persian astrologer had warned the Shah that his life would be precarious with that of the boy, and hence the monarch took great precautions as to the other's welfare.

The pranks Asia played upon Amin-er-Sultan, the grand vizier, were a source of perennial delight to the ruler of Persia, his suite, and other observers of various nationalities. The Shah insisted on having the boy at his side on all occasions, and the only time he was ever successfully separated during the tour of Europe was at the gala performance at the Paris Opera, when Madame Carmet forcibly and personally ejected him from the royal box, and kept him out. The monarch was uneasy, however, during the entire performance.

Asia was protected by the Shah in any of the tricks he perpetrated upon the viceroy. The boy was particularly fond of jerking that august personage's chair from under him on state occasions; he frequently managed to put a superfluous amount of Cayenne pepper into Amin's food, and caused him to choke and leave the table at state banquets; and during the royal visit to Fontainebleau he turned a hose attached to the fountain of the great man, who had chanced to be standing apart from the others. These were only a few of his misdeeds. They were recounted at length in the newspapers,

and the vizier's life was made wretched from the time the expedition left Teheran until its return.

Amin-er-Sultan accompanied Mirzafer to Paris in 1900, as he had Nasser eleven years before, but Asia was not in the entourage this time. To those who remembered his pranks and inquired about him, however, the vizier showed a bracelet he wore on his arm, made out of the boy's teeth. The astrologer's prediction had been verified. The lives of Asia and the Shah had been nearly coextensive, for Amin had avenged himself upon his tormentor as soon as his protector had passed away.

In 1902, on the occasion of Mirzafer's second visit to Paris, a

French journalist inquired of a dragoman in the Persian suite about a particularly intelligent young physician who had been in the entourage of 1900. "He is dead," the other told him.

"Indeed?" said the journalist. "Why, he was a very young man."

"His death was sudden," responded the dragoman. "He was not sympathetic to the grand vizier."

Mirzafer's visits to the European capitals left a better impression than those of his father, in spite of the fact that Nasser's barbaric display of jewels and the Oriental customs that he refused to modify to suit more cultivated tastes, lent him a certain mystery in the eyes of the vulgar. Nasser's religious principles imposed very dirty habits upon himself and the members of his suite, and his visits were looked forward to with positive terror by the custodians of the palaces in which he was housed by his royal hosts.

It required weeks of disinfection and careful cleaning to render habitable again the Alter Schloss in Berlin, where he had occupied the magnificently decorated Louis XIV. apartments. He was given a suite of rooms in Buckingham Palace on the occasion of his first visit to England, but was taken care of elsewhere on his second and third visits. Indeed, it was said that his second visit that rich English portness

From photograph copyright, sold, by Lindemann & Dittmann

Mirzafer-ed-Din, the present Shah of Persia

visited with one another in inviting him to their residences, in the hope that an signal act of devotion to the crown would secure reward in the form of titles, and that this hope was fulfilled in more than one instance. Nasser's suite fed principally on mutton, and this was killed in the living-rooms of the houses they occupied, which was not conducive to cleanliness.

While, however, Nasser-ed-Din was an innate barbarian, cruel and ungenerous, his son and successor had acquired some European tastes, and his disposition was kindly. Nasser was with difficulty persuaded on one occasion that he must not send one of his sons, who had offended him, to be executed in the garden of Buckingham Palace; and another time, the subject of capital punishment in Persia being under discussion at a state banquet, he proposed with perfect seriousness to behead one of his followers in the presence of the company to

BELFAST, THE CHICAGO OF IRELAND

By SYDNEY BROOKS

BELFAST is the Chicago of Ireland, and like Chicago it has sprung up in a night. The guide-books, it is true, have erected for it a sort of historical background, a background that would be improving if it were not so dully incredible.

One simply refuses to connect Belfast with a past of any kind, and to read of a siege that took place in 665, of a castle that was erected in 1177, of wars, forfeitures, and confiscations from the fourteenth to the seventeenth centuries, is simply to dally with meaningless fairy-tales. If Belfast really has anything behind it, that something is most successfully concealed. The city is a triumph of the new and the instant. It makes no profession of believing that it was ever different from what it is to-day; or rather, in its intense absorption in the here and now, it never gives a thought to the latter. The Belfast that really counts is the creation atmosphere of the nineteenth century. A hundred years ago it had a population of no more than 15,000. To-day it numbers more than 350,000, having trebled its population and multiplied its ratable value six times over in the last forty-five years. These are the achievements that appeal to the Belfast of to-day. They tell you about them with a genuinely Chicagoan pride and complacency. Size is their duty. They have the largest ship-building yards, the largest tobacco factory, the largest spinning-mill in the world, and they let you know it. Before coming here, and especially while travelling through the desolate and stagnant West, I had half convinced myself that the sight of a factory chimney visibly smoking was one of the most beautiful and inspiring things in the world. But I find now that you can have too much of chimneys. Belfast is nothing but chimneys, and its rough-tongued, hammerless, money-making people are among the most hopelessly commercialized I have ever come across. I admit their splendid energy and almost Titanic force and the perfection of their industrial equipment. But they are not an inspiring community; their politics are as necessary as Tammany Hall's; their bigotry has not even the excuse of any great historical exploit; their whole tone of life is provincial to the core and unrelieved by more than a faint and casual gleam of art or letters.

Business which elsewhere is business merely, in Belfast is everything. But it is business of surpassing excellence. Whatever the men of Belfast set their hands to they carry through with undiminished thoroughness and an impartial adaptation of means to ends. Go, for instance, to Harland & Wolff's, the famous ship-builders. Their works cover over 150 acres, and they find regular employment for more than 10,000 hands. For immensity of scale and perfection of detail I should doubt whether their equals exist anywhere. To walk even hurriedly through their smoking-furnaces and riggers' shed, their drawing-office, plate-mills, joiners' shops, smith shops, moulding and casting departments, engine and boiler works, fitters' shops, power-house and sawmills, to glance at the timber warehouses and huge building-shops, and to take up a standpoint that will bring into perspective, even though it be only for a moment, the great basins and dry docks where the mightiest vessels ever hunched tower all around and above one like a cascade of gigantic patents waiting admission to the hospital—is to gather an

The Ship-building Centre of Belfast. Many of the world's largest Ships have been built and launched here

impression of a matchless concentration of power and efficiency. It is all the more wonderful, too, when one remembers that Ireland has next to no minerals, and that all the iron, steel, and coal have to be imported. More than four hundred ships, with a gross tonnage of over a million and a half, stand to the firm's credit since its foundation forty-seven years ago. And just across the river Lagan, once and not so very long ago an untravelling stream and now as famous and as busy as the Clyde or Tyne or Weser, is the establishment of Messrs. Workman & Clark, employing some three thousand hands and turning out any vessel you please to order, from a first-class transatlantic liner to a paddle steamer, a ferry-boat, or a sailing-yacht. These two firms typify the best of Belfast's achievements, a magnificent conquest over inconceivable odds. And what is the natural, the quite inevitable, attitude of the men who have won such a fight toward the five-sixths of Ireland that is Catholic and moribund? If Chicago were planted in Lower Quebec, how would it feel toward its hinterland?

And then besides ship-building, there is linen in all its branches—spinning, weaving, bleaching, and so on. France gave Belfast its linen trade by revoking the Edict of Nantes, though the rough foundations of a trade that now amounts to over \$60,000,000 a year can be traced as far back as A.D. 1210. The quality of the water and the atmosphere conspire to give to Belfast linen a texture and whiteness that have made them famous the world over. Sixty years ago I suppose that three-fourths of the yarn was produced on spinning-wheels in the houses of farmers and cottagers. That industry has been killed by the power-loom, but another and greater one has sprung up in its place. Every linen-mill in Belfast employs, I dare say, far more outside the factory than in it. Go into the countryside of Antrim and Down and you will see on every side the vast sheets of linen spread out in the fields to bleach; and in the cottages you will find the womenfolk working on the embroidery and lace, the finishing and detail work that are subsidiary and essential to the main enterprise. In Belfast itself it is simply a choice of which mill you care to go over.

I chose the York Street mill, an enormous factory covering about five acres, with 60,000 spindles and 1,000 looms and employing over 4,000 hands—a perfect establishment in which to see the whole process of converting flax into linen as one could wish for. And when you have thoroughly absorbed into your brain the buzz and click of all the machinery, you have only to walk a few hundred yards to encounter another factory—a tobacco one this time—yet more colossal. All through the United Kingdom Goldsmith's tobacco are household names, and the scale on which the industry is conducted may be judged from the fact that this single firm has paid out in one year \$4,000,000 in duties alone. But even this has to yield to Dunville's distilleries, where the "Old V. R. Irish Whiskey" is manufac-

Castle Place and High Street, Belfast

tured. Their plants and warehouses cover nearly twenty acres; three government superintendents and twenty-five excise officers are continuously employed looking after their stock; and the duty on their annual output would amount to well over \$7,500,000 per annum.

But if Belfast supplies the home, it also supplies the antidote, and I am not sure that it is not even better known for its ardent waters, and particularly for its ginger ale, than for its whiskeys. The two firms that spring instantly to mind directly ginger ale is mentioned both have their factories in Belfast. And in this city of innumerable industrial wonders you also run across a vast rope and cable factory, the largest in the kingdom, the best equipped and most elaborate printing works I have ever encountered, newspaper offices that outdo those of New York in their mechanical perfection, and a host of minor industries, all up to date and all flourishing. Flour-mills, chemical works, tanneries, boot and shoe factories, beam-weighing plants, and establishments for the manufacture of canned fruits, biscuits, preserves, boxes, matches, agricultural implements, and so on. There is probably no spot in the world where 350,000 people produce so much wealth as in Belfast.

And this compact, vigorous, and utilitarian community is, I need hardly say, a hotbed of unending Protestantism and of almost ferocious Unionism. Of the two I think it reverts from the Pope with an intensity slightly greater than it does from the sin of Home Rule. It acknowledges little community of interest or sympathies between itself and the rest of Ireland. Having almost the monopoly of practical intelligence and commercial prosperity, it simply asks of Catholic Ireland to be let alone. It has persuaded itself that Home Rule not only means an increase and increasing attack upon its industries, but is also a synonym for Home Rule. A blind frenzy of suspicion and hatred is the base of its political creed. To listen to the men of Belfast you would think that Catholics spent most of their time cutting throats and stealing property. With all their hard-headedness and practicality they are like the Scotch in being a singularly emotional people. Outside of business they can hardly be said to reason at all. The only way to get a prejudice out of their heads would be to try to turn them. A little over a hundred years ago the Orangemen of Ulster and Belfast were the strongest of Irish Nationalists. Not a single one of the Orange Lodges favored the Act of Union, and many of them passed resolutions expressing their "unspeakable sorrow" over the attempt "to reduce us to the degrading situation of a colony of England."

Belfast in those days was the backbone of the Volunteer movement. The French Revolution found a splendid echo in its midst. There were moments when Belfast would willingly have abandoned a sword for the Rights of Man as well as for the wrongs of Ireland. Protestant Ulster was not then, as it is now, a unit. The Presbyterians, who were not less ostracized and oppressed than the Catholics, joined with them in resisting the pressure of Orange and Episcopalian tyranny. But those days have passed. The Presbyterians have made peace with the Episcopates, and both together now find themselves upon the Catholics. The old generous ideals have died away, and with them the very sense of Irish nationality. Belfast has Pajero on the brain and its eyes on the counting-house.

And yet I seem to see signs of a coming change. The Orange drum, it is my firm conviction, has a crack in it. It will be beaten for all it is worth when the government brings in its Devolution scheme, but it will give forth a less certain and militant sound than it compassed twenty years ago. I do not think it is possible to rouse either Ulster or England to the same pitch of

From stereograph copyright by Underwood & Underwood

A "Bleaching Field" near one of Belfast's Linen-Mills. Belfast's Linen Trade amounts to over \$60,000,000 a Year

fury against Home Rule that both attained in 1886. Unless I am wholly mistaken young Ulster is shivering off a point or two from the rock-ribbed faith of its fathers. It is beginning to abandon the theory that its whole purpose is to serve as an English garnish. It is cultivating a sentiment of loyalty to Ireland as well as to England.

Many different factors have combined to produce this change. There is, to begin with, the Gaelic revival, which has established itself in Ulster with a success that even ten years ago would have seemed little short of miraculous. Then again the peaceful passing away of landlordism has enormously cleared the ground. If Irish Nationalism has always been in part an agitation to beat landlords out, Irish Unionism even more palpably and unblushingly has been an agitation to keep them in. And the landlords, who have hitherto been the extreme of the Unionist party, have retired upon and worked the bigotry and the organization of Ulster Orangemen for their own ends. They are still throughout the province the dominant oligarchy, but their ascendancy is no longer unchallenged. An Independent Orange League was founded in 1903 and has grown into a considerable power. It aims at reviving the dormant democracy of Ulster against the domination of the "old gang" and at relieving Ulster politics from the grip of selfish and do-nothing landlordism. But it also aims at more than that. It has put forward a programme of progressive reforms on which all moderate Irishmen, of whatever creed or party, can for the moment unite. This programme includes the reform of the Dublin Castle system and the excoination of the forty-odd over-lapping and chaotic Boards that misgovern the country. It includes also proposals for giving the Irish people the control of the money voted for Irish purposes, of education in all its branches and of the liquor traffic. Coming from the very stronghold of Orangism nothing could well be more significant than the formulation of such a policy.

Nor does it stand alone. Mr. T. W. Russell, once a Unionist and now almost if not quite a Home-Ruler, is at the head of a movement among the Ulster tenant-farmers for the compulsory expropriation of landlordism, and he could not conduct his campaign more vehemently if he were a Catholic Celt. In Belfast, again, a strong Labor movement has made itself felt, has already wrested one of the Belfast seats from the hands of the Tories, and at the next election may capture them all. The Local Government Act, too, has had a purifying effect in bringing men together for the common good. The Irish Agricultural Organization Society and the Department of Agriculture (which works with local committees appointed by the county councils) are two other powerful influences in the removal of sectarian and partisan barriers. All these are factors that are working steadily toward the establishment of a greater communion between North and South—the Ireland of industry and the Ireland of agriculture. I do not mean to say that Protestants and Catholics have fought their last disgraced fight in the streets of Belfast, nor even that Ulster will submit to the government's Revolution policy without a strenuous fuss. But I do mean that influences are at work that only some great mischance can prevent from breaking down the isolation of Belfast, from creating among all Irishmen a new sense of interdependence, and from reviving in the men of Ulster something of that old devotion to Ireland which was once their proudest title.

ALL IN A GARDEN FAIR

By MARY APPLEWHITE BACON

DRAWINGS BY ELLIUS WOLCOTT HITCHCOCK

C HURCH STREET, the only one in Ferley that had ever been named, was quite deserted as Henry Webb entered it at its upper end and walked with his eyes sweeping steps towards his own residence half-way to its length. He looked down the green and a white sidewalk stretching before him with a pleasant sense of the familiarity, heightened by that impression of novelty which the magic of early spring contrives to confer upon the most familiar scenes.

Green was green on the outer edge of the sidewalk, and sprigs of a shot up thickly here and there close to the faded and quickly emote flowers in his belt. In some of the front yards tall grass-bushes stood with long-bending branches white with bloom. In others white and purple flags were beginning to open in the old-fashioned, star-shaped beds. On the Thomas lot was a devious summer-house which showed only unexpected proportions under the encumbering half and green of a Lady-Bankers rose as old as itself. The shrubbery, broad two-story frame houses for the most part, their white walls discolored to grayness or yellow as ivory, their many blinds a faded green, were each and all shut to the late sweet sunshine and to the sights and sounds of the spring; though, to be sure, there were only a half-dozen or so, each in its square foot-acre lot, that he should care to his own house, with the Holmeville place directly opposite.

The young man slackened his pace a little, partly because he was warm from his long walk, partly from pure enjoyment of what was around him. "And it all might have been just here just for me," he said, with a whimsical smile at the absence of human life about the street.

His last effort was in Ferley, a new town six miles distant, the offspring of a railroad built a dozen years before. There he had made his money and his reputation; there a gay if somewhat novel society was ready to shower upon him all the attentions that he would receive. He had, indeed, genuine attachments there of a certain sort, but he still clung to the village of his boyhood, and would have called it home if he had felt there was a place for him anywhere fully answering to the word. The humble two-room house in which he had been reared was closed and deserted, except as he himself sometimes went there of a Sunday afternoon and walked meditatively about its grass-green yard or gazed at the gleamy blue shades along behind the glass of the blindless windows. He had bought one of the rather handsome old houses on Church Street when, as had been the case with most of its neighbors, it had been put on the market for a score, and had gathered together in its rescue the few possessions necessary to his comfort and his tastes. As a child he would have seen as his widest fancies imagined himself as becoming a resident of the street which gathered into its limits most of the pride and station of the village.—as the dreams that did come to him he was a hero in a more possible atmosphere than that of Ferley; nevertheless, it was a perfectly natural thing to do when the time came; in the eyes of the community he was saving one of the old homes from further decay, and in the meeting out of the unfeeling laws of justice, whatever of tradition or what not the ancient village had gathered to itself was to be, in the long run, the heritage impartially of all her children.

As he stepped now into his own gate, he stooped and made pretence of examining the worn but lately which fell loosely into its place. Something was stirring within him; something which he did not name, but which long for years walked in his always with the proud possession of spring, often also amidst the sweet vigor of an autumn morning when he had let the long, hot summer had laid itself away. Something was calling within him—he must be up and doing. But what? He had made money, he was respected, he was bearing a man's part in the social and civil order where his lot was cast, he responded to duty as it was revealed to him. But was it duty at all, in the narrow sense, which summer had laid away? No, no, no, rather, joy—joy of a sort that should absorb into itself all the adjuncts of human life and set them in their relations? Why should the old street awaken again in his breast, infusing itself subtly into the boyish enjoyment with which he had just been entering along the thrifty street country roads, leaping in the smell of burning brush and of the fresh, warm air which he loved, as the busy farmer asked it with their ploughs? Why had it assailed him even more strangely as he walked down the street village street?

Rather, why had he stopped to give it momentary just here—that insistent doubt, that hungry call—here with the Holmeville house directly before him? The smell of lilacs came to him from its well-garden. He was not ignoring into any useful mental states, he neepered to himself with sudden surprise: he was partial to the odor of lilacs, and chose to stand here and enjoy it.

He opened the gate and jerked it to after him in order to make sure the latch was strong enough to hold. Then, instead of turning directly up the long walk as he was habit from some motive which he had escaped being self-conscious here, he stood irresolutely in his tracks and looked deliberately up and down the street; finally, even going boldly, at the house across the way. When he closed his hand on a man standing as long as he close made his own front gate.

But the house opposite presented an insurmountable face. The heavy front door and the faded blinds of its nine front windows were closed. He did not observe that one of the upstairs blinds was slatted, nor

hear the slight sound when a woman's hand drew the slats softly together. The steady gaze, however, revealed to him that in his neighbor's residence was falling into decay beyond even what he had guessed. The steps leading up to the long front gallery were sinking sideways; he even thought that one of the tall fluted columns was decidedly out of plumb.

"Holmes, like pride, must have their fall," he breathed the gle into the spring air with an unexpected rebuke in its flavor.

But the satisfaction was brief, and an accusing elytrah took its place. He looked about for something on which to vent his self-rebuke and discovered nothing better than Cleve, his dog, who had accepted the invitation of the Holmeville gate, sagging half-open from its hinges, and was scurrying vigorously at the underpinning of the house, from which more than one brick had already fallen out of place.

"Come here to me, Cleve," his master called out, peremptorily. "What are you doing there, anyhow?"

The dog came immediately to his side and lifted questioning eyes to his face. Webb turned on his heel and moved up the walk. "I should think you would be ashamed of yourself," he said, severely, ignoring a lady's house that way. The place needs somebody to fix it up, instead of making it go to wreck faster than it is already. In the court-yard and in society no one was more fastidious in his use of English; with himself and his dog he sometimes dropped comfortably into the vernacular of his boyhood.

Cleve looked his bewilderment at the rebuke, then bounded away into the shrubbery, and by the time his master had reached the front steps, was prepared to drop at his feet the stick brought in a peace offering.

In the house across the street the lady who had closed the blind so softly moved quite away from the window. "Oh displeases him excessively for an instant as his dog to set feet on our premises," she whispered, with a little sigh. "Why did he ever put himself so near to?"

The "us" was only herself, Alicia Holmeville, alone in the still, white house, except for a lad who came at night and slept there as a protector, but whom only the falling of the roof about his head could save from the "leaky-heavy" sleep of boyhood, and the old colored woman, Harriet, who had nursed Alicia when she was a baby and clung to her still when he died, if of a different kind, was perhaps quite as great. Even outside the house she had but little more companionship. Since her childhood the small village had been prospering steadily with its vitality. Citizens abundant with its prosperous days had either moved to more promising localities or were asleep in the old Presbyterian churchyard. Few even of their descendants remained. Major Holmeville himself had died when his only child was an infant; his mother within the last five years. "After she had done Alicia all the harm she could," Mrs. Wilkins was in the habit of saying whenever this happened to be a new burden at her table in the small hotel on the public square, and she could regard herself by reciting current history. "The old Holmeville family was one of the prosaids that ever lived in Ferley, and we've had proud ones enough in our day and time,—and the Major's wife kept it up to the bitter end. It's true there's been no great amount of young men in Ferley since the war, but there's been some, and some girls have married. Alicia might 've married too, for she was considered pretty when she first grew up; though, for my part, I never saw anything so wonderful about her—more like that tall white angel on her father's tombstone than anything else, white and chilly-looking and with nothing much to say. But just because the Thomases and the Grahams and the Dummerks and a few more was all dead or gone, or she moved away, Mrs. Holmeville made up her mind that she would marry her daughter to a prosaids."

Mrs. Wilkins pursued no contemplation of the foolishness of such an assumption and its gratuitous insult to self-respecting people. "She and old lady Crowder were good matches," she would go on again, "with what odds there was on Mrs. Holmeville's side. I firmly believe that woman used to just sit in her dark parlor waiting for somebody to drop out of heaven ready made for her son-in-law; or, if that is putting it too strong, she did indulge the hope to the very last that some of the young men in the big towns where she and the Major used to visit would hear about her daughter and come scurrying her in a coach-and-six; if there's been any coach-and-six since Frederick. But they never did, and now Alicia's left waiting there without any leans, or mother either."

"But she is young still, or looks so," the new boarder comely interposed at this point, depreciating the dismal conclusion. "She may marry yet. She is the young lady."

"Yes, she that sits half-way up in the Presbyterian Church on the men's side. That was always her father's pew, with Dr. Harrod's two seats in front. The other two churches never have had any such arrangements about families sitting together. The Widow McIlwain wouldn't hear of it in the Baptist Church. Yes, that's Alicia Holmeville."

"With the large gray eyes and the fair complexion—" The picture was a pleasant one to linger over.

"And the old-fashioned clothes"—the speaker's face relaxing into

The old piano at which she sat each evening and played over the pieces she had been taught

perfectly good-natured decision—"huggins and delaines and wide-flowered muslins. I declare I never saw the like. None of us here is fonder here yet than we used to love, but we do manage to buy some new dresses once in a while, anyhow."

"Miss Alina had such beautiful hands," This interruption from Mrs. Wilkins's fifteen-year-old daughter, aspiring to young ladyhood, who held Alina Hidenorle as the embodiment of aristocratic beauty, and herself in secret that she could not conform her own plump figure and cheerful talkativeness to so interesting a model. "Such beautiful hands: so long and slim and white"—looking down with keen fondness at her own knuckles, which were only dimples. "They ought to be slim and white," her mother was ready to explain: "she's never done anything to spoil them."

But they were not such idle hands as Mrs. Wilkins imagined. To be sure, old Hidenorle did all the heavier work of the household, but it was Alina who kept the great square rooms, so seldom entered by any one except herself, in the exquisite order which was so vital to her as the air she breathed. That took up part of her day. The shrubbery in the garden and flower-yard grew at its own will: the peonies and hyacinths and stars of Bethlehem came up spring after spring and faded their pink and white and yellow blossoms without asking or receiving attention, and the lilies bloomed as they laid down there. But, still, the flowers had to be cut and put into the old-fashioned vases, and taken away again when they were wilted. And when all other occupation failed, there was always the mending to be done.

Only old Hidenorle knew that the table-cloths and bed-linen were washed into ever-increasing tangles and were perpetuated in service by her mother's exquisite and numberless stitches. And so Mrs. Wilkins had looked, Alina's wardrobe was no longer replenished than the color been-chest or the awkward drawers where the stock of dainties was so low. She could only fall back for her apparel upon her mother's and grandmother's dresses, and at infinite pains fasten them over for herself, with such success as their high waists and amorphous skirts would allow. And, finally, there was the old piano that had been her mother's before her, at which she sat each evening and played over the pieces she had been taught, held to the habit, partly by pleasure in her own skillful execution, partly by a vague sense of fitting a duty proper to one in her station.

But all these engagements brought in no money; and old she needed money as acutely as a great deal, perhaps, but some. She had the industry to earn it, if she had known how. There was no more to be done over to her than to work, and she could not make steel to which Mrs. Wilkins had inherited her.

She pointed over the matter again as she sat on the front gallery lead to ivory and swelling of amethyst around her shoulders, which meant rain. And the house was beginning to look terrible, large space: that in her own room was disclosed from disrepair, and

no loom in places that she was almost afraid to sleep under it. The income from her much-depreciated bank stock sufficed for her own and her faithful servant's actual necessities, but for nothing beyond. The problem of a new roof seemed insoluble.

And yet, in truth, it was not this which gave the secret sense of bitterness in her heart as she sat there in the darkness, but in trivial a thing as Henry World's ingratitude call to his dog two hours before when it had ventured inside her gate.

"Not even his dog," she said again. "He remembers a long time." But she herself remembered better. That spring afternoon so long ago, when the little World boy had followed her home from school, coming with her of her happy invitation into her own little corner of the garden, near the blue hedge, loyally digging the holes in the lawn earth and crowing there again when she had dropped in the marigold seeds; his heart and keen in a high tide of joy. And then suddenly her mother had appeared, almost like a breath of winter, and the little visitor had stopped his work politely—the long handle of the hoe quite overtopping the square shoulder in the little pink cotton body against which it rested—and had looked up at her with his innocent happy eyes. Stark a back might have stayed any ready. But the boy was not in her own thought then. She only said: "You are the blacksmith's little boy, are you not?" Was there anything you wanted here?" And presently, after the moment necessary for his young understanding to take it in, the red head had washed over the child's olive face, he had earned the low bark when he had found it, and was walking out of the garden with an air which Alina should never, never forget.

To the town, with his slow, traitorous nature, the incident survived as something more than a memory. Into the misfortune of his hood it had brought his first intimation of the difference of socially position. At first he thought of them dimly as connected in some way with the ownership of two-story white houses, and spreading flower-yards, and little girls with beautiful faces and large gray eyes that made one want to look at them forever. The larger circumstances came in his apprehension by degrees, but each, as it was understood, seemed in him the resolve to accept it for his own possession. And yet in arranging these things, soberly and patiently, as was his way, he had remained, to his good profit, unmindful by them and gruder than they.

That rebuke of Mrs. Hidenorle's was a good thing for me," he says and to himself, hanging the same look in his dark, but, even so, with a little shrinking, a little pity for the child who had stood there among the blossoming lilacs that sweet spring day.

One result of that day, indeed, survived in a deeply etched impression whose remembrance he had never relinquished like a purple step to account for—Alina Hidenorle was a being set forever beyond his reach.

She did not, for that reason, lose the hold which she had upon his imagination. He took a whole new pleasure in the charm of none than one young woman he had met: he now and then forced himself to consider seriously the defeat, the defeat, of a life unclouded into

quietly with any other; but when he tried to meet what seemed to be the logical issue of such pleasure, such reflection, any compelling purpose failed to appear. Ever at the gate of his world of vision a particular woman stood, whose white hands must open it if it opened at all; and ever in his thought her face was averted from him.

He sat to-night on his piazza and waited longer than usual for the light to appear in the pecker of the house over the way—that dim light which would have seemed to show at all through the closed blinds save that the rest of the house was in darkness. He saw it there at last, and in a few minutes more the tinkling notes from a piano came across the wide street to his silence and solitude. He knew well all the pieces she played, but he could never forget her selection, nor tell what was the order in which they would come. To-night he thought the pieces she chose, especially the songs, were all very sad ones.

"But she has nothing to make her sad, his she, old doggie!" he said to Cere, when at last the music had ceased and the single light and glimmered shine again after an interval in the room above. The tradition of the Holbrook wealth, even though diminished, remained intact in his mind. He did not discuss the affairs of his erstwhile lady with greater minds, nor draw any conclusions from her manner of dress. In fact, he had never discovered that her gowns were old and oddly fashioned. As he watched her on Sundays from his obscure corner of the American Church, he honestly thought the white and lavender drapery which enveloped her fairness was apparel fit enough for a queen, and that neither the wealth nor the fashion of the world could have added to her sweet perfection.

The month wind brought the rain the next day, as Alicia had feared, and the signs of the coming wet and heavy weather were plain. But when the late afternoon sun came out again, the weight of dampness lifted and the long sprays were once more fit for a bridal; the purple and white flags unfolded their gold-embossed petals and the quiet street was filled again with the breath of blues. The plastering in Alicia's back-parlor, however, being the work of an artist, but of mean, showed no such power of setting itself right, and the brown and yellow stains spread themselves darker and uglier than ever.

Henry Webb chose to ride back from Commerce, for the wetness of the roads, and soon after he had put up his horse old Haseltine presented herself at the door of the side porch. "We might come out on the piazza, Aunt Haseltine," he said, wincing at her appearance. "Will you sit down?"

The old woman seated herself in his presence with grave dignity. Her eyes except the wide lawn, the embowered walk to the front gate, and the old green-brown, empty of plants, but with fresh gnaws of glass in its masonry. "Ceres is changed a heap since I used to be in her art of this year house, when the Dunstoakes were all in it," she said, soberly.

He answered with sufficient interest.

"Ain't none of 'em of the places what they used to be." She looked nervously at the house and sat on the piazza roof.

"You keep up things better as the people do."

"Not as well as I might. It's hard to find much interest in keeping up things when there's nobody but myself to see what I've done."

"How come you ain't never married, Mr. Webb?" she inquired, with sudden interest in his situation. "If he had been a descendant of the Dunstoakes, instead of the owner of their house, she would have called him 'Mrs. Henry'."

"Ain't there no nice young lady to you 'nir' over in Commerce?"

In spite of himself he felt a sting in the unreasoning disparagement of her words. But he replied only as if humoring a good-natured curiosity. "Do you think any of the young ladies in Commerce would suit me, Aunt Haseltine?"

"I reckon there's nice ones over there"—much of qualification in her inflections—"more'n apt to be nice ones everywhere. But I ain't got much opinion of 'em, plain myself. Slowly lak one of these yere sarkers on a good old tree—clear supped away all the life out'er our towns. Tain't never gwinter be no such a place, though."

"It's a pity the old people of Ferby would not let the railroad come by here, when the company wanted to bring the route this way before the war."

The old woman stiffened perceptibly. "My old master and the rest of 'em gent'mens didn't want no railroad to be bringing the ruin of creation here where they was a-rising up their families." But the flash of loyalty died down before the consciousness of unaccountable failure. "They done what 'twould be to us best at the time. Tain't expected of nobody, till 'twould be to a better roof than this, to be as far before 'em as they ever be behind 'em. You know that. Who men's yo' elvies for you, Mr. Webb?" she asked, suddenly.

"I'm afraid they don't get much mention," he said. "Sometimes the tailor over in Commerce does a little job for me."

"If that's all, that's mighty little," she said, with conviction. "I hear you 'twould away many a good garment, or give away one, 'bout 'nir' not having nobody to take a stitch or two at the right time." She studied his appearance closely. "That there waist you got on now, sir, if it was just to be fresh 'bout."

He diverted the conversation in her eyes. He noted also that the blue-checked housecoat in which her tall spare form was garbed was almost threadbare and darned laboriously. "Do you know anybody that wants any mending to do, Aunt Haseltine?" he asked.

"Well, I don't know as I would say—letting down her dignity with as little as is possible, till 'twould be to a better roof than this, to be as far before 'em as they ever be behind 'em. You know that. Who men's yo' elvies for you, Mr. Webb?" she asked, suddenly.

"Yes, indeed, I do," he admitted, cordially. "There's a coat in my wardrobe right now that needs to have something done to the lining and the pockets. And I expect there are a good many more things beside that. You wait here till I go it and see."

He returned presently, making a little despatch. "Really, there wasn't quite as much as I thought," he said. "I'm afraid I've been giving away things too freely to Jim, my office-boy. That your mending ought to be worth more than anybody else's, Aunt Haseltine; I know you would take more pains with it."

"You'd better wait an' see it fust," she said, a little grimly. But as she advanced to the hallway from his hands a smile of satisfaction broke over her long narrow face.

Two days later she brought it back. "I reckon it might be worth seventy-five cents, Mrs. Henry"—her countenance in a friendly glow at having something more from the Dunstock house to negotiate with, and, besides, her estimate of the blacker's son had changed since she had seen him at closer quarters. "It's worth fifty cents anyhow."

"Fifty cents, indeed! Why, a tailor would have charged me three or four dollars at the least!" He crumpled a bill together and put it into her hand.

She smoothed it out and looked at it carefully. Suddenly her head grew heavy, and she laid it down with a sigh. "The warden, Mr. Webb," she said, leaning the money back to him. There was life in her voice.

"Of course you haven't," he agreed, promptly. "Let me see; maybe I have something else." He took back the bill and began counting four dollars in silver into her hand. "There is not a tailor in Commerce would do it for less," he protested, as her long heavy fingers began to shrink back. "If you won't let me be honest in paying you for your work, then I can't give you any more."

She made a little curtsy and turned away. "Thanky, Mrs. Henry," she said. The look of joy in her face went to his heart. Was she really so poor?

Where was that memorandum which one of his clients had thrust into his hand in the hotel dining-room? He asked himself the next day in Commerce. Why couldn't the fellow have brought it to him at once? He hunted for it, but he found it was not his client's it belonged to one? What a plague to be so absent-minded, anyhow!

He searched his pockets the second time, and came upon the bit of paper at last in the inside breast pocket of his coat. But his fingers touched something else, something small and hard. He drew it out—a lady's thumb. Yes, this happened to be the coat that time had mended. But this was not his client's thumb. He could not go over the tip of his little finger. Besides, it was of gold. He did not know there were such things. He remembered buying his mother a silver one with the first money he ever earned, grieving over the ugly black stain the one she wore left on her poor hard hand. This thumb was so tiny and so light.

He took it to the window and turned it over in his palm. There were letters on it—"A. B." Alicia Holbrook! Suddenly it seemed to him, the moon was full of voices shrieking the name in his ears. And he was wearing the work of her hands! Those beautiful white hands! Sometimes in church he had heard a frantic desire to bow down on his knees before them and kiss them as his nearest approach to the worship of purity and goodness. How men like himself see so deeply, and felt so long.

Even now, under all his stimulus of emotion, his thinking was slow. She must have had some special need for a small ornament and taken this way to earn it. There was so much little of money in poor old Ferby for anybody, none at all for women, except perhaps for Mrs. Perkins, and surely she carried her small living by the honest. He tried to hide from himself his delight in the chance, whatever it had been, that had brought him and Alicia Holbrook into even this slight relation.

But the object in his hand brought him face to face with a very definite issue. It was her thumb, and she needed it! But how to get it back? To return it openly would be to let her know her secret had been discovered. He flushed hotly at the thought. A dozen schemes presented themselves, and the succeeding instant demonstrated the folly of each. He would have the thumb duplicated and exposed to her from a jeweller's, perhaps in New York. And have her divine the whole matter, and be even more deeply wounded than if he had told her it in a straightforward way from the beginning! He would go at night and thrust it over her garden fence. And run the risk of its being lost forever! At the thought a primordial instinct asserted itself. That which once had been hers was his—and he meant to keep it!

The next morning was Sunday, but perfect as was the April morning, the benighted lecture in the great workshop of the old rectory-house, for Henry Webb all the glory faded into nothingness. Alicia Holbrook was not there! The singing was really too execrable, he thought; why had he not ridden over to Commerce to serve and bend a chair that knew what it was about? And that when in the end he really valued it. It was really a value!

But as the objectionable voice began the long-drawn monotony of the second prayer, his ear caught the lightest of light steps on the brick floor of the vestibule. Haseltine had been a little talking that morning, and her mistress had waited to see her quite comfortable before the risk of being a half-hour late at church. But the sensation of disturbing public worship by coming to after it had begun was an absolutely new one to Alicia. She stood for a second in the open doorway, and then, without word or warning, glided softly into the seat nearest to herself. Henry Webb was his other end.

In sixty seconds that slow man had sixty seconds of gray and gray. First a wild rush of blue. Then a profound gratitude that the rest of the congregation were well to the front and that the woman at the other end of the pew had closed her eyes in devotion immediately upon entering it. What if there or she could see the last flash which was burning even to the north of his back and which seemed determined to burn on indelibly? What if she could see this long sacred prayer of the Presbyterian Church? Perhaps before the end of it she would turn around and demand of him her missing property! His lips curled ghastly at the thought. He would ask her to remove in a court of justice that he had it. What if she would add to the whole matter a word he could drive to her across the space between them as she bowed forward with closed eyes and shut the thumb into her clasped hand as they used to play the game when they were children—and laid fast to what I give you."

THE SEASON'S PLAYS

VENTURES IN MELODRAMA

By "I"

THE sensation which *Heuri de Vries* made last year by his powerful acting in seven widely differing parts in one play, "A Case of Arson," rendered only natural New York's expectation of another artistic triumph when he returned this year in a new play, "The Double Life." It is unfortunate to relate that Mr. de Vries has not repeated his former triumph. The fault does not lie with him. He is an excellent actor, but he has been provided with a play which gives him the very smallest opportunity for the display of his abilities, and it is only when the play itself rises above the commonplace that he even remotely suggests the actor who made "A Case of Arson" the great dramatic event of one season. The play is by a woman, whose pen-name is Ruthless Roberts, and bears every token of being her first effort. It is called "A New Psychological Drama," which has a fine sound. Unfortunately, it is frequently diversified with incidental slither music and the spot-light. It deals with the life of a young man, part owner in a West Virginia mine, who, while on his way to visit the mine, is held up by robbers and rendered unconscious by a blow on the head. He is found in the woods in this condition by a physician, who, upon reviving him, discovers that the young man's mind, so far as he has put is concerned, is utterly blank. He knows nothing of himself, not even his name. So much for the prologue. The three acts which follow deal with events which take place within two years after the "awakening." The young man has now become *Henry Hartmann*, and is given to the world as seeing play with his old friend. His daughter is in love with the son of the man who, owing to the unexplained disappearance of the young man in the prologue, is about to come into full possession of the latter's share therein. A strike is in progress, accompanied by numerous violence and the usual hatred of the owner of the mine. *Hartmann* is so incensed upon learning of his daughter's love for the owner's son, that he threatens the young man at the first opportunity. The intense excitement of this moment produced the shock which rendered *Hartmann's* recollection of the past, taking him back to the day of his injury and blighting out all appreciation of the twenty-two years which followed. Then comes *Hartmann's* acquaintance with his wife and daughter, now quite new to him, and the inevitable happy end.

ing. Mr. de Vries showed all the skill the part permitted in his differentiation of the two personalities, but the opportunities are not marked. Miss Sibyl Klein as *Molly Hartmann's* daughter, played her role with a very genuine girliness.

Under the title of "The Law and the Man," Mr. Wilton Lockyer has presented a dramatic version of Victor Hugo's great novel, *Les Misérables*, and he, like every one else who has attempted this task, demonstrates how impossible it is even to contemplate a dramatic form of this stupendous work. This is not to say that Mr. Lockyer's play is by any means bad. It is good melodrama, and would appeal probably very strongly to any one who has not read *Les Misérables*. In the case of such a work as this of Hugo's, it must seem so evident to any one familiar with the book that a dramatization which will present the characters as the Frenchman has portrayed them is beyond the playwright's wit. All he can do with the work is to present it fragmentarily, his skill determining the fragments and the manner in which they shall be pieced together to make the future of his drama.

Mr. Lockyer has, naturally, selected the best remembered incidents of the book and strung them together with some skill. Therefore he has produced a very interesting drama, but he has not by any means dramatized *Les Misérables*. Perhaps, after all, one should not be too severe upon the author-actor because he simply says his play is "based" on Hugo's work. The play opens with a prologue which rehearse the incident of Jean Valjean and his theft of the Bishop's silver candlesticks. Mr. Lockyer as Valjean gives here rather a strong impression of the convict just from the gaols. He is inclined to be a bit theatrical, but that is the keynote of the play. Four acts follow the prologue. Two of them picture Valjean as the upright Mayor of Montreuil and two as *M. Le Hor*, bringing into the story nearly all the well-known characters of the book. Javert, the police inspector, and the disheveled Thénardiers, Fantine and her daughter, Cosette, move in or out naturally through the action, but are not especially convincing. The great pity is the ineffectuality of Javert, not due to the acting of Mr. Wilton Lockyer but to the tenderness of his part. Hugo intended him to be cruel only to Valjean. In Mr. Lockyer's play he, to say the least,

Maurice Farina and Cecilia Loftus in "Dream City," at Weber's Theatre

and to say it in the vernacular, is not one, two, etc. The play would be quite satisfying were it not "fustled" on *Les Misérables*.

[illegible]

Two Shahs of Persia

(Continued from page 52.)

illustrate the process. Mr. Price offered an Englishman of high rank and title whose wife was a celebrated beauty £10,000 for the lady, whom he desired to add to his harem.

While he was at Thord in the old Helgion police were much excited by the appearance in town of three rugged Bretons, armed with revolvers. It was surmised that their purpose was to kill the Shah, and they were therefore kept under close observation. When they were Persian merchants, who, becoming dissatisfied at home, where they had come in a business venture, had fled to the vicinity of their ruler, had managed to beg their way to Thord to ask him for assistance. They had purchased the revolvers to protect themselves from hostile English and Belgian spies on the journey, they declared. *Murad* was being assured of their plight, and intimating that their story be true, at once issued orders that they be freed for and sent back to Persia.

Nothing could better illustrate the difference between Mirzaifar and the average Oriental diplomat, however, than the Shah's conduct after the attempt by the assassinated Baron to assassinate him in Paris, in 1900.

Nasser would doubtless have insisted that the would-be assassin be learned, elegant or heroic in soul. His son only asked for Salomon's photograph, and said that the man was probably crazy. He even expressed sympathy for him as President Carnot, who ruled at the Hotel des Naumannes, to express the overwhelming regret of France that the life of the illustrious ruler of Persia should have been attempted on French soil.

While Xue was not as much approved of by his son in European courts, however, his visits received considerably more attention than those of his successor, even aside from the prestige of the app Aisin. Xue had a certain flair for show, with a refinement and a certain grace which reflected itself in all far above the greatest nobles with whom he came in contact, and treated these with arrogance or condescension as he chose directed. When dining with the enormously wealthy Duke of Devonshire, he was the only guest who was not the then Prince of Wales, the Shah caught the eye of the Duke and drew his hand across his throat, his aim being to convey the suggestion that in Peking a vessel would be disposed of, and his remarks interpreted.

There, in a white hall at Windsor a certain great lady who had had a reputation for beauty, but was no longer in her first youth, was presented to Naweed-Din, at her own earnest solicitation, and not much to his satisfaction. The Persian monarch, who spoke only his own language and French, inspected her critically from head to heels through his spectacles, and then turned away with the remark, "Trop tard!"—meaning that he had not her too late in her life to find her acquaintance valuable.

As a result, he visited many state banquets during his tours of Europe, but he generally outshined his aristocratic hosts in dress he came to the table, where he found it difficult to live up to modern etiquette. He could not overcome the impulse to take his food in his fingers, for example, and he was almost sure to throw what was left on his plate over his shoulder, when he had eaten all he craved to of its contents. The story is told that he was once sitting at the right of Queen Victoria, at a formal dinner at Buckingham Palace, at a time when the use of paper plates was introduced and heaped the remainder to his esteem to finish, such a particular mark of respect.

While a distant suspect, Miraflores still was his brother's up-to-date person. He was able to handle a knife and fork, and to properly sit a table; but, when alone, he preferred to sit up a stick with his feet on an elevation about the same height and use his fingers. His first voyage on the water was during his visit in 1930, when he crossed the English Channel from Calais to Holland. He remained at Calais for several days, before he could make up his mind to take the trip, and on another made his second voyage and other numbers of his sister soon frequently. Finding that they went and came safely, Miraflores finally found courage to go aboard the boat.

It was a long time, also, before the Nish would venture his person in a motor car. Though eventually he took several trips to Florida with him. At first, however, he preferred to watch his attendants risk their lives in the dead-end races that were fought for his amusement, into the courtyard of the Hotel des Nations, and it was not until they had made sufficient number of journeys without accident that he ventured to trust himself in one. He was very timid about automobiles, and always travelled on special trains so that he might keep the speed under twenty miles an hour.

Although care of the wealthy immigrants in the world, Miraflores was not unacquainted about the payment of his debts on his journey abroad. He made extravagant purchases in most of the European cities he visited, and many of the tradesmen with whom he dealt had cause to regret it. On his second visit to Paris his French creditors attended his baggage and offered partial payment, but he was forced to liquidate these debts. On his third journey to Paris, in 1846, when the Shah stopped overnight at Lemberg, he and his family occupying forty-five large and thirty-five smaller rooms at the Lemberg hotel. In the morning he was rendered a bill for about \$10,000. Miraflores was ferocious and rated the landlord as an extortioner, but the hotel-

keeper told him that it had cost \$3000 to repair the kitchen in preparation for his royal guest, and insisted on payment. There was not sufficient money in the treasury to meet the bill, and the landlord refused to accept jewels as security, because he did not know whether they were real or not. I finally a local banker came to the rescue; accepted a draft on Persia, and settled the account.

During the visit to Paris, in 1900, Saragat created something of a sensation among European royalties by conferring the grand cordon of the Order of the Lion and the Sun, which had hitherto been confined exclusively to reigning sovereigns, upon an American dentist who had relieved him of an obstinate toothache, after many others of the craft had failed.

It may be mentioned that Mirza-farid-Din was interviewed only once during his visits to Europe, and that was at Berlin in 1900. If the scores of journalists of both sides had been present at the interview, the results of the research, only one succeeded, an American woman. The net result of a week or two of effort and considerable time and expense was meaningless answers to three questions. The interviewer asked the conventional question by asking the Light of the World, "What is your mission?" He asked to the Lady-Lily of Paris, and whether he had enjoyed the trip across the Channel, beginning the real interview by inquiring what he thought about the River spanning, then occurring in them. To the first question the Shah answered, "Yes," the second, "No," and to the third, "Neither."

MILK THAT IS WHOLESTONE
From the scientific handling and preservation of milk, as insured by the Federal Food and Drug Act, the United States National Milk Producers Federation has become a reality. But for these purposes, an unadulterated milk is preferred. Minnesota's Faints Dairy, Roseville, Minn., sells, under government inspection.

ADVERTISEMENTS

A BANKER'S NERVE

Broken by Coffee and Restored by Postum.

A leader needs perfect control of the nerves and a clear, quick, accurate brain. A prominent leader of Chattanooga tells how he keeps himself in condition:

— Up to 17 years of age I was not allowed to drink coffee, but as soon as I got out into the world I began to use it, and grew very fond of it. For some years I noticed no bad effects from its use, but at times it began to affect me unfavorably. My limbs trembled, the muscles of my face twitched, my mental processes seemed slow, and in other ways my system got out of order. These conditions grew so bad at last that I had to give up coffee altogether.

My attraction, having been drawn to Postum Food Coffee, I began its use on leaving off the old habit, and it gave me pleasure to testify to the fact. I find it a delicious beverage, like it just as well as I find coffee, and during the years that I have used Postum I have been free from the indigestion symptoms that accompanied the use of coffee. The nervousness has entirely disappeared, and I am so steady of hand as a boy of 35, though I am more than 92 years old. I owe all this to Postum Food Coffee. Name given by the Postum Co., Battle Creek, Mich. "There's a reason." Read the little book, "The Road to Wellville." In jokes. All answers.

MUSIC AND THE OPERA

EVENTS AT THE METROPOLITAN

By LAWRENCE GILMAN

REVIVALS and new productions of more or less interest continue to diversify the record of events at the Metropolitan Opera House. Following close upon the first performance of Gluck's "Fidelio" and the production in operatic form of Verdi's "dramatic legend," "La Donna del Lago," have come Debussy's "Lakmé"—which had not been heard in New

York for a decade and a half—and a performance of Wagner's "Siegfried," with new interpretations in the roles of the son of Siegmund and his predestined bride. As this is written, there is in prospect a revival of Meyerbeer's "L'Africain," the first performance of Puccini's "Mason Lescarot" and "Madame Butterfly" (in which Mr. Cuzzocini as Lieutenant Benjamin Franklin Fiedler will doubtless ensure all honors), and, as the season's climax, Richard Strauss's extraordinary "Salome," opinions concerning which are even now disrupting families and blasting life-long friendships.

Of the two events which, at the moment, invite consideration—the revival of "Siegfried" and the performance of "Lakmé"—there is not a great deal to say. "Lakmé" is a pleasing and ingenious work by a minor composer whose most notable achievement was the composition of some pretty and ingratiating dance music. In "Lakmé" a conventionally tragic tale is embroidered with music which deftly evades all of the dramatic points at issue—music which is at times mildly amusing and at times entertainingly spectacular, but which is at all times insensibly superficial. Why the work should have been awarded out of its powerful and appropriate slumber is a mystery which one looks the incentive to explore. It afforded a site for Madame Scherich in which New York had not before had the privilege of observing her, and which was perhaps, for her, a welcome change from the unwary sequence of "Faustina, Lucia, Mimì, and Rosina" in which she has so long exhibited herself. But, selfishly as "Lakmé" does not contribute greatly to the sum of our operatic joys—on the contrary, it is distressing that such art and labor as she expended upon the part should have been devoted to so poor a cause, Mr. Rousseau, as the perfidious son of Athan who deserts his Oriental sweetheart to return to his regiment, was doubtless as effective as he needed to be. One's sensory habits also, as a legacy from this production, the recollection of a ballet which still lingers looms in the eyes: one can but wonder why, in this

admirably this season. The achievement is a handsome brother in the cap of the Herr-Divertidor than the production of a dozen "Lakmé" and "Fidelios." It is not an ideal representation, for it is weak in two of its essential features: the Siegfried and the Brunnhilde. He have seen many Siegfrieds in New York of all grades of excellence and futility. There was Alvarez, the greatest of them all, despite the fact that he never really sang the music; there was Ernest Kraus (we need not observe the chronological order), whose interpretation had the buoyancy of an old man and the port of a coal-heaver; there was Jean de Reszai, who sang the part like an unchanged and acted it like a boulevardier; there was Aulius, who was mediocre; Kuntze, who had more glow than vigor; Hugelstatter, nicely energetic and perky but quite unimpressive; Dippel, unimpressive though acceptable; and many others, to name whom would be but to catalogue similar shortcomings and compensations. Mr. Karl Burian, whose Siegfried was showcased at the performance of December 20, adds no very memorable figure to the long line of his predecessors in the part. Through no fault of his own, of course, he lacks the appropriate physique. He is large and awkward; he is more bulky than heroic; and his movements, instead of suggesting a superb hero of animal spirit, suggest rather the pallid vivacity of the obese. These are defects, as I have said, for which Mr. Burian is clearly not to be held accountable; but they are factors, nevertheless, which operate very importantly in his interpretation of the finest youth of Wagner's play. They are, indeed, very grave handicaps: a corpulent and unweary Siegfried is as incompatible as a jumpy Hagen, a middle-aged Eve, or a hen-legged Lohengrin. To add to these disabilities, Mr. Burian's sense of the poetic element in the part does not seem to be very keen; his tenderness, his wisdom, his exquisite gaiety, are apparently as foreign to his conception of the character as his expression of its line and heroic vigor is incomplete. Some of the music he sings well, as the scene of the forging of the sword; but in such passages as that in which the young hero ruminates under the forest trees, the raucous and unwieldy quality of his tones becomes disagreeably apparent. It is, on the whole, an intelligent and well-defined conception of the part that Mr. Burian presents; but it is very far from being either eloquent or revealing.

Madame Frischer-Eddy's version of Brunnhilde is a point of excellence. It is a masterpiece, but it does so violence to the traditions of the role. In most other respects, the part was virtually weak. The "Hänschen" of Van Hout, the "Wine of Mr. Hout," the "Aberich of Mr. Gierke," are unimpaired, while the "Ende of Madame Kirschy-Linn" and the "Farewell of Madame Rapold" were, in the main, effective.

One cannot conclude a note upon this performance of "Siegfried" without paying a tribute to the admirable work of the orchestra under Mr. Alfred Hertz. Never so the Metropolitan orchestra seemed so full and rich, so energetic and so potent in its execution of the score. The conducting of Mr. Hertz was delightful in its fervor and vitality.

EMMA EAMES

MARIELLA NERI

Two Important Metropolitan Sopranos

"Siegfried," following on the heels of "Lakmé," came upon one like a pre-arranged wind from the north. How wonderful must be the vitality and the power of the work which can exert so irresistible a spell as does this most magnificent, preposterous, and engrossing of musical fairy-tales, with its declamatory drapery, its articulate and prophetic bird, its perambulating deity, its trap-door appetitions, its miraculous flames, its exquisite poetry of mood, its superb and recuperating music! Mr. Cozzani gives the work

All In a Garden Fair

(Continued from page 61.)

She looked him full in the face with her kind eyes, much more than kindness in them now. "And do you think that I have never been loved without you, Henry?" she said.

It was an hour later that old Howl-line came in search of her mistress, wondering greatly that she delayed so long to leave the cold Sunday dinner set upon the table. No one could have been more surprised than herself when she turned the corner of the blue bedroom and came upon the two together. But neither could say one the have concealed her surprise with a finer hearing.

For a minute or more she stood in the walk considering naturally upon the weather and the garden, and introducing with apparent not a bit of village gossip. And then after a long silence—a silence which the soft air and the sunshine and the look on the two faces before her easily filled—she moved across to her mistress's side, and with almost modern tenderness lifted one of the slim white hands and held it against her breast.

"Be good to her, Miss Henry," she said, tranquilly. Her old face, black and lined with a thousand wrinkles, was itself transfigured by the divine beauty of love. "I know you'll be good to her. These white hands were 'tender' over her head, ain't no pity no sweeter than what she's been all her life."

Explicit

"FETTER legal testimony," says a well-known member of the New York bar, "can easily be made a two-edged weapon in court."

A clever and capable mining engineer was obliged to take the stand as an expert in a suit in Nevada, a couple of years ago. The case involved large sums.

"The examination was conducted by a young and smart attorney, who patronized the expert with all the authority of a full down years of practice."

"One of his questions related to the form in which the ore was found, a form generally known as 'skidder hoops.'"

"Now, sir," said the attorney, "how large are these hoops? You say that they are riding in shape. Are they as long as my leg?"

"Yes," replied the expert, "but not nearly so thick."

"Praise from Sir Hubert—"

FELICIOUS "HARRY" MAISON is quoted as telling of a trip made through the Northwest some years by a Congressional committee comprising several Senators and members. Among the number was Mr. Mason himself.

While in Montana, says Mr. Mason, he was much struck by the strength of character and resolution characteristic of the men of that State. The comment was "put up" for several days by a rich mine owner, whose manner of thought and action, acquired in the rough days of prospecting and poverty, had in no way been altered by his acquisition of great wealth.

When the time came to say good-by, the owner grasped Mason's hand, which he shook with great force. "Smash," said he, "we like you here. You're an Easterner and a public man, but you're no damned snob either! We've taken a great fancy to you, Mason, because you're free and easy, and no gentleman in fact, you're just like us!"

Profit and Loss

It had been a hard day for Mike Flute, but the "ragman." May and varied had been days of rage. But as he seemed inclined to drop of rage. As he was making his way toward the corner of this hot July day, through one of the most recent sections of the city, he heard a cry from above. Looking up, he saw a woman at a sixth-story window vainly looking down to him. Mike's heart was full of hope as he stumbled up the ladder stairs.

At the top he was met by a woman holding a weeping child by the hand.

"Hey, mother," cried the mother to the weeping Mike, "don't you take him little boys away in your big bag?"

THE COPPER QUADRIGA FOR THE NEW MINNEAPOLIS STATE CAPITOL AT ST. PAUL

THE QUADRIGA, WHICH IS THE WORK OF DANIEL CHESTER BRANCH AND E. C. POTTER, IS OF BRONZE SIZE, THE BASE MEASURING 21 BY 12 FEET, AND THE FULL HEIGHT 25 FEET. THE FIGURE IS OF HAMMERED SHEET COPPER, INSTEAD OF THE USUAL CAST BRONZE. IT IS UNDERSTOOD THAT IT WILL EVENTUALLY BE COVERED WITH A COATING OF PURE GOLD LEAF, IN THE MANNER OF ST. GAIEN'S EGYPTIAN STATUE OF GENERAL AHMUDAN IN THE PLAZA AT 29TH STREET AND FIFTH AVENUE, NEW YORK.

THE AWAKENING OF LONDON

THE FIRST TRAMWAY ACROSS THE TRAFALGAR WAS RECENTLY OPENED IN LONDON. THE TWO-TRACK LINE, WHICH CROSSES THE KINGSMAN BRIDGE, HAS ABOLISHED THE DRE OF AUTOMOBILES, SINCE IT OCCUPIES ALMOST THE ENTIRE WIDTH OF THE ROADWAY.

Electric Steel

During the past several years technical literature of many countries has teemed with extensive reports regarding melting processes by electricity, but there is only one instance where the first invention has been put into successful operation. The first has recently contained an article on electric smelting for pig iron, but said nothing of the feasibility or economy of producing steel by this process.

At the Linderberg Steel Works at Linderberg, Hanau, Prussia, this new process for the production of the highest-grade steel has been in continuous operation night and day for nearly a year, the old methods formerly employed having been entirely discontinued.

This plant produces almost exclusively high-grade and alloy steel, for which there is an enormous demand by the large skate, cutlery, and tool manufacturers. No great loss has been the recent demand for the new steel that an enlargement of the plant is being made in order to increase the output.

Up to the successful manufacture of electric steel high-quality steel had been produced by a smelting process in gaspate crucibles with a capacity of only 60 to 110 pounds, and as the necessary raw material had to be imported the expense was very great.

At the Linderberg electric steel-works high-grade steel is produced from the most ordinary scrap-iron rubbish of the cheapest kind and quality, and its condition is quite immaterial, as by the process all damaging substances, like sulfur and phosphorus, are practically eliminated, being reduced to one one-hundredth of one per cent. The loss in the use of this material in slag and refuse varies between one and eight per cent. The rubbish is first melted in a tilting furnace or oven, constructed similar to those ordinarily used in American smelting-works. After being thoroughly reduced to a fluid state it is poured and conveyed in a vessel by a travelling crane to the patent electric oven, which has a capacity of from one to two tons. In this oven the necessary quantities of carbon, manganese, chlorine, silicon, nickel, tungsten, arsenical iron, etc., are added, to produce any kind or quality of steel desired. The whole process of production requires from two to two and a half hours.

The developing bath is heated by an electric current of 15,000 volts, which is brought into connection with the oven by means of a steel electrode and carried back to the current by a second steel electrode, both of these electrodes being suspended perpendicularly through the top of the oven, and adjusted so as to touch, but not quite come in contact with the melted mass. The current leaps from the electrode in a wide, mighty voltage arc, and passes through the mass to the second electrode, thus producing the degree of heat sufficient for the purifying and fusing process.

The casting mode for electric steel are the same as are used in any other factory. The cost of production depends upon many points which will become clearer after further experience in the new process. Raw material, fuel, electric current, wages, etc., depend largely upon the locality, and the improvements in the process that may be made make it difficult to give accurate figures, but it is safe to say that an average quality of steel as heretofore produced by the crucible process can be made by the electric process for from \$25 to \$24 per ton.

The advantage of the electric steel over the manufactured by the old system is its superior purity, and permits the introduction of from 20 to 30 per cent. more carbon than in the crucible steel. It can be made more easily forged, is not easily affected, like the crucible steel, by the damaging influence of carbonizing, it is stronger and more firm, and offers a much greater resistance to wear and tear. The new system also gives added independence on account of the very ordinary material used for producing the steel. Such advantages have never been reached by any other system, and it has only recently been given to the public. This is accounted for by the fact that the inventor, Dr. Engineer Paul Hirsch, a Prussian, has kept the secret a secret and he was able to demonstrate to the public a complete, successful working plant.

The electric process is based on scientific metallurgical principles, which are of the secret of the invention, while the old method was a result of experience, and depending upon the use of only the most expensive ores. This new process should be of great interest to the American steel industry.

POPE

1907 POPE - HARTFORD MODEL L

Typifies the supremacy of American automobiles. In its construction have been successfully solved all the problems which are essential in the production of a modern gasoline engine of the greatest efficiency and smooth running qualities.

The four-cylinder, vertical, water-cooled 25-30 H.P. MOTOR is equipped with mechanical valves and pump spark system with pressure for ignition. Shifting GEAR transmission drive opens forward and reverse. Thorough LUBRICATION system. Especially efficient BRAKES operated by foot pedals and side lever. Portability of CONTROL by levers on steering wheel but not revolving with it. All parts easily ACCESSIBLE. EVERY DETAIL of construction and equipment up-to-date. (SUPPLY FOR CATALOGUE.)

ABBOTT'S BITTERS

Important to use that it is Abbott's.

MODERN TOWERS OF BABEL IN NEW YORK

By GEORGE ETHELBERG WALSH

"THE Tower of Babel was 606 feet high, according to Genesis, when the confusion of tongues brought all of our present linguistic troubles into the world," said my antiquarian in reply to a question for exact information, "but every scholar believes he exaggerated the height."

"And the confusion of tongues?"

"Oh, that was a legend which probably sprang from the wrecked (confused) condition of the Tower after its destruction, and which for so many centuries remained untouched by human hands."

"Then its extreme altitude carried to other lessons than that it's dangerous to build beyond one's ability to make good?"

"There is a similar story," the man of letters replied with a smile, "found in Central America, where Xelhua built the pyramid of Cholula in order to storm heaven, but the gods destroyed it with fire and confused the language of the builders. The lesson you're after is contained in that legend. It's fire, and not the confusion of tongues, or fear of collapse, that is the real danger."

An engineer who is building the tallest building in the world—a veritable Tower of Babel right in the heart of New York—dismissed this fear with the remark:

"The new Singer Building will have a total height of 625 feet, which beats the Tower of Babel by quite a little, and it will be as solid and lasting as the Pyramids. As for being destroyed by fire at the top, it is safe to say that would be a physical impossibility. Fire-proof terra-cotta and concrete won't burn, and, when protected by these, iron and steel won't warp and twist. No fire is out of the question. Danger from that source is an exploded doctrine in New York."

New York agrees to many things, but in nothing more than in her skyscrapers. We lead the world in the attempt to "storm heaven"—not sacrilegiously, but for purposes of gain. Our tall tower-like buildings may be typical of the Babel story, for in no part of the world is there a greater confusion of tongues. By actual count there are twenty-three nationalities—direct or indirect descendants—working on the lofty building which is to eclipse in height all other office structures.

Ten years ago a serious attempt of merchants and city officials was made to limit the height of tall buildings in New York. They succeeded in doing nothing. Then the fire department took a hand at it. The city's very existence was threatened by the skyscrapers. A fire breaking out two hundred feet above the curb would not be a flaming torch to scorch the spire, but a wide disaster.

"Some of these blazing spires," characteristically remarked one alderman, "could be carried by a strong wind to the Jersey side or across the river to Brooklyn. The whole water-front is thus menaced by our skyscrapers."

But the only torch that threatens the harbor front up to date is that held in Liberty's hand, and that is not considered very dangerous, except by those who look upon our unrestricted immigration as the greatest menace to our country. Moreover, the opposition to the tall building is subsiding—has subsided. What is the cause of it?

"Three distinct professions have combined to remove the incubus from the sky-scraper," is the explanation given by a leading architect. "The architect has labored not in vain to make the tall building something else than a monstrosity. Some of the new structures are finished architectural products, such as the Trinity Building, for instance. The engineer has eliminated any danger of collapse from faulty construction, and, lastly, the fireproofers have made these tall buildings so proof against all fires that they are considered as fire-retardants instead of fire-spreaders. The exposure hazard has been materially reduced in New York down-town by the construction of these massive fire-walls, over which no fire could pass."

There is no use trying to discuss the artistic side of modern tall buildings. There are too many critics of rigid camps to make the work pleasant. No two agree, or at least if they have any point on which they can favorably compare notes they obscure their words of praise or condemnation by terms too technical for the ordinary reader to comprehend. There has filtered down to the lay mind an impression that all sky-scrapers are ugly, insatiable, beside towers which personify the American spirit of self-advertisement in big letters. But this impression may be all wrong. There are sky-scrapers and sky-scraper-towers with sheer walls, three and four hundred feet high, lofty, massive structures capable of housing a whole city, with sub-basements that honeycomb the rocks of Manhattan to a depth of sixty feet; long spinning shafts, which from the street look quite large enough for an elevator to run up, and for a stage-set to surmount the peak.

Architects have, in some instances, sought to add beauty to the sky-scraper, producing harmony of design out of irregular proportions; but the excesses of the shadowing structures say that such buildings can never be other than grotesque to the city. A prominent architect who was asked to draw plans for a twenty-five-story building in New York absolutely refused, and gave as his reason this: "I shall not risk my reputation in trying to achieve the impossible. Such a monstrosity is an engineering problem; not an architectural one. A building out of proportion cannot be made beautiful by hanging a few decorations on its outside."

Yet another, especially high in the profession, said to me: "The modern sky-scraper—office-buildings we like to call them—is a tri-

umph of art over commercialism. We have made the tall building an artistic success. It is a commercial structure, but we spend more money in the exterior design than many suppose. There are half a dozen such buildings in lower New York which are as architecturally perfect as any up-town mansion. It is a new style of architecture—Latinized American—and as such it must persist and grow in enthusiasm."

If architects and the public differ as to the artistic side of the sky-scraper, it would seem as if the engineers—structural engineers, as they are called—had no point of disagreement. Building a modern steel structure, clothed inside and out with brick, stone, marble, and terra-cotta, is an exact science. This science, however, has changed marvellously in the last few years, and an up-to-date engineer knows the methods in vogue four or five years ago. That the science is still in an evolutionary stage is manifest from the interviews had with engineers.

"Concrete is the coming structure—reinforced concrete built up and around steel cages or frames," explained one. "There will be no limit then to the height of our buildings. Ours in Chicago, the original home of sky-scraper, they are limited in height by the nature of the soil, but here on dear old Manhattan we have a rock foundation which will permit us to build up to the clouds. We've run our foundations sixty and seventy feet below the curb; and still the rocks hold good."

From another source comes this information: "The steel frame of an office-building can be run up a thousand feet in the air, and if protected from fire it will stand for hundreds of years. We can do this today because of the manufacture of light, semi-precious terra-cotta. This is absolutely fire-proof, and it weighs so little that the load factor on the framework is comparatively small. Such buildings as the new United States Express Company's twenty-second-story structure, and the mammoth West Street building have their steel frames clothed with terra-cotta blocks inside and out, and the load carried by the ten upper stories is less by one-half than nine-tenths of the buildings constructed in the past. I see no reason why, with steel and terra-cotta, we couldn't build fifty and sixty story buildings in New York."

Of course all this is more or less confusing to the uninitiated. It is the old proverb over again of common men getting considerably mixed when the doctors disagree. So no more of it for the present. The technical side must be settled by the experts.

Second matter in the city comes an elevator elevator of a tall office-building, he shakes up two hundred feet in the air, and after he has recovered his equilibrium he glances down the great well or shaft and asks, "Is there no limit in the height of elevator-runs?" Whether or not he knows it, this simple question is a crucial one. Five years and more ago the height of the tall building practically stopped at twenty stories. That was the limit of safety for elevators. A few ran higher, but it was not advised by engineers. It was supposed that this mechanical difficulty would work for good the height of our tall buildings.

But now, as we pile story upon story in building skyward, we have reached the period where we are going to add more elevator sections, and keep piling elevators upon elevators. A future cliff-dweller may have to transfer two or three times before he reaches his office. A second battery of elevators will be installed in the new thirty and forty story structures now building, and when we reach a higher point there will be three distinct elevator sections. So the problem of the elevator is solved, and there is apparently nothing to prevent our tall buildings rearing their heads a thousand feet in the air.

Within a year from next May the new Singer Building at Liberty Street and Broadway will be ready for occupancy. The plans call for a tower to rise to the height of forty-one stories, or a total of 625 feet. This is seventy feet higher than the Washington Monument. It is a good deal short of the Eiffel Tower, but that was not constructed as an office-building or living place. It is merely a freak for temporary artistic purposes of a great fair. The tower of the new wonder of the New World will be sixty-five feet square, and on each floor there will be ample office-rooms.

Comparisons may be useless, but sometimes they are instructive. The Park Row building—which in its day was famous as a tall sky-scraper, and viewed in a distance stands as a pretty respectable sort of structure, with its twenty-three stories, and extreme height of 300 feet from the sidewalk to the roof—could be placed on the main roof of the new Singer Building, 262 feet above the curb, and the top would still fall short of reaching the apex of the mighty tower. The same is true of many other famous skyscrapers—the St. Paul Building, at Broadway and Ann Street, with its 306 feet; the American Surety Building, 306 feet high, the Trust Company Building, the new Trinity Building, the Commercial Cable Building, and the famous Flatiron Building.

This new height of New York's buildings sets a standard which cannot forever remain unchallenged. Already there are promotions of rivalry. The tower of the new Biltmore and from Exchange will reach to an altitude of 401 feet, and the tower of the Metropolitan Life Insurance Company's building in the corner of 42nd and 5th Sts. (Plaza) is planned to reach nearly 600 feet above the curb. This will dominate the Flatiron Building, and make Bixna on the Madison Square Garden ashamed of her past haughtiness.

Yet it will fall short of the Singer Building tower by a considerable number of feet. There will be more expensive buildings, such as the new Boreel Building, which is practically an enlargement of the Trinity, with its estimated cost of \$15,000,000; but for sheer height the Singer tower must dominate New York's landscape for some time to come.

The wind velocity in the vicinity of New York is not, on the average the year round, extraordinary, but at times it blows at the rate of fifty and sixty miles an hour. Then gales go surging up Broadway, upstate turn inside out, and the weavers of skirts struggle frantically to hold together their various articles of clothing. The man on the top of a skyscraper is like a sailor wet aloft in a storm to furl sails. He rings by tooth and nail to whatever support he can find, and gets down again—of he can—with more electricity than he went up. This wind velocity—not in its average, but at its maximum—is an important mathematical problem with the engineer when he runs a building twenty to forty stories high. The wind pressure on a tall building must be reckoned with carefully. A structure five or six hundred feet in the air must be braced to withstand a wind pressure of something like thirty pounds to the square foot. With a tower sixty-five feet square and several hundred feet above the top of the main building there is a wind pressure at certain seasons of the year sufficient to drive a dozen ocean steamers half across the ocean if it could be harnessed and converted into available horse-power. The resistance to the wind pressure must be secured by angle-braces every second or third story, and the whole calculated out by mathematical formulas.

If there is any doubt in the mind of the sceptical about the force of the wind at great altitudes, he should drop a plumb-line from the top of the structure to the bottom of some inclined court on a windy day. The line would then be found to vibrate and swing very much like the pendulum of a clock. A recent test of the vibration of a tall building in a heavy wind was thus made, and it was found that the line swung back and forth through an arc of nearly two degrees. Nature has supplied us with everything that corresponds to a plumb-line. Our beams appear to that in a liquid when standing on a vibrating tower, and the dizzy sensation communicated to us is not all fancy. The rocking of a tower five or six hundred feet in the air is not very different from that of a ship in a sea. There are numerous cases of "seasickness" among the cliff-dwellers of Manhattan, and they have to get accustomed to their high altitudes before they are immune.

If the wind pressure should at any time reach the maximum stress allowed for the Singer Building, it would represent over its whole surface a force equal to 128,000 foot-tons. At the total weight of the tower is only 21,000 tons, it would be possible to overturn this portion of the building, or rather lift it up from its foundations, should the wind blow at such a velocity as to exert an even pressure of thirty pounds per square foot. To avoid any such contingency, each heavy iron column is anchored to the foundation elements some sixty feet below the surface of the ground. The margin of safety thus obtained is sufficient to withstand any of the summer wind-squalls or tail-ends of West-Indian hurricanes which sweep across Manhattan.

One consistent sky-scraper vertically, as it were, instead of horizontally. Their enormous heights dwarf our appreciation of their proportions in other respects. Sprung out on the ground, the forty-story towers would cover nine and a half acres, which with land at present high prices in lower New York would be worth a Rockefeller fortune. How many people can live comfortably and do business on such an acreage? Certainly in congested lower New York crowding is phenomenal, and a good many people can live on an acre. But in the

The City versus a Railroad

ACTING UPON A DEDUCTION OF THE BOARD OF ESTIMATE AND APPOINTMENT OF THE CITY OF NEW YORK, THAT THE NEW YORK CENTRAL RAILROAD HAD LAID TRACKS FOR ITS FREIGHT-TRAINS UPON PROPERTY TO WHICH IT HAD NO LEGAL RIGHT, THE SUPERINTENDENT OF HIGHWAYS PROCEEDED TO RIP UP THE TRACKS AND MARSHED VARIOUS TRAINS THAT HAD BEEN USING THEM

Singer Building there will be accommodations for some six thousand people, and they will not be crowded. There will be some luxurious offices where only a few clerks will occupy a whole suite of rooms. Crowded as parts of the East Side are to-day, this single building could house something like 20,000 people.

The mechanical equipment of any one of a dozen of New York's recent tall buildings represents the phenomenal development of modern work of the builder. In the sub-basement from 000 to 1000-horse-power plants furnish the energy for driving the elevators, heating, lighting, and ventilating apparatus. In one building alone there is an even thousand dynamo. In the Singer Building there will be installed sixteen elevators in the main structure, and four in the tower. Several thousand electric-lamps are required to furnish light for even the ordinary twenty-story structure. Outside air is drawn into the buildings by powerful suction fans, and then after being filtered it is distributed through the different floors. Enough coal is consumed every day to run an ocean steamer, and the heat thus released would keep "all cowboys" warm over a ten-acre lot.

There are some forty buildings in New York which are strictly fire-proof, and many others which pass under this name, but are, technically, only semi-fire-proof. Nearly, if not all, the tall sky-scrappers belong to the first class. They are practically indestructible from fire and the ravages of time. Wood is used as sparingly as them that matches are sometimes said to be the only wooden articles of furniture in sight. Fire-proof curtains, carpets, draperies, and furniture make combustible material an unknown quantity in those lofty cyruses of man.

"But what about earthquakes?"

Not unless the rocks of Manhattan were split sunder could even an earthquake seriously injure the best modern sky-scraper, for their foundations are imbedded in them and could not be dislodged by shakes and quakes. Some of the fire-proofing could be shaken off, but the steel frames would remain intact. Even the dislodgment of the fire-proofing is becoming more difficult by earthquake shocks, for it is now the practice to anchor all blocks and bricks used for this purpose securely to the steelwork. Altogether the sky-scraper of to-day is a pretty safe place to live and work in, and its comfort is beyond question.

A Misunderstanding

"Give me a ticket to Pierre, South Dakota."

"Single?"

"If I was I wouldn't have to go to South Dakota."

The Chastisement of a Saint

In a small barrio not far from Manila during the cholera epidemic of 1902 the Filipinos died by the score.

They had torchlight processions in which they carried the image of the patron saint, and they prayed to him, and spent much

money in candles to burn before his shrine, but still the scourge continued.

At last a meeting was held, and it was decided that San Roque was neglecting his children, and that some strong measures must be taken to make him take notice of them.

They accordingly took his image, fastened a strong rope to one of the legs, lowered him head first into a well, and left him there for two days to show him that they were not to be treated with disdain.

At the end of that time they drew him up and restored him to his place in the church, telling him that they were sorry, but he must atone for his duties.

Strange to say, no more natives died of the cholera in that barrio.

A Tough Brutus

E. B. WILLARD, the English actor, says that the provincial English audiences greatly relish a witty interruption of a performance. Mr. Willard followed this statement with a story of an actor who played Julius Caesar in a minor English city.

In the final scene the actor who was playing Brutus stabbed himself with a trick sword which allowed the blade to slide into the hilt. When the actor tried to stab him by jerking the sword to his breast the blade refused to slide, and despite his earnest endeavor he could not work the staff of steel into the hilt. After several strenuous trials a corkscrew abouted from the gallery, "Lord, but ain't 'e a tough chap!"

Cear: "If the czarévitch cries like that over a little thing like the colic, what will he do when he grows up and inherits my troubles?"

Take a

for that hoarse or husky throat and you get quick relief—valuable to all who talk or sing.

These three fruits are pleasant, somewhat narcotic, and free from harmful drugs, wholly different from any other coughs.

Miller HIGH LIFE

The Champagne of Bottle BEER

Miller "High-Life" Beer has that rich, pure and pleasing taste called the "MILLER TASTE" gained by perfection in brewing.

Cleanliness and Purity are our strong points and are very essential in beer making.

We spend large sums annually in this direction, our experience being of sixty years' standing.

Our Malt and Hops are the very best money can buy and the best obtainable on the world's markets and are selected by expert brew-masters.

We filter all our beer and sterilize every bottle before it leaves our brewery.

The reason Miller Beer is so much better than other beer is in the way it's brewed.

The Gentleman Ragman

BY

WILBUR NESBIT

Author of "The Trail to Boyland"

For pure, unadulterated humor this story of a typical inland village—told from a boy's standpoint—is a real treat. The characters are amusingly true to life—the dry, shrewd country editor, Orphena the village poetess, Squire Miller, who plays tunes on a locust leaf, etc., etc. One chapter tells how the barefoot cure was tried in Plainville. If there is anything funnier than that, it is the chapter which describes the tactics of Johnny's mother when buying ready-made clothes for the male members of the family.

COMMENT

FROM HARPER'S WEEKLY OF NOVEMBER 24:

The sole requisites of the reestablishment of the Democratic party upon an enduring basis are an Issue and a Man.

The issue: Katingismism of tariff taxation now bearing upon the poor, and the substitution, for revenue purposes, of graduated inheritance and income taxes to be paid chiefly by those whose surplus wealth has been acquired through privileges accorded by the state and opportunities afforded by a democracy.

The man: WOODROW WILSON of Virginia and New Jersey. The Democrats of New Jersey possess a rare and glorious opportunity to point the way, and make a striking contrast, by naming the Man as their candidate for United States Senator to succeed JAMES F. DAVIS.

Can they rise to the occasion?

We shall know next week.

The political sensation of the week ending January 5 was the first annual message sent to the New York Legislature at Albany on January 2 by Governor CHARLES E. HUGHES. In the speeches made by him in the campaign, which ended in his election to the Governorship, he promised that if elected he would carefully investigate the structure and working of the State government, and would try to remedy the defects discovered. How and when he would make good the promise was, of course, a different question. He has lost no time in proving that he meant precisely what he said. In his very first message he recommended that immediate provision be made for a recount of the votes cast for Mayor at the municipal election in New York city in 1905, pointing out that the matter was one into which no consideration with respect to persons or expediency should be allowed to enter. It is not, of course, a question whether Mr. McCLELLAN makes a good Mayor, whereas Mr. HEARST might make a bad one. The paramount, fundamental, exclusive question is whether in a commonwealth possessing representative institutions votes shall be counted as they were cast. The Governor went on to urge that with reference to future elections the courts should be empowered to order a recount summarily—a power which the New York Court of Appeals found lacking in the present election laws. He would have the power to authorize the bringing of an action to try the title to a given office lodged in the Supreme Court rather than in the Attorney-General, because the latter's title to his own office might be disputed. The Governor also called upon the Legislature to amend the Corrupt Practices at Elections Act by imposing a limitation upon the amount of money that may be expended by a candidate to procure his election. We take for granted that the amendment will be passed, in view of the disclosures of the lavish disbursements made by Mr. HEARST in furtherance of his candidacy.

It was, however, Mr. HUGHES's recommendations of drastic statutory changes designed to improve the means of railway

transportation within the State which most startled the Legislature. He earnestly advised that the existing Board of Rapid Transit Commissioners be abolished, and that a new board be created, to have all the powers now exercised by the Rapid Transit Board, and also to have powers with reference to the operations of railroad companies within the territory of Greater New York, or, should such an extension be deemed advisable, within a wider district, embracing the adjoining counties into which certain lines of the surface railroad do now or may hereafter reach. Mr. HUGHES proceeded to assert the advisability of abolishing the present Board of Railroad Commissioners and the Commission of Gas and Electricity, and of creating a new commission endowed with powers of regulation and supervision, within constitutional limits, of all the corporations now subject to the two existing boards last named, which powers should be supplemented, he said, with such additional authority as may be needed to insure proper management and operation. The reason for such new legislation is, he said, that domestic commerce must be regulated by the State, as interstate commerce is regulated by the Federal government, and that to this end the State should exercise its power to secure impartial treatment to shippers, the maintenance of reasonable rates, and adequate service with due regard for the convenience and safety of the public. That is to say, the Governor would have the State of New York perform the duty which, if left unperformed, would, in the opinion of Secretary Root, cause the American people to invoke the powers of the nation and obliterate State lines. Mr. HUGHES has also announced an intention to subject at once to rigorous investigation every one of the appellate departments and boards, some of which have long provoked a great deal of criticism. Among those to feel the probe will be the Insurance Department, the Banking Department, the office of the Forest, Fish, and Game Commissioner, the office of the Commissioner of Agriculture, the Health Department, the State-prison Department, the State Tax Commission, the Lunacy Commission, and the office of the Excise Commissioner, together with many minor commissions and boards.

Such is the new Governor's programme. It remains to be seen to what extent the New York Legislature will permit it to be carried out. Merely by proclaiming it, however, Mr. HUGHES has made a most favorable impression, and now finds himself one of the most-talked-of men in the United States. The New York World does not hesitate to say, with all respect to Mr. CLEVELAND and Mr. ROOSEVELT, that Mr. HUGHES's message is the most hopeful and invigorating document penned by any Chief Executive of this State in many years. The Philadelphia North American thinks that the message marks the beginning of a new era in American politics, and sees in the new Governor a "strong man." The Philadelphia Press recognizes that Mr. HUGHES's appeal is made straight to the people, and sees in him "a man with possibilities, who is to be watched." The Washington Post pronounces the address admirable, and advises its readers to "keep an eye on HUGHES." The Washington Herald avers that "the eyes of the nation are upon Governor HUGHES," and declares that the country is looking for a man who knows how, and has the moral courage and stamina, "to do things." The Boston Transcript acclaims the message as not disappointing to those who expected Mr. HUGHES to take independent ground and an advanced position. The Boston Herald says that it marks the advent of a new power in the affairs of the State. On the whole, it is probable that Governor HUGHES, if he goes on as he has begun, will be able to get the New York delegation to the next Republican national convention. As a vote-getter he has been tested in a memorable contest, and he will have been tested in office before the spring of 1908.

Mr. LOOSE had to abandon his proposal to the Senate to vote that the President's action in discharging the negro troops without honor was legal and constitutional. The President, it seems, desired such an endorsement, and Mr. LOOSE was anxious to get it for him, but even his own colleague, Senator CRANE, could not see his way to support such a resolution. There was no chance for it to pass in the Senate, so it was not pressed. Mr. LOOSE offered instead a resolution authorizing the Senate's Committee on Military Affairs to make inquiry into the Brownsville affair of August 13, with power to summon witnesses. In this he forestalled Mr. FORAN, who, neverthe-

less, offered a resolution of his own, to much the same purport as Mr. LOOSE's, but differing from it in several more or less important details. Mr. LOOSE said that two questions were involved, one of fact and one of law, the latter being the question whether the President, in dismissing the companies without honor, had exceeded his powers under the laws and Constitution. His argument on that point was that though the "dishonorable discharge" can only be given by sentence of a court martial, the "discharge without honor" comes within the discretion of the President, the Secretary of War, and the commanding officer. There could be no doubt, Mr. LOOSE thought, that the power of summary dismissal was inherent in the office of commander-in-chief when the President was invested by the Constitution with that office, and there never has been any attempt by Congress to prevent the exercise of this authority.

The Army Regulations lay it down (§ 146) that when a company commander deems a soldier's service not honest and faithful, a board of officers shall be convened to determine whether it has been so or not, and "the soldier will in every case be given a hearing before the board." "Discharge without honor on account of 'service not honest and faithful' will be given only on the approved finding of a board of officers as herein prescribed." So the Regulations; though there follows in paragraph 148 the information that the blank form for discharge without honor shall be used when a soldier is discharged "(b) without trial, on account of having become disqualified for service, physically or in character, through his own misconduct," and "(c) when discharged without honor is specially ordered by the Secretary of War for any other reason." The Regulations seem amenable to a good deal of interpretation. If paragraph 146 applies in the case of the men of the Twenty-fifth Infantry, the lawyers of the Senate will let us know it. Senator FORAKER, in his reply to Senator LOOSE, said that discharges without honor have only been known since 1895, and there was no instance (up to the time of the Brownsville case) where a soldier was discharged without honor when he was charged with a crime, protested his innocence, and was denied a trial. That is interesting but not conclusive. The question whether the President has power to discharge soldiers "without honor" without a hearing seems still unsettled and debatable, and needs more discussion.

It is a very important order which, by direction of President ROOSEVELT, has been issued by Secretary of the Interior HERRICK, the order, namely, for the summary destruction, after April 1, 1907, of all illegal enclosures and obstructions existing on the public domain. On December 17 the President sent to Congress a message in which he called attention to illegal fences on the public domain, and gave notice that if the necessary legislation to legalize proper fencing by government control of the cattle-ranges were not passed, he would himself take steps, under the existing statutes, to have all illegal fences removed. Congress having given no intimation of its intentions in the premises, Mr. ROOSEVELT has fallen back on the act of February 23, 1885, and has notified all receivers and registers of land land-offices and all special agents of the government that this law, hitherto almost a dead letter, must be carried out. The extent to which this order will affect great grazing interests in the West will be appreciated when we recall that a census of the illegally fenced public domain has shown that it comprises more than five million acres. It is alleged that the Nebraska Feeding and Cattle Company alone has 400,000 acres in one tract surrounded by illegal fences. When we say that the act of 1885 has hitherto been almost a dead letter, we do not mean to say that no attempt has been made to prosecute offenders under it. The sentences imposed, however, have been lenient. The first conviction of the Nebraska Feeding and Cattle Company resulted in the imposition of a nominal fine on some of the officers, and in their commitment to jail for six hours, which time they were permitted to spend in charge of their attorneys at the Omaha Club. The wholesale spoliation of the national domain has gone on long enough, and the determination to stop it is one of the things for which his fellow citizens will be grateful to Mr. ROOSEVELT.

The investigation of the HARBOR railway merger by the Interstate Commerce Commission, and the light cast by it on the use to which was put an issue of \$100,000,000 worth of convertible bonds by the Union Pacific corporation, is not unlikely to lead to some drastic legislation by the Fifty-ninth or the Sixtieth Congress. On January 3, the day before the inquiry began, Mr. VENABLE, of Minnesota, introduced a bill giving the Interstate Commerce Commission power to control the issue of stock or bonds by interstate commerce carriers. The measure provides that before any increase of capital shall be made the carriers shall apply to the Commission, stating the amount of stock or bonds to be issued, the reason therefor, and the purpose to which the proceeds are to be applied. The Commission, if it be deemed necessary, shall order a hearing on the application. The bill further provides that no special or preferred stocks or bonds shall be issued by any common carrier to represent an increase in the value of the property of carriers unless there shall have been a real corresponding increase in the value of the property. Moreover, no stock shall be issued based on the earnings of the carriers. In other words, with due allowances, earnings must be divided among the stockholders as they accrue, and not accumulated so as to provide a basis for the inflation of stocks. Finally, the bill prescribes that no competing carriers shall be permitted to own the stocks or bonds of a rival. It is manifest that if such a bill had been a law some years ago, the Union Pacific would never have been able to acquire control of the Southern Pacific; much less could the proceeds of the bonds of the former railway have been used in the purchase and sale of the stock of outside corporations, such as the New York Central, which it could have no hope of controlling.

Boston is still struggling with its sumptuary laws, especially Massachusetts Sunday laws. Last Sunday, a lieutenant of police, acting under the orders of the not-yet-suppressed District-Attorney MORAN, visited the clubs to find out what the members drink, how it is served, and how it is paid for. For MORAN's convenience, the policeman also made a note of recent banquets held at the clubs, taking down the names of the guests. It behooves a stranger to be cautious, perhaps, before attending a banquet at a Boston club. Besides this, still under the whip and lash of MORAN, Police-Commissioner O'MEARA proposes rigidly to enforce the Sunday law. According to recent decisions of Boston's judiciary, here are some of the things which may and may not be done in that town of a Sunday. Bootblacks may shine until 11 A.M.; then they must retire. Bakers may sell bread before 10 A.M., and from 4 to 6.30 P.M. A florist may sell flowers for a Sunday funeral, but not for a Sunday wedding. Ice-cream may be eaten, but not made or sold. Photographers may not take pictures. Hotel porters may not wash the sidewalks of their luns. Show-windows may not be dressed. A shop-keeper may not wash the floor of his store. A musician may not play at a hotel. These are some of the momentous decisions of the municipal courts within the five days prior to this writing. They make a Boston Sunday look like a London Sunday, and nothing more is needed to induce travellers to wait until Monday before going there. It is open to discussion whether Boston's Sunday habits or the Massachusetts statute-book shall be reformed.

The attention of Northern and Southern people both ought to be drawn to efforts which are being made in Georgia to settle some of the problems of the race question. The Rev. Dr. PRESTON, of Atlanta, has made a very interesting statement in the *Congressionalist* on this subject, telling us that there are three movements in which both races are interested. The first is industrial; the second is religious; and the third he calls civic. The first movement is supporting a reasonable and promising proposition to establish an industrial school. As branches of this school there are to be established schools in which the domestic arts are to be taught. Negro men are to be trained in the one for mechanical pursuits, and negro women in the other for household services. The second movement is carried on by committees of the white and negro churches, and under their direction an effort is being made in the pulpits to inspire the people of both races with a love of law and order. The third is carried on by two cooperative civic leagues—the one black and the other white. The idea

of this combined league is, as far as possible, to put more responsibility upon the negroes. Negro policemen are to be appointed for negro parts of the city, and the number of negro jurors is to be increased. Some good effects have already been felt. These efforts by the white and black citizens of Atlanta have a deep significance. They prove what rational men, uninfluenced by party necessities, have always believed. No more than any other part of the civilized world does the South desire to be counted barbarous, and there is reason to believe not only that the South will do its best to solve its own social and domestic problems, but that when it tries it will make a better job of the undertaking than can any outsider.

There is a good deal of peering into the future lest, peradventure, the peers may see the end of our present era of prosperity. Some of these, who are called financial magnates, seem to expect disaster; and to expect disaster too loud, if the utterer be an authority, is frequently to court it. So far, however, there is little sign that the country is to be plunged into ruin. The latest prophets among the "magnates" are Mr. STEVENSON FISH, to whom the year just passed has been rendered unpleasant by Mr. HUBBARD, and Mr. GEORGE GUILD, who is in a happier frame of mind. Mr. Fish expects a panic soon, and Mr. GUILD sees no sign of one. At their annual meeting, which was held this year in Providence, the economists took notice of the question, and some of them gave their opinions. Professor JOHN R. CLARK, of Columbia, thinks that there may be a good many bubbles that need pricking. He thinks that there is over-speculation in lands and mines, although he admits that some of the securities that lay heavily on the financial stomach a few years ago have been digested. He looks for a shrinkage. Another economist—Professor W. G. SUMNER, of Yale—is more hopeful, and his view seems to be nearer that which we may call prevalent. "We have seen," he says, "an amazing expansion of undertakings of all kinds, and they have been carried on with success. The property is real and very wide. I cannot see that it is anything but true growth and genuine achievement." There is a sanity in this view which is inspiring.

Two United States district judges have declared the Federal employees' liability law unconstitutional. Although they are both of Southern districts, they are also both appointees of Republican Presidents. Judge EVANS, of Kentucky, who has already been publicly lectured on account of his opinion on this very law, was appointed by McKINLEY, and Judge McCALL, of Tennessee, was appointed by ROOSEVELT. Congress passed this law under the commerce clause of the Constitution, and it is expected by the political power at Washington that the courts will construe this clause in such a way that Congress may enact laws regulating the contractual, or otherwise legal, relations between the railroads and their employees. Of course, if the Supreme Court gratifies the political power by such a construction, all contracts between those engaged in interstate transportation and others, whether relating to interstate or to intrastate commerce, will be judged to be within the jurisdiction of the United States. In other words, any contract to which a transporter is a party would be interstate commerce. A contract with a drayman to haul goods to or from a freight-station; a contract under which hackmen are admitted to a passenger-station for the convenience of travellers; a contract to clean the windows of cars; a contract to supply new plush for Pullman or other sleeping and parlor cars—all these are quite as much commerce as are the relations between the laborers in a railroad yard and depots and the railroad.

In deciding as they did, Judges EVANS and McCALL decided as all lawyers, merely lawyers, would have decided a very few years ago. In holding that navigation was commerce, Chief-Justice MARSHALL defined commerce as the word is used in the Constitution. "Commerce undoubtedly," he said, "is traffic, but it is something more; it is intercourse. It describes the commercial intercourse between nations and parts of nations . . . and is regulated by prescribing rules for carrying on that intercourse." Possibly it would not occur to any one that the relations between employer and employed constituted such intercourse except to one not averse to amending the Constitution by construction. At any rate, in

the light of MARSHALL's definition, Judges EVANS and McCALL have not yet done anything worthy of castigation. They have simply expressed an opinion based upon MARSHALL's definition.

It seemed as though Secretary TAPP's remarks about his candidacy for the Presidential office meant, if they meant anything in particular, that he would not go on the bench until the next Republican convention had had a chance to nominate him. Later advice, conveyed through the Washington correspondent of the *New York Evening Post*, are to the effect that the next chance, if any, that President ROOSEVELT has to nominate a justice of the Supreme Court he will nominate Judge TAPP. The inference is that the Judge's prospects as a Presidential candidate do not seem to be worth nursing at the cost of the chance to secure him for the embellishment and ingratiation of the bench.

After all, the question of the disciplining of the companies of the Twenty-fifth Infantry is hardly likely to be a Presidential issue next year, nor are Judge TAPP's chances likely to be affected by it. Tariff may have come again to be a topic in another twelvemonth, and in that case it may be recalled that Judge TAPP said in a speech at Bath, Maine, last September: "How soon the feeling in favor of revision shall crystallize into action cannot be foretold, but it is certain to come, and with it those schedules of the tariff which have inequalities and are excessive will be readjusted."

The Baroness BRACKETT-COWTIN had a great funeral, on January 5, in Westminster Abbey, where she was buried. The Abbey was filled with mourning people, and flags were at half-mast in London. She was an old-fashioned philanthropist, and spent a great deal of her money in improving the physical conditions of the miserably poor. The great givers of our generation incline to other channels of expenditure, and especially to facilitating the rise of those who are able to help themselves. Our successful money-makers seem to take more kindly to helping likely people to succeed than in ameliorating the condition of the unsuccessful. Anything that seems like a provision for the perpetuation of failure goes against the grain with them. Their millions come out readiest to provide better education for better-than-average scholars, and to increase knowledge. Charities such as won the Baroness BRACKETT-COWTIN such wide repute in the last generation appeal to them less strongly. The Baroness, however, was not trained in the school of self-made success. She inherited her fortune from her father. Possibly the later taste in philanthropic disbursement is sounder than hers, but at any rate she had a very large funeral.

Is it *Ue-majesté*, or contrary to army regulations, for an officer of the United States army to speak with disrespect of the race-suicide bog? If it is, there may be a court martial ahead for Major CHARLES E. WOODGERF, M.D., U.S.A., who, in an article in the *Sunday Times*, almost makes light of the race-suicide scare. He avers that the birth-rate diminishes in direct proportion to the growth of human intelligence, and that within very recent times the death-rate for infants has been so diminished by medical discoveries that it is no longer necessary to produce half the children needed a century ago. All that, we knew before; but Dr. WOODGERF goes farther. He finds an incalculable benefit in the fact that the human race in its civilized branches is gradually becoming confined to the lines of small families. That, he finds to be part of the process by which the survival of the fittest is now being accomplished in the higher nations. Feeble children are now raised who formerly perished. Present types, much feebler than the powerful prehistorical brute, arrive in obedience to natural law, as being fitter than the stupid man of great strength, and able to drive him to the wall. So (contrasting modern nations) in England and France the more intelligent children survive; in Russia—with large families and a huge infantile death-rate—the most robust and often the stupidest. Five births to a family, now ample for us, would have meant race-extinction a thousand years ago. The average family, Dr. WOODGERF says, is now about four, but in two or three centuries, if our death losses continue to diminish at present rates, the birth-rate will drop naturally to a fraction over two children to a family.

The Coming Ambassador from Great Britain

It is settled that the successor of Sir HENRY MOTIMER DURAND in the British Embassy at Washington will be the Right Honorable JAMES BAYCE, the distinguished author of *The Holy Roman Empire* and *The American Commonwealth*, who was President of the Board of Trade in the ROBERTSON ministry, and who has just resigned the post of Chief Secretary to the Lord Lieutenant of Ireland, which, in his case, carried a seat in the cabinet. He has been for twelve years a Privy-Councillor. The appointment deserves attention because it is a unique incident in the history of the diplomatic intercourse between our mother country and its daughter state. Never before has England selected for her regular representative at the seat of our Federal government an eminent man of letters or a statesman of cabinet rank. Striking, indeed, is the contrast, from this point of view, between the course which, from the achievement of our independence down to the present hour, our Federal government has pursued toward Great Britain and that which Great Britain has hitherto adopted toward the United States. Our first minister to the court of St. James's, appointed in 1783 by the Congress created under the Articles of Confederation, was JOHN ADAMS, the second President of the Republic. In 1792, three years after the Federal government was organized under the existing Constitution, President WASHINGTON was chosen for our representative in London, General THOMAS PINCKNEY, who had served with great gallantry throughout the Revolutionary war and had been Governor of South Carolina. PINCKNEY received fifty-nine electoral votes for President in 1796, and would have become Vice-President had not JEFFERSON beaten him by four votes. He was succeeded in the British metropolis by RUTHERFORD KING, who represented successively Massachusetts and New York in the Federal Senate, and who was the Federalist candidate for Vice-President in 1804 and for President in 1816. For a number of years following 1803 our minister plenipotentiary in London was JAMES MONROE, who afterward was twice elected President of the United States. In 1815 the same office was filled by JOHN QUINCY ADAMS, who became our Federal Chief Magistrate ten years later. The post was occupied in 1825 by ALBERT GALLATIN, who had been our Secretary of the Treasury from 1801 to 1814, and who is generally acknowledged to have been one of the greatest financiers and statesmen in American annals. In 1831 WASHINGTON IRVING, then the most distinguished man of letters in America, was *chargé d'affaires*. He was followed by MARTIN VAN BUREN, who in March, 1837, became President of the United States. In 1841 our minister at the court of St. James's was EDWARD EVERETT, who was successively a United States Senator from Massachusetts, a President of Harvard University and a Secretary of State. Five years later the same office was filled by GEORGE BANCROFT, the well-known historian, who had been a Secretary of the Navy, and who was to be the first minister to the German Empire. From 1853 to 1856 we were represented at the court of St. James's by JAMES RICHANAN, who had been a United States Senator from Pennsylvania, and a Secretary of State, and who was to be President of the United States. His successor was GEORGE M. DALLAS, who had been Vice-President. Next came CHARLES FRANCIS ADAMS, the son and grandson of a President, who himself had been a candidate for the Vice-Presidency on the Free-soil ticket in 1848. In 1860 the functions of minister plenipotentiary were discharged by JOHN LOTHROP MOTLEY, the well-known historian of the Dutch Republic, who previously had been minister at the court of Vienna. In 1860 we sent to London JAMES RUSSELL LOWELL, then our most eminent man of letters, and previously minister to Spain; and in 1863 Mr. CLEVELAND named as the first Ambassador to Great Britain THOMAS F. BAYARD, who had been a United States Senator from Delaware and Secretary of State. Such are the names most notable for literary or political importance in the remarkable record of our diplomatic appointments to the court of St. James's. Viewed as a whole, the list attests an almost pathetic anxiety to select the best men in the country to represent the government and the people of the United States in England. No such anxiety was evinced in the selection of ministers to other European powers, not even in the case of France, except during the quarter of a century which immediately followed 1778, the date of the treaty of alliance.

Relatively careless and contemptuous during more than sixty years after the establishment of our Constitution was the selection by the British Foreign Office of envoys to the United States. The first twelve were obscure persons, not one of whom was to play an important part in history, and one of whom, JACKSON, had to be dismissed for insubordination in precisely charging the Secretary of State with duplicity. The next eight British ministers were equally insignificant, intellectually and socially, with the exception of Sir STRATFORD CANNING, who had not yet given proof of the abilities which were to enable him long afterwards as ambassador at Constantinople. One of the eight, CAMPTON, had to be dismissed summarily for a violation of the neutrality laws, having undertaken to enlist soldiers for the British army during the Crimean war. A man of genius, Sir HENRY LYTTON

BULWER (some time afterward made Lord DALLING), was sent over to negotiate the Clayton-Bulwer Treaty, but not until the Buchanan administration was the importance of the United States distinctly acknowledged by the successive appointments of two members of the peerage, Lord NAPIER and Lord LYONS, to be ministers at Washington. The experiment has not since been repeated, for Mr. LOVELL S. SACKETT-WEST had not inherited a peerage when he came hither as envoy, and Sir JULIAN PAULING, though he was ultimately made a lord, was simply permanent Under-Secretary to the Foreign Office when he became minister. We repeat that the long list includes not a single man who had attained cabinet rank at the time of his selection for the post of British minister at Washington.

On these memorable occasions in the past the British government recognized that the services of a man of first-rate abilities were, at least temporarily, required at Washington. In the early fifties, Lord ELGIN, then Governor-General of Canada, was appointed a commissioner to negotiate a reciprocity treaty between the United States and Canada. The task was performed successfully. Again, when the controversy concerning the Alabama claims threatened to involve Great Britain in war with the United States, a commission headed by Earl de Grey and Harrow (afterwards Marquis of Ripon) was sent to our Federal capital, where it arranged the Treaty of Washington. Once more, in 1896-97, the British Foreign Office named for its representative on the Joint High Commission appointed to settle, if possible, outstanding disputes between the United States and Canada, Lord HERSHELL, who had been Lord Chancellor in a Liberal administration. There is reason to believe that if the British government had been equally solicitous about the qualifications of its permanent envoys to the United States during the first half of the last century, the war of 1812 might have been averted, and the questions respecting the boundaries of Maine and Oregon might have been settled without bringing the two countries to the verge of hostilities. The British government has apparently determined never again to be guilty of the mistakes committed in the earlier period of its diplomatic relations with the United States. It has arrived at the conviction that some of its foremost statesmen is too good for the post of ambassador to Washington. In the selection of the Right Honorable JAMES BAYCE for the office it has evinced discrimination. The practical acquaintance with public affairs gained in a long Parliamentary career, and in the exercise of the functions of President of the Board of Trade and Chief Secretary for Ireland, has peculiarly fitted him to transact the political and economic business of the embassy. He is the first British envoy to appeal strongly to the sympathy and esteem of Irish-Americans, because among British Liberals Ireland had no firmer friend. To educated and thoughtful Americans he carries credentials such as some of his predecessors have presented, for he is known throughout the Union by his authoritative work on *The American Commonwealth*, which exhibits a more accurate and exhaustive knowledge of the structure and working of our Federal and State Constitutions, and a more intimate acquaintance with our laws, institutions, customs, modes of thought, and points of view, than any American citizen is known to possess. He comes, in a word, equipped with a capacity of understanding us, such as no former British minister has evinced. That is, of course, the fundamental condition of useful and fruitful intercourse.

The Flourishing of the Wicked

It is somewhat difficult to come to realize that justice is not so much a supernatural revelation as an outcome of human sensibility and of slow growth. It falls upon us at times with almost crushing force that there is no justice in chance or fate, and that the good man is hard to slay, to storm and shipwreck and earthquake, equally with the villain, and that the wicked man, if he be sunny, is still, as in the days of the psalmist, likely to flourish and spread himself like a green bay-tree. The singer of the psalms showed an ethical insight far in advance of the average human consciousness when he made that marvellously poetic effort to explain the adjustment of rewards and punishments in the thirty-seventh psalm, where it had to be admitted that the wicked man usually gained his share of the world's goods and prospered exceedingly, while the attempt that could be pronounced to be righteous was that his seed should not be beggars and his end should be peace. The law that like will unto like, and that rewards are of the nature of the effort put forth, is never broken down. It may be because we are so apt to say to the little child, "Be good and I'll give you some candy," that it falls upon the youth like a calamitous stone that the reward of duty done is not praise or acclaim or success or prosperity, but simply the power to fulfil further duties; that it is not the way of Destiny to answer to man's impatient clamor, but to frown and often unsearchable losses. The whole scheme of punishments and rewards, childishly as we may play with them in fancy, at

times, is simply the law that effort put forth calls into being results of like kind with the effort, that a man's life grows into the shape and stature of his thoughts and his wishes.

The religious consciousness leads to a patient acquiescence in the higher and ultimate designs of Destiny and the strength for self-sacrifice, so that such designs may not be even temporarily impeded. The impartial methods of nature with the just and the unjust cannot be superseded, nor except in very slight measure controlled; but the ideal of human justice grows steadily. As the centuries add to the exactitude of man's sense of moral justice it becomes less and less possible for a man to accept those gains which mean another's loss. The voluntary erasing of poverty was at one time the hallmark of a saint, and saints were looked upon as supernaturally endowed. Such saints are cast abroad over the earth to-day, and we look upon them as only a little odd, and wonder what disappointments may have taught them the worthlessness of earthly goods and the value of spiritual rewards. The sham workers, the social-settlement people, the theosophists, and the various new sects and creeds which lay stress upon inward effort and inward results lay no claim to a supernatural holiness, but simply stress the fact that results are according to the nature of effort, and that peace is not gained by making another suffer. The aim with them is of wider growth, and endures humanity instead of circling a mere personal career. If one give one's faith to the theory that there is an all-knowing, all-loving creative Intelligence, it follows that such Intelligence would desire the welfare, the growth, of all creation equally. Being above hazard and chance, it must be that imperfect creations are imperfect only in so far as they are in process of growth, only partially created or dropped as a seed into darkness, to work the way out into light and into consciousness. And man, in as far as he acquiesces in all creation, will know no limitation of sympathy, no barriers of separation, but, like MARVELL's perfect man, will learn to become "equal, unclassed, tribeless, and nationless." It has been said of St. FRANCIS, "If you had taken him in the loneliness that the madness of an astronomer can conceive, he would only have beheld in it the features of a new friend." This is the reward of the acquiescent consciousness. Who believes in a loving universe shall himself gain such, and no journey through the black coal-sacks of interstellar space shall divorce him from the loving hope and trust he has created. Socrates, who said, "No evil can befall a good man," was not protected from the death penalty, but his force in heaven or earth could make him meet death with tranquillity or ignoble fear; he was the victor transforming the horrible shade into a calm and noble vision.

A modern writer has said that poetry and religion are in essence identical, and differ only in the way in which they are attached to practical life. "Poetry," he says, "is called religion when it intervenes in life; when it merely supervenes upon life it is seen to be nothing but poetry." When that which is of farthest sight and most essentially beautiful, whole in concept, unobscured by personal considerations, controls life, it is religion; when it is merely aesthetically contemplated and enjoyed as an adornment of consciousness, it is art, but art divested of its highest powers. For art is great just in so far as it sets upon life and consciousness and proceeds from the man of courage and truth in the creator.

Religion, then, is the application of the highest concepts to conduct, and no one will contend that the highest concepts applied to conduct result necessarily in prosperity, riches, or honors. As the psalmist foretold, the righteous man may go to have peace in his inward consciousness and to see a good disposition in his children; but as religion rules only in the realm of the ideal, it has only an ideal adequacy. Those who look to virtue to help them to prosperity or to shield them from misfortune are allowing themselves to invite the real to encroach upon the ideal. The reward of virtue is peace, in the sense of having attained at first to apply one's highest concepts to practice in a world quite inadequately prepared for such attempts, and the chances still are that the cunning man, the unscrupulous, the self-interested, will flourish and spread himself like the green bay-tree—but the end of the righteous is peace.

Personal and Pertinent

JONAS QUINCY, once Mayor of Boston, has long illustrated an old but only half-recognized truth that intellectual men are sometimes utterly incapable of succeeding in business. Mr. QUINCY is reputed a cold man by those who do not know, and he here again illustrates a truth the non-recognition of which often leads to cruel injustice and harsh judgments. This truth is that real shyness frequently appears to be frigidity, but the ice is only in the manners. Mr. QUINCY is one of the most loyal of friends, and in public and private affairs is an idealist. Practically, he is a shrewd legislator and a dreamer of fine plans, but he is not by nature an executive. He comes of an old line of scholars and statesmen, and was born land poor. He has tried to meet his con-

ditions by transmuting his dreams into gold, but he has failed. The more poetic the business scheme, the more it enticed him, and he poured his funds and his credit into many fancies, among others into a vision of turning the rays of the sun into motive power. The rays were to be harvested in Egypt, that now he goes voluntarily into bankruptcy to put an end to it all, and purposes to look after the law business of his clients. At the same time he ought not to retire from politics, for there he is not only an idealist, but he is sound and sane, and he has the public interest, not his own, at heart. More than any one else, he is entitled to the credit of making WILLIAM K. BRYAN'S election of Massachusetts. As a legislator he was the ablest leader of the Democrats of his State ever had. As Assistant Secretary of State he performed a thankless task for which he received much odium not his due. As Mayor of Boston, that city owes him its great railroad terminals, and the poor much park room, free music, and other wholesome pleasures.

The news that comes from England about the tall hat in the House of Commons is almost revolutionary. The tall hat is the modern successor of the medieval head-gear of the free bourgeois and citizens of the thirteenth century who were summoned to SIMON DE MONTFORT's Parliament, and who are supposed to have worn their hats in the presence of the knights who represented the shires in order to mark their equality with them as legislators. That hat is going, they say, and is soon to be the merest memory of a sign, but the sign is, indeed, of blessed memory to those who know anything about Parliamentary history. Mr. ASQUITH, the Chancellor of the Exchequer, so it is reported, refuses to wear his hat in the House, and so an age-old tradition vanishes, or at least threatens to vanish, from the hearts of men, so it has vanished long since from their memories. If this report be true, it may appropriately be said that ASQUITH was the man of all men to kick the House of Commons tall hat out-of-doors, for he married into the "Dolly Dialogue" set, in which ARTHUR BALFOUR also takes his recreation. Pretty soon we shall see the tall hat disappearing from the heads of the men who sit in the windows of the club on Pall Mall, and when the news of this reaches our country, hats will be hung up in the parlors of our own clubs. But as has been vaguely outlined, there is a reason for wearing the tall hat in the House of Commons, and although it has been forgotten by most men, the tale's overthrow must reveal to many who are not unmindful of small historical incidents the high significance of what seems to modern notions a funny custom. We are more tolerant of some of these funny customs when we know their origin. When JOHN BRYAN entered the House of Commons with his hillycock hat and his "refer," he was presumptuously superior to the tall hat and the frock coat, but after he had lived there for a time he spoke kindly of them, saying, "The 'lifter' up I get in society, the better I understand why ways are different."

There seems to be an inclination to question the right of the friends of CHARLES S. FAIRBANK to ask for a suspension of the public judgment concerning the charge against him. As he has been indicted for an offense in connection with the sale of some railroad securities belonging to the New York Life Insurance Company, some censors of public morals have found him guilty. This is the fashion of such censors, as it is in accordance with their nature to say that those who believe in Mr. FAIRBANK are moved by a selfishness which leads them to ask for favors for a man of position that they would not think of asking for a poor man. But the friends of Mr. FAIRBANK are not such. They are people who believe in civic duty, and have faith in Mr. FAIRBANK because he has sacrificed so much for the public welfare. Mr. FAIRBANK was a friend of THOMAS when many of the best young men of the country were the followers of that statesman. He served the State as Attorney-General, and did much to aid in breaking up the TWENTY. He was one of the leaders of the Democrats who made CLEVELAND Governor and President. He was Secretary of the Treasury, and won public opinion of men by the wisdom of his administration. When he came to live in New York he was made president of the New York Security and Trust Company; but he was much more than that: he was a leader and adviser in all good movements for the betterment of national and municipal conditions. Public men, reformers, and philanthropists sought his advice, and they got that, and also his money. He was the organizer and head of the Anti-Smugglers in New York, and persuaded the national convention that Tammany did not tell the truth when it asserted that CLEVELAND could not carry the State. A recent appearance in national affairs was in support of Mr. NIXON against BRYAN. For Mr. FAIRBANK's unselfish devotion to the public interests, a devotion which has cost him much sacrifice; for his modest services in support of charities; by reason of the simple purity of his private life; and, recalling his own sympathies with all high things, his friends do not believe him guilty, and will not until he is known to be. In asking for a suspension of judgment they are not singling him out for a special favor; they are asking for what is due, under the law, to every accused man, high or low, rich or poor, useful citizen or tramp, a man of virtuous repute or one who is usually bad.

THE BOMB-THROWING OUTRAGE IN PHILADELPHIA'S RICHEST BANK

ON SATURDAY MORNING, JANUARY 5, A MAN ENTERED THE RICHEST BANK IN PHILADELPHIA, THE FOURTH STREET NATIONAL, AND, AFTER GAINING ACCESS TO THE OFFICE OF THE PRESIDENT, REQUESTED A LOAN OF \$5000. UPON BEING REFUSED, HE WAS ESCORTED TO THE OUTER OFFICE BY AN ATTENDANT: WHEN OPPOSITE THE CASHIER'S DESK, HE THREW A BOMB SUPPOSED TO HAVE CONTAINED NITRO-GLYCERINE, WHICH EXPLODED WITH DEVASTATING EFFECT. THE CASHIER OF THE BANK, W. E. MCLAUGHLIN, WAS INSTANTLY KILLED, AND THE BOMB-THROWER HIMSELF WAS SHOWN TO FRAGMENTS; FIFTEEN OTHERS IN THE BANK WERE MORE OR LESS SEVERELY INJURED, AND THE INTERIOR OF THE OFFICES EARLY WRECKED. THE THROWER OF THE BOMB, WHOSE NAME WAS HIL- LAND STEELE, IS BELIEVED TO HAVE GONE TO THE BANK WITH THE PURPOSE OF SOMEBODY IT BEING THE CONFUSION FOLLOWING HIS ACT. HE IS KNOWN TO HATE HAD DESIGNED UPON OTHER BANKS AS WELL.

THE WIDTH OF A SCHOOL BENCH

THE REASONS FOR CALIFORNIA'S DEFIANT DECREE AGAINST THE JAPANESE IN HER PUBLIC SCHOOLS

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

This is the first of a series of articles in which Mr. Inglis, who has gone to Japan for "Harper's Weekly," will discuss at first hand the crucial question of the real attitude of the Japanese nation toward the United States—a matter which threatens to become increasingly vital to the peace of the world. Mr. Inglis, whose graphic articles from Cuba and the Panama Canal Zone during the President's visit have been recent features of the "Weekly," will make a close and searching study of conditions in Japan as they affect American interests. His next article will tell of the manner in which the American authorities in Hawaii have solved the problem of Japanese encroachment, which is even more pressing there than in California.—Editor.

CALIFORNIANS want to be rid of the Japanese. They feel sure that somehow or other they will put the little son out of the way very soon. Whether the putting out of the way involves the United States in a war with Japan, or whether the thing can be done smoothly and peacefully, is a matter of supreme indifference to the people of the Golden State. They are the glibest, most flexible, most reckless community in the Union. Just now they are determined that the Japanese must go, just as any generation ago they were resolved that the Chinese must go.

It is impossible to imagine the people of any other State of the Union acting like this. One cannot conceive of the citizens of Texas or New York or Massachusetts making war on a powerful alien race regardless of the consequences to our nation. In order to understand why one of our greatest States is thus dancing merrily on the brink of war it is necessary to take a clinical view of the situation. The condition is psychological rather than political.

And to arrive at a clear understanding we must probe back to the very beginnings of this marvellously rich, generous, joyous, lavish, devil-may-care community. There is nothing else quite like it in the world. (California really began to exist when gold was discovered in Captain Sutter's mill-race and thousands of strong, reckless, daring, able men flocked here in search of it from all parts of the world. Among the gold-hunters were many who hated law and order, the foremost adventurers in existence. They gambled, ran threats, operated the first machinery of shame and duress—did all the things except honest work, in order to possess themselves of the gold they thirsted for. How these fellows actually seized the reins of regularly constituted government, how for a time they speeded terror along the golden stream, and how at last the real Americans of the region arose, the Vigilantes and with pistol and hangman's noose rid the world of the foul crew, are still slowly inked upon the pages of history. These things happened only half a century ago. Many men still live who took part in that drama of graft, oppression, and swift revenge.)

California has grown great since the days of the Vigilantes. The State now produces crops every year that are of far higher value than the gold output of any twelve months in the richest mining period. The profitable traffic of the great port of San Francisco rolls on in an ever-increasing flood, unchecked by the earthquake and fire which did more harm to commerce than any other calamity in American history. Within a few years a newer, richer, more beautiful San Francisco will arise from the charred ruins of the old. For the unbreakable spirit of the pioneers is still the guiding genius of these people.

Yet the old mining-camp spirit is still dominant, too. In spite of an area of charred and blasted ruins as great as all Manhattan Island from the Battery to Fourteenth Street, San Francisco is still buoyant, effervescent, fond of lavish pleasures, indifferent to what all the rest of the world may think or do. And as in the old days the rich camp was obsessed by short-cut methods, cut-throats, swindlers, scoundrels, and thugs, so now the city of San Francisco is in the clutches of a gang of political vultures as reckless and daring and devilishly cunning as any recorded in history.

The taxpayers, the citizen generally, the entire newspaper and periodical press of the State, are united in an effort to drive the ringsters out of office and into the State's prison. Entrenched behind the defences thrown up by able counsel, the plunderers are laughing at the people's clamor for punishment. The old thug gang of the golden fields were never more insolent or bolder in their defiance of right and the popular will.

But, one may ask, what has all this to do with the question of excluding the Japanese? Much. On this entire page were filled with the facts already laid before the Grand Jury about the highly organized and developed gang of San Francisco the reader might get a suggestion of the soil in which the dangerous anti-Japanese nettle has grown. The armies of graft and of decent citizenship are drawn up for a battle to the death. The orderly process of the law has been put in motion in a determined effort to convict Mayor Schmitz and his associates, accused of corrupt misdoings in office, and send them to State's prison. Every article known to

shrewd legal minds is being used to defeat this procedure, and the army of graft admits is predicting that "they'll eat all the roses." So desperate are the citizens that there is much talk of the righteous lynchings done by the old Vigilantes, these periodical published recently a full-page cartoon showing an old-time lynching in all its hideous detail, and suggesting that if ordinary methods of punishing grafters should fail, there is still such virtue in the methods of Judge Lynch. Under the editor's name is this significant title: "Coming events cast their shadows before."

So it is easy to see how in the present furious state of the public mind in California such a minor question as whether or not there may be war with Japan is here thrown aside as a mere academic problem. One of the ablest editors in the State spoke of the complication most casually last evening at dinner.

"It isn't at all impossible that the war will come," he said. "But what of it? One of the two nations has got to elbow the other out of the commerce of the Pacific some day, as we might as well have it out on the pretext of the public schools excluding business as anything else. Of course we'll win. We're too big for the Japs. They'll bother us a bit at first, but then our superior weight and money will tell. What we're really anxious about is to punish the grafters and ringsters who have plundered San Francisco ever now while we are in crisis. That's the really vital question of the day. That's what you should be writing articles about. Never mind the Japanese. We'll attend to them sooner or later."

That editor reflected accurately the spirit of the community as I have found it during the few days I have spent in San Francisco. For most of us Americans, accustomed as we are to the welfare of the nation as the first concern of every citizen, this spirit is hard to understand. It is necessary to remember that from the earliest days these people have lived in isolation. What goes on in the world across the Pacific or the opposite world, almost as remote, on the other side of the Rockies and the great plains, is equally indifferent to the Native Sons of the Golden West. Not that the California lacks patriotism and loyalty. He has both these qualities in abundance. But his patriotism and his loyalty are concentrated, first of all upon his State. The nation comes a long way after, in his estimation.

It is impossible to breathe the air of San Francisco without realizing how completely all business, all traffic, is in the hands of labor leaders. The wages paid to every kind of labor are far higher than anywhere else in this country. The work of rebuilding the stricken city has been badly delayed by strikes for higher pay by every kind of skilled and unskilled laborer. The situation is pitiful. Every man or firm or corporation that supplies labor or material for the rebuilding of the city has raised the price of labor or material. All the fine spirit of brotherhood, of loyalty to the city, seems to have been lost in the desire to make as much money as possible out of the rich landiness of rebuilding. It is difficult now to be sure whether rich corporations or poor men began the plundering; but it is certain that the idea prevailing in the minds of most men to-day is to get rich quick, let the consequences fall where they may. There are many noble exceptions to this rule, both great and small; but the money-hungry majority, set the noble exceptions, is in command of the situation.

Under these conditions, the grafters have done everything in their power to carry favor with the labor leaders. These leaders, in return, have influenced the vote that kept the ringsters in power. The result has been disastrous in many ways. There is no form of enterprise, legal or illegal, in San Francisco, that does not pay its tax to the grafters in public office. The revelations during the past month have been astounding. Even the wretched business of tearing down and carting away the ruins has been forced to pay its toll to the ringsters. The street cars are owned by city officials through the friendship of relatives or other reliable persons. Under a shamless pretext of necessity, whose shame has been clearly exposed, the streets of San Francisco have been given over to the unightly, dangerous overcrowded trolley system.

Mention the labor leaders have been honored by public officials and encouraged in their war against the Japs. What is written here is not intended to apply to the merits or demerits of the Jap as a laborer in America. But every one who understands the situation admits frankly that the exclusion of Japanese from the public schools was only the beginning of a general move-

went to exclude the race from California. The exclusion of the Japanese from the State may or may not be right and necessary. The reckless manner in which the fight was waged upon them in the public schools is the thing that must make any thoughtful observer stand aghast.

No one denies that Japanese pupils could have been excluded from schools attended by white children in such a manner as to avoid giving offense. As a matter of fact when the trouble was begun there were only ninety-three Japanese pupils attending the twenty-three public schools in San Francisco. Of these ninety-three pupils, only two were twenty years of age; four, nineteen years old; six, eighteen years old; twelve, seventeen years old; nine, sixteen years old; and ten, fifteen years old. The rest were between six and fourteen years of age.

When you ask the average San-Franciscan why the outcry was raised against these Japanese pupils he gives two answers: (1) they are an immoral lot, apt to contaminate any children in their neighborhood; (2) it is not desirable to have full-grown or half-grown men, whether Japanese, American, or of any other race, associating with little children.

Without stopping to consider the merits of these contentions, one is startled to note the method by which the Japanese were excluded from the schools. The Board of Education suddenly adopted a resolution directing that Japanese, Korean, and Chinese pupils must not go to schools attended by white children, but must attend separate schools provided for their race by the Board of Education.

That was the rub. That was the provision that called the cry of protest from all Japan, which has not yet ceased to reverberate throughout America, and which might still lead to war. The citizen of Japan is not only proud, but sensitive. Especially sensitive since overruling Russia to any reflection upon his honor; he is like Sir Walter Scott's Hielander, who walked abroad with nostrils quivering, and catching the air for an affront. To throw him in pell-mell among Chinamen and Koreans, whom he despises, is the crowning act of humiliation. It was bad enough to be publicly branded as unfit to associate with Americans, but after that to be cast contemptuously among his inferiors was not to be endured.

Why, then, did the Board of Education deliberately affront the whole Japanese people, when, by the use of tact, they might have avoided any trace of friction? Clearly, I think, because they acted with needless haste, and secondly, because of the violent opposition of the labor-union to everything Japanese. The labor-union is the dominant force in all California to-day. Its wishes are not only obeyed, but eagerly sought out in advance, so that obedience may be rendered even before the asking. To affront the Japanese was to gain the favor of the labor leaders. Therefore, the thing was done. If the consequence of the act should be an embroilment of the United States with Japan—well, let 'em fight it out.

There can be no doubt that the Japanese laborer and artisan is rapidly becoming a dangerous rival to the American of the Pacific slope. He is alert, adroit, industrious, lives cheaply, and works for low wages. There are now more than thirty thousand Japanese on the Pacific coast, and they are arriving at the rate of five a month. The Japanese now outnumber by far all the other races in the Hawaiian Islands.

Notwithstanding the wild loud clamor that Japan is secretly sending veteran soldiers to Hawaii and the Pacific coast, in order that they can be armed and used against the United States in case

of war, it is possible to see a sane reason for their looking in this direction. Wages are more than twice as high here as they are in Japan, and the cost of living is not much more. The intelligent Japanese citizen naturally inclines to the country where his work will yield him the largest amount of profit.

Naturally, too, the California laborer, who is the first to feel the effect of this competition, is the first to protest. It seems unfortunate, though, that in this instance his protest should have been so badly bungled. There can be no doubt that Japanese immigration to these shores must be restricted, whether by a new treaty or through a proclamation by the Mikado as the result of a friendly understanding with Washington.

In searching their memories diligently most Americans can recall Denis Kearney, the orator of the Sand Lots of San Francisco, who, twenty years ago, raised the slogan, "The Chinese must go!" Denis is old now, but his mind is still active, and his voice as loud as ever. He has hosted a pronunciation on the Japanese question, which is worth quoting here, because it voices, although with extreme vehemence, the sentiments one finds in ninety-five Californians out of one hundred.

"The Japanese," he says, "are the Yellow Peril. There is no question about that. I tell you solemnly if the fathers and mothers of this country don't see it now, they will see it later on to their sorrow when it will grow to such size that it will be impossible to settle it. Yes, bloodshed!"

"They're establishing tailor shops, shoemaker shops, laundries, restaurants, and everything else. They're becoming gardeners, and doing all kinds of work which our own children and our own people ought to be compelled to do. They're leasing land all over the State and raising products on it to compete with our own farmers at a cheaper rate. They're worming their way into every work.

"By and by there'll be a million of them here, because this is the finest place in the known world to live. Now one million Japanese would be a menace to the peace of these States. They'll fight. We know that. The Russians, Japanese war shows it. They are a fighting nation, and they are fighters by nature. They mean to win by hook or by crook."

"If our Republic should get into trouble now of these Japanese would volunteer to defend it, but they will help it overthrow it and upon it to do so. When they are called on to fight, who do they fight for? They go into battle for their Emperor and not for Japan. Let us get into difficulty with their Mikado there'll be a million of 'em here in our own country to take up arms in his defence. Ain't that true? Do we want it to be true?"

But the vehemence against the Japanese is by no means confined to persons of the Denis Kearney type. Mr. Bonavent, the Superintendent of Schools of San Francisco, defends the action of the Board of Education. He says that in 1872 the Legislature of California enacted a law forbidding Indians, Chinese, and Mongolians from attending public schools with white children.

"Aside from the fact," he says, "that ninety-five per cent. of these so-called Japanese children are young men, and that if any European nation were sending any number of students to a like age we should segregate them from the white students, we should understand now and for all time that he cannot insist on a personal association of his children with those of the white race."

"We had no conception when we endeavored to force this rule that it would cause an national commotion. It was purely a local

THE JAPANESE SCHOOLBOY WHO STANDS BETWEEN TWO NATIONS

Keiichi Aoki has been selected by the Japanese Consul in San Francisco to be plaintiff in the test suit which is being brought against the School Board of the City of San Francisco at the instance of the Japanese residents to test the constitutionality of excluding the Japanese from the public schools. The Japanese claim, under treaty, the rights accorded to the most favored nation, that is, the one on whom is accorded to any European nation. The School Board offered to segregate the Japanese and give them the same advantages as the white children, but the Japanese declined to accept this. They wish equalized competition in the public schools. There are twenty-three Japanese children in the San Francisco public schools, twenty-eight girls and sixty-two boys. Seven are in the first grade; ten in the second; twelve in the third; sixteen in the fourth; eleven in the fifth; thirteen in the sixth; seven in the seventh, and seventeen in the eighth. Of these sixty-eight were born in Japan and twenty-five in the United States. The boys' ages run from five to twenty years, and of the grown-up Japanese there are nine aged 18; twelve aged 17; six aged 16; four aged 15, and two aged 26. They are distributed in twenty-three public schools throughout the city.

regulation for the good of San Francisco children, whose parents urged us to action and which was much easier to enforce after the fire than before.

"If the Japanese use this pretext to find fault, why have they never objected under the most-favored-nation clause to the fact that many States of the Union prohibit the intermarriage of whites with blacks, Asiatics, or Indians?"

"We give them the same accommodations, learning, and teachers as are afforded our own children, but we object in an adult Japanese sitting beside a twelve-year-old schoolgirl, and if this

be prejudice, we are the most prejudiced people in the world on that point."

Whatever may be the outcome of the public-school question, one cannot help regretting that the matter of Japanese exclusion was not handled with more suavity. It was not the exclusion that hurt; it was the contemptuous classification of the conquering Japanese with the Chinese and Koreans. I have heard that exactly the same problem has been adroitly solved by the American authorities in Hawaii, where the Japanese are much more numerous than they are in California.

TRYPSIN AND SOME POSITIVE CANCER CURES

By C. W. SALEEBY, M.D., F.R.S. (Edin.)

ON January 20, 1906, there appeared in the *British Medical Journal* a brief preliminary note by my friend and former teacher, Dr. John Beard, of Edinburgh, upon the results he had obtained by the treatment of cancer in mice with trypsin, according to his theory of the nature of this terrible disease. Knowing what manner of man Dr. Beard is, and recognizing the enormous significance of his results in the mouse, in the light of his former work on the subject, I determined to give the widest possible publicity to his results, so that if they meant what they appeared to me to mean, no life should needlessly be sacrificed. By great good fortune I was enabled to present my article to the American public and to the profession in HARPER'S WEEKLY for March 3, 1906. I need not now return to what was said there. I will say nothing now about the theory, but will confine myself exclusively to the results which have been obtained. My article attracted the attention of Professor W. J. Morton, of the New York Post-Graduate Medical School and Hospital, and in April he set to work. I will almost immediately deal with his results, for which mankind is justly indebted to his skill and energy and insight. The reader will remember that a second article on this subject from my pen was published in HARPER'S WEEKLY on September 1, 1906. The subtitle of that article was, "An explicit statement of achieved results." But what I had there to say is simply nothing at all compared with what I have to say now. I proceed to my immediate business, and, therefore, if I have time, I will state certain details as to the manner of treatment which have come to light since I wrote my second article.

The first case of cancer reported to be cured by Dr. Beard's method was published in the *Medical Record* of New York on November 24. I am writing on December 10, having last week heard by cable that a second case, very different in nature, and treated by other physicians, was in have been reported in that journal for Saturday, December 8. The cable also stated that that same issue of the *Medical Record* would contain a preliminary report on the treatment by Professor W. J. Morton. By his kindness I received late on Saturday evening an advance copy of his report, to which I have already given publicity in this country in our leading evening paper, the *Full Malt Gazette*, of London, for today, December 10. Of course I cannot actually see the *Medical Record* for December 8 until it reaches this country in about a week, but I will immediately avail myself of the copy of the report sent me by Professor Morton. I know that I would have his concurrence in using it for the benefit of the readers of HARPER'S WEEKLY, since it was there in March last that I introduced the subject to the American continent, my article being referred to in his report. My present business is not to discuss any kind of theories, but to demonstrate in the most authoritative way—that is to say, on the authority of a physician who needs no praise from me—that there are now known facts which should be immediately acted upon by all those concerned.

In the pioneer case reported in the *Medical Record* for November 24, the disease was situated in one of the vocal cords of the patient. The result of the injection of trypsin has been an absolute cure at the time when that report was written. Even more remarkable, since the disease was far more advanced and long past hope from surgery, is a case of cancer of the tongue, which has been attended by two leading physicians and two leading surgeons in Naples. That case will shortly be reported. Professor Morton's paper (which a few readers—at any rate, medical readers—may possibly have seen) deals with no less than twenty-nine cases, some being private patients and some hospital patients. After eight months of continuous trial—much of which time was spent in giving doses far smaller than are now known to be safe and desirable—Dr. Morton was able to report three "hopelessly inoperable cases," cured to date. In one of these cases nothing remained of the tumor but a dense fibrous mass, which was easily removed by a distinguished surgical colleague of Professor Morton, and was examined by the pathologist to the New York Post-Graduate Medical School and Hospital. That report states that only a very few remaining cells, more active and cancerous, were to be found among the debris, and that the tumor displayed complete atrophy and degeneration. Before very long I shall have the delight of seeing some microscopic sections from this case, which

are now on their way across the Atlantic; but it is already evident that the appearances which they present are eventually indistinguishable from those presented by microscopic examination of the dead tumor killed in the mice upon which Dr. Beard first experimented. Those appearances were described by me in this place on March 3. This first case of Professor Morton's is the most valuable because of the completeness of the demonstration. In no other case in America has it yet been possible to examine, under the microscope, the results of the treatment of a tumor by trypsin. In two cases of hopelessly inoperable free cancer, which had defied all other means, complete cure is reported, but in these there does not even remain anything to be examined by the microscope.

I now proceed at once to quote the summary of Professor Morton's report. He says:

"Commence upon cancer. 1. Two of them, cases 10 and 14, severe cases of free cancer, are cured to date by the use of trypsin.

"2. A remarkable process of retrogression by degeneration and atrophy of a carcinomatous (sarcomatous) breast gland to final and curative obliteration has been microscopically demonstrated by case 1.

"3. In all cases signs of amelioration in the progress of the disease have been observed.

"4. Cases 1, 2, 3, 4, and 8, as well as others not specially recorded among the hospital cases, demonstrate that trypsin produces constitutional reaction characterized by rigors (shivering fits), fever, pain in the back, sense of weakness, drowsiness, etc., but of temporary duration.

"5. Cases 1, 2, 3, 11, among others, demonstrate beyond question that trypsin may produce local reaction in a cancerous tumor, indicated by swelling, heat, pain, or increased discharge.

"6. Cases 20 and 21 demonstrate that enlarged glands associated with cancer have rapidly diminished in size under the influence of trypsin.

"7. It has already been pointed out that these cases were mostly absolutely hopeless at the time of beginning treatment.

"8. Rigors and increased temperature following within a few hours the injection of trypsin is an encouraging sign, since it indicates that the cancer has been attacked by the trypsin. The toxic action is due to the toxic action of absorbed and destroyed cancer products.

"9. Trypsin has a decided effect in reducing cancer cachexia (system-poisoning) and in improving the general health.

"10. Trypsin in many instances, as notably in cases 12, 13, and others, demonstrates that even in severe cancer (of internal organs) the disease may be brought to a halt, so in effect, even if the patients do not eventually recover.

"11. The use of trypsin has caused hemorrhages to cease, and has alleviated pain.

"12. It is a fact that the patients frequently refer their greatest feeling of improvement to the period of time when they are taking amylopsin following trypsin. An important, as well as a difficult, feature of the treatment, therefore, is to reasonably determine the proper time to administer the diastatic ferment as well as the requisite amount, following or during the use of the trypsin. It has seemed to me that the pure diastase (injectio-amylopsin) had much to do with favorable results.

"13. Weighing carefully the above cases, I have come to the conclusion that trypsin, if possible, should be used in larger doses than I have yet used it in most of them. Feeling one's way, for instance, from ten to thirty minims daily for from four to six weeks, as advised by Dr. Beard, and then resorting to amylopsin. It is only lately (November 23) that I have been able to get a microscopic report (case 1) of the actual effect of trypsin upon a cancerous tumor. This report has entirely another aspect to the work, and encourages me, as it should all others.

"14. In all fairness, I conclude that trypsin deserves further trial, but I reserve an opinion as to its actual therapeutic value until I can speak from a larger experience."

The action of trypsin upon cancer, then, which the grains of Dr. Beard's method enable us to get enabled to get, is the most important of the past twenty years, is a reality. There is a special relation (Continued on page 88.)

The rescued miner on the horse upon which he rode six miles to a hospital immediately upon being released from his sixteen days' imprisonment

The mouth of the tunnel in which the rescue party worked day and night for more than two weeks to liberate the entombed miner

Hick's comrades aboveground serenaded him with a phonograph to prevent his going insane during his imprisonment. The photograph shows the machine being played into the pipe that led down to the miner's subterranean prison

LUDWAY B. HICK, THE MINER WHO WAS TRAPPED IN A CAVE-IN AT THE EDISON POWER PLANT IN THE SIERRA NEVADA MOUNTAINS NEAR BAKERSFIELD, CALIFORNIA, WAS RESCUED RECENTLY AFTER HAVING SPENT SIXTEEN DAYS IN A CHENCK ONE HUNDRED FEET UNDERGROUND. WITH THE EXCEPTION OF THE LOSS OF A LITTLE FLESH AND THE ACQUISITION OF A FEW GRAY HAIRS, HICK IS NONE THE WORSE FOR HIS TRELLING EXPERIENCE.—INDEED, HE WAS SO LITTLE PERTURBED THAT HE GOT ON A HORSE AND RODE SIX MILES TO A HOSPITAL.

THE GENTLEMAN FROM TOYLAND

BY

PHILIP LORING ALLEN

DRAWINGS BY GEORGE WRIGHT

"I DIDN'T suppose," said the girl in the gallery, "that they ever allowed children down there on the floor."
"House-clearing," explained the guide. "All these Congressmen's wives are picking up to leave at the end of the session. Some of 'em can't find a place to put the youngsters, and send 'em down here to spend the afternoon out of harm's way with their daddies. Nobody objects, though I suppose it don't strictly conform to the rules."

It was Donald's first visit to the halls of legislation, but he had already concluded that they were not places in which any sensible person would care to spend his time. He knew vaguely that his stern-faced, white-haired father was honored and famous

there, that he had worked hard and fought hard, and stayed away late of nights to attain the place that he now occupied. He had a hazy notion that all this would imply some degree of pomp and circumstance—not, of course, like that of the kings in story-books, but nevertheless having somewhere the modern equivalent of a fanfare of trumpets or a gleam of cloth of gold. To-day he had been confronted by the reality. And of what did the reality consist? Sitting at a varnished desk among battalions of varnished desks, reading interminable letters and papers, and forgetting all about one's little boy squirming in the next seat.

If Donald had only known it, this was the very dulllest day of a dull session. The House had made a generous allotment of its time for considering "a bill making

appropriations for the sundry civil expenses of the government." But nobody had anything to say about the sundry civil expenses of the government, so the new members were allowed to take up the time and talk about other things. Some talked on the biggest and weightiest questions of statescraft, others on modest minor bills of their own, but all were on a common footing in this—that almost no one paid the slightest attention to what they were saying. Once only did something interesting happen. Then the drowsy-looking man who occupied the high pulpit under the gilt clock suddenly rose to his feet.

"All those in favor of the amendment offered by the gentleman from Louisiana," he said, "will please rise and be counted." Donald wondered why every man on the other side of the room stood up and nobody at all on his own side. He was on the point of asking his father for the explanation, when the man in the pulpit said something about "those opposed." Instantly all the men who were standing sat down, and all about Donald others began popping up from their seats. His busy father raised his head, looked about him on instant, as if to see what came next, and was starting to his feet.

"Why are you voting, General?" suddenly inquired a deep voice just behind.

"You've got a proxy right beside you," Donald felt himself picked up and stood on the top of his father's desk. His father, protesting a little, sank back in his chair. When Donald was reached he to the count the gavel passed a moment, pointed at him, and all the men laughed.

Donald looked around and saw that the strong arm

Drawn by George Wright

"Why are you voting, General? You've got a proxy right beside you"

which had lifted him up to vote belonged to a fat gentleman with round red cheeks, eyes that twinkled behind his spectacles, and a high white collar.

"Did our side win?" he ventured to ask as he was helped down. The fat gentleman only chuckled. Donald's father had again become too much engrossed to notice him, but he had gained a little confidence in his strange surroundings and presently slipped down from his chair and wandered off through the maze of varnished desks in quest of the fat gentleman. Seeing him some distance ahead, Donald approached hesitantly, but the fat gentleman, unlike most of his neighbors, seemed to have nothing in particular to do and that was reassuring. He took Donald on his knee and they watched together for a while the efforts of a young man with a white waistcoat, who was reading a speech on the improvement of the Congaree River.

"Why don't you get up and talk?" Donald was emboldened to whisper.

"Do you go to school?" inquired the fat gentleman.

"Yes."

"Do you remember the first week you came to school?"

"Yes," said Donald again.

such wonderfully branching horns that artistic appreciation presently overcame self-consciousness.

"He's running so fast," observed the artist, wiping his forehead when the sketch was half finished. "That it's as much as I can do to keep him on the paper." The animal was running in Rhoda's direction and she drew back a little nervously, but was reassured when the completed picture was laid up with all four of the reindeer's hoofs safely on the page. Here the fat gentleman outdrew her. "Who's that talking now?" he said.

The little girl hid her face for a moment. "My papa," she said, with a titter.

"That's my papa over there. See him writing with a pen," explained Donald. "What grade is my papa in?" he whispered to the fat gentleman, beginning to catch the spirit of his friend's joke. But neither he nor Rhoda made any reply and Donald obligingly turned to look at her father. The man who was speaking was tall and dark, with long hair and a fierce bright eye. He was not dressed like Donald's father, who wore a soft gray suit and a blue necktie with a pin in it. His coat was long and black and his necktie was only a tiny striped bow of every color. Donald did not understand what Rhoda's father was saying, but he could

Drawn by George Wright

Donald gripped Rhoda's slim fingers and started down the strip of red carpet

"Did you ever get up then and recite when you weren't asked to?"

"No, I didn't," said the boy, puzzled by the questions.

"Well," said the fat gentleman, "I'm one of the new boys in this school. That's why I don't. I've been here just one year. I'm not out of the first primary."

"But you're a big man!" objected Donald, incredulously.

"Oh, I can make excellent speeches, capital speeches," explained the fat gentleman, eagerly. "Only I have to make 'em at home."

"I'm sure they're nice," said Donald, earnestly. Then he was puzzled on another point. "I get my lessons at home," he essayed, "but I say them at school."

"You're lucky," said the fat gentleman, and chuckled once more.

Here Donald suddenly discovered that he was not, after all, the youngest person in the hall. Coming towards them was a little girl a trifle smaller than himself. She was all in white, starched and very white, with a blue sash, and her hair fell in curls that were yellow and soft. "Hello!" exclaimed the fat gentleman.

"Here's my little sweetheart. How is Rhoda?" he asked, as he lifted the little girl to his other knee.

Donald regarded her shyly, but the fat gentleman reached for a sheet of paper and began to draw the picture of a reindeer with

see that the others were finding it worth listening to. He did not quite realize how, but a change had come over the place. Men were hurrying in from the cloak-rooms and corridors and taking their seats. The gallery, which had been nearly empty, was magically filled. Applause began to come at every pause, but it all arose from the orator's own side of the House. Where Donald sat, all the men were listening, but they never betrayed their interest by a hand-clap.

Then, all of a sudden, a new thrill of expectation came over the place. Donald's father had slowly swung himself from his seat and stood expectantly, his body leaning forward, ready to put in a word. The black-haired orator saw him and stopped.

"Does the gentleman from Tennessee yield to the gentleman from Minnesota?" asked the man in the pulpit.

The gentleman from Minnesota was Donald's father—he knew that. So Rhoda's father, who was just saying "With pleasure" most politely, must be the gentleman from Tennessee. Rhoda sat still, as if a little abashed by the prominence of the family's representative. Donald was only anxious to see what would happen next.

If the gentleman felt that I did not state his position correctly in my remarks of yesterday," Donald's father was saying.

TRYPsin AND SOME POSITIVE CANCER CURES

(Continued from page 85.)

between this ferment and this particular kind of tissue. Furthermore, Dr. Beard was absolutely correct in stating, as he did from the very first, that trypsin had no action of any kind upon tissue that is not cancerous. Recent experiments of Dr. Finkus of Freiburg, conducted at the request of Messrs. Fairchild & Foster, who have done magnificent work in the preparation of this ferment, have shown that active trypsin given to small dogs in doses proportionately scores or hundreds of times larger than any hitherto given to man, causes no symptoms of any kind. But if results are to be expected in the case of cancer, evidently active trypsin must be used. We are now learning that this ferment is a delicate and unstable substance which only too easily loses its power. Unfortunately, inert trypsin has too often been used, and it is plain that trypsin—or rather, the remains of trypsin—which will not digest dead white of egg or albumen in a test-tube cannot be expected to digest and destroy the albumen of a living cancer cell. On this all-important point we must follow the advice of Messrs. Fairchild & Foster, of New York, whose experts have been in collaboration with Dr. Beard almost from the first, and who have contributed essentially to Professor Morton's success. I believe that the trypsin employed by him has been freshly prepared for him every day by Messrs. Fairchild & Foster. When I said, then, in September in this place that the "remedy... can be purchased... at any chemist's shop in the civilized world," I was in error. I believe I may say that was the only misleading statement in my articles. What purports to be trypsin or pancreatic extract, and what at one time was trypsin, can be so purchased, but that is not good enough, as we now know. My current advice now to all physicians and others concerned is to consult with the great chemical firm which has been of such service. Dr. Beard's private address is 8 Barnton Terrace, Edinburgh, and his advice and skill are at the service, for nothing, of any physician or surgeon who cares to write to him. I am always happy to hear from correspondents, but in this matter it involves delay to write to me, as I promptly forward all my letters on this subject to Dr. Beard, who deals with them himself.

The summary of Professor Morton's report contains one word which will be new to the reader, and that is the word "amyllopsin." This introduces a point not hitherto discussed in HARPER'S WEEKLY, and of importance scarcely second to that of the activity or inactivity of trypsin. Trypsin is not the only ferment produced by the pancreas or sweetbread. On the contrary, there are at least three others, one of them being what is called a diastase ferment, the ordinary business of which in the adult body is to digest the starchy matters in our food; its name is amyllopsin. When Dr. Beard heard of the constitutional symptoms which usually follow the use of trypsin and which, as Professor Morton says, are due to the poisonous action of absorbed and destroyed cancer products, it occurred to him that possibly there was a meaning in the association of amyllopsin with trypsin in the secretion of the pancreas. Possibly, he said to himself, the amyllopsin completes the work done by the trypsin—that is to say, it further breaks down and

disposes of substances which are formed when trypsin digests the albumen in a cancer cell—or in what corresponds to the cancer cell in that early stage of the development of the body to which I referred in my first article. At Dr. Beard's request, Messrs. Fairchild & Foster therefore prepared injections of pure amyllopsin, and during the last few months these have been regularly employed, in the hope that they would complete the essential work done by the trypsin. All Dr. Beard's predictions in this respect have been magnificently verified by experience. As Dr. Morton says in the body of his report: "It is only fair to Dr. Beard to state that the outcome here demonstrated is exactly what he predicted." We will, therefore, do well to speak not of the trypsin treatment of cancer, but the pancreatic treatment of cancer, since not only the trypsin of the pancreas, but also the amyllopsin, is necessary for the complete treatment. In my knowledge of science I can think of nothing that more brilliantly verifies the saying of Herbert Spencer, "Science is prevision," than the manner in which the use of amyllopsin has verified Dr. Beard's expectations. If any instance surpasses this it is of course the results of the use of trypsin itself.

I believe I have fulfilled the purpose with which I started this article. Its importance is not to be estimated by its length, for, in the first place, I do not wish to burden the essential with the unessential, and, in the second place, I am already overworked in the effort to give this treatment a fair hearing as soon as possible. Accordingly I shall never cease to rejoice at the magnificent results which have followed as a direct consequence of my first article in HARPER'S WEEKLY. The point I wish to make are simply these: Though the treatment is still in the experimental stage and will long remain so (for there are many things we do not yet know), it has absolutely demonstrated that it is capable, not in one isolated case or two, but in many, of curing by its unaided power hopeless and inoperable cancers. It seems to me that many improvements will yet be made, amongst which theory suggests to me the use of simple alkalies, since it is in an alkaline medium that trypsin acts best. The body tissues are all alkaline, but there is some reason to believe that a cancer is acid. Nevertheless, we already know enough to convince those who are capable of learning, that at any rate in every case of inoperable cancer this treatment should be tried. I, for one, am not without hopes that before long surgery and surgery will have scarcely anything to do with one another. Secondly, I have tried briefly to show that the treatment needs the utmost attention to details. Active trypsin must be used if success is to be expected, but active trypsin is not easily to be obtained, and it is not easily kept active. "Heating it merely to 60° Centigrade, so many a doctor has done when preparing the injection for use with boiled water, destroys its activity permanently. There is any amount more to be said, but I have not time to say it now. In due course I shall publish a book dealing with the whole subject. Meanwhile I have briefly stated all the essential facts that I know. It is my earnest prayer that this article may save as many lives as, thanks to Professor Morton and his helpers, my first was the means of saving—and many, many more.

A DISTINGUISHED RAILROAD PRESIDENT AND HIS SUCCESSOR

The Pennsylvania's New President

JAMES MCCREARY, FORMER VICE PRESIDENT OF THE PENNSYLVANIA RAILROAD, SUCCEEDS THE LATE A. J. CASSATT AS PRESIDENT OF THE ROAD

Alexander Johnston Cassatt

MR. CASSATT, WHO HAD BEEN PRESIDENT OF THE PENNSYLVANIA RAILROAD SINCE 1893, DIED AT HIS HOME IN PHILADELPHIA, ON DECEMBER 28

LOST, STRAYED, OR STOLEN—TWO BILLION DOLLARS!

By HENRY HARRISON LEWIS

THERE is somewhere, lost, strayed, or stolen, a stupendous fortune of more than two billion of dollars, the greater part of which might have been the property of Uncle Sam at the conclusion of the fiscal year ending with June, 1906.

If a more determined and intelligent effort had been made to capture the export trade of the world.

This colossal sum represents the amount of manufactured goods not sold by the United States in the period mentioned, but disposed of by her great trade rivals, Great Britain, France, and Germany.

To bring it nearer home, the loss during the fiscal year ending with June, 1906, because of the failure of the manufacturing interests of the United States to sell their wares in foreign markets, would amount to the sum of \$25 for every man, woman, and child in the country. This sum, small as it seems to be, represents one-fourth of the amount it cost each American citizen, his wife, or his children to live during the same period.

There is plenty of interest in the above hastily stated facts. Although we are the greatest manufacturing country on earth, we have been content to see the world's markets slowly but surely absorbed by the British and the German. I say content, because it is through no lack of warning that we have all but lost the world's export trade.

The profit in selling manufactured goods abroad, in Central and South America, in China, Japan, and Africa, in Europe and Australia, where money pours out in a never-ending stream for imports, has been known to the average American manufacturer for years. We have been told so by students of economics and by experts, and a wise government has created a new department for the purpose of keeping an informed of the possibilities of selling our cotton goods and our shoes and our hardware and our machinery, yet last year America sold not more than five hundred millions of dollars' worth of manufactured goods abroad instead of two billions of dollars' worth which she might have sold. It is only a step to the ports of Central America, there is no broad ocean to cross to reach them, yet America's share in Central America's import trade in 1905 was barely one-fifth! China manufactures practically nothing, her population of consumers exceeds four hundred million souls, and her imports are annually in excess of two hundred millions of dollars, yet the United States stood twelfth in the race for this magnificent market in 1905.

It is true, as you will be told by any student of economics, that our total exports for the last fiscal year exceeded those of Germany by \$209,000,000 and were within \$5,000,000 of Great Britain's, but the statement simply clouds the main issue.

Practically two-thirds of our total exports consist of such articles as wheat, raw cotton, mineral oil, and other staples for which there is a steady demand among the nations of the earth. These articles are sought by our neighbors, and it is no credit to us that we sold more than a billion and a half dollars' worth, that is, no credit from the legitimate exporter's point of view.

The rice for the world's markets is not in these articles placed by nature in your own country practically to the exclusion of other countries, but in the long line of manufactured goods of which no country has a monopoly. It is in that particular field that the United States has been badly worsted by her trade rivals, and it is in that field that we saw two billion dollars' worth of goods supplied by Great Britain, Germany, and France, instead of by us.

It is patent that a good reason must exist for this apparent carelessness on the part of our manufacturers. The American business man of any degree is not in the habit of overlooking trade opportunities, that is, in his own country, but it is evident on the face of it that this same American business man is overlooking—whether advisedly or through sheer neglect remains to be seen—the immensely profitable markets outside his particular horizon.

Several months ago I paid a visit to a manufacturer of builders' hardware in an Eastern city. The factory was large, covering many acres of floor space. There were hundreds of men in each mechanical department all busily engaged. The office here was large, and alongside the shipping building in the grounds was a railroad spur holding a dozen cars. There was an air of prosperity everywhere.

The general manager, who is also vice-president and a member of the firm, rubbed his hands as we watched the steady stream of cases being loaded on the waiting cars.

"Looks like business, doesn't it?" he said, complacently. "We're working like this all summer, overtime almost every night, and still we can't keep up with the orders."

A case loaded on a truck passed us at that moment, and a shipping truck stentled on the end caught my eye. It was a diamond-encrusted letter "D-P" and the words "New York," the commercial insignia of a well-known metropolitan export commission house.

"Ah! I see you are one of the wise American manufacturers who realize the value of an export connection," I said. "Doing a large business abroad, I suppose?"

The manufacturer smiled. "Large business?" he replied. "Humph! that's the only case of goods we have shipped abroad this year. We wouldn't have sold

that if the commission house in New York had not begged us for the stuff. We happened to be 'long' on a certain brand of bronze hinges and we filled the order. But they had to take what we could spare."

"I suppose you got your money on bill of lading?"

"Sure thing. We are not short of goods out of the country on credit. It's a long haul, but it's not for us."

"What is the destination of the goods?"

"I don't know, nor do I care very much. We sell direct to the commission house, and they fill the order from their foreign customer."

"And you didn't even give the customer the kind of hinges he wanted?" I said in amazement.

"No. We need all that stock to fill domestic orders, and it is the domestic field we are trying to cover. We don't give a tinker's dam for foreign trade, at least just at present."

"But you expect to go into export trade some day, I suppose?"

The manufacturer shrugged his shoulders.

"Perhaps. We are doing pretty well now, thank you, but I presume the time will come when we may find it worth while to sell abroad. It may be within five years and it may not be for twenty. When we find the domestic market slumping, we'll ship our surplus to other countries."

At the end of this interview, held with a representative American manufacturer, I thought I could see one or two reasons why we had lost that two billion and odd dollars' worth of manufactured goods longed in Central and South America and in other foreign climes during the year 1906. It was becoming plain that the money had not strayed, nor had it been stolen. It was lost, and lost in a way not very pleasant to patriotic Americans.

In this conversation with the manufacturer of builders' hardware several very pertinent facts became apparent. In the first place it was evident that one of the greatest of obstructions to the satisfactory growth of our foreign trade is the fact that our manufacturers are almost entirely occupied with their domestic sales. Their factories, of which there are more than 600,000 according to the government statistics, have been built solely for the purpose of manufacturing goods to be sold in this country. Their increase in number from year to year has been just enough to provide for the increased demand of the domestic market, and apparently no provision has been made to provide for a possible foreign demand.

The second important fact in that our manufacturers make no effort to see beyond the national horizon. A manufacturer in New York or Philadelphia or Pittsburgh can tell all about the possibilities of trade in California or Texas or Maine, but his focus ends at tide-water. He knows vaguely that the Argentine Republic, for instance, buys annually more than one hundred million dollars' worth of goods abroad, and that only seventeen million dollars of this is bought in America, and he also knows that his shoes or ploughs or hardware or cotton goods would have a ready sale down there if handled properly, but the fact doesn't interest him.

He will supply goods in the export commission houses for sale abroad if he has the goods to spare, but if there should be an increase in the domestic demand, the foreign trade will have to wait. Aposon of this point in the report made by Special Agent Hutchinson, who was sent to South America in 1905 to investigate our trade with the countries down there, Mr. Hutchinson reports:

"Much complaint is made as to the apathetic character of American enterprise in the Brazilian market. A dull year in the domestic markets of the United States sends a flood of circulars and a horde of commercial travellers to South America in an attempt to get rid of surplus products. Usually these efforts are fairly successful, merchants in Brazil being induced by the excellence of the goods or by unusually low prices to enter into American connections. But the moment the home market shows improvement the American exporter grows indifferent and neglects or purposely ignores his South American orders. In short, Brazil is looked upon as a convenient dumping-ground in times of need, while the demands of more regular trade are neglected."

"In some cases the neglect takes the most unexpected forms. For instance, I was told a few days ago by one of the exporters of goods from the United States, a man who fully recognizes the excellence of American manufactures and the possibilities of development of our trade, and who is anxious to do a larger business with us, that he has almost despaired of increasing his American purchases or dealing with any but a few of the largest and best-known houses in America. He told me of numerous cases in which, after forming new American connections solicited by the Americans themselves, he had had his orders neglected, or his shipments delayed for months or even abandoned entirely, with no more satisfactory excuse (to him) than that the factory was too busy on other orders. Such connections he naturally abandons for good and for all."

This last complaint really strikes the key-note of the whole difficulty: American exporters have not met with greater success in Brazil largely because they have not made sufficiently persistent effort. There is not an importer in Brazil with whom I have talked, whatever his nationality, who has not told me emphatically

CELEBRATING THE DISCOVERY OF THE HUDSON

A bird's eye view of the projected exposition at Verplanck's Point, two miles below Peekskill, the inauguration of which will celebrate the discovery of the Hudson.

DRAWN

ER—THE PROPOSED TERCENTENNIAL EXPOSITION

memory of Henry Hudson's noteworthy voyage of discovery in his ship "Half Moon." He entered the Hudson River on September 3, 1609

that there is a big trade awaiting the Americans the moment they are ready to take hold of it with persistence and determination. But apocryphal is the story of the long-haired, bearded man.

This statement of conditions in Brazil does not describe an isolated case. There is not the slightest doubt that similar conditions exist in almost every other market in the foreign trade. The two billion dollars' worth of exported goods lost by the United States last year were lost in large part simply because the American manufacturer selected to ignore the outside markets. It is a condition of affairs of almost direct interest to every man of family—yes, and woman of family—in the country.

The United States cannot always saunter at the high level of prosperity. The wheels of the country's factories will not always whirl for the benefit of the domestic demand. The time is coming, and perhaps soon, when overproduction will slow down the manufacturing plants, and instead of the full day's measure of work and the well-filled pay envelope there will be half-time and even less for those of the great army of men whose daily bread depends on the continued prosperity of our manufacturing interests.

Not very long ago I was told by the head of one of the largest leather-binding establishments in the country that he not only firmly believed in the value of foreign trade, but that he had derived enough of his time and capital to secure a fair share of the export sales in his line.

"Ten per cent. of my output goes abroad," he said. "We book upon that ten per cent. as an anchor to windward for me in case of a slump in the domestic demand. We have a very large plant, and there are times when we would have to reduce our working force if it were not for our ten per cent. sent to foreign markets. We have established a branch house in Hamburg through which we handle the European trade, and we have men on the road abroad seven months in the year."

"Do you supply your foreign customers with the leavings of your plant, or do you try to meet their wishes?"

"We manufacture to their order and not what we think they should have," was the prompt reply. "We carry five special brands suggested to us by our foreign representatives. And we would carry fifty special brands if the trade called for it."

To make this object-lesson more apparent it may be well to look at the other side of the subject. The buyer of a large export commission house in New York relates the following experience:

"Not long ago I received from a Colombian firm an order for a certain line of cotton goods amounting to \$30,000. We laid the order before a New York dealer and offered him the order, pointing out that the goods were required in shorter pieces than are usually sold in this country. The manufacturer expressed his appreciation of the order, but said that unfortunately he could not supply the goods in the lengths desired, and that the Colombian firm would have to take them in longer pieces or go without. The change required could not possibly have subjected the manufacturer to any serious inconvenience, but the manufacturer was firm in his decision."

"Very well," said I, "we'll place the order elsewhere."

"You may try," said the manufacturer, "but you will find that it is the only people making these goods, and so the order will have to be placed for the goods as we make them, and I guess your friends in Colombia can manage to get along with them."

"I am not sure about that," I said. "I think these goods are also made in Germany, and perhaps the order will have to go to Germany."

"It required but one letter to a German manufacturer to obtain an acceptance of the order exactly as placed, and so the order went to Germany, and the American manufacturer lost not only the \$30,000 piece of business, but probably many subsequent orders for equal if not greater amounts."

It would be interesting to know just how many cases similar to this \$30,000 loss could be found in the two-billion-dollar loss. And it would be interesting to discover just how much that \$30,000 loss will ultimately affect the workmen employed by the manufacturer who refused a slight concession to a foreign customer. I recall an incident occurring several years ago in Buenos Ayres. I had returned to the city from a trip through the provinces, and met a travelling salesman recently arrived from the United States. He was of Scotch descent, and in addition to a working knowledge of Spanish had his share of Scotch obstinacy and determination.

He also enjoyed a tremendous amount of enthusiasm, and the manner in which he opened up his selling campaign soon had him warned the heart of the very father of commerce. The Scot's line of goods included cash-registers, and so we will be talk to the trade that it seemed as if every shop of importance in Buenos Ayres would buy one. I have never seen a travelling man's "run" open so completely and so soon.

About ten days later I was called to Brazil, and it was several months before the Calle Florida was no again.

MacLean was the first acquaintance I encountered after landing. I hardly knew the man. He had the dejected look of a card-sharper on a cattle-stealer, and I saw at once that something was wrong with his trade. After we had exchanged greetings, he sighed and drew a cablegram and a letter from his pocket.

"Read that, mon," he said. "And air dein' so ver' weel, too! It's enough to make a saint grey. Read it, mon."

The cable message was short and to the point. It said:

"Close all orders and return home first week in August."

The letter was more specific. It stated at some length that the company had decided to relinquish its efforts to secure foreign trade, at least for the time being; that the domestic demand had increased unexpectedly, and that the factory would be fully occupied meeting home order to come due to come due.

I would almost the salesman's great success in introducing the company's goods in spite of German and English competition, nothing

save a formal statement of conditions at home and the possibility of recalling the Argentine representative at a moment's notice. The letter had come in the shape of the cablegram quoted above.

"It's too bad, MacLean," I said, "but you are only repeating the experience of more than one professor in this field. It is your misfortune that business increased back home. When do you leave?"

The Scot struck the table with his clenched fist.

"I'm no going back," he blazed. "I'm going to stay right here and sell goods, mon, if I dee fer't. The firm is wrong. It has no right to give up this trade. It has no right to take from me the best chance I ever had. I'll show them their mistake if I have to work for nothing. Just look at this, mon. It's my order-book, and the best order books have been made since I got their old cablegram."

"But how do you expect to fill the orders if your firm won't send the stuff down here?" I asked, amazed.

"I know nothing about that, mon. I'll show them up home what a market it is, just the same. It's sheer money, mon, to kill such a trade, and it's not doing right by me that created it. I'll show them."

When I left for the States, two weeks later, MacLean was still taking orders on his line of samples. I have never heard how he made out with his house. He had determination and persistence enough to accomplish a great deal, but it is hard to move an American manufacturer who has decided that he is not in need of a foreign market.

If any particular example is needed to prove the utter fallacy of our oft-repeated claim that we control the trade of the world, let us look at the government statement that the United States can be credited with only 4.68 per cent. of the great import trade of Asia—a continent that buys more merchandise abroad in a year than America does.

It is in China and Japan that the most important and valuable increase in imports will be found during the next five years at least, yet American manufacturers apparently are doing nothing to secure an adequate share. A recent report made to the French government by an investigating agent sent to China says in part:

"As many German merchants are found to-day in the great cities in the interior of China as in the treaty ports on the coast. In Shanghai alone there are sixty-eight German merchant houses, which are doing twenty-two per cent. of the total business of the port. In Tientsin there are twenty-nine German business houses, which control forty-five per cent. of the exports and sixty per cent. of the imports of the city. Fifty per cent. of the imports of Canton, China's greatest city, pass through the hands of German merchants, and so it is throughout the rest of the empire. Germany has been working with equal persistence in other Asiatic countries, and she has secured a foothold that will be found extremely difficult to break."

In view of these facts it is almost amusing to recall the statement made by the manufacturer of builder's hardware quoted elsewhere in this article in which he said, "When we find the domestic market slumping, we'll ship our surplus to other countries." Germany and Great Britain and France, whose manufacturers are working twenty-four hours a week to establish themselves in the markets of the world, certainly will have something to say about that. A foreign trade is not acquired between us.

It is hardly fair to proclaim the absolutely unsatisfactory condition of our foreign trade, and to attribute the fault, at least in part, to the attitude of the manufacturing interests, without indicating a remedy.

The government at Washington, through the medium of the Department of Commerce and Labor, distributes broadcast literature showing what is not being done and just what can be done abroad with profit. The National Association of American Manufacturers devotes a goodly part of its time and energy in advocating foreign trade, and the various trade papers read by the manufacturers themselves fill their columns with information concerning the need of cultivating an export trade. Our public men, such as Secretary Shaw, Secretary McMillan, James J. Hill, and others interested in our national expansion, have lost no opportunity to warn the country of its almost criminal neglect of foreign trade.

The American manufacturer declares that he is too busy with his domestic orders, that he will not do business with countries requiring long credit, that a foreign trade campaign is too expensive, and that he can sell his goods abroad when it is necessary.

There is no doubting the fact that the manufacturers of the country are busy. Our internal commerce, which amounts to more than \$60,000,000 a day, counting every day in the year, indicates that we are pretty well occupied as a nation, but there seems to be no good reason why the average manufacturer should devote one-tenth of his time and one per cent. of his profits to the acquiring of a foothold on foreign trade. And there seems to be no good reason why the American manufacturer should not devote the same national, intelligent, business energy to the acquiring of foreign trade that he does in his domestic business.

The reluctance of the American exporter to give long credit to customers in South and Central America, for instance, seems peculiar when it is understood that both Great Britain and Germany conduct an immense volume of business under the same terms. If a German manufacturer can supply his customers in Uruguay on nine months' credit and realize a profit, why cannot the American exporter do the same thing? It is because he is less shrewd in the conduct of his business? Or is it because he does not know how to sell goods beyond his national horizon? In either case it might be well to paraphrase an old saw for his benefit:

"Go to the German, those exporters; consider his way and be wise."

THE VILLAGE POST-OFFICE—HER LETTER

DRAWN BY HAROLD MATTHEWS BRETT

THE ROMANCE OF ESPERANTO

By HENRY JAMES FORMAN

TIME was when every article on Esperanto in newspapers and magazines was entitled, "What is Esperanto?" or by some similar rubric, showing that the subject-matter was an exposition of something strange and new. Now, however, every one in even the sleepiest rural community who reads his newspaper knows that Esperanto is a language of remarkable ease and beauty designed as an international medium of communication. It is by now common knowledge and only to Maratoni's schoolboy, but to any schoolboy, that by a stroke of genius Dr. L. L. Zamenhof, a physician of Warsaw, Russia, invented a language which any one, whether he has ever studied foreign languages or not, can learn to read fluently in a week or so, and to speak and write it in a couple of months. To the person who has studied Latin or any other foreign language Esperanto is merely play. The average educated person can read it fairly at sight. It is pretty generally known by this time that the grammar of Esperanto, as published by Dr. Zamenhof, covers something less than five duodecimo pages, and can be mastered by our schoolboy himself in about two hours, if not in less. As to the vocabulary, so international is it in its structure that, in the phrase of one student, on every hand "the ghosts of words you already know rise up like old friends" and teach you the meaning of Esperanto words. All of these facts have by now received pretty wide-spread currency, and there is no need to go into further analysis. The purpose of this paper is rather to glance at the progress Esperanto has made thus far, and at the ever-increasing speed of that progress.

It has already been written, many times, how Dr. Zamenhof, while still a boy in the gymnasium at Bielystok (Russia), known to me chiefly by a certain massacre, dreamed and pondered on some means of doing away with the strife and hatred between the diverse nationalities dwelling in that city and in all cities. A common language seemed to him the best means of bringing about a mutual friendly understanding. For, as he observed in a recent article, "If some one speaks to me in my own language I feel that he is spiritually akin to me, even though he may dwell in a far country; but if he speaks another tongue he is a stranger to me, even though he dwell in the same town with me." At the age of nineteen, we learn, when he was still a student at the gymnasium, he had already invented and developed a language, which, however, was not as perfect as the present Esperanto. A little band of students, comrades of young Zamenhof in the highest class of gymnasium, celebrated the achievement of their eleventh by a sort of festival, at which they sang joyfully that "the unity of nations must fall, must fall! The world should unite into one family." It was not until 1887, however, that the author published his beautiful system in a small pamphlet signed "Dr. Esperanto," where the name.

Few were the friends of "Dr. Esperanto's" language in those days. Volapük had failed so abominably that people naturally hesitated to listen to any one with a new idea for an international language. To be sure, Esperanto was good and sound, point for point, in every respect in which Volapük was bad and defective; but to discover that required some investigation, and nobody cared to investigate. In 1894 a solitary organization was formed for the study and discussion of the new language at St. Petersburg.

Into France Esperanto had made its way earlier. As early as 1893 M. Louis de Beaufront, a Frenchman of talent, though a Marquis, became interested in "Dr. Esperanto's" system, and determined to introduce it into his own country. For twelve years previously M. de Beaufront had been working upon an idea of his own for an international language, called *Ido*. He came across Dr. Zamenhof's pamphlet, however, and to his amazement found a strange similarity between the two systems. The two men had never even heard of each other, but by chance they had hit upon the same idea. The Frenchman, however, saw clearly that the Russian's system was in many ways superior to his own, and with touching loyalty in the idea that an international language was a necessity, he shelved his own and set himself to aid the propaganda of Esperanto in France.

He was weary with his twelve years' labor upon *Ido*; he lacked time to prepare text-books and money to publicize them. Besides, the shade of Volapük here also stood between the enthusiasts and the public. But, nevertheless, in 1892, M. de Beaufront succeeded in bringing out a complete text-book on Esperanto, which brought it more within range of his countrymen. Soon thereafter, too, he was joined by other propagandists who saw the value of this remarkable tongue. In 1901 a society was formed for the purpose of spreading a knowledge of the language, and a journal devoted to the cause commenced publication under the editorship of M. de Beaufront. It was not until 1900, however, that a new era began for Esperanto in France. The Paris Exposition brought together many learned men, and the Esperantists did all that in them lay to bring their beloved language before these savants. In a large measure they were successful. Ernest Naville, General Secret, Charles Méray, and many other eminent men endorsed the cause. College professors throughout the country followed suit. And to-day Esperanto has a wide currency in France and Switzerland. Many hotels and commercial houses employ it; many classes and societies devoted to the study have been formed. A year ago there were seventy-five societies registered in France, and this winter, it is expected, legislation will be introduced in the Chamber of Deputies providing that Esperanto be taught in all the public schools of the country. Members of the French Academy, as, for instance, M. Boireau, rector of the University of Dijon, are writing and speaking in favor of Esperanto, and the first Esperanto Congress (1905) was held on French soil.

In England the success of Esperanto has been almost as great. Ever since Mr. Joseph Rhodes organized the first society, at Brighton, Yorkshire, in 1892, Esperanto has been making steady progress. Numerous groups and societies have sprung up quickly; the British Esperanto Association began to publish a journal, in which may be found every month long lists of persons who have joined the movement or passed examinations in Esperanto. Among England's Esperantists are Lieutenant-Colonel Poles, Major General George Cox, W. T. Sted, editor of the English *Review*, and Felix Moscovice, the well-known artist and abolitionist apostle. To-day courses in Esperanto are offered in many of London's County Council schools, and the next Esperanto Congress is to be held at Cambridge, England, under the chairmanship of the famous etymologist Professor W. W. Skeat.

In Germany there are now two publishing houses who devote themselves to the publication of Esperanto literature, and one of these, at Frankfurt, is about to commence publication of an *Esperanto* journal covering the entire world. Every day new societies are springing up all over the world, in the United States, in the West Indies, Africa, Australia, and New Zealand. Among the Japanese, ever alert for the best in civilization, there are now hundreds of students of Esperanto, and the Japanese Esperanto Association is daily adding to its membership.

In the United States it is only recently that the movement began to gain headway. A few pioneers scattered throughout the country had for some years been working on behalf of Esperanto, and some groups were formed in Boston and elsewhere through the endeavor of Mr. John F. Tumbly and a very few others. But within the last year the activity has been marked. A number of university professors, notably Professor Morse and Houghton of Harvard, Professor Macdonald of Princeton, and Professor Viles of the Ohio State University, have come out in favor of Esperanto. Societies have been formed at Harvard and other universities, as well as in the leading cities of the country; at least two Esperanto papers have begun publication, and the famous Roxbury Latin School in Boston has a voluntary course of over fifty students in Esperanto under the leadership of Professor Lowry.

Perhaps the most important volunteer to the Esperanto propaganda in America is *The North American Review*, the oldest and most conservative magazine in the country. Founded by personal study and fascination of the excellence and value of Esperanto, the editor of the *Review* has instituted a regular department giving instruction in Esperanto and information concerning it.

AUTHOR OF ESPERANTO, THE INTERNATIONAL LANGUAGE

THE RACE FOR NAVAL SUPREMACY

By W. G. FITZ-GERALD

IF the annual expenditure on naval armaments continues to increase at the present rate, surely the burden will be unbearable within ten years?

This is the question which thoughtful men of every nation are asking themselves to-day. Thirty years ago civilization paid less than \$100,000,000 a year for its defense in land and sea; to-day the figure probably stands at \$2,000,000,000 per annum. All countries, even immense military powers like France and Germany, appear to have entered upon an aimless race for naval supremacy.

"Keep on building and maintaining at the highest point of efficiency the United States navy, or quit trying to be a great nation."

The words are those of our President. And Admiral Robley D. Evans thinks we can hardly stop "until we have fifty first-class battle-ships and a naval force of at least 70,000 men."

Such dicta are significant signs of the times. "Germany," says the Kaiser, "must be so strong as to be able to impose peace on the sea as well as on land." As to the new French President, M. Clemenceau, he asks the Chambers, "At a moment when the peace of the civilized world rests upon force of arms, how can we disarm?"

Russia, too, is making good the naval wastage of her great war. She has launched a new *Patulda* and has a *Repos* building; both cruisers of this name were sunk at Port Arthur. Then, too, the *Andrei Perestroev* of 10,000 tons is on the stocks of St. Petersburg, the *St. Evstasie* at Sebastopol, and her sister, the *Esperanza*, will be launched in the spring. The *Rurik*, sunk by Kamura, is being replaced in the yards of Vickers Sons & Maxim.

Meanwhile Japan has a naval budget of \$37,500,000 to be spread over five years of ship-building. Great Britain looks as usual with her *Dreadnaughts*, which have set a new fashion in war-ships and rendered obsolete even vessels of the latest pattern. France is hurrying to lay down *Dreadnaughts* also; while Germany's Imperial Budget for 1907 contains an item of no less than \$78,000,000 for ship-building and maintenance. Of this a million at least is

to be set aside for the building of submarines of an entirely new type.

Germany has long celebrated this little-known naval weapon, but the laying down of the *F. No. 1* at Kiel shows that at length the submarine is to form an integral part of the German fleet. Within the next two years the Berlin Admiralty will build no fewer than thirty submarines of this type, six against 40 built and building for England, 80 for France, 12 for Italy, 23 for Russia, 9 for America, and 7 for Japan.

As at present arranged England will have, in 1910, 60 first-class battle-ships; France, 32; the United States, 20; Germany, 25; Japan, 16; and Italy, 11. And of big and powerful cruisers the numbers are: England, 74; France, 23; United States, 18; Germany, 13; Japan, 16; and Italy, 9. Our own naval expenditure goes up in leaps and bounds, and quite recently Representative Kahn, of California, introduced a bill authorizing the Secretary of the Navy to buy fifteen submarines at a cost not exceeding \$3,500,000 for the defence of the Pacific coast.

The submarine is thought to be the safest, surest, and quickest means of defending the Pacific coast against the attack of Japan should this country be involved in a war with her. It is proposed to install the vessels in the great coast ports, such as San Francisco, Seattle, and Portland. As all the world knows, there are fashions in war-ships as in other things: fashions, too, and costly ones, in heavy guns, armor, and minor dispositions. Just now the "Big Ship" theory holds the field, and all the nations are practically copying the British *Dreadnaught*, a monster three times as powerful as any other battle-ship afloat, yet with the speed and prodigious engine-power of the fastest cruisers.

Yet such a war-ship from first to last will cost \$10,000,000, and one of this type is about to be built for us. This costly game is being played very much in the dark, for long before our new and improved *Dreadnaught* is ready for her guns it is likely enough the flying-machine will be a practical proposition, reducing in turn all the billions of dollars' worth of naval armaments to mere scrap-iron!

THE TRAGIC WRECK OF THE LINER-YACHT "PRINZESSIN VICTORIA LUISE," OFF PORT ROYAL, JAMAICA

THE "PRINZESSIN VICTORIA LUISE," OF THE HAMBURG-AMERICAN LINE, WENT ABOARD ON THE DOVER-GETT PORT ROYAL, NEAR KINGSTON, JAMAICA, ON A CLEAR NIGHT IN NOVEMBER. NO ALIGHT WAS THE INITIAL SHOCK THAT THE SHIP CONTINUED PLUNGING AND THE PASSENGERS PAID LITTLE ATTENTION. THE SUBSEQUENT SHOCKS GAVE RAPIDLY MORE SERIOUS, AND IT WAS BEFORE LONG THAT THE SHIP WAS DOWNED. SHORTLY BEFORE THE PASSENGERS WERE TAKEN OFF, THE SHIP'S COMMANDER, CAPTAIN BRUNSEN, BEARING BOMBACE, WENT TO HIS CABIN AND SHOT HIMSELF.

MUSIC AND THE OPERA

EVENTS IN RETROSPECT

By LAWRENCE GILMAN

THERE is a certain pleasure in indulging oneself in comment upon artistic events whose significance has had time to sink gradually into the mind. The loss in sharpness and vividness of impression is more than atoned for by a certain mellowness and perspective which advantageously accrues to it. Such events, for example, were the first performance in New York, by the Kessel Quartet, of a string quartet in F major by Maurice Ravel, and a remarkable performance by Mr. Wassily Safonoff and the Philharmonic Orchestra of Wagner's "Tristan" Overture. Comment upon these matters, both of momentous interest, has necessarily been held in reserve by the press of conflicting events of less intrinsic, but more popular, importance. It is well worth while to advert to them now, with somewhat more deliberation than would hitherto have been possible.

Maurice Ravel is one of those music-makers of to-day who are somewhat loosely classified as the "younger Frenchmen"—that group of contemporary (sic) composers whose radical procedures in their art have set them conspicuously apart from such comfortably established men of music as Saint-Saëns, Massenet, and others of an older and less adventurous day. Ravel may be grouped, for the sake of convenient reference, and with what Mr. Mendelssohn would call "rough truth," with such gifted iconoclasts as Claude Debussy, Vincent d'Indy, Pierre de Bœville, Charles-Marie Leffler (an American by the chance of residence, though French by artistic affiliation), and others who are finding new and surprising musical forms for the utterance of their thought. Of this group of determined (though variously able and significant) personalities, we have become familiar, of late, with Messrs. d'Indy and Debussy; of the work of Mr. Ravel we had heard in this country nothing of importance prior to the performance by the Kessel Quartet.

Mr. Ravel has quite obviously fallen under the thrall of Debussy's capricious style; if, as has been maintained in Boston, there is a definite and individual personality here beside the shadow of the composer of "Pelléas et Mélisande," it is not perceived. One finds in this quartet (and one does not, of course, pause to estimate the man's art as fully by the measure of this one work) no extremely devious and sensitive manipulation of harmonic, melodic, and rhythmic elements whose character is invariably, for most of us, unaccounted with Debussy's peculiar and fascinating art. Did we not know Debussy and his insouciant and elusive music, Ravel would doubtless seem unaccountably significant. One has small patience with those pettifoggish opinioners who have chosen to discuss writing as Ravel's because of its departure from traditional and long-hallowed methods of expression—who elect to find in it nothing more significant than a "ba-tred of common tricks," a

"doting on chromatic complications," and an absence of "old fashioned melodies." It is better to be quick with Debussy than dead with Schumann and Brahms. It is not unlikely that Ravel will emerge from those enchanted woods and those haunted and magic gardens where brood the spirit of Pelléas and Mélisande and the Faun (of Mallarmé's prophecy), into the woods and gardens of his own imagination: he has the impulse and the art, though he lacks, as yet, the vision.

Let it be emphatically affirmed that Mr. Franz Karel and his associates deserve the cordial thanks of all unbiased and alert and untrammelled music-lovers for having given them an opportunity to hear this new and very interesting music—it and scarcely he said, incidentally, that Ravel's quartet could not well have been more exquisitely and more eloquently displayed.

There has been discussion in some quarters of the merits of Mr. Wassily Safonoff's recent interpretation, through the medium of the Philharmonic Orchestra, of Wagner's "Tristan" Overture. For the great majority of his audience, and most of his critics, Mr. Safonoff's performance of this time-worn and trifling work was as superb as it was notable. For these, Mr. Safonoff achieved the astonishing

feat of presenting this increasingly hackneyed music in such a way that it took on a new beauty and—*mirabile dictu!*—a new appeal. Yet he has been taken to task, with a fine show of righteous indignation, because, in his reading of the finale (where the theme of the Pilgrims' Chorus is triumphantly chanted by the horns), he "discovered" a middle voice which could be used in one spot to bury the melody as given out by the trombones, and he accordingly so used it, and expounded one of the most significant modulations in the closing portion of the score.

It is a pity to dispute so unimpressive an indictment; but the obstinate facts are these: In the first place, Mr. Safonoff did not "discover" this middle voice in the score; it was "discovered" some time ago by Arthur Niksch—a conductor of not altogether despised attainments. In the second place, the articulation of this particular voice (heard for three and four horns in unison, which would seem to indicate that Wagner intended it to be prominently heard) does not "capture," but, on the contrary, accentuates and italicizes, "one of the most significant modulations in the closing portion of the score."

The point does not admit of dispute; it is self-evident to any sensitive and musically intelligent mind, so long as it be an unbiased mind.

Mr. Safonoff needs no defender, nor Wagner's music an expositor; but the seeds of misrepresentation are often deleterious, long-lived, and ineliminable.

Mr. Alfred Herzs against the Light

HOW THE CHIEF CONDUCTOR AT THE METROPOLITAN OPERA HOUSE LOOKS TO THE AUDIENCE

THE SEASON'S PLAYS

FARCE AND MELODRAMA

By "I"

It would seem to be an accepted fact that any play written for a comedian must present him as up to his ears in difficulties. It is never making him from the bright side of things, always from under the cloud of distress. Of course, the cloud is always tipped up in the last act to disclose its silver lining, but during all the acts which come before the comedian is destined to struggle with adversity. It has been thus in all of the plays with which Mr. William Collier has delighted us of late, and now, in a play of which he is joint author, when he has the opportunity to reverse the accepted order and give the comedians "a show for his white alley" and portray him from the rise of the curtain even unto the fall thereof as a happy human being, he does no such thing. He surrounds him—himself, that is—with all the troubles the comedian is heir to and lets him squirm out the best way he can, to the great delight of the audience.

The farce Mr. Collier and his collaborator, Mr. Grant Stewart, who has a part in the play, have provided is entitled "Caught in the Rain," and the audience at the Garrick Theatre are such as to fill the playhouse to its capacity. The play deals with the somewhat elderly theme of mistaken identity, although it is embellished with the newest of ribbing and provokes laughter about every half-minute. The action takes place principally in Colorado, and Mr. Collier is a dashing young mining expert who is frightened to death at women. He would go miles out of his way to avoid one, and—the most calamitous thing in the matter of lovers—he is brought into unavoidable contact with a very charming and very pretty one, in the person of Miss Nanette Comstock. Mr. Collier is Dick Crawford, and Miss Comstock, Fazel Mason, and they meet in the streets of Denver just as a great storm of wind and rain—real rain—hurls upon their environment and imprisons them under an awning in front of a barber shop. When Mason is the owner of a ranch which Crawford's partner, Maxwell, is anxious to buy on account of the copper under it. Crawford, most naturally, falls in love with Fazel Mason, and is utterly unconscious of her identity. Maxwell insists that he must marry the ranch-owner, but Crawford, having all women, intimates he would much prefer to be hanged. Maxwell then plans to

marry her himself, to keep the copper in the family, as it were. But at the proper farcical time, however, Crawford learns that the young woman he has declined to marry is the very one with whom he is so much in love. The rest is easy.

Mr. Collier's part is naturally one which is admirably suited to him. If it were not it would be his own fault. There is no one else on the stage who can struggle so buoyantly against comical troubles as Mr. Collier, and in this he has shown all the time. The lines are at times very broad indeed, and the scene between Mr. Collier and Miss Comstock under the barber-shop awning is particularly happy, affording Mr. Collier just the opportunity he desires for his discharges. Miss Comstock, who is pretty, and there is no harm in saying it twice, is an admirable foil to Mr. Collier with her amusing sedateness and glances. Mr. Wallace Eldinger as Bob Livingston, the young man who is always posted at his club and run got no credit, made quite a hit.

Mr. Grant Stewart contented himself with a secondary role, and among the others in the cast were Charles Pearce, Miss Anne Langel, Mr. George Nash (who played Maxwell), Miss Helen Collier (Marion), and Miss Louise Drew. Mr. Pearce was the negro servant at the club—George Washington Blake, who had nothing to serve but ham and eggs—and, of course, drinks. As a whole, "Caught in the Rain" is a very amusing bit of nonsense, and will delight a great number of persons.

As an example of how to spend money and spend it with a most engaging consciousness, let me suggest a visit to "Brewster's Millions" at the New Amsterdam Theatre. It is a melodrama which can give pointers to the good accomplished "spender" in New York. And Edward Ahearn, who plays the part of the "spender," "Money" Brewster, does it all just as naturally as if he had thrown away his hundreds of thousands before he took to being an actor. The story of the play is more or less known, and it concerns the efforts of an ambitious young man to make away with one million dollars in a year, which he must do in accordance with the terms of a will before he can inherit the astounding sum of seven millions. There is one scene in a ten-act play, which is the best stage illustration New York has seen in many a day.

William Collier and Nanette Comstock, in "Caught in the Rain"

A DREAM THAT CAME TRUE

By FRANK MARSHALL WHITE

THE story of the life of Christen Dase Maglelsen, the Norwegian sculptor, who has become famous in his old age as the discoverer of the process of making what he has termed "classical clay," such as was used by the ancient sculptors at the highest period of Greek and Roman art, and whose achievement constitutes him a benefactor to his fellow craftsmen for all time to come, is that of many another devotee of dreams that have come true who was unable to give a sufficient reason for the faith that was in him. For the thirty best years of his life, from the time he was thirty-three until he was sixty-three years of age, Maglelsen gave his first thought and his highest energy to the quest for the lost art, and for twenty of those years his life was embittered by poverty and the ridicule and contempt of his acquaintances.

Maglelsen was among the most devoted of all men and creeds worshipping at the shrine of art in Rome in the early seventies of the last century. His previous career had been a romantic one. Born in Trondheim, Norway, in 1841, he had left school at the age of fifteen to go to sea, and for seven years had voyaged in sailing-ships about the globe, visiting Australia, India, China and America, rounding the Horn and the Cape of Good Hope many times, and six times crossing the equator.

During all his service at sea, however, the young Norwegian had cherished deep in his breast the ambition to become a sculptor, an ambition that had existed there ever since he had had any recollection of an inner consciousness. As a boy at school he was continually sketching and carving on wood, or modelling in clay or any other plastic material that came to his hand. When he was twenty-two years of age, and first made of a big vessel in the American carrying trade, he could no longer restrain the impulse that impelled him to an artistic career, and he left his ship at Alicante, in Spain, and secured employment with a wood-carver as the first step toward the fulfillment of his ambition. For three years Maglelsen worked as a wood-carver in Spain, England, Sweden and Norway, and then he had saved enough money to go to the Royal Academy at Copenhagen and study sculpture under Professor Bissen, the father of the present sculptor of that name. When his money gave out he returned to hand-carving of Christiansia to earn more; and in 1871 a subscription was raised among citizens of that town, who had learned of his artistic promise, and he was sent to study in Italy.

At that time students of art from all over the world were flocking to Rome. Living was cheap before the establishment of the sea of Victor Emmanuel's government there forced up the price of the necessities of life. The high priests and the acolytes of art were all simple in their tastes. After a day of work in the studios they purchased meat and vegetables at the slope and from street vendors,

and carried them to be cooked at the wine-shops, where men and women of all nationalities spent merry evenings together.

Maglelsen's associates were such other members of his craft as Hansens and Holbeck, Bunes, the latter a pupil of Thorwaldsen, Wolf and Schultz, Germans, who won distinction; Borgesen, the Swede; Charles Sumner, an Englishman of reputation; and Fossile Sumner, who ranks among the leading American sculptors today. Three other Norwegians, whose reputations are international, the young sculptor numbered among his friends in Rome—Olaf Bull, Henrik Ibsen, and Hjalmar Hjorth.

An illustration of Maglelsen's artistic sincerity is found in the fate of the statue that he won the gold medal of the Paris Salon. He had taken Melsager as a subject for a statue in the auditor after the Greek model while he was a student in Copenhagen; and, after working on it for two years, had broken it up, although Professor Bissen had considered it a creditable piece of work, and was vexed when his pupil destroyed it. In Rome he began another statue of Melsager, worked on it a year, and broke it to pieces. A third time he devoted himself to the same subject; and, completing the statue in five years, sent it to Paris, where it received the award as related. Nevertheless, when it was returned to his studio it seemed to him still as unworthy work of art, and he destroyed it finally.

It was not until Maglelsen had been three years in Rome that the idea came to him that was to cost him so much of effort and suffering. He saw that it was impossible for the sculptor of his time to "reach up"—as he expressed it—to ancient Greek art. There must be a primary cause for their failure when such masters as Thorwaldsen, Canova, and Michelangelo could not attain the results of the ancients, he thought, and the only solution of the enigma to him was that the classical sculptors worked in a different material. The conclusion was comb-

ated by the fact that among the earlier Greek and Roman sculptors had worked from a hot hand had something of a granular and sticky appearance by the most skilled of the moderns. Indeed, Holbeck had told him that Thorwaldsen himself had once turned over with his foot the head of a recently discovered antique statue in Rome, and remarked sadly that he had never been able to do as good work as that.

To Maglelsen's surprise, his fellow sculptors took little interest in his theories, though some of them believed with him that the ancients must have known other methods and materials than those employed by the moderns. While he was pondering the subject one day found a fragment of the arm of a life-size statue from the best period of Greek art, that had obviously been stretched after it had been moulded. Of course the arm could not have been stretched on without having a support of iron or wood inside, which led to the

Christen Dase Maglelsen, the Norwegian Sculptor

DRAWN FROM LIFE BY OLIVER HENRIKSEN

inevitable conclusion that it could not have been made in common clay, since common clay cracks on being fired over a hard substance, and a material that cracks cannot be fired.

Even that day the sculptor made the labor whereby he earned his last bread secondary to the search for the lost art of the ancients. For a time he suffered no hardship, because he received many commissions from visiting Norwegian, Swedish, and Danish. In 1877 he married a beautiful Italian girl, for he was seeking a comfortable living and the future looked bright. Just at the present, however, Ross began to be less of an attraction to the traveling public. The relations between the Queen and the Vatican had disquieted much of the mystery that hung over the Eternal City, and foreign visitors became fewer and fewer, while the increased cost of living drove many artists and students away.

In 1878, his commissions having practically ceased in Rome, Magdalen returned to Christiania with his wife and two children—to poverty, ridicule, injustice that was almost penurious, and scorn. For a time all went well, for his work as a sculptor was known throughout Scandinavia, and his friends sympathized with him in his enthusiasm in the cause of the lost art. Indeed, the city of Christiania gave him permission to erect a small house, with a studio adjoining for his work and experiments, on a stretch of vacant land in the suburbs that belonged to the municipality. A wealthy housewife, who had one of his sculptures, gave him the material to construct the modest building, and he built them himself, with the assistance of a single carpenter, and borrowed the money to furnish them.

As he had done for the last six years of his residence in Rome, Magdalen in Christiania gave almost his entire attention to the discovery of a material that should give the same result when fired as the ancients obtained twenty-five centuries before. He scarcely did enough remunerative work to pay his household expenses, and the consequence he did create he often destroyed because they did not reach his ideals. He purchased and made experiments with combinations of every plastic material that he could get to learn about, from whatever source, and still he was no nearer the solution of the problem than before. It, like Falsony, who worked extra hours to discover the lost art of the smelting of earthenware in France three centuries before, Magdalen did not turn up his household furniture to carry on his experiments, he deprived himself and his family, that was what was necessary to the success of the necropolis of his life in the struggle to attain the goal of his ambition.

It was not long before Magdalen's friends became convinced that his cherished belief was a delusion, and no argument or expostulation on their part could induce him to relinquish his quest. They told him that he was doing injustice to his family, and they finally decided that he was insane. Magdalen had the advantage of Falsony in this respect, however, that he was believed in him, and he believed that he was never so happy as he was during the period that he lived in the little house he had built himself and worked in the studio beside it. "My wife, above all the world had confidence in me," says Magdalen. "The Italian of good blood are the few people in the world, the women are the best of them all, and my wife was the best of all the women."

But now evil days overtook the dreamer. The city had given him the use of the land upon which his house and studio were situated with the proviso that he vacate within four days if it was found unnecessary to it. Though he was assured by a city magistrate that this was a pure formality, a municipal government, however, could not afford to encourage a madman, and the house he had occupied the better six months, the same magistrate who had assured him that the agreement to vacate was a formality put it into execution.

At the time this disaster befell, Magdalen felt that he was just on the point of making his great discovery. He went to the magistrate and, on his knees, begged him to allow his studio to stand at least for two months more. The utmost allowed him was two additional weeks; and, before that time had expired, the sculptor arrived early one morning to find workers on his studio, and knocking down his chimney, hoisted by a group of

enclenchers. Through the chimney the wreckers descended into the building, and not content with razing it, threw his tools out of the windows and broke up his moldings. Some statues that were the work of years, and that he had lost the loss of ever since, were destroyed. For ten years after the city of Christiania pulled down Magdalen's house and studio, the soil on which they had stood remained vacant.

Years of bitterness poverty followed, and Magdalen declares that he cannot now understand how he was enabled to keep a roof over his head and that of his family. "If I were among my acquaintances to ask for assistance, the door was closed in my face," he says. "I was publicly laughed at as a man without sense. I was the most despised man in Norway. The only friend I might have depended on was the banker who had given me the material for my house, and he was even worse than I, for he was in prison charged with fraud."

It is possible that Magdalen's discovery might never have been accomplished had he not one day, while still experimenting for the chemical clay, made a practical invention that brought him sufficient revenue for the support of his family. With only one object in view, he now worked on, day after day, and month after month, until twenty-seven years had passed since he first devoted himself to his task.

Had Magdalen known even a Modest Falsony, the quest for the lost art would certainly have been abandoned, for Magdalen himself tired of it, and was almost ready to believe that he had suffered and worked in vain for all the weary years. His wife insisted, however, that he continue his experiments, and almost immediately thereafter the idea came to him to mix the component parts of clay without their ingredients. The first trial showed him that he was on the right track, but three years more of experiment followed before the dream actually came true.

The value of Magdalen's discovery has been estimated by the sculptors both of Europe and America, but it is through the Sculptors Society of New York that he is giving it to the intensity throughout the world.

A Billion and a Half from American Earth

According to a statement by the United States Geological Survey, the United States, during 1905, dug from the earth minerals valued at \$1,823,877,127, an increase of 200,000,000 dollars over the preceding year.

Cool and red products, of course, far exceeded any other commodity, there being produced 77,650,830 short tons of anthracite, and 315,559,491 tons of bituminous coal, of a total value of \$492,477,217, and 22,231,129 short tons of coke, valued at \$72,478,180. Of miscellaneous coal products there were 40,454,215,152 cubic feet of gas, \$6,022,943 gallons of tar, 40,000,258 gallons of petroleum liquid, and 39,000,000 gallons of ammonia sulphate, the total value of these products being \$36,684,972.

The total production of iron ore is 1905 amounted to 42,248,133 long tons, valued at \$7,103,084; pig iron, 21,692,884 long tons, valued at \$192,450,000; manganese, 4118 long tons, valued at \$36,214; gold, 4,205,742 ounces, valued at \$88,188,711; silver, 54,161,294 ounces, valued at \$16,254,972; copper, 601,067,843 pounds, valued at \$139,797,716; lead, 392,000 short tons, valued at \$28,690,000; zinc, 203,849 short tons, valued at \$24,854,192; and platinum, 318 ounces, valued at \$6320.

Musicians' Autographs

Autographs of great musicians are no certain assets. Except, perhaps, in the case of Beethoven, one of whose letters at a recent sale in Berlin realized \$197, and another, which contained two lines of music, a man's celebrity would not appear to guarantee a "luxury" value to his signature, as on the same occasion an autograph of Johannes Brahms, the much-prized one of Beethoven, sold for only \$155. Here are some other prices which obtained

at this sale, notwithstanding that, at previous auctions of the kind, autographs of the same men had practically gone begging: A letter of Beethoven, \$37; a small one of Mozart, \$40; three letters of Beethoven, \$86; a letter of Chopin, \$250. Gluck manuscripts are scarce: one of music, dated from Vienna, December 31, 1769, although a small affair, changed hands at \$1000. A visiting card of Haydn found a purchaser at \$26, and a letter of the same at \$127. Two letters of Schubert realized respectively \$400 and \$337; a scrap of writing of Mozart, \$275; four letters of Wagner, \$322. Such figures may be taken to be satisfactory or not according to the point of view. To many they will but suggest a grim comparison with prices paid for those musicians when alive for their actual work.

Outspoken

A REPRESENTATIVE from a southwestern State was, not long ago, lecturing to a college that his memory was getting poorer each year.

"Things that I hear go in at one ear and out at the other," said he.

"That's bad," said the colleague, with a forced smile; "but you'd better be thankful that your case is not so bad as that of Hank of Indiana. Things go in at his ear and come out of his mouth."

A Sad Case

A CHICAGO physician was one day called to attend a sick child in a "shabby get-together" quarter of the Windy City.

"Madam," said the doctor to the mother, "you should send this child into the country for several weeks each summer."

"I am sorry to say, doctor," responded the woman, "that we are not rich enough to do that."

"Then," suggested the physician, "have her sent by the Fresh Air Fund."

"Oh, doctor," exclaimed the woman, "we are not poor enough!"

FIFTY YEARS SUPREMACY

The supremacy of Pears' products in this as in every other line of toilet and skin care goods is a fact which is daily being proved to the people of the world by the fact that Pears' Soap is the most popular soap in the world.

A COMPLETED SECTION OF THE PENNSYLVANIA RAILROAD'S NEW YORK TUNNEL

ON JANUARY 4 THE SECTION OF THE PENNSYLVANIA RAILROAD'S TUNNEL, LINED BETWEEN FIFTH AVENUE AND THE EAST RIVER WAS MADE CONTINUOUS BY THE JOINING OF THE EAST AND WEST BOWEN BORDERS AT A POINT BENEATH THE JUNCTION OF THIRTY-THIRD STREET AND THIRD AVENUE. THIS COMPLETES AN IMPORTANT SECTION OF THE TUNNEL, WHICH WILL PENNSYLVANIA ROUTE WITHIN A FEW MONTHS. THE BOWEN UNDER THE NORTH RIVER HAVE BEEN MADE, AND THE UNFINISHED PORTIONS ARE BEING RAPIDLY COMPLETED. IT IS EXPECTED THAT TRAINS WILL BE RUNNING BETWEEN THE TERMINAL ON THIRTY-THIRD STREET AND NEWARK IN THE SUMMER OF 1908, AND THROUGH THE EAST RIVER SECTION A YEAR OR SO LATER.

Commerce of the United States with Panama

Exports from the United States to Panama are increasing with very great rapidity. The exports to Panama during the year just ending will aggregate a little more than fourteen million dollars, against nearly eight millions in 1905, and a little more than 2½ millions in 1904. The figures for the full year have not yet reached the Bureau of Statistics of the Department of Commerce and Labor; but those for the eleven months ending with November were \$12,926,871, and as the figures for the single month of November were \$1,523,367, it is quite apparent that the grand total for the full calendar year will exceed fourteen million dollars.

These figures cover only the exports to Panama sent in merchant vessels, and do not include that sent by government transports or naval vessels. What proportion of this total of over fourteen million dollars' worth of merchandise sent by merchant vessels to Panama is sent for the government, or by its representatives, cannot be determined at present, since the shipments of this character when sent by vessels engaged in the general transportation of commerce are treated in the same manner as merchandise sent by individual exporters or firms. While a considerable part of the merchandise exported to Panama is doubtless for the use of the government, or at least for use in the work upon the canal or the Panama Railroad, an examination of the list of articles forming this total indicates that a large part consists of articles of food and clothing or other merchandise intended for individual use rather than for the canal works. Nor can it be determined just what proportion of this total goes in the way of citizens of Panama located outside of the Canal Zone, since merchandise intended for citizens of Panama may pass through the ports located within the Canal Zone and

thence into the hands of the merchants of the State outside of the Canal Zone.

The fact that the value of the native products sent from Panama to the United States aggregates three-fourths of a million dollars annually, and that the purchasing power of the people adjacent to the Canal Zone is doubtless greatly augmented by their trade relations with those employed upon the works of the canal, suggests that perhaps two million dollars' worth may be destined for importers and dealers located outside the Canal Zone, but within the Republic of Panama. These figures do not include the value of merchandise sent from one coast of the United States to the other by way of Panama, where the Bureau of Statistics maintains a separate statement for merchandise of this class, showing between two and three millions dollars' worth of merchandise annually passing from San Francisco to New York by way of the isthmus, and between five and six million dollars' worth passing from New York to San Francisco by way of the isthmus.

The Wings of Time

METURCIAN was walking in his garden. "My goodness," he exclaimed, suddenly, "here's another flower on that centurion-plant! Why, it opens but yesterday since I plucked a blossom from it."

He walked slowly toward an oak-tree two hundred years old which he had tenderly raised from an acorn.

"Ah, no," he mused, "how time flies!"

Next Time

"Yes," said Mrs. Malaprop, talking to a friend about her daughter Emily's wedding. "I'm glad it's all over. If it had lasted several longer I should have had serious palpitation or something! Why, what is a palpitation? When the minister pulled her to the wedding, I asked him whether it was

necessary to have two spouses for the bride and groom to kneel on. He smiled, and said he thought that something thicker would be better; and Emily laughed right out and left the room. Well, of course I knew I'd said something wrong, so I corrected myself. 'I didn't mean spouses,' I said, 'I meant two Cossacks.' And what do you suppose he said?"

"Asked you whether you desired a foreign military effect?" ventured the guest.

"No. He said that, judging by the present state of affairs in Russia, he doubted whether he'd be able to get them; and even if he could, he doubted whether they would be agreeable to be knelt upon, judging by the way they were fighting oppression. Oh, I was so mild! You can bet the next time I won't beat around the bush; I'll come right out and ask whether or not we need two pillars!"

As a Favor

At the pit of a coalmine in Pennsylvania there have occurred, during the past few months, quite a number of accidents whereby innocent bystanders have come to grief. Accordingly, some kind official has caused to be posted a notice that reads the name of politicians. It reads:

"Please do not tumble down the shaft."

The Millennium

SENATOR FORAKER tells of a remarkable speech made by an illiterate spellbinder at a Western State, wherein the orator, gradually working himself into a hysterical condition, exploded his peroration something as follows:

"O low citizens, when these principles of mine are triumphant, we shall have happiness and prosperity from Maine to California, from Florida to Alaska, from Alpha to Zumbah!"

Telephoning From a Train

Extensive practical experiments have recently been conducted by a Kentucky railroad with a telephone device, the complete success of which is of such importance. By means of this device, a moving train may communicate with any city having telephone connections, and, in the trials, under adverse weather conditions for the most part, conversation was held with parties in New York, while the Kentucky train was moving at a speed of from fifteen to thirty-five miles per hour.

By means of the new system, train dispatchers can at any time give orders to a train crew, thus absolutely eliminating all danger of collisions, and passengers may call up any one with whom they wish to speak just as they would on an ordinary long-distance wire. Trains travelling in the same or in opposite directions may also communicate with each other. By many prominent railroad officials the device is said to be second in importance to a safety appliance only in the air brake.

In the trials, the telephone was placed in the cabin of the engine, and connection with land exchanges was obtained by means of two heavy copper wires stretched alongside the track, at a distance of five feet. Contact between the train and the wires was maintained by a form of trolley connected with the locomotive bell. This trolley is made of gas-pipe, and carries two small tanks filled with a chemical mixture through which steam is fed to make a chemical reduction at a distance which may vary from half an inch to three feet, thus allowing for all vibrations and sway of the moving train.

The expense of establishing such a telephone line would not, in many instances, be at all great, as the wires could be strung on the telegraph-poles along the right of way.

Not Yet, but Soon—Perhaps

A PROMINENT New York lawyer says that in his earlier professional days he was glad to expand his slender income by bill-collecting. One day, however, he had a bill against a man who, incidentally, had since achieved a success which puts him beyond the necessity of such an indefinite statement to be made on that occasion. The young lawyer found him with his feet joggled upon his desk, while he gazed dreamily at the ceiling through a cloud of tobacco smoke.

"But really, sir, I must insist that you give me some definite idea as to when you will settle," the lawyer said, after having been gently rebuffed.

The reticent responded in lower his eyes and to have his pipe brought.

"Why, certainly, sir—though there seems to me to be a rather unnecessary conversation about this trifle," he drawled. "I will pay the bill as soon as I think of it, after receiving the money which a dividend will put me in a way to accept the dividend. I will write and send him just as soon as I feel in an energetic mood after a really good idea for a plot has occurred to me."

Not for His

A PROMINENT lawyer who formerly practiced at the bar of Kansas City tells of a fatal incident he encountered there during a time in which a certain young device was sold as a success.

A counsel for the other side in cross-examining the youthful medicine-giver, testified to several sarcastic remarks tending to throw doubt upon the ability of an young man.

One of the questions was: "You are certainly familiar with the symptoms of contraction of the brain?"

"Yes," answered the cross-examiner, "suppose my learned friend, Mr. Taylor, and myself were to have our heads together, should we get contraction of the brain?"

"You learned friend, Mr. Taylor, might," suggested the young physician.

The Gentleman from Toyland

(Continued from page 87.)

"Why did he say anything about it then? Why did he not stop me whenever I entered one of those pervious of truth of which he was so complacent?"

"I had no desire," replied Rhoda's father, in his gentle tones, "to condemn the gentleman to total silence." A shout of laughter that was almost a yell went up from the other side and Donald saw his father's face turn crimson.

The fat gentleman did not look happy. "Oh, Lord, oh, Lord!" he muttered, "to hang two innocents into this bear garden just as the slaughter begins. They can't help seeing—Come," he went on, brightly, turning the two children toward his attention.

"The picture I drew just before was only my second-best picture. Do you want to see my best one?" He proceeded to draw them a supernaturally slender giraffe, but when he painted the horn of a rhinoceros in the middle of his forehead as if he had been a unicorn, attention ceased to be a virtue. As Donald came back from the jungle, the first words that broke upon him were his father's sharp and angry.

"Not that, not that. I never said that." He swung his head and his whole body with every phrase and struck the desk with his fist.

The gentleman raises the issue of sounds. "Since he does so, I can use a little language as he. I can characterize to him in a word. I can say that he is a different and audacious—"

He passed for just an instant, and there was a look from one side of the chamber to the other that was frightening. Up in the pulpit the ivory gavel rapped sharply. Twice the fat gentleman did something that imperious. He hurriedly set down the children from his knees and stood then in the aisle. "Quick," he whispered. "Don't ask questions. Don't join hands and march straight down the carpet here right towards the man with the mallet."

Donald did not reason why. He gripped Rhoda's arm, fingers, started down the strip of red carpet, drew a deep breath straight to the front and marched. Rhoda trusted obediently at his side. Donald's father, his eyes blazing, was leaning forward, one hand behind his ear to catch the next word: Rhoda's father, shaking his long hair, was about to speak it. Rhoda saw them both dimly, but he only lightened his hold on the little girl's hand and marched on.

Then he saw the strange thing of all. He saw the true features of both fathers alike. Their arms fell to their sides and they looked helplessly at each other. As the diminutive couple reached the area of freedom under the eyes of the clerks, they were cheered by the great din of laughter and cheering that went up from Republican and Democrat in relief that the noise was past and the insulting word said.

"The gentleman from Minnesota has the floor," announced the speaker, when quiet came again.

Donald's father fumbled at his watch-chain in his pocket of mind came back. "I yield to my friend from Tennessee," he said at last.

His late antagonist stepped forward, bowled back the locks from his forehead. "Mr. Speaker," he began, very slowly, "I have the honor to represent a fraction of the country in which the floor"

—he passed a second—was an honorable and renowned institution. A few moments ago it may have seemed to you, sir, that the gentleman from Minnesota and myself were about to be precipitated into some of the aboriginal frocks. But, Mr. Speaker, it is absolutely essential that a trial, one started, shall be carried on, even to the third and fourth generations, and when we see in this instance the nobility, he made a sweeping gesture toward the shaven Rhoda and Rhoda, still hand in hand, he can never allowed to finish his sentence, then rose to the point of laughter and again retired the painted panels of the ceiling.

wife are rising up the Old Road; they're the nearest gossip in our country—and they'll be here in ten shakes of a lamb's tail." "How do you know they're coming?" asked Patty. "Jane Abbott rang me up to warn me," was the answer.

"Central," remarked Patty, after an irritating struggle, "can't you give me a better connection? I can't hear a thing my friend is saying."

"Connection's all right," answered Central, with some asperity. "If your neighbors that are listening will hang up their receivers you'll hear all right." There was an indignant sound of receivers slammed to place, and Patty heard.

In the Western harvest season one year a wedding fell upon a busy day. To some of the harvesters delay meant loss of money to risk for a merry-making. At the hour appointed the wedding party gathered, the bride, groom, and clergyman close to the telephone. The absent farmers and ranchmen were rung up, and each with his car at the receiver heard the ceremony and congratulated the bride. In Illinois, farmers fifteen and even thirty miles away from a recent political convention sat in their homes and listened to the speeches. These are the lighter amenities of the telephone. It is a greater thing when it summons a doctor and saves a life. Not long ago a baby on an Eastern farm, in fact that he could not have lived a half-hour unassured, was rescued by the nearest doctor caught by the telephone just as he was leaving his home for the city; a messenger would have been too late.

Electricity in Farm Work

The trolley and the telephone are not the only help electricity gives the farm. Several years ago a New York man developed a small water-power on his farm. He set it to generating electricity; the electricity saved wood, cut up feed for cattle, churns butter, and lights his house and barn. He is one of a group whose numbers, already considerable in Europe, are growing in the United States.

The farms of summer hotels have been object-lessons to whole neighborhoods. In the dairy of one of them, twenty-five miles from New York city, a bottle-washer, a churn, a cream-separator, a butter-working machine, a can-crusher, and an ice-crusher are operated by the same electrical plant that drives washing-machines, lifts swampy pools, crushes stone, and performs lighting and lifting chores in two hotels. All this can be done for a group of small farms as successfully as for one big one—done so cheaply as to save more than pay for the cost and trouble of installing the plant.

An electric motor is more compact and comfortable for farm travel than steam, and it is found by competent experts to cost much less to operate than the steam-locomotive which is often used to run a threshing machine. (A ten-horse-power locomotive is estimated to cost from \$9,000 to \$10,000 per horse-power unit, while an electric motor under the same conditions can be operated for \$8,000 to \$9,000 per horse-power unit.) The introduction of electricity into practical farm-work is immediately due to the enterprise of manufacturers who are adding to their business by the sale of electrical machinery adjacent to the plant. *The Electrical Magazine* (English) called attention some time ago to the local opportunities for supplying farmers enjoyed by two electrical companies in Kent and Gloucestershire, and to the advantage to both farmer and companies if the latter would use these opportunities. In California, it seems to be ahead of England and this country in electrical farming. It is being found to pay in the south of France, where there is plenty of water-power to generate the electricity, and reports from both French and German farms indicate that electrical farming is profitable under varying conditions.

The account of these farms given in the *Electrical Age* should be as thrilling to youth as the tales of Jules Verne. One farm, at Sumner, has a portable motor that, set up in its neat carriage, trundles easily from field to field, from quarry to barn. By a few feet of wire it can be attached to three machines. Driving them all at one time, in an hour it cuts up 1430 pounds of carrots, crushes 1100 pounds of linseed-cake, and lifts 333 cubic feet of water to the stables. Disconnected from these machines, it is taken to the fields, and at the same time gaily drives a threshing-machine and a corn-sheller. Certainly electricity is not too lively a word for such a contrast with old conditions when men with "split and frozen fingers" flailed their grain, chopped their carrots, and carried water in pails.

At Quindran this society has a three-hundred-acre farm that furnishes 25000 gallons of milk daily. On it electric motors do farm and dairy work during the day, a part of the current generated being used also to charge storage-batteries from which to draw for lighting and other necessary work at night. The portable motor performs here all the labor it achieves at Sumner, besides driving a windmill and running a little mill. There is no record of its shoring sheep, but electrical shoring is done on other farms, where this latest power does everything but haul.

There are in practical use several systems of electrical ploughing. The motors, one on each side of the field, are connected by wire cables that draw the plough back and forth. The Quindran plough cuts down thirteen inches into the hardest soil, and replaces twelve horses and eight men. This plough passes from one furrow to the next by automatic switches, and, like many of the new machines, is so simple as to be almost unteachable. An observant student of such matters describes an Italian electrical plough, used successfully near Turin, that travels a thousand feet in eight minutes, turning three furrows at a time, each twenty-four inches deep.

Lack of organization, the initial expense of installing plants, the skepticism of those who are slow to imagine what they have not seen, have retarded practical demonstration by private indi-

viduals in this country, but there are in existing experiments a definite prospect of what is to come. Rural communities are already more frequently lighted by electricity than cities. They have no gas companies to dislodge. I have seen, even in the East, where electricity is less "universal," farmhouses lighted by electricity generated seven miles away. The drop-light, easily swung from farmhouse porch or tree to guide the approaching guest, is more significant than much speech. Any village or farm community with a good water-power at hand can have electricity for light and power under conditions of exceptional economy, and even without water-power electricity may be generated by steam or gas engine units on a commercial basis far more profitable than the installation of a gas-lighting system with expensive piping through a sparsely settled district. Think of the comfort of rooms well lighted, and lighted from above the table level; the relief of dressing in a farmhouse where it is possible to see one's face without elevating an oily lamp to dangerous heights, like a fella gaddis of liberty!

The "new" farmhouse is going to be lighted, supplied with water, partly cleaned, and perhaps heated by the power that drives the machines in the barn. Dish-washing, laundry-work, and even cooking, the friendly current is already performing with suitable aid. A New York department store is now giving to all who will look an exhibition of cooking by electricity. In the exhibit of an English company at the St. Louis Fair, electrical machines automatically manufactured chocolate cakes and delivered them in paper bags! A successful electric kitchen was there conducted by a young woman, who, with big curls all around her doing a prodigious business, in four months cleared \$10,000. The space her establishment occupied was no more than one city block, but there was no smoke, no smell, no dirt; the cleanliness of the electric kitchen appealed to people, and the food was good. These things take time to tell, for one scientist who teaches us how to kill harmful insects, maintain the over-temperature in a beehive, and purify water by electricity, there will soon be thousands of farmers who do these things.

The lighting of fields for night work, the heating of fruit orchards in time of frost, may be slowly progressing, but already, as East as well as West, electricity is busy lighting farm elevators and storing away grain and hay. It is no severe mental strain to see it running elevators in the farmhouse! The women of the farm are going to be grateful to the electrician. If he lightens their indoor tasks and gives them the light for porching, so much the wiser for consumption. The world's work is set on a stationarily male and female. If it were, the women would still make mistakes.

Green Light in the Greenhouse

Electric lights in greenhouses encouraging plants to grow over-time are apparently a subject of new possibilities for the market-garden since the advent of the familiar mercury-vapor lamp. This light, green and ghastly to the human eye, but pleasing to plants, is costing only a third of the price of white light, may not be new to most people, but the increasing use of it in greenhouses by playing a stimulating electric current among their roots is the latest, newest word in forcing vegetables.

Whether in the house or outside, pumping is perhaps the most impressive part of electrical farming. The windmill was one of the first farm engines. First, gasoline, wind, and sun motors are now everywhere doing "manual labor" for the farmer or generating the electricity that does it. The electric pump is becoming the water-pump of the Northwest. It began its work on a line eighty-three miles long, from the San Bernardino Mountains to Los Angeles. This line has now been farther extended; distance has no terrors for the electric current. Some of the irrigation wells go down fifty feet, some a thousand; to the electric pump it does not matter. These irrigation pumps are installed in small houses placed at intervals on the farms, and when the farmer needs water in his ditches he "flips his flashlight and closes an electric switch." The pump starts up, and his crops are watered. Land that at first was practically worthless soil, since the installation of the electric pumps, for \$200 or even \$500 an acre in grass sections; and where fine fruits are grown, for \$1500 to \$2000 an acre.

Statistics of gallons and square miles in irrigation reports may be dry reading. Translated into human experience they are full of wonder. A California vineyard that for twenty years had been successful suddenly began to go back. The land depreciated a million dollars in two years. One of the owners had no more land, and no recourse but the blaming of bad luck. The Agricultural Department at Washington is eliminating "luck" from agriculture. It heard the wail of the vine-growers and attacked the problem. Alkali, long buried and deep, had risen in a moist season to the surface. While it remained, vines would not grow, and would not yield. The Bureau of Soils planned an anti-alkali campaign. Drains were laid, connecting in rows with a central ditch into which they emptied. Then the land was flooded. The metal pump poured over it continuous streams till it stood inches deep in water. The water dissolved the alkali, the solution flowed off into the ditch; while those drains are there alkali will never again injure the vines. This re-boration rose from ten to thirty dollars an acre. One group of men had their fortunes saved to them, and the government found a way to reborn 3,000,000 acres, kith and kin with the alkali land.

Condemn with life, invention, thought—and drudgery and monotony are doomed. Boys and girls from the farms are necessary to the city. They bring to it the vigor that renews its blood and sinews. Hereafter, whether they come or stay, escape from the farm will not be for them the only escape left. If the city they will have to leave still more to give. In the city they are already impacting the new to transform the old.

Mrs. Frog: "Don't be cross, dear; you know what a terrible time little Taddy is having in getting his foot."

The Future in America

By H. G. WELLS

This is a remarkable book about America. It is the work of an English critic who has achieved a wonderful reputation for his keen analysis of present conditions and for his gift of vision into the future.

Mr. Wells's recent visit to America has enabled him to view our country in its many phases—social, economic, material. With rare insight he has grasped American conditions as no one else has done. He puts into graphic and picturesque language much that we as Americans have felt but only dimly comprehended, and in striking but convincing chapters shows whither America is tending.

Mr. Dooley

HIS WIT AND WISDOM

IN THREE VOLUMES

MR. DOOLEY" needs no introduction to American readers. During the past few years "Mr. Dooley" has done more to brighten the pages of the periodical press in this country than any other humorous writer or group of writers has done. "Mr. Dooley" opened a new and rich vein in American humorous literature. But his shrewd comment and laughable dialogues with his friend "Mr. Hennessy" are more than a text for laughter. They are full of wise reflections—sharply satirical at times, again broadly ludicrous—upon the trend of great public events and life in general. It is this element in "Mr. Dooley" that has made his "Observations," "Opinions," and "Philosophy" more than the light reading of the moment. The humor is sparkling, clear, and highly good-humored, but, underneath, is American common-sense in its most terse and characteristic expression.

FINLEY PETER DUNNE

Now, for the first time, "Mr. Dooley's" *Works*, so to speak, have been collected and published in three uniform volumes. They are permanently bound in dark-green cloth; they are carefully printed from clear, clean-cut type, on good paper, with wide margins. The three volumes are sold with a year's subscription for either HARPER'S MAGAZINE, HARPER'S WEEKLY, HARPER'S BAZAR, or THE NORTH AMERICAN REVIEW.

OUR OFFER

We will send you the set of three volumes, all charges prepaid, on receipt of \$1.00, and enter your name as a subscriber for either HARPER'S MAGAZINE, HARPER'S WEEKLY, HARPER'S BAZAR, or THE NORTH AMERICAN REVIEW for one year. If you do not like the books when they reach you, send them back at our expense and we will return the \$1.00. If you do like them, send us \$1.00 a month for five months until the total amount, \$6.00, is paid. In writing, state which periodical you wish.

Sophy of Kravonia

By ANTHONY HOPE

Author of "The Prisoner of Zenda"

SOPHY OF KRAVONIA

IN his new novel Anthony Hope returns to romance, and in the absorbing vein of *The Prisoner of Zenda* writes of another mapless little kingdom—Kravonia. Here an English girl is the centre of an exciting story. The crown-prince, whose life she saves, falls in love with her, and once the story of her career becomes a galloping romance, in which reckless adventures, court intrigues and conspiracies, dangers and hairbreadth escapes follow one another in quick succession.

With Frontispiece. Ornamented Cloth, \$1.50

HARPER & BROTHERS, PUBLISHERS

By the Author of "The Garden of Allah"

The Call of the Blood

By ROBERT HICHENS

A wonderful new novel by the author of *The Garden of Allah*—a story thrilling with the exultant joy of physical life. The scenes are laid in the most beautiful of the Mediterranean islands—Sicily. Here the hero and heroine come from England to spend their honeymoon. In the man's veins runs a strain of Southern blood which is caused by the environment of his father's land and by the fantasy of an alluring young Sicilian girl.

The story runs through a series of beautifully intense and passionate climaxes. Every scene breathes the same wonderful mystic charm that made his former novel a marvel of romance.

Illustrated. Price, \$1.50.

WATERPORT

Permit until first evening gunfire.
CHIEF OF POLICE

SO READS the traveler's permit when he lands at Gibraltar. With the sound of the sunset gun he passes out. He knows the hour, and he prepares to go.

When the sunset gun sounds for you, at an hour that you cannot know, what preparation will you have made to protect your family?

A sinister note is in the sound of the sunset gun for the man who has thought his life permit would not be retired so soon,—and who has waited for the time when he could "afford" life insurance.

Today is that time. We would like to tell you how little it costs—what liberal terms are offered by this life insurance company. Send in coupon.

The Awakening of Helena Richie

By MARGARET DELAND

Author of
"Old Chester Tales," "Dr. Laverder's People," etc.

"A PERFECT book," declares the *New York Times*. "Everybody is reading 'The Awakening of Helena Richie' now. It is the novel of the summer."

"As an achievement in letters this story of passion and folly, repentance and renunciation, deserves to be ranked among the chiefest samples of American imaginative writing."—*Philadelphia North American*.

"Such work as this is bound to endure, must endure," says the *Providence Journal*. It shows how good American fiction can be. The story charms insistently from the first page, but presently it flashes out into a tremendous drama, catching the reader in its onward sweep and holding him enthralled to the end.

Illustrations by Walter Appleton Clark. Frontispiece in four colors.
Faint 8vo. Cloth. Price, \$1.50.

COMMENT

A Job for J. J. Hill

Was ever any sincere effort made to put Mr. JAMES J. HILL on the Interstate Commerce Commission? It would be a splendid thing to have on that commission a man who knows in Interstate commerce and also railroads. Mr. HILL knows both. A commission consisting solely of him would probably be an efficient body, in which railroads, shippers, the general public and everybody else might rejoice and have confidence. A commission consisting of him and two other eminent experts, such as the late Mr. CANNATT and the late Mr. SAMUEL SPERRY, might be better still. Even the present commission, if Mr. HILL could be added to it, would by that single act be improved.

Federal Salaries

What are the reasons of the Senate's Committee on Appropriations for rejecting the bill passed by the House to raise from \$8000 to \$12,000 the salaries of the Vice-President, the Speaker, and the cabinet officers? If the Senate committee considers that the bill does not go far enough, and that should include a long list of other officials whose pay should be increased, it is right. If it thinks that all the proper increases should be made at once, and that to concede at this time the increases for which the House bill calls may prejudice, or delay, the granting of others that ought to be made, it may be a sound reason for delay. But in themselves the reasons that the House bill calls for are urgently desired. The cabinet officers, especially, are scandalously underpaid. They ought to get relief without an hour more delay than necessary, and more relief, too, than the House bill gives them. Twelve thousand a year is not enough for a cabinet officer, though it is considerably better than eight thousand. We hope the Senate means to try to get this work of salary raising properly done, and to make it include, besides the officials named in the House bill, the President, the judges of the Federal courts, Supreme and Circuit, and the ambassadors.

Mr. Root's Visit to the Dominion

Mr. Root goes to pay a social visit to Lord GARY at Ottawa. It is confidently expected that questions will be discussed between the two interesting to themselves and to the Dominion of Canada; and that the discussions will be carried on, in a casual and earnest conversation, in the agreeable and comfortable frame of mind which pleasant social intercourse invites and stimulates. Doubtless the two will come to an agreement upon most, if not all, of the questions in issue between the two countries. Most sensible men would. Mr. Root and Lord GARY have met each other before, and may reasonably be supposed to understand each other's mind on these subjects. Besides, Mr. Root is an exceedingly astute negotiator. The pertinent question is, of course, reciprocity, and it is the

difficult. Practically, Lord GARY can have little to do in bringing about an arrangement on this subject, or, indeed, on any other; but he will be a very useful instrumentality of communication with LAUREN. After reciprocity comes the question of the seal-fisheries. We now know that the award of the Paris tribunal has not saved the seals, who are rapidly disappearing. It is doubtful if anything can now be done to save the herd. Besides these questions there are others, among them those concerning the Northeastern, and the Lake, fisheries, and bonded goods in transit through Canada. Mr. Root and Lord GARY, as we have said, will probably agree, but it is much more important for Mr. Root and Mr. LAUREN to come to an agreement.

The United States and Canada

There ought not to exist these causes of difference between the two countries, but they do; moreover, it is very difficult to negotiate them away. It is easy, as has been suggested, for England and the United States to come to an understanding, but Canada, not England, is, after all, the principal party in interest, and Canada is not an international power. Nevertheless, England, the Dominion's representative in the council of nations, can or will do nothing to which Canada objects. As long ago as Mr. BAYARD's time he and Lord SALISBURY reached a just conclusion as to the seal-fishery, but, at the last moment, Canada objected, and Lord SALISBURY ran away. In the same way the Gloucester fishermen have prevented an agreement which would be advantageous to New England and the provinces. England, for whom Lord GARY will speak directly, cannot bind Canada; but LAUREN can. On the other hand, Mr. Root cannot bind the United States, for behind him, controlling him, perhaps thwarting all his desires, will be the Senate, and controlling Senators are the Gloucester fishermen and other constituents. It will do much good if Mr. Root and Lord GARY so conduct and proclaim their negotiations that a public opinion in both countries will be enlisted in support of their conclusions—the chances being very strongly in favor of those conclusions being just and wise.

The President and the Negro Soldiers

The President has wisely concluded to withdraw part of the sentence which he pronounced against the colored soldiers of the Twenty-fifth Infantry. This part is that which prohibits the men from being employed hereafter in the civil service of the United States. Whether he is right in insisting that he has the power to dismiss "without honor," in spite of the articles of war, is the subject of discussion in the Senate, a discussion which we are not inclined to anticipate. But it has always been clear that his attempt to deny to these negroes the right of future public employment, at least in the civil service, was wholly unconstitutional and illegal. In his haste, Mr. ROOSEVELT not only called all these negroes criminals, but he usurped a power which the Constitution reserves for the United States Senate, sitting as a court of impeachment to try a civil officer. It is perfectly fair to assume that there is no presumption in favor of the legal decisions of one who frequently reverses himself on encountering criticism. A lawyer would have amended the President's now famous sentence if he had been consulted in advance, and doubtless that which is good in it would have stood. If this had been done at the proper time there might never have occurred the sharp quarrel accentuating the raw issue of which Senator TULLMAN took significant advantage the moment the opportunity was offered to him.

The New San Domingo Treaty

The prospects of the new San Domingos treaty, despite the efforts of the Secretary of State, are discouraging, although there is abundant time for them to improve. There does not seem to be any objection to the provision that the United States shall take charge of the custom-houses, shall collect their revenues, and shall pay the principal and the interest on the bonds to be issued for the redolent indebtedness of the island. But there is manifest in the Senate a disposition to doubt the validity of the claims against the republic. There is a suspicion entertained that these claims have been bought up in New York at a low price, and that here is the influence behind the treaty. Feeling sure that Secretary Root would know this if it were true, and, further, being certain that if the pressure were scandalous he would not favor the treaty,

we are convinced that such reasons ought not to defeat the treaty. There may be other reasons for voting against it, but it is impossible to believe that the administration would support a tainted treaty.

Governor Hughes and the Machine

It is doubtful if the Republican machine, in its present mind, desires a contest with Governor HUGHES. It seemed at first, as though it was bent on war, and the wise people who watch politics and politicians with meticulous care interpreted the make-up of the legislative committee to indicate war on the programme which the Governor set forth in his message. But for some reason or other the leaders, including Senator RAINES, have now professed to the people of the State that there is no intention on the part of the machine to make the suspected war, but that the Governor's programme is to be carried out; that the Railroad Commission and the Commission of Gas and Electricity are to be abolished, and their work turned over to one commission; and that the Governor's other recommendations are to go through, while it is also stated that the Governor has made no bargain, in consideration, that obliges him to sign any bill which the machine leaders decide to pass. In other words, Governor HUGHES retains his independence, as was to have been expected of him. This is precisely as it should be. Senator RAINES's announcement came after a speech which Governor HUGHES made before the Albany Chamber of Commerce on the day when the seemingly hostile committee were announced. This, again, is precisely as it should be. Perhaps it is a case of *post hoc propter hoc*.

Hughes and Roosevelt

In his Albany speech the Governor said: "The only strength that I or my administration may have is in the confidence of the people of this State, and in any difficulty that may arise, to the people of the State I propose to appeal." Experience teaches that the Governor may make his appeal in confidence. At the beginning of his administration he finds himself in a much better position than that which was Governor ROOSEVELT's throughout the whole of his term. Neither he nor his distinguished predecessor was the deliberate choice of the machine. Governor HUGHES is more fortunate, however, than was his predecessor. He has no distinguished and generally recognized bosses to deal with as Governor ROOSEVELT had in PLATT and ODIELL, and the smaller bosses seem to have retreated. There is no one now to occupy a room in the Capitol as his office from which to issue orders to his members of the Legislature, as ODIELL did in Governor ROOSEVELT's term. Governor HUGHES will not overstep the proper line between the executive and the legislative departments of the government. He is a lawyer and a constitutional lawyer. He will not feel himself under the necessity of weekly consultations with any boss. He will not do many of the things which Governor ROOSEVELT thought that he was compelled to do, but which called forth a good deal of harsh criticism from men who had been his friends. As it turned out, however, the people supported Governor ROOSEVELT with such fidelity and loyalty, and the popular opinion in his favor was so evident and so aggressive, that the politicians were worsted in all their efforts against him. Notwithstanding the criticisms, ROOSEVELT captured and held the popular imagination and faith. Those of the party leaders who were chiefly concerned in this State wanted him nominated for Vice-President to avoid the other inescapable necessity of re-nominating him for Governor. It may be that some of them now regret their conduct at Philadelphia in 1900. Now they have HUGHES on their hand, and if he stands by his programme and his announced purposes, he too will retain the faith which the people expressed in him at the polls.

The President and the Senate

Announcement has been made that the anti-ROOSEVELT Republican Senators have proposed to weary Mr. ROOSEVELT by revisiting some of his alleged usurpations, in a resolution and speeches, with no intention to pass the resolution, but to content themselves with criticism. It was further proposed, in the interest of the game, to induce the Democrats to father the resolution. It is to be hoped that the rumor that the Democrats will not consent to do this is true. There is good reason to criticize Mr. ROOSEVELT. He has done and said a good many things that offend against propriety, or are not

within his province or the scope of his duty as President, or are hostile to our Constitution and form of government. The Senate, however, is not the place in which to discuss differences of taste between the President and the Senate, and it ought not to be the playground for small games of politics. The President himself sets an example to Senators. He is bold, frank, sometimes with a brutal frankness, perhaps, but a fight with him is a real fight, and his fighting virtues might well be imitated by the Senators. If they are afraid to fight that way let them keep still, although to keep still may involve a neglect of duty. But if there is occasion for Senatorial action—and there doubtless is—against any proposition or act of the President's, the serious attention of the country will be the sooner attracted if Senators will be as bold and frank and independent as the President is. They can be all this, too, without falling into bad manners; but the country prefers frankness, even when marred with bad manners, to the stilette manipulated with that hypocritical smile which went so well with that old question of Job's to Amos, "Art thou in health, my brother?" If there is any need for a resolution criticising the President it ought to be a real resolution, introduced for serious business. To introduce a resolution in order to furnish an opportunity to intimate charges, true or false, and then to run away by abandoning the resolution, will never, we hope and trust, be accepted in this country as courageous and seemly fighting.

Is Roosevelt Responsible?

A recent article in the "Editor's Diary" of *The North American Review* suggests plainly a subject for a real debate in the Senate. This is the assault made in Secretary Root's recent speech upon the States, the Constitution, and our Federal government. The question raised by the speech is so serious that Congress may well express its opinion upon it. This is especially true since the editor of the *Review* has fixed the responsibility for the sentiments of the speech upon Mr. ROOSEVELT. At least he has clearly shown that the Secretary of State set forth the previously uttered sentiments of the President, and described in graver and weightier words than Mr. ROOSEVELT is accustomed to employ the well-known tendency of the latter's mind. Besides, Mr. Root has put behind the President's attitude towards the law and the Constitution his own ability and character as a judicious, thoughtful lawyer and statesman. The point of Mr. Root's speech which requires the most attention is his advocacy—at least he does not criticize the doctrine—of wholly changing the character of the Federal government by constitutional constructions made by judges appointed, and to be appointed, by the President. In advancing this theory, which is more than revolutionary, Mr. Root only repeats an idea more than once expressed by the President. The editor of the *Review* shows this by quotations from the President's speeches, notably the following: "We need . . . through judicial interpretation and construction of law to increase the power of the Federal government."

Disregard of Constitutions

The editor shows also, by citations from the editorials of leading newspapers of the country, that he is not singular in connecting Mr. ROOSEVELT with the Secretary's utterance; while he also shows that some prominent Republican Senators are startled by the utterance. That Mr. ROOSEVELT's mind has advanced to this point is certain. As he spat upon the Constitution of Cuba, he seems also to be inclined to spit upon the Federal Constitution, while he is not only willing, but anxious, to accomplish his object by the tortuous method of construction. He wants the courts to change the fundamental law, and, therefore, the character of the government, by pretending that the Constitution means what they know that it does not mean. This is an assault upon the integrity of the States; but it is more than that: it is an assault upon the Federal form of government which JOHN MARSHALL defended, defining the true powers of the Federal government, but never doubting the validity or the propriety of the rights of the States. If the Senate desires to criticize the President, here is an opportunity for discussion that should be as fearless as Mr. ROOSEVELT's and Mr. Root's announcement of a doctrine that the editor of *The North American Review* denounces, saying of the President's despatch to Secretary TAFT, concerning Cuba—"I do not care in the least for the fact that such

an agreement is unconstitutional"—that it "does clearly indicate a frame of mind which spurns restraint, despises law, and is dominated by despotic instinct; incidentally, moreover, it was the most gratuitous and insulting utterance respecting a friendly neighbor and helpless ward that ever emanated from the lips of an American President."

Bad Work of the Trusts

The condition in which, for some weeks past, the trusts have held the city of New York is very deplorable. The rubber trust has brought it about, somehow, that the sidewalks, contrary to use, should be wet four or five days a week, and the crossings muddy, inducing large and unusual expenditure for gum shoes; the gas and electric-light monopoly has contrived exceptionally dark weather, in which folk often have to breakfast as well as dine by artificial light, and many offices, and most dwellings, have gas or electric light in use all day; the ice trust has seen to it, up to this writing, that there is no natural ice-supply hereabouts for anybody to get in, so that the price of ice remains high and promises to be higher next summer than it was six months ago. Precisely by what wrongful, and probably criminal, expedients these results have been induced we are not ready to disclose this week, but the results are before the public, and the public may, and doubtless will, rest assured that to connect them with the machinations of the trusts enumerated will prove a matter of the utmost simplicity to those of us who know the facts.

Need of New Railroads

An expenditure of eleven hundred million dollars a year for five years would suffice, in the opinion of JAMES J. HILL, to provide the railroads of the country with the means to handle properly the business already in sight, without allowing for future growth. So Mr. HILL says in a recent letter to the Governor of Minnesota. The chief cause of the present congestion of business Mr. HILL finds to be a lack of railroad tracks on which to haul cars. The business of the railroads has increased in ten years 110 per cent., their mileage but 21 per cent. Mr. HILL finds it to accord with the best judgment of experienced railroad men that an immediate addition of five per cent. a year of the railroad trackage should be made for five years to come to relieve the present pressure. That means 75,000 miles to be built in five years at a cost, including terminals, of \$75,000 a mile, to cost altogether something over \$5,500,000,000. Besides the money the work would call for the labor of 200,000 men in grading, besides track-layers, bridge-builders, and others, and would take two million tons of steel rails a year, which is two-thirds of the product of all the rolling-mills in the country. Labor is not to be had, Mr. HILL says, in sufficient quantity on any terms even for ordinary extensions now being made. As for money, it will not be forthcoming until the talk of railroad confiscation or transfer to the state is over, since it is that sort of talk that has already caused railroad-building to decline to the lowest point within a generation, at the time when all other forms of activity have been growing most rapidly. As helpful remedies, Mr. HILL recommends the decentralization of traffic to relieve terminals; more points for export, and more interior markets. Also a fifteen-foot canal or channel from St. Louis to New Orleans, which, he says, would go farther to relieve the entire Middle West and Southwest than any other work that could be undertaken.

Women and Hotels

It was announced the other day that the owners of the Martha Washington Hotel, in New York, were not entirely satisfied with their experience in running a hotel for women, and would retire from that experiment and rent their property for a less restricted use. The trouble appears to have been that the hotel was not cheap enough to make it preferable to other good hotels on the ground of economy, and that the advantage of partial seclusion from the society of men was not one that enough women with money to spend would spend their money to secure. So far as appears the hotel has been intelligently managed; the building is a good one, and the location is convenient. If the Martha Washington has not paid as a woman's hotel the inference seems reasonable that women who can have their choice do not care, as a rule, and will not pay, to be secluded from the males of their species. They prefer, it would seem, if they are to live in a hotel, to

live in one where there are men about. This is a conclusion so flattering to men that the more possibility that it is true brings large measure of consolation for the Martha Washington's change of plan. There is nothing surprising about it. Hotels for men only flourish in New York when they are very cheap. The town has many bachelor apartment-houses, and a good many clubs where men hire bedrooms, but the hotels that men prefer are those that shelter women too, and nothing but pressing considerations of economy ever sends them to any other kind. Moreover, men have their uses in the maintenance of hotels besides the apparent fact that it is agreeable to the women guests to have them about. They drink more or less stimulating beverages, have their hair cut, get shaved, and smoke cigars, and what they pay to a hotel in consideration of the satisfaction of these tastes and addictions is found to be of material importance in providing the revenue necessary for the hotel's support. Not only self-indulgent men, but indulgent husbands and fathers, must be very good for a hotel. Go and dine in any of the great restaurants of New York and observe the deportment and expenditures of this class of patrons, and it will not surprise you that the woman's hotel should miss their patronage.

The Jews and the Schools

There are tokens of a little restlessness among some of the Jews in New York for fear their religion is not having absolutely a square deal. Last month the newspapers had stories of the withdrawal of some Jewish children from the Christmas trees and other Christmas exercises in the public schools of the East Side, and of protests against any notice whatever being taken of Christmas in the schools. Later evidence of a kindred jealousy appears in the remarks of Rabbi SILVERMAN of the Jewish Temple of Emanuel on Fifth Avenue and Forty-third Street, on January 13. He said, as reported, that proselytism was carried on in the public schools, and that the churches were influencing the government contrary to the Constitution. Deprecating the alleged willingness of the Board of Education to allow religious pictures and symbols in the schools, he noted the possibility that "the time may come when an altar and a priest will be installed in every school, and a cross will replace the American flag on the top of the school building." "Let us call a halt before it is too late," said Dr. SILVERMAN, and he went on to enumerate various evidences of a union between religion and government in this country—such as the prayers in Congress, "In God we trust" on our coins, and the enforced observance of Sunday.

What Judaism has most to Fear

To some of these evidences Dr. SILVERMAN was inclined to be indulgent, but he felt that there could be no defence for attempting to lead the child in the public schools away from the religion of its fathers. He is certainly right about that, and we presume the Board of Education will maintain that no such attempt is being made or would be tolerated. This city is one of the few places—perhaps the only place—in the country where such attempts would be a matter of considerable practical importance, and here, above all other places, they should be guarded against. But, after all, taking this country by and large, and considering its origin and history, it seems rather hopelessly open to the imputation of being a Christian country, and Dr. SILVERMAN can hardly hope the people of his religion will escape all the inconveniences of residence in a country in that condition. The Jewish children may be and should be carefully shielded in the public schools from instruction inimical to their faith, but nothing can keep them from breathing American air and absorbing a good deal of whatever is in it. Are we mistaken in surmising that what Judaism has most to fear in this country is not the proselytizing influences in the public schools, but the absence of persecution, and of discrimination against Jews as Jews? Where no fence is built around the young Jews it is easier for them to wander. How much the rising generation of Jews in New York stray from their fathers' fold we do not know, but we hear much oftener of their being un-Judaized than of their being Christianized, and where they lose the restraints of their own religion without gaining any other they are very much the worse for it. So it is said to be with some of the Japanese, that when they lose their national religion, with its high standards of duty and honor, and get nothing in place of it, their characters crumble.

Commercial Crises

Tag pessimistic forecasts of the early future with which Mr. JOHN D. ROCKEFELLER and others have been credited has started a discussion of the question whether the prosperity which we are at present enjoying is likely to be short-lived. The answers of experts differ. Those who accept the theory that there is usually an interval of about ten years between two industrial crises maintain that a crisis is overdue, and cannot, therefore, be long deferred. As the last great crisis broke in 1873, the next, they say, should have occurred in 1903. Others aver that, as a matter of experience, the interval between two great crises is not ten years, but twenty years, though there is apt to be a minor crisis about the middle of the term. They insist that we witnessed such a minor crisis in 1893, and that, consequently, no great dislocation of industrial and financial conditions need be feared before 1913. Practical manufacturers and railroad men decline to accept any of the assumptions concerning the periodical or cyclical character of crises for which we are indebted to the professional political economists. They are confident that, just so long as our crops are plentiful, we shall continue to be prosperous, provided, of course, an era of overproduction does not supervene. By overproduction is meant, of course, an output which greatly exceeds the demand of consumers. Of such an excess there is as yet no proof. On the contrary, the productive capacity of factories is overtaxed, and their output is sold for many months in advance.

When, on the other hand, there comes a lull in the demand for manufactured products, and the factories, in consequence, accumulate a large surplus stock, many of them will have to shut down, and, owing to the resultant glut in the labor market, there will be a signal drop in wages. A shrinkage in consumption will inevitably follow the increase in the number of the unemployed. The duration of the crisis which will inevitably follow will be proportioned to its severity, and there is probably ground for the prediction that our next great crisis will be exceptionally severe and prolonged.

Apparently, it is not due, however, before 1913, unless we should have poor crops for the next two or three years. So we need not, as yet, be much depressed by the dismal view of the future which Mr. ROCKEFELLER is alleged to take. The railways of the country will have to buy enormous quantities of iron and steel products before they can make their truckage and rolling-stock commensurate with the increasing requirements for transportation, and, to say nothing of the increase of our population by the excess of our birth-rate over our death-rate, we are importing annually 1,200,000 immigrants, who will have to be fed, lodged, and clothed. An excess of supply of manufactures over demand seems, therefore, to be still distant.

A Tunnel under Dover Strait

As might have been expected, the establishment of an *entente cordiale* between Great Britain and France has led to revival of the project for the reconstruction of a tunnel under the Straits of Dover which in the last century was mooted more than once, but which was supposed to have been vetoed definitely in 1882. That, from a commercial point of view, such a tunnel would prove extremely serviceable is undisputed. It would signify facilitate the transportation of perishable goods, and would give an immense impetus to passenger traffic. There were, however, the project is opposed vehemently by military authorities, including conspicuously General Lord WOLSELEY, formerly commander-in-chief of the British army. The experts of the present-day resort to the conclusion reached by Colonel MARRIOTT in 1861, who testified that an mechanical means of destroying the tunnel within a few minutes of an alarm being given could be looked upon as trustworthy, and that if soldiers were relied upon to prevent the egress of hostile troops from the tunnel, it would prove to be practically difficult to guard against surprise. Lord WOLSELEY earnestly recalls the Duke of Wellington's oft-repeated warning that his countrymen ought not to rely upon the assumption that his country was unassailable by sea.

There is, in truth, no historical foundation for HENRY's description of Britain as a "favorite island." With the possible exception of Sicily, there is scarcely any large island on the surface of the globe which has been attacked successfully more times than has England. To say nothing of the invasions by the Romans, the Jutes, the Saxons, the Angles, the Danes, and the Normans which resulted in conquest, we may note that during the period between 1066 and 1485 there were half a dozen landings on the English coasts which affected the succession to the crown. If it be said that in those days England was weak at sea as compared with her neighbors, an assertion open to dispute, let us confine ourselves to a period much nearer our own time. In 1659, though the Commonwealth had become formidable at sea as well as irresistible on land, OLIVER CROMWELL, with a small body of followers, managed to land on the coast of Scotland, was there crowned king, and, at the head of an army, advanced into England as far as Worcester. In

1688 the Prince of Orange, with a body of Dutch troops, landed at Torbay, and in about six weeks reached London, where, presently, he and his wife were crowned joint sovereigns. Finally, in 1745, although at that time the British navy was greatly superior to the French, the Young Pretender contrived to elude the British cruisers, and with a small number of adherents effected a landing on the west coast of Scotland. Ill-equipped as he was for conquest, he soon overran the northern kingdom, and pushed forward into England as far as Derby, within two days' march of London. As for the great naval and military armament which NARCISSUS assembled at Boulogne in the year before the battle of Waterloo, there is now little doubt that a crowding of the Channel could have been effected had the Emperor listened to HENRI FRANKLIN, who offered to furnish him with transports propelled by steam. From the moment that steam became the motive power of navies, the Duke of Wellington, remembering the situation at Boulogne, never lost an opportunity of proclaiming his belief that England was peculiarly exposed to invasion. As for the present friendship of France being a guarantee against a misuse of the proposed tunnel, Secretary of War HALDANE has pointed out that in diplomacy you can never tell what may happen to-morrow, and he might have added that the last *entente cordiale* between France and England, which existed during the Crimean war, was soon followed by the panic caused by the fear of a French invasion, which led to the organization of the Volunteers. On the whole, it seems improbable that a tunnel under the Straits of Dover will be constructed in our time.

The Anglo-Japanese Treaty

THE suggestion made in the *North American Review* that the British government might deem itself constrained by treaty to side with Japan in the event of a war between the latter country and the United States, but that the British people would probably protest against legislation in such a contest, has called forth some comments from the *London Standard*, the semi-official organ of the Unionist party. The Anglo-Japanese treaty was negotiated, it may be remembered, in the summer of 1903, by Lord LANSOWORTH, then Minister for Foreign Affairs in the HALLAM government. Under the circumstances, the *Standard* naturally tries to defend the treaty, but it does not deny that, if Japan should choose to regard the right of the children of her subjects to attend public schools in San Francisco as one of the "special interests" in which the second article of the treaty refers, and to that end should levy war on the United States, Great Britain would be bound to cooperate with her. It asserts, moreover, that the British people would stand by their plighted word, and abide the consequences, though these, it acknowledges, might possibly be disastrous.

We believe that the Unionists, of whom the *Standard* is a mouth-piece, are here making the same mistake that they made when they acquiesced in Mr. CHAMBERLAIN'S proposal to impose a duty on foodstuffs imported from abroad. It was this proposal, more than any other cause, which subjected the Unionist party to overwhelming defeat at the last general election. The cessation of supplies from the United States and Canada would inevitably cause a marked increase in the price of breadstuffs, and the resultant dismay and anxiety would subject the British government to a pressure impossible to withstand. The millions of workmen would demand a repudiation of the Anglo-Japanese treaty, and the framer of it would become the most unpopular man in England, though, at worst, he can only be taxed with an inadvertence, for nobody dreamed of a war between Japan and the United States when the treaty was signed in August, 1903.

Books of Quiet

It may seem strange to say that in an age generally looked upon as commercial, bustling, noisy, the spirit of the times is voiced most definitely in a literature of acquiescence, of reflection, and quiet. There is nothing new under the sun, and there has never been an age since the beginning of writing that has not produced books of this same order, but never before have such books been so numerous, so widely read, so influential. It could almost seem as if the battle, the noise, the greed, the haste, the competition, were justified by the beauty of the body of admonition they have called forth.

Earlier in the century the tone of *creance* was entirely different; rebuke was more petulant and vehement and less hopeful. One has but to compare the utterances of CHARLES and BENJAMIN with those of MATTHEW LYNCH, BENSON, WAINWRIGHT, E. MICHAEL, FAIRBANKS, and the writer of *The Modern Mystic's Way*, to note the introduction of patience and hopefulness in the counsels of perfection. The new tone is not that of the patronizing master, as of one who should say, "I, hallo, have conquered life—listen while I explain it all, and learn of me how to act your part!" It is rather an admission of the solidarity of life, of the unity of

souls. The writers no longer reach down to us from a height of perfection to teach us, but they say, "I am even as you; share with me all I have seen"; but if by chance they voice the truest spirit of the age, they say, "I see you; let us acknowledge this, and share our consciousness."

"All men, even the saints," says a modern mystic, "are interested in their own affairs; so the right and wrong of it (human relations) come to be matters of the scope of self, the reach of self, the depth and breadth and height of self's affairs. Which one is neighbor to him that fell among thieves? I have grown to be neighbor and to have the neighborly heart towards him only over whom I have learned to stretch my shield of ownership, and to make real and living for me with the warmth of interest. I feel in that which I call mine; to other men I am cold: they are theirs and somebody's, they are not mine." It is the spirit of our age to feel that neighborliness must stretch as far as the whole girth of the world, and that all mankind is not only mine but we.

WHITMAN perhaps carried this feeling farther than any other, and with him it was less, too, an intellectual conviction than an innate perception. He felt it, with strange, mysterious thrills he felt his bondage to all men—in men past and men to be:

"It avails not, neither time nor place—distance avails not,—
I am with you, you men and women of a generation or ever
so many generations hence;
I project myself—also I return—I am with you, and know how
it is.

"I too, felt the curious, abrupt questionings stir within me."

That seems to be the human discovery beginning to voice itself here and there in the latter half of the nineteenth century, and singing itself aloud from a strange choir in the new century in many antiphonal chants of whole and rich and varied beauty, the song of the identity of human experience, the solidarity of the human soul—singing that the whole illusion of separateness is pain, and that until virtue is nature we must suffer, not in the least because some one outside or beyond us inflicts suffering, but because our own thought inflicts suffering.

There is another ante, too, constantly sounding through these representative books of quiet—the note of the love of all creation. One notices easily how in the nineteenth century there sounded a new and a more thrilling note in the feeling about nature. There was an impassioned undertone in WATSON'S contemplation, in BYRON'S escape from men to nature, in SHILLER'S complete absorption in natural things, and that note has gained in strength and fervor and volume. Never before has the loving observation of and rejoicing in nature so pervaded the whole of literature, prose, and poetry. MACLELLAN is writing of the individuality of flowers, quite as if he were writing of the faces of his friends; Mr. A. C. BENSON'S *Treasures of Gold* treats of that bit of light that runs through life, shooting up here and there some point of exquisite beauty, "that seems by a lifted horizon to set the spirit free for a moment," and it is C. E. who sings of how the fresh, young years brought him back to acquiescence:

"I begin through the grass once again to be bound to the Lord.
I can see through a haze that has faded, the face full of rest
Of the earth, of the mother, my heart with her heart in accord.
As I lie mid the cool green tresses that mantle her breast,
I begin with the grass once again to be bound to the Lord."

Even the new philosophy of pragmatism (if it is not too childish to label as "new" any form of human consciousness) seems to be clearing the ground of littered obstructions, so that one may decide more what sensations and what perceptions are valid and conduce to their best moments, but whether they willfully cooperate with those or not, yet surely out of the immensity of life as it flows towards us, each one creates his personal world, its breadth, its depth, its vision, and control it for better or worse to the sum of human consciousness.

Personal and Pertinent

Now that Professor MATTHEW of Cambridge, England, is dead, the palm for scholarship in the history of medieval England comes over to this country. This may possibly console us for the sadness in which, no doubt, the nation is plunged by the news that a Canadian Rhodes scholar has distanced all his fellows from the United States, who, however, come out fairly well intellectually when their devotion to athletics is considered. Professor TIMMS, of Harvard, is now unquestionably the authority on medieval history, especially on the history of the papals. He was born in Troy, and was graduated at Williams College. Then he went abroad, studied, and hoped for a teaching job. Hope began to fail him. One day ELLEN PERCY, who was a classmate of his, found him deliriously himself with some dusty volumes in the British Museum, and to PERCY, GIBBS confessed that if he did not get his hoped-for job in a couple of months, he would have to go back in Troy and degrade himself by making money. But Harvard wanted him, and now he is a professor and an LL.D. As

a culmination of his glory, other scholars believe that he is worthy of his doctorate.

WILLIAM ALGER SMITH, who is to succeed Mr. ALGER as Senator from Michigan, is an interesting figure. He began his active life in Grand Rapids, Michigan, as the boy that swept out the law office of which he is now the head. He is a prosperous and indefatigable lawyer, and while he represents his State and his district in that loyal and faithful way that limits the usefulness of a good many American Representatives and Senators, he is not so bound to the traditions of servility that make miserable, and sometimes pitiful, the lives of inferior men who are in public life because their constituents do not want, or cannot get, better men. Mr. SMITH did not like the out-fitting bills that came before the House of Representatives with so much pressure behind them; but he voted for the first one because his private interests were the other way: he was a shareholder and a director in a railroad company. It may not seem much of a reason to some people, but it satisfied "SAM" McCALL, of Massachusetts, who is Mr. SMITH's best friend in the House of Representatives, the two families sustaining interlocking relations. McCALL spoke and voted against the scheme, having disposed of all holdings of railroad property that might have embarrassed him.

MONCURE D. CONWAY, whose *Wise Men of the East* is now receiving treatment at the hands of the reviewers, is the present figure among our literary men whose voluble reminiscences please the younger generations of the uninformed. He delights them, among other entertainment, with stories of LINCOLN. Some of these stories indicate how pettiferous good men—like the abolitionists—could be when, as LINCOLN used to say, they undertook to "run" his administration. It is so much easier to "run" a machine if you haven't got to ride with it to its doom after you have pulled the lever. Conway, as editor of the *Commonwealth*, used to go with the abolitionist delegates to Washington to urge upon LINCOLN to make war upon slavery. Just before the issuing of the famous proclamation, a delegation of this kind all around the President in the usual solemn circle, demanding emancipation. They must have been unusually offensive, for LINCOLN felt himself most comfortable when he ignored the riders and confined his conversation to the young CONWAY. So, having met and disposed of all their arguments in favor of immediate emancipation, he said to CONWAY that he had been reminded of a "little story." At this time serious, that is to say humorous, people used to be shocked by any of LINCOLN'S "little stories," before he told them. The rider abolitionists probably went over to the mantelpiece to look at the French clock. LINCOLN, thus relieved, told CONWAY that once a sinful farmer down in Maine asked a druggist of that Prohibition State to put some whiskey in his soda-water. The druggist, looking around, probably, and catching a glimpse of a peering constable, said, virtuously, that the law forbade him. Upon this the farmer prone to drink whispered, "Can't suttin' git in unbeknownst to ye?" "And such a feller," said LINCOLN, "may happen to one of my proclamations."

EDWARD H. STRAUSS, LL.D., is a modest man whom few know, and who is liked by as many as know him. He is one of those rare Americans who would be more famous, if he advertised himself, than most of those who proclaim and are proclaimed. He is the real King of Siam. STRAUSS was graduated at Harvard some thirty years ago, and pronounced on the stage of Saunders' Theatre a Latin oration which WILLIAM EVERETT said was the only Latin oration he ever heard applauded. He studied law, but he practiced diplomacy. For a number of years, a greater number than used to be given to American diplomats, he was secretary of legation at Madrid, and he held up the hands of Dr. CYRUS and PEARL BURNETT, who were ministers. He was an adept in the Romance languages, in civil law, and in the arts of diplomacy. When CLEVELAND came in, STRAUSS, whose Democracy is Charles-tonian, wanted to be a minister in South America. His Spanish experiences and successes should have given him the post at once. Finally, after a turn at the office of Third Assistant Secretary of State he was sent as minister to Ecuador and promoted to Chile. When the Republicans entered they did not want STRAUSS, so Chile made him one of its arbitrators with Bolivia. After a while Harvard made him professor of international law. The King of Siam, all this time, had an English expert to advise him about treaties, general diplomacy, and domestic affairs. He died, and the King asked for an American. STRAUSS was appointed, and he is in effect king. Among other things, he has abolished slavery. Last winter he started home for a vacation, but he was stung by a poisonous insect in Egypt, and has since been at death's door. Harvard gave him an LL.D. last summer, STRAUSS sitting on the platform as an iron wicket to receive it. The other day he started back for his three old partly cured. Although so few know him or about him, his diplomatic career has been for more important and more brilliant than that of any living American; but the United States cannot have his services, because he is a Democrat, and a conservative Democrat at that.

Correspondence

MAGIC IN POETRY

New York, January 5, 1907.

To the Editor of Harper's Weekly:

SIR.—Mr. Kipling, in an address last year which attracted widespread and continued attention, said that there were only five passages of sheer magic in English poetry; and that four of them were found in Keats. But he did not quote any of these passages. By "magic," I take it that Mr. Kipling meant the production by the poet, in a few words, of pictures and impressions so vivid, vivid, powerful, and unforgettable that one, no matter how often he may read it, never pauses to analyze the passage, or to pick out a meaning here and there, this being in fact poetical genius in its highest form.

I should like to quote the five passages in English poetry which seem to me to contain the most of sheer magic, taking the word English in its widest sense, because one American is included in the list. I speak merely as one of the "million-footed," and ask you what you think of the quotations, ranking them in merit in the order named, as follows:

Perhaps the softest song that found a path
Through the sad heart of Death, when sick for home,
She stood in tears amid the alien corn;
The same that ofttime hath
Charm'd magic casements opening on the foam
Of perilous seas, in fary lands forlorn.
—Keats' "Ode to a Nightingale."

I saw pale kings and princes too,
Pale warriors, death-pale were they all;
They cried: La Belle Dame Sans Merci
Hath thee in thrall,
—Keats' "La Belle Dame Sans Merci."

The sun's rim dips; the stars rush out;
At one stride comes the dark;
With far-loud whisper o'er the sea
Lifts the specter-haunt.
—Coleridge's "Rime of the Ancient Mariner."

On desperate sea long woe to roam,
The hyacinth hair, the classic face,
The Naiad airs have brought me home
To the glory that was Greece,
And the grandeur that was Rome.
—Pope's "To Helen."

Round the cape of a sudden came the sea,
And the sun looked over the mountain rim,
And straight was a path of gold for him
And the need of a world of men for me.
—Browning's "Parting at Morning."

It may be noted that four of them contain allusions to the sea, the greatest of the earth's physical manifestations.
I am, sir,

JOSEPH A. ALTSCHULER.

[Our recollection is that Mr. Kipling's allusion to the magic verses is in the story called "Wireless," and that he there quoted the two last lines of our correspondent's first quotation from Keats.—EDITOR.]

ANOTHER OPENING FOR COLONEL ROOSEVELT

December 31, 1906.

To the Editor of Harper's Weekly:

SIR.—We from far away watch the progress of affairs in the States with a good deal of interest; but, naturally, affairs close at hand bulk larger in our vision. So, when we rejoice in President Roosevelt as a champion of peace, of honesty, and of activity, we rejoice more in the fact that his tenure of office has been marked by a more vigorous foreign policy. The payment of an indemnity many years overdue, the granting of privileges to American institutions in Turkey equal to those granted to others, and the raising of the States' Legation to the dignity and power of an embassy, are a welcome change from the careless and ignorant policy pursued heretofore, which for many years made "Amerrikah" a byword in Turkey. American missionaries abused, even expelled, and American property destroyed without an effective word of protest from the country of which they were so proud—this was a severe test of loyalty.

But it is not only for the American citizens in Turkey, but also for the sake of this terror-ridden land that we welcome President Roosevelt's activity and fearlessness, hoping that of the many waves of reform which his energy creates, at least a faint one may make itself felt here.

The jealousy with which the Christian powers of Europe regard each other makes it difficult for any one of them to interfere in this settling pot of misdeeds. Even if Great Britain were willing to interfere in Turkey, as the States did in Cuba, with no thought of gain or aggrandizement, but only for the sake of reform, the other nations of Europe would not trust her disinterestedness, but would rather oppose her with a view to preserving the balance of power. In addition to this there are many points of international relationship and etiquette which make it an extremely delicate question

for Great Britain or her Ambassador to interfere in any matters but such as directly concern British interests.

The United States finds herself freer in these respects. Her interference in Turkish affairs would be looked on with less suspicion by others. Also, as a younger nation and as one whose relations with European politics have been very slight, international etiquette would make fewer demands. And she could always count on the moral and, if necessary, practical support of Great Britain and her sympathizers in all measures that would tend to solve the Eastern problem, and so wipe out a blot on the page of Christian history.

May we, therefore, entertain the hope that at the expiration of his term of office as President, Theodore Roosevelt may be sent as United States Ambassador to Constantinople, where by his tact and his energy he might not only improve the status of American citizens in Turkey, but might also serve the interests of humanity?

I am, sir,

A RESIDENT OF TURKEY.

STUDY JAMES WILSON

PHILADELPHIA, January 5, 1907.

To the Editor of Harper's Weekly:

SIR.—I am much interested to see by your issue of January 5, in the editorial paragraph beginning "There is one point which Mr. Root neglected to mention," that you have grasped the fact that James Wilson, great Nationalist though he was, stood like a rock in the Constitutional struggle against Hamilton and all who would do away with the State governments. While I feel sure the writer of that editorial has made a study of Wilson, allow me to urge a careful study of his teachings by you and your force of writers, for through your pages you wield a tremendous influence on the public, and we, as a people, are drifting very rapidly into a condition which will necessitate our harking back to first principles and studying them as did the men one hundred years ago. You will find that James Wilson was a true Democrat then Jefferson, and a better Federalist than Hamilton, for he founded his whole theory of government on the people—absolutely and irrevocably—and was both an ardent States-right man and an uncompromising Nationalist, all of which represents not inconsistency, but a broad comprehensive grasp of fundamental principles and a deeper and broader grasp than any other man of Wilson's day possessed. He was not, as scurrilous as Hamilton, but he was equally as brilliant and far more profound—compared with Wilson, Hamilton was a puffy in the science of government; even Hamilton's great report of February 23, 1791, on the constitutionality of the bill for establishing a national bank, was based on Wilson's luminous argument in 1788 on the power of the Congress to incorporate the Bank of North America, and I doubt not but that the historians of the future will find evidence among the Hamilton and Wilson manuscripts to prove even a closer connection on the part of Wilson with that report. I have already found a manuscript copy of that report among Wilson's papers.

I am, sir,

LUTHER H. ALEXANDER.

NOT "DISHONORABLY DISCHARGED"

NEWLY, OREG., January 10, 1907.

To the Editor of Harper's Weekly:

SIR.—In your issue of HARPER'S WEEKLY for January 12, the front page is occupied by a cartoon representing a negro sergeant holding in his hands a paper on which is inscribed (upside down to the reader) the words "Discharged without honor from the Armies of the United States." So far so good. On the bottom of the page in large characters appears the legend, "Dishonorably Discharged."

For years HARPER'S WEEKLY has been a journal of civilization, and its words have been the conscience of a nation. Never in all that time has it displayed any marked unfairness. But you are aware that the soldiers were not dishonorably discharged, and your standard of education forbids your magazine to plead the crass ignorance of the civilian on military matters. Without entering into the merits of the case, it is no more than fair for your publication to retract the phrase so suggestive of either gross ignorance or petty bias, that HARPER'S WEEKLY may stand clear before the people as a fair magazine. I have had the honor to serve my country over a period of years as a soldier, and the army itself would not relish your cartoon, unless it has changed greatly since my day. In fair exact handling of this peculiar question you will find perhaps sympathy with your views; but it is late in the day of the day for HARPER'S to contravene so important an injunction against our Chief Magistrate.

I am, sir,

WALTER S. MACAULAY.

Military Instructor, O. S. and S. D. House.

[Our correspondent is justified in calling attention to the legend under the cartoon in the issue of January 12. It should have read, not "Dishonorably Discharged," but "Discharged without Honor." The mistake was an oversight, and by no means intended as a "somewhat harsh" jab against our Chief Magistrate. The army regulations say, "A dishonorable discharge from the service is a complete expulsion from the army, and covers all unexcused delinquencies." "Discharge without honor" is a milder expression of disapprobation. But either of these forms of discharge acts, as we understand it, as a bar to reenlistment.—EDITOR.]

THE KID-GLOVED GOLD-FIELDS

A MINING REGION DE LUXE, WHERE MILLIONAIRES ABOUND
AND NEWSPAPERS ARE PRINTED WITH GOLD INK

By BARTON W. CURRIE

THE tenderfoot will seek in vain the thrills of story and drama in the Nevada desert.

There comes no longer any border-land of civilization. The realist hunting for ideas and color must fare far and wide from even the jumping-off place in the new gold country, where scores of booming and boom communities have mushroomed forth upon the sand-plate and hitherto untrodden alkali within the past instant.

The awakening is rude. Disillusioned crowd upon one another's heels from the moment of your arrival. As far as the railroads are concerned you have reached the Ultima Thule. Southward there is a vast unpopulated waste—unpeopled if you put out of the reckoning the widely scattered little shacktowns where the gold-hunters are digging with a fair frenzy for the ore Nature locked deep in subterranean dikes of rock below the sunbaked, naked, unwatered desert.

The imagination draws vivid—home-land—pictures while you ride a day and half the aught beyond the benign pale of growing things. There is imagination in this rugged scenery where age-brush must struggle desperately to exist in sparse and vagrant clumps, where the clayey wastes (the word is of Western coinage) look rabbit and gopher can find no sustenance, and where no insect breeds in the poisoned dust.

Therefore it is abruptly disconcerting to descend from a weather-beaten Pullman (only the very derelict of has-been-palace cars are permitted to roll over the desert) into the dazzling glare of electric lamps to find the vibrant with the livery and snout and market of motels, and to find the station thronged with chauffeurs in leather livery and hungry-eyed cabmen. This aspect of the latter-day world's advance is a keen disappointment.

Why did you ever read that article and the other literatures who wrote of dismal little camps where men with picks toiled wearily at the gold-digging?

There was spice in romancing it then. There was romance, there was danger. Enthusiasm boiled vent in shavings up. The whiskey would burn a hole through a horse-hide boot. Treasure was carried in belts. Men slept with rifles in their hands and shot prowling wolves at the tent-flaps. A human wolf showed his teeth only once and then hit the dust. Revolver hilts and gun butts were notched. The tenderfoot danced the artillery quickstep. If tempests he was made to drink fuel-oil while the muzzle of a villainous weapon tickled his ear.

Where—where? Those were the days.

But now! Shades of the Party-aimers! In the modern gold quest you must have a veritable city for an outfit; no electrified, telephone-connected town, complete from bath-tub to touring-car—a portable city that can be rushed up overnight. And you must transport your city hundreds of miles over the alkali desert and set it down where the stunted Joshua-tree with its deformed tentacles has stood lonely vigil for centuries. Then you may dig amid congenial and resourceful surroundings.

Lament, oh tender stranger from the highly civilized Eastern States! The days of the storied Bad Lands are over.

"Any gun-fighters left?" is the lonesome query of the literary miner. "Our circulation demands something short and full of action."

Yes, indeed. More than several survive both here in Nevada and in California. There are gun-fights, too, which are very short and full of action. So there are occasionally on Broadway, often on the Bowery, and now and then in domestic Harlem, Nevada has no monopoly. But there are no fancy policemen, and the camp daily makes only a paragraph of them, tucked away under an ad. which reads something like this (this was in actual advertisement printed in the Goldfield News last September):

"Wanted, a piano-player. Must be good dish-washer. Last performer had a mean temper and quit very suddenly. Apply—Glad Hand Saloon."

There is a little color in the life left, but its rugged mantle of picturesque has been taken off.

What of the pioneer of this hopeless country? Surely, you conjecture, he must be picturesque to have ventured so far and remained, lodged in by mighty silence. Recall him!

The big man in white flannel, pearl-colored felt hat, glistening canvas shoes, groomed to the minute in every detail, chuckled under his luxuriant mustache.

"There blows a pioneer," laughed this modern Nevada. He waved a glove at a big French car that slid noiselessly by over the granite-hard trail that served for the main thoroughfare of the camp.

"That a pioneer!" I could not choke down my disgust. Above in the cavernous depths of the townhouse sat a young man as prettily groomed as a fashion-plate. He was immaculate and spoke in good taste, except for the glint of his fangs, which was a little out-of-pocket. His Panama might have been late, but down here (you fall into the habit of saying "down here" in spite of the 6000-foot altitude) it seemed distressingly de pioneer.

He looked utterly bored. You could see that the set of his features was studied. He considered it good form.

"Sort of a duke of the desert," I groaned.

"Killed a man yesterday," announced my companion shortly, by way of supplying a sensational antithesis. I couldn't I brightened at this. Possibly here was an Alkali Ike or a Diamond-feld-lack in a new make-up. Of course he had been whisked away in his car just as my interest rose up on its hind legs.

"Got the drop on his man, eh?" I ventured with affected unconcern.

"No," was the drawing rejoinder. "Not quite that. You see—at least it was rolled out to me in this shape, though I suppose the truth was tortured so it was passed along—the gun went off by accident. He carried a couple of those sawed-off 44's, about eight pounds of Mr. Colt's best blue steel product, in the tool-kit of his machine. In rummaging for his wrench a trigger became involved. A cartridge exploded and the ball hit Wong in the neck. Wong was the club cook and, unhappily, he was standing at the kitchen window. Disgracefully insignificant, as he was truly a celestial performer, and we were to have had one of his famous duck dinners that evening. However—" and he lazily drew forth a gold cigarette-case studded with diamonds.

"Pretty tough on Wong, too," I remarked as I accepted a moss-green Turkish. I felt glum indeed. There was not even a waft of straw of the romantic to snatch at. For a people so completely out of the world and with the Nevada laws so loose and inert, conditions seemed hopelessly commonplace.

It was difficult at first to get a proper focus for these Nevada folk. As my field of observation cleared, thoughts I discovered that there were singular features in their lives; that the country did furnish occasional thrills; that there were tragedies and scandals that would delight the heart of the most ardent city editor.

Libraries of "copy" have been written all about Western gun-fighters and Bad Men who led dangerous lives. The newspapers have brought the action down to date in the new gold-fields, but the stories have not received the brush of true color. Scarcely if newspaper fact and magazine fiction possessed even remote elements of realism these pioneers of the desert should be swaggering about with gun and whip, bawling and howling by the very terms of their reputation.

And they are there—these Bad Men. The tenderfoot meets them. But the stage business is colorless. There is the Glad Hand Saloon, with its bullet-scarred door; the Palace; the Gratitude; the Three Wheels, where you may hear the senseless music of clinking gold throughout the day and night of the year's full spate. Only the harden observe the Sabbath. They have a union and are small capitalists. They shave with significant posture and your pit does not budge. You can save a small fortune by growing a beard.

To return to the Bad Men. The impulsive, color-hunting tenderfoot will not find them behind the glittering signs. They are members of the Mine Owners Association. They rendezvous in clubs, where they chat about one-thousand-foot levels, black-out ore, high grading. Their gossip is all golden, but all their gold does not come from the mines. They own the gambling-halls and resorts that are conventionally taboos in the clubs. You will find them loitering in great leather chairs at the club, and you will find the club is a dignified three-story stone building—a light-gray stone worth more down there than some of the ore dug from the mines. They think nothing of putting \$50,000 in a little structure of this sort.

You may not know these Bad Men of Nevada by their clothes. The expensive tailors of Los Angeles and San Francisco have their representatives in every camp. You will find more well-dressed men there than in any neighborhood of the same size in the world. Moreover many of these well-dressed adventurers are college bred.

A particularly well-groomed young man I met on the train, and recognized at once as a hero of the Eastern gridiron of a decade ago, led me to the Montezuma Club immediately I had found lodgings in an unscrupled room with paper walls. He was vastly enthusiastic about the place and the people and the mines. He had me by the arm and swept me along the crowded street where groups of men stood gossiping on the wooden sidewalks. Every few steps he saluted some friend, caught him by the arm and introduced me.

"This is Mr. Jones, owner of the Red Star," or, "This is Mrs. Smith, one of our engineers." "I want you to meet Mr. Brown. He heated the Hildad Puss." "There is Mr. Green, agent for Senator Doe." "Here comes Mr. White, who represents Senator Ee."

There were dozens of these thoroughly city-looking men in the club, reading papers, sipping cocktails, and discussing the latest strike of ore in a neighboring camp. One and all treated the tenderfoot with deferential courtesy and polished hospitality.

"I have seen a gun in the palm of my hand," he certainly looks like a kid-gloved community of Bad Men, if you have any such left in what I supposed was a high-pressure corner of the world."

"My dear chap," spoke up a young Englishman, so creased and (Continued on page 136.)

The Lewandowski Model for the Kosciuszko Statue, selected by a Jury of Art Experts, which President Roosevelt rejects

The President's Preference—the Model for the Kosciuszko Memorial submitted by a Sculptor of Lemberg, Austria

PRESIDENT ROOSEVELT AS AN ART CRITIC

A STATUE IN MEMORY OF THE POLISH PATRIOT KOSCIUSKO IS TO BE ERECTED BY THE UNITED STATES GOVERNMENT IN LAFAYETTE SQUARE, IN FRONT OF THE WHITE HOUSE, WASHINGTON, AND A JURY OF ART EXPERTS HAD DECIDED THAT, OF VARIOUS MODELS SUBMITTED IN COMPETITION, THE BEST WAS THAT OF MR. ST. B. LEWANDOWSKI, OF VIENNA. PRESIDENT ROOSEVELT HAS DEPARTED FROM THE VERDICT OF THE COMMITTEE, SEVERELY CRITICISING MR. LEWANDOWSKI'S DESIGN, AND DECLARING HIS PREFERENCE FOR ONE SUBMITTED BY A SCULPTOR OF LEMBERG, AUSTRIA, WHO HEDDED TO SEND HIS NAME. THE GOVERNMENT JURY OF AWARD WHICH WILL HAVE THE FINAL DETERMINATION IN THE CONTEST CONSISTS OF SECRETARY TAFT, SENATOR WETMORE OF BRIDGE PLANK, AND REPRESENTATIVE MCCLARY OF MINNESOTA.

WHEN THE MINISTRY WAS ORDERED TO THE FRONT

AN AMUSING AND UNPARALLELED INCIDENT IN AMERICAN HISTORY AND THE PART A METHODIST MINISTER HAD IN THE REPEAL OF A LAW

By J. R. TAYLOR

THE possibility that the young Freshmen preparing for the priesthood may be "called to the colors" is not the least interesting feature of the struggle between government and church now going on in France. Americans are apt to regard such a thing as unthinkable in this country, where the peaceful ministrs of all denominations are known and respected. They will, therefore, be incredulous when told that the very thing has happened in those United States that is one of the sovereign commonwealths of the American Union, by the express act of the Legislature, priest, parson, evangelist, men of every holy calling, were hidden to enroll themselves in the forces which that State was sending to the front. How this happened, and how the forced service was averted, constitutes an interesting story, which even the dark disasters of the time cannot rob of a certain humorous aspect.

The thing was done and undone in Mississippi. The last years of the civil war had come, and with them the realization that the demand of the Confederacy for men was considerably larger than the reliable supply. In fact, men were getting to be something of a rarity away from the ramps in certain States. They were nearly all with Lee and the other Confederate commanders, who were leading a hope growing more and more forlorn. The proposal to enlist negro regiments had been discussed, but its wisdom as a policy had been generally denied. It is true there were many of them along with the armies at that time, but they were there in the capacity of servants, rendering the personal services to which so many of the ragged troops had been accustomed at home. Still, men had to be got somewhere. Not only the "seed-corn of the Confederacy" must be ground if the South, broken in two by the capture of Vicksburg and the occupation of Memphis, was to continue to make head against the superior and encouraged forces of the North, but all stray labor and older grains must also be utilized. Conscription, a conscription which would take the section from one end to the other, was evidently the only resource. A bounty was naturally out of the question. The depreciation of the Confederate currency, which made a pair of boots cost several hundred dollars, shut off all hope in that direction. Neither the Confederate nor State governments had anything of material value to offer. Under these circumstances, Mississippi, sitting through its Legislature, turned itself in the task of helping to fill the thinning ranks of the Southern armies. For some time the Legislature had not been permitted to enjoy the quiet conducive to high meditation or brilliant and sound

pleasure the legislators, probably because of unsettled conditions. So it left that place, and in February, 1864, met at Macon, a town in the eastern part of the State, on the Mobile and Ohio Railroad. At Columbus it had used the court house and the Christian Church as its legislative buildings. At Macon it was decided, after some deliberation, to occupy a female school. So it met in the old "Cal-

Mississippi's old State Capitol at Jackson from which the Legislature moved temporarily

hous Institute" for young ladies, and proceeded to solve the momentous problem of how to procure soldiers for the cause.

The solution, as intimated, was very simple. It consisted in nothing more nor less than the passage of a law which would call nearly everybody to the colors except the infants in the cradles and the women and young girls at the spinning-wheels. Section, according to those who have the knowledge that permits of a just comparison, has no all-embracing piece of legislation of that character gone through a law-making body in time of war. The age limit was raised to a point unknown before. Every man, no matter what his occupation, was hidden to join the army and impliedly threatened with being hunted down and conscripted in true military fashion if he failed to obey the summons. No exceptions seem to have been made except for absolute physical disability. Exemption on professional grounds there was none. The merchant, the farmer, the lawyer, and, last of all, the Catholic priest and the Protestant minister were all included within the terms of the act. War showed itself in all its exactness, and the State was preparing to pay the full price. She had given much; she was taking steps to give all, to throw the remnants of her male population into the breach.

But before the measure went to the Governor for his signature, while it was yet in the hands of the enrolling clerks of the Senate, who were preparing to copy it in a bold, round hand, an extraordinary thing happened. One morning the representatives had convened in a large chamber formerly used for a recreation-room, but now appropriated to more august uses. The speaker had rapped for order, and order had come. Glancing a curious eye over the assembly, he observed a solemn-looking gentleman in black in the rear of the hall. It was Mr. Harmon, a Methodist minister. He was tall, he was stern, and there was an air of suppressed indignation about him that gave warning to those near that he was laboring under a strong necessity for speech. Being some distance away, the speaker did not note the latter circumstance. He merely saw a minister whom he knew by sight and reputation. So he assumed a polite parliamentary smile, observed that he saw the House of Representatives was honored by the presence of a minister, and then asked him if he would not obligingly open the proceedings with prayer. Rev. Mr. Harmon complied. He stood up in his place, with a glitter in the eye that one does not usually have when uttering an invocation, and began. It was a prayer that every eye remembered who heard, and that has been pre-

Calhoun Institute, where the Mississippi Legislature met. The only extant picture of the Building

legislation. It had not in Jackson until November, 1863, but at that date a certain General Sherman made things so uncomfortable around the State's capital that it decided to move to Columbus, a city at a considerable distance from the regular seat of government. Then Governor Clarke, the "Governor," as he was called, was inaugurated. But Columbus soon proved to

SEE the Diplomatic Corps
At the Presidential day
How independently they're dressed
In their God-blessed best!
Baron Houn leads the way
In a tennis blazer gay,
And a racket in his right—
Is he not a pleasant sight?
Juncumb's the next in pass—
Dear old Juncumb of Dem Tasse—
With a splendid football suit,
Very chic and very cute,
Leather guard upon his nose,
Sits to cover up his nose;
Chas. protector on each shin,
And a ball of pecker's skin
Underneath his duster arm—
He's a picture full of charm
Next to Juncumb comes Jimmie Bliss—
Jimmie's looking mighty nice—
Baseball cap upon his head,
And a smaller sweater red,
Harvard B just over his nose
Heaving on his hands chest,
Leaning on a standard bat—
He's person mighty neat!
Therefore will smile on him
And he'll call him "Sugar Jim"
Next we see the happy man
Credited from Taboran,
Shod with shining hockey skates
Shining through the sacred gates
In his train, kidshin to skin,
Tobak and lat Dyke
March along with smiling face,
Ready for the three-legged race
That at any time may be
Part of the formality
That prevails when Therefore
Greets the Diplomatic Corps
So they come from jolly Scotland
Navyman strong B
Saxons, Saxons York and Dane
Vassal in this Spain
All in costume for the far

Famed Pelicans Gumbana
All save one! O where is he?
Representing Magoty—
Strange for him whom none can check,
Represented by a "Speck" too—
White, O where is Speck today,
Personal of the arena?
Can it be that he is gone?
Tennis, golfing champion—
Master of the Turkey-head:
Single-sticker of repute;
Hoots loud and Prince of all
Kinds of modern games of ball—
Speck the sprinter, full of dash,
Jai Alai bold and brash—
Only man in all the corps
Who can stick to Therefore,
Kicks him that thick and thin,
Mid the roar and mid the din
Of the policy of sport
At our Democratic Court—
Taking fences, jumping rails,
Putting lions, sniping snails
Riding smooth and riding rough
Calling for the stored stuff—
Like our Speck, so good and gay
Like Sir Mussy sailed away
Nay! it has
For the gates are opened now
In they walk and bow they bow
Looking eagerly the while
For that most delightful smile
Full of love and pride,
Which I'm sure will prove to be
Just a peer in history
Then it is that Speck is seen
Sitting with untrodden knee—
Willful Speck, looking for
us for mighty Son of Bess
Playing parlous on a floor
We're our only Treasurer

Who can wonder, of the bunch
Who have the biggest "hunch"

THE PUBLIC LIBRARY BUILDING WHICH NEW YORK WILL EVENTUALLY POSSESS

SOME DAY, WHEN THE MUNICIPAL AUTHORITIES CEASE STRENGTHENING RED TAPE AROUND THE PATH OF ITS PROGRAM, NEW YORK WILL HAVE A PUBLIC LIBRARY BUILDING WHICH WILL BE SURPASSED IN SIZE ONLY BY THE CONGRESSIONAL LIBRARY IN WASHINGTON. THE COMPLETED NEW YORK PUBLIC LIBRARY WILL COMBINE THE ASTOR, LENOX, AND TILDEN FOUNDATIONS. THE BUILDING, WHICH WILL OCCUPY THE LOT (5000 FEET SQUARE) FRONTING ON FIFTH AVENUE BETWEEN 40TH AND 42D STREETS, WILL MEASURE 470 FEET IN BREADTH AND 390 IN DEPTH. IT WILL BE BUILT OF WHITE MARBLE, WILL ACCOMMODATE THREE AND ONE HALF MILLION VOLUMES, AND WILL COST IN THE NEIGHBORHOOD OF \$10,000,000. IT WAS BUILT IN 1909.

MAKING A BUSINESS PAY

By HENRY HARRISON LEWIS

THESE, in process of development today. In connection with American methods of doing business, a new and most important factor which is generally termed, "systematic business economy." Briefly its attributes are to show how to make a business pay when it did not pay before, pay better when it did pay before; to show how to find leaks in business and how to stop them; to show how to make the best method of doing any business fit that business.

It is estimated that during the past three years fully twenty-seven per cent. of our important commercial enterprises have applied the new factor to their plants and have achieved satisfactory results. It also has been proved that it is possible to reduce operating and manufacturing expenses fully forty per cent. in many cases, and practically an average of twenty-five per cent. in all cases, where professional systematization has been utilized in the reorganization of a plant.

A new profession known as business engineering has taken its place in the ranks of our scientific commercial industries, and it is now possible to have a business suffering from any of the other serious diseases treated by an expert much as a doctor of medicine would treat his human patient. The work of these "business doctors" is extremely interesting, and although their fees are large the results invariably achieved are more than satisfactory.

In systematizing a manufacturing plant, a commercial business, or any one of the numerous branches of industry or commerce, it is necessary to utilize both mechanical appliances and brains. The most vital factor is not the system used, but the men who carry out the system.

Mr. William Van Horn, the man who built the Canadian Pacific Railway when others failed, and who is an active director in a score of important enterprises, said one day:

"Start right. Begin at the top and work down if you desire to systematize your business. If your executive head is incompetent it will do you very little good to have a capable officer. A two-inch leak in a ten thousand gallon tank is more dangerous than the whole bottom knocked out of a water-pail. Before you equip your railway system with block signals be sure you have men capable of working them. It isn't the throttle in the engine cab that runs the train, it's the man behind the throttle."

The executive head and his immediate subordinates might be called the higher personnel in business concerns. As directors of men and leaders in the work they must have a thorough knowledge of human nature and be specialists in organization and execution. It is for them to see that the system as applied to business is carried out in all its broad details.

Further down the scale come to the rank and file, the great mass of employees who are the private soldiers of industry. To the capitalist who invests his money in business enterprises, and to the employer of skilled and unskilled labor, no matter what the volume of his trade, the question of hiring men is of great importance.

In contradistinction with the old slipshod methods we have today, directly evolved through the newer system of business economy, a new type of labor expert whose duty is to seek out, pass upon, and engage the standing army of trade.

He is a thoroughly trained man whose duties are manifold. He employs all labor. All applicants for positions are referred to him. He is the final judge of their length of employment and of their value. Not only does he form the connecting link between employer and employee as regards the hiring of labor, he also acts as the go-between in important questions affecting the welfare of both. It is his duty to keep careful watch upon the men, and if there should happen to be a trace of discontent, the labor expert, through his secret-service system, learns the facts, and either causes the dismissal of the agitators or recommends needed reforms to the employer.

In large establishments requiring the services of a great many men of various trades, the labor expert maintains a regular employment bureau. He works upon a system apparently as methodical and unerring as clockwork. In this age of specialists when one expert mechanic is worth a dozen commonplace workmen, and when manufacturers and business men in general are keen to find and keep desirable specialists, the labor expert of this modern school must be constantly on the alert to discover the best, and, once found, to prevent any other firm from winning such men away. In his work the labor expert must practice economy in the matter of wages. It is more to his credit to secure for his employer good men at average wages than through the paying of bonuses. To do this he must make up especially desirable men satisfied with his work as well as with his pay.

The great manufacturing plants and the most important corporations require in their employ men of almost every trade and profession. It can be understood, therefore, that the system creating the labor expert also created a system for the proper conduct of the labor expert's work. A concrete example will be of interest not only to those connected with the largest concerns, but also to the merchant or manufacturer of comparatively minor importance. The labor expert, when associated with a well-run manufacturing organization maintains with absolute stress the following system of engaging its employees:

In the first place, all records are kept in the form of a card index system. In the office in question there are twenty card-indexes, one for each division of service, such as carpenters, molders, fashers, formers, clerks, salesmen, etc. The cards are of different colors to indicate the proficiency of the man. For instance, if the workman is a carpenter by trade his record is kept upon a white card in the carpenter's cabinet. If he understands painting his name and address and the facts in the case are also entered upon a buff card and filed away in the painter's cabinet.

The cards used are of the medium size, and each contains such printed heads as occupation, name, address, age, married or single, education, nationality, salary or otherwise, and remarks. Under the latter head is given as fully as possible the history of the man, with special emphasis to his ability as a workman and his loyalty to his employers. The records are kept up to date through a system of correspondence, both with the man interested and with those who know him. New men are constantly being discovered through the medium of carefully worded advertisements placed in magazines and in the daily newspaper "want" columns. For instance, the labor expert of the manufacturing trust in question utilizes a regular system of advertising, using the principal newspapers of the country.

The advertisements are worded something as follows:

"Machinists.—Wanted, competent men accustomed to pattern work. Union scale paid. Address by mail only. Department D, Box 3546, General Post office."

On receipt of a reply a printed form is sent to the applicant embodying about all the information desired by the labor expert. When the form is filled out and returned, the applicant is notified that he has been registered, and that it will be to his interest to keep "Department D" informed as to his whereabouts. This system of advertising and indexing is sufficient to keep, at the call of the manufacturing trust, an army of men available practically at a moment's notice. It is apparent that almost any employer can utilize a similar system to advantage. It is merely a question of a greater or lesser amount of advertising, and one labor expert or a board of experts.

Since the existence of the salaried labor expert from the old plan of hiring men through the bureau of each department there has developed an even more systematic form of securing employees. This is the labor expert board. While this board, generally composed of from three to five members who have graduated from the bench or office force, does not deal with the workmen as directly as the individual labor expert, it exercises a similar but a wider influence in the employment of labor and in the protection of employees against the loss of desirable men; and it finds its peculiar duty in the prevention of strikes and annoying labor disturbances. An instance showing the advantage of the board is found in the case of a large American shipbuilding company. Under the old regime the hiring of men was left to the heads of departments under the general supervision of the superintendent. This system, or rather lack of system, resulted in discontent among the men, a noticeable lack of efficiency among the workmen, and a high cost of production. To-day the employees of this company are engaged to a man through a regularly organized board of three labor experts, which has direct charge of the hiring of the working force, and the retention and personal satisfaction of the work and file.

In the use of system as directly applied to the personnel, working by method does not end with the hiring of the man. There added to the pay-roll through the efforts of the labor expert or board of experts, it is necessary that he should prove worthy of his hire. If system has any value at all it should return to the user interest, goodwill or his institution a surplus or a profit. The head of a large manufactory of agricultural machinery, replying to a question asked by a trade colleague, said recently:

"We have a detailed system of handling our employees. First, we use care in the selection of men. And this costs more than the mere statement implies. We look up every man carefully, learn his experience and ability, and then try him out. There is no greater source of loss than working with poor human tools. Second, we put the matter of wage incentive up in the individual workman, by paying by the piece. Every man is working for money, the first necessity is to satisfy him on this point—to show him full returns for increased effort or efficiency."

"Where this system is impracticable, we pay a day wage and hold out the incentive of an increase dependent on the quantity and quality of work he turns out. Under either system we hold out the incentive of promotion to superior men carefully, learn his experience and ability, and then try him out. There is no greater source of loss than working with poor human tools. Second, we put the matter of wage incentive up in the individual workman, by paying by the piece. Every man is working for money, the first necessity is to satisfy him on this point—to show him full returns for increased effort or efficiency."

"We maintain an exact system of reports, showing the output of each man, department, and factory for every hour. In handling this problem, no factor is of greater importance than accurate knowledge. We have a rigid system of inspection of all work; this adds to our knowledge of conditions, shows us—as any other

GULLSEGG

A STORY OF A BAY OF FUNDY BOY

By LESLIE COVERT

DRAWINGS BY E. V. NADHERNY

FROM the time he began to go to school he was called Gullsegg by everybody but his mother and the schoolmaster. It was because of his speckled clothes and freckled round dark face. He was five then, and restless as a magpie. How he hated the wooden-legged schoolmaster, the girls, and the high benches.

Even the tips of his toes would not touch the edge of the tempting knot-hole directly under his own seat. He thought it might fit his left front toe, and wrangled like a coveyed in a frying-pan, while he held by the desk in front to give more length to his limbs.

The boy who shared his bench was under the desk, watching the squirming toes, and chuckling because he did not believe the new boy's legs were as long as his. It was most exciting, but they had forgotten Anna and the schoolmaster. The old man, noticing the suspicious silence of the school, turned suddenly from his maps on the blackboard at the back of the room, and missed Chick Ingalls' head from above the rows of seats. He spoke to him, but got no answer. In spite of his wooden leg he hid from the rear unbraced and commenced to thump the bent back with his crutch. The boy started up with such force that his shoulder and head striking the desk sent it—books, ink-bottle, and Gullsegg—crashing to the floor.

After classes were over for the day, the new boy waited for his seatmate on the corner of old St. Paul's common, and, with the voice of a herald of good news, called in him, "I got it in just afore you spilled us!" To which Chick, running at the front of eighteen or twenty girls and boys, yelled derisively: "Got it in, did ya? Hi! I got sumpin' in for you! I'm agoin' t' lick ya!" and before Gullsegg could decide to run, the screaming boys closed round him.

Gullsegg had not had time to become popular, so the shouting was all for Chick, whose adoring little cousin Josie capered about the inner ring shrieking: "Chick! 'I give ya' a good fair chance—a blame good chance," while the boys from all sides screamed: "Give it to him, Chick, me boy. Ain't he some like a gull's egg, now? Hi! Chick, let's see ya' smash 'im later speckled shells! Wallop him, Chick!" And Chick did wallop him.

That phase of life was new to Gullsegg. When he reached home his mother had returned from a hard day's work at the shore, and was stripping dried codfish for supper.

"You've ben a fight in," she exclaimed, looking at her son with a warm and accusing eye, "an' you bent, an' I'm agoin' t' tell your grand-father!"

Such a climax was too much for the boy. His mother had turned against him!

His little being was flooded with the awful isolation of life. This must be the schooling his mother had talked so much about. He grew white about his mouth and nostrils, and his hands clenched. "I wish I was dead, I do! You're a goin' to tell on me, be ya? Ever'buddy in this whole world don't like me—ever'buddy." His face grew red and puffy as his passion changed to one of self-pity, and he burst into sobs: "I wouldn't tell on you to her you lacked, an' I ain't agoin' t' care if ya don't like me. I shuld think you'd love y' own drowned man's little boy—what's named—after him, he—?" But the woman smothered the last of the sobbing wall against her breast.

By-and-by, when he believed that the world was his mother and she loved him, he ate a round of bread with a strip of "Grand Maman cheese," and was still hungry, so his mother gave him a broken bit of Sunday's gingerbread. Then he cuddled down contentedly against her loving heart and dreamed of how he would always be a little boy, so he could sit on his mother's lap, and how he would learn to fight that Chick boy, and how he would scare those screeching girls, and how—and how—until he fell asleep, while his mother rocked and sang:

There was an' ol' sailorman nam'd Nebel'd-sonner—

(Ri-lo-o-o, hi-li do.)

He was a fartherer from Nova Recker.

(Hi-lo-o-o, hi-lo-o-o.)

Lisbeth Glibben's husband had been drowned while returning from a fishing trip to Grand Maman in one of Fundy's small November gales. That was near the end of the year's herring-catch when if the men got wind of a school in the weeds, no matter how black the night or dense the fog, they drop out in their smacks on the rib-tide. Great kindly fellows! Many a one at night, as his sail fills with the wind and swings his boat round Ingalls' Head, peers back for the last lingering gleam of the harbor house-lights, and often that look is his farewell. If clothed in heavy flannels, thick woollen jersey or jumper, loose overalls, and covered by yellow oilskin, wide seawater fastened under the chin and awkward hip-boots, they are knocked overboard by a swinging boom, or if from a too heavily laden boat capsizing, they are flung into the waiting sea. It is impossible for them to help themselves. Instantly the water fills their boots and sucks them down, while the waves tumble and toss as before and keep their grim secret forever.

No trace of Simon Glibben's boat or its contents was ever found. A few days after its loss his widow gave birth to a son.

The mother had not a penny above what was due the kindly old woman who had nursed and cared for

Drawn by E. V. Nadherny

"You've ben a fight in," she exclaimed, looking at her son with a warm and accusing eye, "an' you bent, an' I'm agoin' t' tell your grandfater!"

her. As soon as she was strong enough, she carried her baby up to the creek and painfully climbed the stairs leading from the beach to her father's loft. There the lonely old man found her when he returned from a sailing trip. As he was glad to have her, he said, gruffly, "I allus told ya, 'Lisbeth, that twaz durned foolishness fer yon t' marry Nim Gildson, an' be'd be up t' some blame thing that 'ud bring ya' no good, an' 't'ow be's up an' done it, an' yon an' that young un are left fer me t' sh' for." But his daughter had no intention of being dependent. The next day she dragged herself heavily to the shore where men and women were toiling night and day, salting, stringing, and smoking herring. She found work amongst the stringers, and there while the season lasted she stowed day by day threading fish's gills with the smoke-browned sticks. The baby at these times she left, well wrapped in shawls, in a shed close by, nestled in a bundle of sails or coil of rope.

Her one ambition was to lay by enough money to enable her to keep little Simson at school. She could not harbor the thought of his following the sea,—that jealous mistress, who gave to them so meagrely, while she robbed them of their best.

The boy's father and his father's father had been drowned, and Lisbeth hoped to save her son, that he, long after she had been

lost an opportunity for sticking out her tongue at him and proudly teasing her curly hair. Little recked Gullberg, and though he did like her hair, sometimes he was tempted almost beyond endurance to throw some live Junebugs in it.

In the boys' opinion, one thing to Gullberg's advantage in comparison with Chick was his easier management of cars. His mother had found it impossible, living on the shore as they did, to keep him from the boats. Nobody knew how or when the boy had learned to row. It seemed equally as true an instinct as that of gulls to swim. In the soft warm days of the mep tides he grew to hate adding and lirkome spelling in that close little school-room.

He knew all there was to know, he told his mother, as he swaggered about in a new pair of breeches that were held by knitted braces like a man's.

"Marm," he said—"marm, there's Ram'sies Miller, he's a ground man, an' I know more 'an he does. Jest yesterday he wuz a-tellin' me as how he don't 'bhere in gittin' any more learnin' than you're born with, an'," daggily, shaking his head, "he'd oughter know, 'er he kin lift the heftiest heaviest 'heave o' anyblindy roun' in th' world 'mos', I guess. Anyhow he's a heap smarter'n old Stumpie!"

"Simson Gildson! Don't you ever let me hear you call that

Drawn by L. V. Sullivan

With the coolness of an old tar, Gullberg caught the ring hanging from the end of the punt as he slipped past and fastened it to the painter

laid to rest in a quiet corner of the old burying-ground, might take his father's place beside her. This would be possible, she thought, if he might become a schoolmaster.

Gullberg had other ambitions. Next to a desire to give a knock-out blow, and to manage a sailboat, and to "see all the bugs on the whole island," he barged to loved terror of himself in the mind of every girl he saw. To this end he carried bats and toads in his jumper pocket, and in his school water-bottle, that was deceitfully marked "Soothing Syrup," he imprisoned black bees. Sometimes when lessons were unusually dull he freed a dragon-fly from his penitentiary. He had bred the bright-colored things from the first time he ran away to play in the brook. Two had flashed round and round his head as if they were playing tag. He caught one in his hat and held it carefully while he examined it, then he let it fly again; but at length he caught them both, and took them home in an empty gin-bottle he found beneath the bridge.

His mother was horrified when he showed them to her.

"What be yon a doin' with them devil's dam'nin' seedles?" she gasped, and seized the bottle. "They'll sew up your mouth an' drive your last drop o' blood!" With that she flung his prize from a window into the creek. "You're ten runnin' away, too! I mos' know that if Sim could speak he'd say lick ya—but I ain't a-goin' to. I'm too tickered out."

The schoolmaster separated Chick and Gullberg. He put Chick on the far side of the little dark school-room, just at an easy chewed-ball-throwing distance from Gullberg. When Chick returned a volley of these balls the old man always saw him, and Chick had to stand on a box in the corner, balancing on one foot, while resting on his head was an empty ink-bottle. When it dropped, the schoolmaster smartly wheeled "Chick's bean legs."

"I'll track you to afflict the harshest son of a widow," he roared, adding emphasis to his words with his stick.

It was useless for Lisbeth Gildson's son to try to explain that he was also at fault, or inevitably he and Chick fought it out after school, until the younger boy grew expert and they became fast friends. This friendship irritated dose, Unlike the other girls, she showed no fear of Gullberg and his animals, and never

good old man seeh names no more. What's old Ram'sies Miller, anyways? He can't write his own name, let alone spell it! You git right off t' school, I've a good mind t' lick ya!" but ya grand father says there ain't no more use in lickin' yon than in spittin' in the ocean to swell the tide."

Chick did not go to school regularly during those gentle spring days. He hung about the shores and beaches, and sometimes tramped far down the coast in search for sea birds' eggs.

Often at noon Gullberg found him in an old punt that was pulled up out of the reach of the highest tides, eating the lunch that his aunt had carefully tin-kettled for him to take to school. The two friends always spent the first few minutes in loudly boasting of the coming ship's things and of any new possessions already had evening; then they lagged over snapping eggs for snail's shells and snails impaled on wooden pegs. Sometimes, after Gullberg had run away home for his own lunch or back to school, Chick, drowsy from the strong sea-air and growing too fast, fell sound asleep curled up in the bottom of the old boat.

One day early in May the tide, wringing in under a glorious purple haze, reached its highest-water mark just as the nine-o'clock school-bell clanged the children in for lessons.

Gullberg's grandfather was at the other end of the island, and his mother was to spend the greater part of the day charring at old Doctor Gien's, so she gave the boy a pull of lunch. At twelve, when the other children took their kettles and baskets out on the gravelled yard, he set off down the back road to find his truant-friend. When he neared the creek a strange sight met his gaze. It made him forget lunch and "Chick." The gentle face of the early morning's tide had been a doubtful one. It was now proving that at half-tide. It reared its head, like a snake, far out across the yellow flats, and belasting one moment as if to gather force, it rushed back toward the shore.

The sheds were deserted. Work was slack, and the men comfortably eating their noonday meal at home. Gullberg knew this, and like a flash he thought of the small boats lying along the shore, the tackle, slips, and sheds that would be swamped, and of

(Continued on page 135.)

HOW CHINA IS FOLLOWING JAPAN'S MILITARY LEAD

By CONLY-PINCH

SPECIAL CORRESPONDENTS FOR "HANKEN'S WEEKLY" WITH THE CHINESE ARMY

The Infantry Division of China's Army of the North passing in review across the Country south of Chang-te Fu

TODAY China's soldiers are armed with the best products of German and Japanese skill. They are trained by Japanese officers in the strategy and tactics so efficiently employed against the Russians in China and Manchuria. They are equipped with signal-balloons, wireless telegraphy, and a Red Cross Society. Their officers are graduates of excellent military schools, established in various parts of the Empire, in the facilities of which are to be found a large proportion of German and Japanese instructors. Modern history has but one other example of a nation so thoroughly, so rapidly, and so earnestly renovating an antiquated and useless military system as China. That example is Japan. If China's progress toward military perfection is less rapid than that of her Eastern neighbor the cause of her slowness is to be found in the commercial and unmilitary spirit which has animated China for centuries past, in the vastness of the system which she is reorganizing, and in the disordered state of her government.

China's army is en route to perfection. Will it arrive? Has it won the way? Is the march ahead of too great distance? These are the questions now asked as the result of the second annual maneuvers of the Chinese imperial army, which took place near Chang-te Fu, in the province of Honan. The only answer which can be given at this turn of the century's wheel is: "Shui chih tao, shai chih tao." Who knows? Who knows?

Compared with those of a year or more ago at Hsiao-chien Fu, military critics give the subsequent maneuvers second place. No comparison is made with the maneuvers of modern nations.

To Western countries maneuvers have a far different meaning and purpose. Strategy and skill are demanded. Large unit movements are given an opportunity to handle large bodies of men, not according to programme, but in conformity with the conditions that govern real warfare. The Chinese conception of war maneuvers is radically different from this. Every move of officers and men has been carefully arranged beforehand. Individual ideas would have put in rout the entire army. Originally had no place on the chess. However, as utilized by China, the maneuvers served the purpose of drill, gave opportunity to handle troops under service conditions, and more or less removed the small prejudices against the army which are sure to be entertained by a people who never go beyond the walls of their own cities and villages unless actually compelled to. It established, also, a new code of ethics for the soldier. Before the review was over, the villagers who had fled from their homes in terror upon the reported approach of the troops, returned with all their fear gone. Word was given out that no degradations were being made, that food was being paid for, and that kindness and brutality was to be found in the soldier's heart. Everywhere was this commented upon. So astonished were they all that the old Chinese proverb, "Good iron should not be used to make nails, nor good men to make soldiers," fell into disuse and far from public thought.

As was said by one of the experts, "The maneuvers were good, but not startling. They were more or less of a disappointment. Last year those who came to scoff remained to praise. Enough could not be said in approbation. The press went mad. The Yellow Peril was imminent—at hand, in fact. All Europe was excited. America wondered, and the world at large entertained new ideas of China and her army. This year there was no illusion. Criticism came to criticize, as they thought, a modern army; then realized how unfair they had been. They found that China had not produced a modern army, as Western countries understand the term; that conditions, as found in China, were too great a handicap, that her army, as a homogeneous unit, does not exist; that it is quasi-imperial and subject to the forces of the Empire; and that therefore the present day standard of Western nations cannot be applied."

Other critics look upon China's military failure with enthusiasm. They regard the Chinese who contented as conquerors. He has proved his capability. His discipline is excellent.

"Give me a few thousand of such men," said one attaché, "and I should not be afraid to march from Peking to Canton in the face of any opposition that China at present can produce," while the

opinion of another was that "the Chinese are doing more than was ever expected. They are, no doubt, endeavoring to do very well. It would be unkind to China to compare her army with those of Western nations. Strategists are the product of generations, not of a day. China need not regard her army with any pessimism. Physically, the Chinese soldier is the equal of the best the West can show. Who knows but that a war would develop a Chinese Napoleon?"

When it is remembered that these same soldiers which are now calling forth the admiration of the military critics of ten nations were only yesterday the apesmen of China's antediluvian army, and as such the expression of her anachronistic art, one is able to grasp the progress which China has made toward military regeneration. Less than fifty years ago European forces, invading Chinese soil, were opposed by troops armed with long bamboo poles, wooden shields, and grotesque masks intended to inspire terror in the hearts of the invaders.

The modern Chinese army, the finished product of which, to date, was presented to the critical eye of the world in the recent maneuvers at Chang-te Fu, may be said to have taken its origin from the foreign-drilled Chinese troops commanded by General Frederick T. Ward, and later by General Gordon, at the time of the Taiping Rebellion. To the efforts of General Ward are to be ascribed the weakening of the imperial government to a sense of the inability of the office military organization to cope with the disorders of the Empire, and of the superiority of foreign methods of fighting over those then prevailing in China.

The development of the new army from the "Ever Victorious" forces of Ward has not been steady. The painful lessons which China learned in her war with Japan in 1894-95, and in the international campaign for the relief of the legations in 1900, seem to point to a steadier development in the future.

From the first adoption of foreign arms and foreign methods into the Chinese army has met with opposition on the part of certain Chinese officials. The ranks of the opposition, however, have slowly weakened, until it may be said that to-day the great majority of higher officials no longer look upon the change with disapproval. The two most progressive, as well as the most patriotic, of the provincial viceroys, Yuan Shih-kai and Chang Chih-ting, are among the chief supporters of a new army movement. The forces of the north and of the south, which met at Chang-te Fu, are the direct results of the efforts, respectively, of these two statesmen. Tieh Liang, president of the Board of Revenue and member of the Grand Council, and Tuan Fang, viceroy of the two Kiangs, were also interested in the recent maneuvers. The army reform movement in China is deriving much of its support from an awakening national spirit of toleration and respect for the military. Thanks to this spirit the soldier in China is gradually coming into his own. The Chinese phrase for "society in general" is a compound of the words "sages, husbandmen, artisans, and tradesmen," in which the soldier finds no place. That this phrase has lost its usefulness as a literal expression of Chinese public sentiment is becoming daily more apparent. The Chinese army is no longer regarded solely from the cosmic class. In the rank and file of the forces which met in mimic battle at Chang-te Fu were to be found many members of the literati class. To one acquainted with the inflexibility of Chinese sentiment this is significant, and speaks well for the future possibilities of the army.

At the present time the Chinese reorganized forces are composed principally of the two armies organized and superintended by Yen Shih-k'ai, viceroy of Chihli, and Chang Chih-ting, viceroy of the two Kiang provinces. All of the available men of these two armies were mobilized for the maneuvers. The number engaged is estimated by Chinese authorities at approximately 40,000. The strength of the two armies was practically equal.

The Army of the North was composed of conscripts from the provinces of Chihli and Shantung, while the so-called Army of the South was made up of those from Hupai and Honan. All branches of the service were represented. The Army of the North was composed of three brigades of infantry, one regiment of artil-

Drilling the Field-pieces (of German and Japanese Design) of the Artillery Division of China's Army of the North. The Armies of the North and South together comprise more than 40,000 Men

lery, one regiment of cavalry, and a battalion of pioneers. It was commanded by Lieutenant-General Tuan Hsin Hsueh, commander of the third division and director-general of all military schools in Peking Fu. General Tuan is an officer of wide travel experience, and has studied tactics in both Germany and Japan.

The Army of the South was made up of three brigades of infantry, one regiment and a battery of artillery, one regiment and a squadron of cavalry, and a company and a third of pioneers. Lieutenant-General Chang Piao, who has twice witnessed the Japanese grand manoeuvres, was its commander-in-chief. He is regarded as one of the foremost generals in the Chinese army at the present day. His actual post is commander of the eighth division of the Hupeh provincial army and co-director of Han-yang Arsenal.

The artillery was equipped with 180 field-pieces, of various models and dates. German models, manufactured in China, and Japanese models predominated. The infantry were armed with the Japanese army rifle, XXXI Kuang Hieh, and the southern forces with Mausers, model 1884, manufactured in Hankow. The cavalry were armed with carbines and sabres.

Northern troopers were mounted on Chinese ponies, the southern on Japanese horses. The officers' mounts were divided amongst the English, Australian, Arabian, and French. The use of Japanese horses by the Chinese cavalry was largely in the nature of an experiment. Up to this year the only mounts employed have been the small Chinese ponies, raised in Manchuria and Mongolia. The Chinese pony is unquestionably the superior of the two animals in the matter of hardiness and cheapness of keep, but the Chinese military authorities are divided on the question of size in army animals. Judging from the expressions of opinions which have been made by Chinese officers subsequent upon the manoeuvres, the question would seem to be still unsettled. The consensus of foreign expert opinion is in favor of the retention of the ponies for ordinary mounts.

Each soldier carried, in addition to his rifle, forty-five pounds, distributed among ammunition carried in hamp-belts, bayonet and scabbard, an extra pair of shoes, blanket-roll, canteen, rice-canister, and either a pick, shovel, or hatchet. With less than \$3.50 a month, a part of which is kept by the government for his family, he buys his own ration of rice, dried fish, pork, and cabbage. Occasionally the Chinese soldier treats himself in the army

hardiack which the Japanese have adopted as a part of their army ration. He has adopted the army canteen with great avidity, and while inclined to insobriety, his monthly stipend is not sufficient to allow him to indulge himself to the detriment of the service.

For the recent manoeuvres, a section of hilly country south of Chang-tu Fu was chosen for the scene of the principal operations. The theoretical object of the manoeuvres was to test the ability of the Army of the North to defend the approaches to the capital of the Empire against the approach of the southern forces. Chang-tu Fu is a walled city of about 70,000 population. It lies on the Peking-Hankow Railway, about midway between the two terminal cities. A portion of the scheme of defence consisted in stationing small bodies of men at the various stations along the railroad and patrolling the track by solitary sentinels posted every four hundred yards. Station guards varied in strength from fourteen to fifty men each, a force quite insufficient for safeguarding the line of communication in case of actual hostilities, but large enough to serve as a skeleton formation.

The main body of the Northern Army was mobilized from its outlying stations by train and by foot upon Chang-tu Fu, and was massed among the hills and ravines to the south of the city. The Army of the South was mobilized at Wei-lin and Tangyang, the latter place fifteen miles south of Chang-tu.

The action of the first day of the official manoeuvres was destined to partake largely of the nature of a farce. The programme of the day's manoeuvring described a cavalry skirmish on a bit of level ground to the east of Tangyang. About eleven o'clock the pickets on duty straightened up, rubbed their eyes, and arranged the horizon for the approach of the Viceroy Yuan Shih-k'ai and his train of attendants. A riderless horse came galloping by: then from the west of Tangyang city a long dust-cloud stretched out and up. Another second and the line was filled with life. The northern blue was seen. Officers and men came sweeping across the wide plain just east of the Wu-lin-chow. They followed the road which branched off to the right, and took their positions east of the wall. Another dust-cloud. Out of it is seen the huge red flag of the Viceroy Yuan Shih-k'ai. Men are not discernible.

A small detachment of cavalry rode out to a road skirting the village and beckoned the crowd back. Here and there horsemen came scurrying. The foreign attaches and correspondents, all guests of the Chinese government, were seen galloping hard over the manoeuvre ground. Riding close to the flag on a small black China pony was Yuan Shih-k'ai, followed by T'ieh-liang. These were the imperial commissioners appointed to inspect the manoeuvres. A special guard of 250 soldiers encircled them. Safely across the plain, they took their position and waited. The viceroy's pet regiment of cavalry advanced to meet the enemy, who had been heard firing random volleys since the appearance of the first dust-cloud. The advantage of position lay with the southern troopers. Yuan Shih-k'ai's body-guard moved out to reconnoitre. Straight into the jaws of the enemy they went. Chang Chih-tung's Royal Guards were lying low. They waited their opportunity, then sallied forth, and strong. Volleys after volleys they rained upon their enemy. There was no reply. They found that they had charged into a body of neutrals. The mistake lost them their advantageous position. The northern cavalry massed themselves and charged foot to foot into the disordered ranks of the southern troops. The result was inevitable. The programme for the day had been changed. Confusion, disorder, and retreat for the Southern Army, the laurel wreath for the forces of the north. Yuan Shih-k'ai was joined once more by his battered and frightened body-guard. The cavalry was lined up for inspection. Twelve o'clock, the day's manoeuvring was over.

The Japanese major-general, Matsuyama, the senior observer

Viceroy Yuan Shih-k'ai and his Body-guard reviewing an Evolution of China's modernized Army

officer, and the Japanese attackers were first to reach the tiffin tent which had been pitched near Wu-chia for the refreshment of the guests. Fast on their heels were the various representatives of nine other governments, who were being surrounded by newspaper correspondents. Opinions were given freely. Major-General Matsugawa was questioned, but Major-General Matsugawa was silent.

That night the Southern Army quartered in the vicinity of I Ko Ya, a place not distant from Tsung-ying, and the Northern Army quartered at Chih Pao, five miles south of Chang-tu Fu. At four o'clock the next morning the southern infantry was moving toward Chih Pao. They had discovered the northern camp, and were pushing forward to gain the first advantage. The northerners had not been sleeping. They were reconnoitering as well. It was near Fu Tsan they met. General Tuan Hsin Hsueh took advantage of the topography of the land. He concealed his forces, trails and ravines were in plenty. The Northern Army, in their khaki uniforms, disappeared from sight, while but a few miles distant the southern regiments squatted on their haunches waiting for the word. In the open field, midway between the two lines, a huge yellow balloon was seen floating skyward. It had been sent up about ten o'clock in the morning. This was the first time that the signal-balloon had been utilized by the Chinese army.

The day came on. Suddenly the two armies directly beneath the balloon filled with life. Once more the clever and his guests had come to see another act of the great play that China had prepared for them. Their coming was the signal for the southern commander. A half-hundred horsemen pressed through the crowded road of the small village. They had come to make way once more for China's favorite victory. He was on his way to the field of action. The men on their haunches assumed a look of interest. It was then the word was given. Like lightning they were on their feet, running toward the south and east. Thousands of them were charging toward the Army of the North. In vain they hammered away on Fu, the left wing of the Northern Army along tensely to its post. A long line of southern men were advancing in the face of a dozen guns. They did not realize the battle. The northerners were crafty and full of strategy.

back six miles south of Chang-tu, and had planted their mountain-guns on the heights west of the railway. A mile east of the railway the heavy guns were stationed, while their infantry extended three miles eastward. About half past ten the southern force opened fire upon them. The mountain-guns on the heights were brought into action. All the guns were cannonading. With apparently no respect for the marksmanship of the northerners, the southern forces pressed forward in the very face of the guns. Their centre advanced in such numbers that the northern centre fell back to the north on a line with their mountain pieces. This was no doubt a ruse to mislead the southerners. In a little time it was seen that the southerners had made a mistake. Nevertheless they pressed forward to the northern centre, again not taking precautions to guard against the possibility of the heights. In the distance could be seen the coming to life of the northern soldiers. With fixed bayonets they charged. Like the rush of a whirlwind they came. Sliding, running, and slipping, they crossed the railroad track, straight over the knoll where the attacks and correspondents were congregated. In their mighty rush they completely enveloped the entire Northern Army. Twelve o'clock. The signal-balloon carried up two balls. The day's battle was finished, but no decision regarding it was given out because of the unsatisfactory way in which the movements were carried out on both sides. Again Yuan Shih-kai, the commissioner, was not on the scene of action at the critical moment, and again the guests of the government made for the refreshment-tent. Again they dealt in opinions, but Major-General Matsugawa said no word.

The fourth day was given to reviewing the army by Yuan Shih-kai and T'ieh Liang. The firing of the guns having ceased, the natural curiosity of the villagers gained the mastery over his fear, and as a result thousands of spectators were just beyond the picket-lines. For two hours the army marched in review. Officers and men were resplendent in dress uniforms of blue and gold. Yesterday's combats were forgotten. Across the open field, just outside the walls of Chang-tu Fu, the 180 guns were being wheeled across the green of the winter wheat. The cavalry, with sword at girth, swept by them. Then came the steady tread of the infantry, the band playing energetically the national anthem. Thus

The Red Cross Division of the Army of the North—a Feature of modern Military Organization adopted by China

They pressed their advantage, and succeeded in turning the left flank of the Southern Army just as the signal-balloon, sent up one of the small Paris rubber balls. The day's fight was over, and the victory, with the empire a mile way, was given to the south once more. Again the correspondents and attaches were summoned to tiffin. Major-General Matsugawa was seen within the folds of the tent. Correspondents and attaches exchanged notes. Major-General Matsugawa was again questioned, but, as before, Major-General Matsugawa was silent.

Although the Northern Army had gained a definite victory, they did not follow up the advantage secured by their position. Instead, on the following day, they resumed a defensive movement instead of pushing an offensive one. They had fallen

closed the second grand annual exhibition of the Chinese Imperial army.

While military critics may differ as to the exact amount of credit due to China for her present army organization, they are fairly well agreed that she has not yet an army which can be classed as modern. That China has made a long step toward creating such an army, and that present signs point to the ultimate accomplishment of her object, are points upon which they are equally unanimous. How long it will be before her army can hope to have reached that state of perfection which would enable it to meet European or American troops with any assurance of success, is a question which may be answered only by "Shui chih tso."

WHEN THE SHIPS GO HOME

By ALFRED DAMON RUNYON

I VE seen 'em go from a hundred ports
With th' breath of 'em in their sails,
I've felt th' thrill of th' Homeward Call
As th' wake they leave at their tails.
I've heard th' keene whisperin' Home—
Th' Catch in th' throat I know;
As I've felt th' dart of th' Homing Heart
'(Way back in th' Long Ago!)

A beautiful sight in th' Home Bound boats
With their bellying sails to th' wind;
As 'you hear 'em sigh as they're passin' by
Th' one who stay behind.

Oh, I've seen 'em drift from a hundred ports
As I've felt th' call to go;
But I've let 'em slide with th' ebbin' tide
'(Way back in th' Long Ago!)

As I see 'em go from a hundred ports
I hear th' trees sing "Stay!"
I hear th' note in th' river's throat;
In th' song of th' ocean spray.
Oh, a beautiful sight in th' Home Bound boats,
But we are the ones who know
That our hearts are here since we brought 'em here
'(Way back in th' Long Ago!)

MUSIC AND THE OPERA

STRAUSS' "SALOME"

By LAWRENCE GILMAN

NOW that Richard Strauss' astonishing music-drama "Salome" (based upon the one-act play of Oscar Wilde) has become, in the course of its international preparations, a part of the repertoire of the Metropolitan Opera House, its actual artistic quality becomes a matter of immediate interest in this region of the musical world.

In order to avoid any possible misconceptions, the present appraiser may be permitted to clear the ground by saying that, in the first place, he holds no brief for those who have objected to Strauss' extraordinary score because they truly find it a virtually continuous tissue of dissonances; who reject this most adventurous and unsketched music because its unequalled cacophonies seem to them "choking," or "obnoxious," or "outrageous."

Let it be said at once that the cacophonies of "Salome" are mislabeled, in this quarter, not because they are hideous, but because they are hideous; not because they transcend various long-hallowed traditions of musical rectitude, but because they lack point, vividness, salience, and eloquence—a matter which may be enlarged upon somewhat later in this discussion. In the second place, no objection will be made—though we shall perhaps be alone in this—to the character of the subject-matter which Strauss has chosen for exploitation in his music-drama; that it is a matter for quite separate discussion; since the composer might claim that the first consideration should be for the manner in which he has expressed his theme, such as it is, and in this we are at one with him; any other way lies aesthetic confusion and ineffectuality. What, then, is the quality

The Composer of "Salome"

A RECENT PORTRAIT OF RICHARD STRAUSS

of the music which the incomparable Strauss—Strauss, the most commanding musical personality since Wagner—has conceived as a fit embodiment in tones of the tragic and malevolent and haunting tale of the dancing daughter of Herodias and her part in the career of the prophet John, as recounted—with non-Biblical variations—by Oscar Wilde? We may consider, first, whether or not it achieves the prime requisite of music in its organic relation to a dramatic subject: the enforcing and heightening of the effect of the play. Let us set aside as irrelevant those other matters which, in the case of "Salome," have so absorbed critical attention, and of which we have heard overmuch: its remorseless complexity, its undragging novelty of invention, its superb and miraculous celebration. These are matters of importance, but of secondary importance. The point at issue is, has Strauss, through his music, intensified and italicized the moods and situations of the drama; and, secondly, has he achieved this end through music which is in itself notable and important? For oneself, the response must be, on the whole, a simple negative. There are passages, beyond question, in which the situation created by the dramatist is tellingly, and with remarkable effect, accentuated by the music. There are such passages in the opening scene, where the entrance of Salome is solemnly prepared; in the tumultuous dialogue between the Princess and the Fore-runner—for example, the few vivid measures in E-major, of singular intensity, where the theme expressive of the growing passion of Salome is converted with the gravely simple theme of John; in the scene preliminary to the Dance; but these flashes of power and eloquence are occasional and fugitive—they are tense and gripping passages in a waste of bombast and empty discourse. For one's ultimate impression of this music is of its tragic, its almost superhuman, brutality; for it is surely nothing less than tragic that such brave endeavors, such a mighty and splendid and resourceful storming

of the heights, should end in so desolate a rout. Never was music so avid in its search for the eloquent word. We are amazed at the ingenuity, the audacity, the resourcefulness, of the expressional apparatus that is cumulatively reared in this unprecedented score. Cacophony is heaped upon cacophony; the alphabet of music is ransacked for new and untried combinations of tone; never were effects so elaborate, so cunning, so feebly contrived, offered to the ears of men since the voice of music was heard in its pristine estate. This score, in its latent, challenges the music of the days that shall follow after it, for it foreshadows an expressional vehicle of unimagined possibilities. But they are still, so far as Strauss and the present are concerned, possibilities. The music of "Salome" is a towering and pathetic monument to the helplessness of endeavor without impulse. At point after point this music misfires. Its unexampled cacophonies, its elaborate and heaven-storming dissonances, are, for the most part, so empty, so rhetorically futile, so barren of eloquence, that one ends by classing them in one's mind among the platitudes of music—a disquieting issue, surely! The thing, to put it shortly, is abortive: the anticipated event, so elaborately prepared for, fails to occur. One is not enthralled or engrossed or perplexed or shocked; one is, on the contrary, dispirited, even, at times, bored—the means intended are so feeble, the resultant eloquence so evanescent, so occasional. The speaker declines and expatiates, he is rhetorically portentous, he is inextinguishable in gesture, he has at his command every resource, every ingenuity, every persuasion; yet we sit back in our chairs, immensely admiring, yet quite contained, quite coolly possessed, quite unmoved and unconvinced. To speak without metaphor, the drama of Wilde is not movingly realized in the music of Strauss. There are in the play moments of great passion, of overwhelming and sinister power, which find so adequate counterpart in the music. The desire of Salome for the lips of the Prophet is crystallized in a theme which incredibly reminds one of Macbeth; it is veridically and conventionally erotic, rather than wildly and ungenerously lustful; the pleading of Herod before the yielding of the Fore-runner's head lacks force and insincerity; the music of the Dance sounds almost perturbing in its want of splendor, of harmonic and colorful exuberance; Salome's madly exultant exaltations over the severed head, and her affecting apostrophe to the dead Prophet, are denoted in music which has moments of poignant intensity and of commencing and far-reaching beauty; the Strauss of "Don Quixote" and "Ein Heldenleben" cannot easily die; but its moments of banality, of pretentiousness and depressing commingling of labored and defeated improvisations, are far more frequent.

This music, then, judging it in its entirety, is deficient as an expression, as a transposition into tone, of the drama upon which it is based; it does not, as a whole, adequately intensify or italicize the moods and situations of the play; in beauty, in intensity of emotion, in puissance of appeal, it falls below the level of the drama. One does not feel that the play has been found its inevitable, its final, musical complement, as one feels in the case of so completely successful a music-drama as, let us say, at random, the "Pelléas et

Mrs. Olive Fremstad
THE DANCER WHO EXACTS THE
DILE OF "SALOME" AT THE
METROPOLITAN

Mélieux of Debussy, or the "Tosca" of Puccini—not to allege such supreme examples as the legacies of Wagner's genius. One listens to "Salome," it must be granted, with the nerves in an excessive state of tension—it is consciously exciting; but so is, under certain conditions, a determined beating upon a drum. An assault upon the nerve-centres is a vastly different thing from an emotional persuasion: yet there are many who, in listening to "Salome," will need to be convinced of it.

Let it also be said again—lest one be misunderstood—that there is no valid objection to be held against any dissonant effect whatsoever in music, so long as it is successfully articulated—so long, that is to say, as it addresses us sharply and vividly. As I have elsewhere said, "there is possible in music a kind of ugliness, a kind of deliberate cacophony, that is explosive and significant—that speaks, that is eloquent. Strauss himself has achieved such an effect in that wonderful and heart-shaking passage in his 'Don Quixote' which depicts the mental disintegration of the demented knight; or, again, in the unforgettable battle-music in 'Ein Heldenleben.' There is also possible in music another order, of dissonant effect, which may be achieved (to recall Mr. Whistler's luminous phrase) by the simple expedient of 'sitting on the keyboard': an effect that is obviously possible without either inspiration or artistry." And it is upon this order of futile and unlifting expression that Strauss, for reasons which need not here be explored, relies in much of the music of "Salome."

It would be absurd to deny, of course, that "Salome" is in many ways a noteworthy and brilliant—and for the curious student of musical evolution, a fascinating—work. Its musicianship—the sheer technical artistry which contrived it—in breath-catching in its facile and inerrant mastery. The quality of its inspiration, and its success as a music-dramatic commentary, which have been the prime considerations in this discussion, have been measured, of course, by the most exacting standards—by the standards set to other and greater works of Strauss, in comparison with which it is lamentably inferior in vitality, slowness, and importance. In at least one respect, however, it is delightful to be able to praise unreservedly this much discussed and variously regarded score; and that is in the case of its superlative orchestration. Strauss has written here for a huge and complicated body of instruments—there are 112 players in his orchestra, and he has set them an appalling task. Never in the history of music has

such instrumentation found its way on to the printed page. Yet though he requires his performers to do impossible things, they never fail to contribute to the effect of the score as a whole; for the dominant and wonderful distinction of the orchestration lies precisely in the splendor of its total effect, and the almost monotonous art with which it is accomplished. One finds upon every page not only new and astounding achievements in coloring, unimagined sensitivities, but a superb and keenly poetic feeling for the timbre which will most intensely the dramatic moment. The instrumentation, from beginning to end, is a gorgeous writer of strange and novel and obscuring colors—for in such orchestral writing as this, sound becomes color, and color sound; it is not a single sense which is engaged, but a subtle and indescribable complex of all the senses; one not only *hears*, one also *imagines* that one *sees* and *feels* these tones, and is even fanatically aware of their possessing exotic and curious colors, vague and singular perfumes. Yet all this magnificence, this unrelenting juggling with sensory impressions, is incurably external. It is a gorgeous and money-lord garment, and that which it clothes and glorifies is a poor and unmarred thing. There is little vitality, little true substance, within this dazzling instrumental envelope; and for any one who is not content with its brave exterior pomp, and who seeks a more permanent and living beauty within, the thing becomes but a vast and empty husk.

Where, one ends by wondering, is the earlier, the greater, Strauss?—the unparalleled master of music, the indisputable genius, who gave us a shroud of masterpieces; who gave us "Don Quixote," "Ein Heldenleben," "Zarathustra," "Tod und Verklärung." Has he passed into that desolate region occupied in his day by Hector Berlioz, for whom, as has been said in this place before, a sense of the tragic fatality of talent without genius did not exist—the fatality of application, of ingenuity, of constructive resource, without that ultimate and superlative flame? Is not Strauss, in such a work as "Salome," but another Berlioz (though a Berlioz with a gleaming past)? Is he not here as one disdainfully indifferent to the ministrations of that "Eternal Spirit" which, in Milton's wonderful phrase, "sends out his Seraphim with the hallowed fire of his altar, to touch and purify the lips of whom he pines?" Is not Strauss to-day (to quote the bitter reproach of one who has been his most enlightened and effective advocate) "a marvelously clever man who was once a genius?"

THE SEASON'S PLAYS

THE TWO NEW CLYDE FITCH PLAYS

By "I"

OF all the inartistic prevaricators (who would call a lady anything else) who have graced the stage we commend to an indulgent public one *Becky Warder*, the heroine of Clyde Fitch's latest play, "The Truth" which has Mrs. Clara Bloodgood in its chief rôle at the Criterion Theatre. She is a very attractive young woman who has inherited her unfortunate personality from a remarkable father, so we are more or less inclined to forgive her as not entirely responsible for her undesirable attributes, and at the same time admire such absolute frankness in her charming misrepresentation of facts.

As a play, "The Truth" is a notable achievement by Mr. Fitch, who, however, must share at least half of its honors with Mrs. Bloodgood. Neither Mr. Fitch nor Mrs. Bloodgood has ever done anything better, which, in each case, is saying much. Mr. Fitch has succeeded in depicting a young woman with whom we are all familiar—the young woman who does not misstate things with any desire to do an injury, but one whose imagination is so great and whose opportunities are so numerous that untruths escape her in the natural course of any conversation. Furthermore, she does not adhere to her lies after she has told them, but embellishes them with each repetition.

Of course, we are very sorry for *Becky Warder*, particularly so when, upon deciding in a sudden unaccountable moment to tell the truth, she is so tragically misapprehended by an less important a figure in her life than her indulgent husband. He has never doubted her in anything, however damaging the circumstantial evidence might be, until one day he discovers her unfortunate predilection, and thereafter nothing she says is the truth so far as he is concerned.

This is the pivot of the play. As her untruths have to do with a certain irresponsible young man of her acquaintance, although there is no wrong doing, only its suggestion, there is a fine scene between husband and wife and each leaves the other. *Becky* goes to her disolute father to seek asylum under his doubtful protection in his shabby two-room home in Baltimore. Far from having learned a lesson, she begins lying with her very first words to her father. The scene between the father and daughter provides one of the finest moments

Clara Bloodgood as "Becky Warder," in "The Truth"

in the play, which is his resolution in her tiny life he has been a liar misrepresentation. *Becky*, too, makes her confessions, which extend back almost into her babyhood, when she told the other little children that her father was really her stepfather, and that he used to beat her. She did this, she says, to make herself interesting.

Becky's father, Mr. Roland, is played by Mr. W. H. Shack, the powerful *Robson* of "Leah Kleesha," and his acting is a gem in natural characterization. He points out to his daughter all the follies of her heritage of untruthfulness, and yet when the mood seizes him he proves himself to be the most memorably persistent of liars, and this, bless you, within a few minutes after his fine lecture. Mr. Shack's artistic performance actually aroused a certain amount of sympathy for the wretched man and his weakness.

Another member of the company, Mrs. Sam Sothern, gave in *Ever London* an admirable performance as the jealous and erratic wife whose husband is the irresponsible young man very much in love with *Becky Warder*, and the source of the estrangement of *Becky* and her husband.

One of the important characters in the play was somewhat overdrawn, but no doubt intentionally so. This was Mrs. Jeaneer Crenshaw, the lodging-house keeper with whom Linden lives, and who is, by the way, very much in love with him, even to the point of asking him if her money is not as good as any other woman's for him to live on. The part was played by Miss Zella Sears, who did it ably in the accompaniment of much careful fringing of her "rat" and adjustment of her waistband in the Rose-sinkhouse manner.

Mr. Fitch is to be congratulated, and so in the company which presents "The Truth" so vehemently.

On the same night upon which Mr. Fitch was enjoying the triumph of "The Truth" at the Criterion Theatre, another play of his was making its appeal to a handsome first-night audience across the street at the Avor. Mr. Fitch calls it "The Straight Road"—the road from ruin and degradation to what the late Mr. Arnold would have called spiritual "sweetness and light." Along this road the heroine of the piece, known by the sufficiently descriptive cognomen of *Bonnie Street Walk* (her true name is *Mary O'Hara*), proceeds, with sundry digressions, from the gutter and the ginmill to ultimate respectability and joy. Her progress is somewhat as follows: Mr. Fitch discloses her to us, at the start, as emerging from a barroom "scrap" with another lady into the temporary refuge of the local Settlement House, where *Miss Thompson*, who runs the place, becomes convinced that, if she can only contrive to lead *Miss O'Hara* gently by the hand along the flowery path of Bible texts and plain water, she can propel her charge along the "Road" to the goal of an eventual regeneration. In net two, we find *Mary*, garbed in a sweetly pretty white muslin

Blanche Walsh as "Mary O'Hara," in "The Straight Road"

gown instead of the ankermat rags of the first act, visiting the rich Miss Thompson at her paternal mansion on the banks of the Hudson. Now Miss Thompson has a young man, to whom she has engaged herself. She loves him dearly; but the audience is permitted to suspect that the young man, Douglas Ainsie by name, is attracted more by the gleam of Miss Thompson's diamonds than by her comeliness and virtues. Mary, too, is in the toils of love, and her steady is brought before the footlights in the person of a lowly but honest harp. Now it appears that Mary, having her full share of retribution, catches the eyes of young Ainsie, the betrothed of Mary's benefactor. The young man shakes up to Mary, and is caught at it by his fiancée; but he lies out of his uncomfortable situation, putting all the blame on honest Mary who has resisted his advances. Miss Thompson, naturally enough, believes her young man rather than Mary. The latter realizes that it is incumbent upon her to prove her faithfulness to her lady friend at all costs, she therefore turns the wicked young man to her, under promise of adequate reward, and invites Miss Thompson to call on her at the same hour, hoping that thus her perjury will be revealed. But things go awry. The young man, who Miss Thompson allows herself to be fooled in his arms, with one eye on the door and the other on the clock. The hour comes and the door opens; but there enters, not the wished-for Miss Thompson, but Mary's steady, the burly harp. It will be seen that Mary's position has its embarrassments. She tries to square herself, but the harp refuses to be convinced. While he is administering due reprimands to the young man, Miss Thompson arrives, albeit too late. She, too, refuses to accept Mary's explanation of the case, though she realizes at last her lover's perjury. Finally, they all depart—the harp having bestowed upon his lady a parting curse. Mary is left alone. "The Judge observes, 'is what you get for being good';" whereupon she proceeds to break up the furniture, smash a few mirrors and window-panes, and generally to demonstrate her rage for her virtue. She has a previous all-night celebration, after her old habit; when, just as she is lifting the bottle to her lips, her eyes fall, under the inspiration of a neighborly spot-light, upon a picture of the Virgin which hangs upon the wall. Woe, being fundamentally a worthy soul, drops the bottle and falls upon her knees in prayer. In act four all is made smooth for her. She succeeds in demonstrating her innocence, the harp opens his arms to her, Miss Thompson bestows her blessing, and all is as it should be. It only remains to be said that this extraordinary farcical of vulgarity, melodrama, and Salvation Army sentiment is admirably acted by Miss Walsh and an excellent company. But both Mr. Fitch and Miss Walsh are worthy of better things. The play is a frank appeal to the gallery; what its fortunes with the public will be remains to be seen.

Gullsgag

(Continued from page 128.)

the punt, perhaps with Chick in it fast asleep.

There was no time to rouse him. He alarmed the village. His long legs never had made much time. In five minutes he stumbled over Jed Brown's doorstep into the kitchen, where several men sat about a table.

"Till everlastingly," he gasped, "the tide is a-standin' on its tail an' a-goin' 't' swell low the ahead," then picked himself up and was off like an cat for the shore.

The boys had already reached Chick's door, which lay just beyond the punt, when they saw the Creek; and Gullsgag, perched on a bowler, could see the punt rocking on the swell. Chick might be sleeping in it and be carried out to sea. The men must all save their gear. There was nobody but himself—oh, yes, the harp, so that Chick was in it. But he knew he had no time to make inquiries; the crazy sea-rashed punt might sink! His grandfather's dingy with its crew was lying

near him, beached. He felt the tide would break before it reached the boat to which he ran, and fell upon its middle thwart, landed his feet, and firmly grasped the gunwale. The wave did fall below him on the sands, but sent a breaker crashing up that soaked him to the skin and set the dingy floating.

It was a hard pull at first, though soon the tide ran back with equal speed, and the boat had only to keep his bow turned toward the tossing punt.

If Chick were there he hoped he would not wake, because, not knowing where he was, he might be happening out, as he often did on shore. On the rise of the next wave he craned his neck. Yes, there he was in the bow of the boat. They were nearly half-way across the harbor now. With the readiness of an old tar, Gullsgag caught the ring hanging from the end of the punt as she slipped past and fastened it to his painter. Chick still slept, and Bimcoe saw that the punt had commenced to take water in the stern. He brought his boat up close, and heaving over, clutched the unconscious boy.

"Nar, Chick!" he said, gently. "Chick looked up drowsily: 'Be you come for hush, Gullsgag?' Then, as he remembered the particularly large pile of molasses rike he had in his kettle, he started up ready to brag.

"I better ain't got ex big a—" Gullsgag gripped a larger handful of Chick's shirt.

"Don't get flumpe' round none," he said, quickly, "cause there's bin a tide same's yu' read about in the poplary, an' we're on it, an' the punt's a-barkin', an' you've got 't' git into this dingy." Oh, say, dingy! You're ex safe ex safe!" But Chick, startled from pleasant dreams by such overwhelming circumstances, could neither think nor move, only grasped the sides of the slowly sinking punt and howled.

Gullsgag was in despair. He begged the other lad to step across. His words had no effect. He quickly changed his grip of the jermy in his left hand from his right, which he doubled rigidly and shook before "Chick's face. "If yu' can't step over this minute, you deevil, I'll knock yu' overboard an' lick yu' afterwards."

The tone of that speech stopped Chick's howls and brought him at once to the side of his boat. The tide was now bearing from the shore too strongly for the boy to pull in. A boat was coming toward them from the Creek. Chick had stopped sobbing, in his interest in the sinking punt, which he watched with open mouth. When the last bubbles had subsided over it, he suddenly remembered how cowardly he had been, and glanced furtively at Gullsgag, thinking he must despise him for it. Gullsgag caught that look.

"Nay, Chick," he said, eagerly, "I know jist how you felt. You was kinder struck all ov a bump a-thinkin' how bad your aunt Jinnie 'ud feel. I'm glad yu' stopped thinkin' about it, cuz I guess yu' 'died' his yu'. Don't you mind, though, I've had jist sech spile myself. Say, I bring a snake 't' show yu', an' he's still a-sleepin' in me pocket."

Shortly the boat was reached by three men, who came ashore from the Creek, and towed laboriously back to shore. Most of the men were still busy with their scattered tackle, but a crowd of excited women was far down on the sticky clay to meet the boat. The women's shrieks and all his dark were there. Little Josie, before she even looked at her cousin, flung her arms around Gullsgag and sobbed with remorseful gratitude.

"Nay, wond' go for to stick my tongue at yu' no more."

But Gullsgag swarmed himself from her clinging with a grunt: "You git out this an' lemme be!" and fled from them all up the sloping beach.

He stopped at his grandfather's little vegetable-patch, where he gently put something from his jumper pocket to a grumpy aged and sped on to the house. His mother had just returned, and sat near a back door, sewing in a mat, quite unconscious of the afternoon's happenings at the Creek. Her son dropped on the pile of rags beside her. His mother's quick eye at once noticed his wet hair.

"Simmie Glidden, I cautioned you not to

go swimmin' till next month, an' I've a good—"

But Gullsgag was too hungry to listen longer. "Yes, I'll tell yu' all about it soon's you give me a piecr: an' I want it to con't. mother, cuz I ain't had no lunch, an' my trunk is a-growin' scoundious."

His anxious mother left her work and cut a large slice of bread, and spread it with molasses.

"Now," she demanded, "git outa them wet clothes an' tell me exactly what aitches you've bin up to."

Gullsgag, between bites, told her. That night, when Little Josie Glidden thought her son fast asleep, he suddenly popped his head out from his trundle.

"Marmie! You sleepin'?" His mother answered him, and he went on, shyly: "Well, I didn't tell yu' everything. After Chick an' me was brung ashore that mornin' little cousin o' his she begun to bug me same 's if I was yu' an' she was me. Say, be yu' listenin'?" We'll, same 's if I up an' wanted her, to—an' I didn't—no sech thing!"

His mother from her bunk above said, soothingly, "Of course not; mother's one lamb didn't want the honey to do no sech thing. Now go to sleep, Simmie!" For several minutes there was silence, until from the under bunk again came a small voice: "Now, marmie, I didn't mind herin' them black curls git in my eyes—muth—no more—but I had a doctor—make a—make in my pocket, an' I was scared the prosin' 'ud wake him an' he 'ud slide out, an'—in a hard of words—'an' she never 'ud go for to do it no more. But don't yu' tell grandp'!"

Generally So

WILLIE (who has never been in the country). "Pa, what is a farm?"

FATHER. "A farm, my son, is a tract of land completely surrounded by a mortgage."

PURE AT THE SOURCE.

Me is a pure strain of blood, the commonest and best. Every physician and nurse should know the source of supply before using in any form. It is the only remedy to give that is called "pure." ADVERTISEMENTS

WHITE BREAD

Makes Trouble for People with Weak Intestinal Digestion.

A lady in a Wis. town employed a physician who instructed her not to eat white bread for two years. She tells the details of her sickness, and also certainly was a sick woman.

"In the year 1887 I gave out from over-work, and until 1901 I remained an invalid, in bed a great part of the time. Had different doctors, but nothing seemed to help. I suffered from cerebral congestion, female trouble, and nervous stomach and bowel trouble. My husband called a new doctor, and after having gone without any food for 19 days the doctor ordered Grape-Nuts for me. I could eat the new food from the very first mouthful. The doctor kept me on Grape-Nuts, and the only medicine was a little glycerine to head the alimentary canal.

"When I was up again doctor told me to eat Grape-Nuts twice a day, and no white bread for two years. I got well in good time, and have gained in strength so I run do my own work again. "My brain has been helped so much, and I know that the Grape-Nuts food did this, too. I found I had been made ill because I was not fed right—that is, I did not properly digest white bread and some other food I tried to live on.

"I have never been without Grape-Nuts food since, and eat it every day. You may publish this letter if you like, so it will help some one else. Name given by Postum Co., Battle Creek, Mich. Get the little book, "The Road to Wellville," in pigs.

THREE NOTED COURT-TENNIS PLAYERS

COURT-TENNIS, WHICH IS MAKING AN INCREASING PLACE FOR ITSELF AMONG INDOOR SPORTS, HAS ALREADY ATTRACTED INTERNATIONAL INTEREST. ONE OF THE PROMINENT PLAYERS OF THE GAME IS JAY GOULD, THE SEVENTEEN-YEAR-OLD SON OF MR. GEORGE GOULD. YOUNG GOULD HAS WON THE AMERICAN AMATEUR CHAMPIONSHIP IN THE GAME. HE IS SHOWN IN THE PHOTOGRAPH, TAKEN AT GEORGIAN COURT, THE GOULD PLACE AT LAKEWOOD, WITH HIS PROFESSIONAL INSTRUCTOR, FRANK FORRESTER, AND FERNAND GARCIN, THE PROFESSIONAL COURT-TENNIS CHAMPION OF FRANCE.

THE KID-GLOVED GOLD-FIELDS

(Continued from page 118.)

prinked that he might that moment have stepped from a handbox, "we don't carry our poppers outside. It's decidedly bad form. Then there's a \$200 fine for freighting ordnance in the open. No. No one was ever fined. The last sheriff who sought to collect a fine died very suddenly. We gave him a fine funeral. Forty ministers followed the hearse. Poor fellow! He was a trifle impulsive. It hasn't been the custom for ever so long to go about like a hardware store shut, but you can lay a mighty loose wager that every chap you meet has some sort of shooting-iron concealed in his harness."

There was one thing of absorbing interest in this life in the alkali flats. No liars of social denunciation were drawn. There were no boundaries of caste. Proprietors of gambling-hells chummed with bank presidents and lawyers. George Wingfield, who gambled his way to many millions, is a partner of United States Senator George S. Nixon. Wildcat promoters and owners of the richest claims were thick as fellow conspirators. Several ex-convicts seemed immensely popular and chatted easily with a former Governor of Idaho and an ex-Supreme-Court justice. A man who had spent five years in prison for murder sat joking with the Governor who had pardoned him. All classes were bound by the potential kinship of the gold mine. Weeks, not years, wrought vast changes in the affairs of these men. Almost every man you met had shaken off the burden of a past when he invaded the desert; some had only recently come out of striped jackets.

"See that big fellow sitting in the corner reading?" whispered the President of the Board of Trade. "Well, last week he was slinging dishes in the Palm Restaurant. To-day his check's good for quarter of a million. He had a lease on the Moonshine; bought it for \$300 the day before they struck the vein."

It is generally taken for granted that the tenderfoot known all about the Moonshine, the Blue Dade, the Hungry Cove, the Ruby Cretins, the Big Owl, Jr., and the scores of other mines of weird title that are yielding untold treasure. A liberally paid staff of advertising men and subsidized correspondents of newspapers are expected to make all the world familiar with these underground Aladdin grottoes.

The mines, I found, were the one absorbing topic; in fact, the overwhelming interest. Family, friends, and the affairs of the outside world were buried in the shroud of oblivion. Earthquakes, fires, floods, wars, the assassinations of kings, were utterly read matters.

A tow-headed youth who ran rather speciously to phials and disassembled horsehooves, handed me a local paper and proudly called attention to the fact that it was printed with gilt ink.

"There's nothing near about us," he boasted. "We've got the stuff in the mines and we're getting it out by the hundreds of golden tons."

How many of the mines paid dividends in the yard-long stock-list that hung, framed, on the wall? Ahem! Why? "Well, now, let me explain," etc. Yes. There were many dead claims. In fact the desert was gouged here and there with holes in which fortunes had been poured—the small savings of farmers and clerks in a thousand far-away communities; so far away that their walls of anguish and despair could never reach this mountain-invested dip of the Nevada desert.

Did the tenderfoot persist in his inquiries a dozen nimble tonguers clattered specious explanations. Every man with a head on his shoulders, a gun on his hip, a heart without fear and a little more than a grubstake had a brilliant, even convincing chance, the moment he "hit the camp." All about you were men who were either millionaires or plutocrats in embryo.

Now and then, it was true, you might, after becoming pretty thoroughly acquainted, remark a distinguished capitalist borrowing \$5 around breakfast-time. Yes, when the banks were open. But there was a recent reason for this. Subterfugeously he was a Crown. Above the earth's crust (merely temporarily, of course) a pauper. Supremely resident in the merits of his claim, the gold mined was immediately reinvested in development.

This is the word the "wildcaters" conjure with. Related to gold-mining there is a ring of pleasant allurement in it. Analyzed and resolved after careful study it wrings like a sponge, and it very often happens that investors can squeeze more gold out of that marine growth than they ever wring from development.

Go FLORIDA and the SUNNY SOUTH

1. Jacksonville, Florida
2. "Apache," of the Clyde Line
3. New York
4. Charleston, South Carolina

THE fame of Florida as an American winter resort is world wide, and much of this is due to the large number of excellent hotels; but this great tropical peninsula has many and manifold attractions for the tourist apart from the hotels. It is our nearest land to the equator; its sea beaches are the finest in the world; its rivers, lakes, bays, inlets, and

minor streams are beautiful beyond description; its forests are filled with rare tropical trees; its cultivated lands are replete with orange blossoms, magnolias, and a thousand other exotic blooms. There are many miles of superb roadways, and these are being added to with rapidity; the cities, towns, and villages are thriving, prosperous, progressive; the State is crisscrossed by excellent railways, which touch every important point; and, to cap the climax, there is a splendid fleet of fine passenger-steamships—the Clyde Line—which connects Jacksonville, the capital, by a direct, all-water service with New York.

The voyage from New York to Charleston, South Carolina, where the steamer touches to and from Florida, only requires two days—two delightful days of coastwise sailing on pleasant seas. The run of the steamer from Charleston to Jacksonville takes from twelve to sixteen hours, and the trip from the mouth of the Saint Johns River to Jacksonville is one of the most delightful river trips in the United States.

From the moment that the Florida coast is sighted, and the palms are seen growing in the sands at the ocean's edge, all is novel. The wide, shallow, twisting river winding through the vivid green of the low lands that are broken with narrow and broad inlets of the stream, the tall, bare-stemmed palms of the South flanking a green roof over the palms that are the underbrush, make a series of fascinating pictures as the steamer sweeps smoothly along, perhaps in the level sunlight of the early morning, and thence to the different points of the compass in obedience to the demands of the tortuous channel with its broad surface but narrow path for vessels. Twenty-five miles of this tropical panorama passes before the eyes of the traveller ere Jacksonville is reached, and the steamer ties up at the Clyde Line wharves in the heart of the city.

Florida is certain to remain America's best and most popular winter resort. Her sunny and never-fading beauties are making strong bids for the patronage of the tourist, and when it is remembered that Florida need not fear the winter, but that she can be enjoyed all year long, and even be equalled. Despite the attractions of her competitors in the Western Hemisphere—and despite the attractive

On St. Johns River

them, her supremacy must be admitted when the facts are considered.

No other American winter resort has so vast an area, so complete and so convenient transportation, and so many and such magnificent hotels. No other State in the Union is so admirably situated—both geographically and climatically—for winter sojourn. No other State has so great a wealth of seacoast, of bays and inlets, of lakes and rivers. True, there are no lofty mountains, but the central portion is high and wooded, the forests are extensive, and the western coast is the paradise of the sportsman. Game is plentiful in the uplands and the marshes, and every variety of tropical food fish is to be found in the adjacent waters. Here is the native birth of the majestic tarpon, the mightiest fighter against whom man has pitted his skill with rod and reel. The marshes and the bays of the Gulf Coast are the winter habitat of migratory wild fowl, and the wooded uplands teem with quail and grouse. Too much cannot be said for the charms of this tropical wildwood, this deeply indented and delightful west coast; and when all has been said, when its attractions have all been set forth in the language of fact, more convincing than florid superlatives, one item, the most important of all, remains to be added—the vastness of its area. This woodland elysium, this aquatic paradise, is more than a thousand miles in length, extending from Pensacola to Key West.

The St. Johns—America's only navigable tropical river—penetrates more than four hundred miles into the heart of the State. The St. Johns is fed by the Ocklawaha, the head waters of which are close to the source of the Kissimmee. This latter river, flowing south, while the Ocklawaha and the St. Johns flow northward to the Atlantic, runs into Lake Okechobee, the largest body of fresh water in the State, with an area of 1250 square miles. Lake Okechobee empties into the Gulf through the Caloosahatchee River at Charlotte Harbor. This system of rivers and lakes, almost continuous, makes a diagonal winding waterway through the heart of Florida, from Jacksonville to Fort Myers, more than six hundred miles long.

The Florida East Coast is synonymous with winter-resort luxury. Here are most of the famous shore and interior places identified with the annual incoming of wealth and fashion from the North. Here are America's most beautiful resort hotels; here is St. Augustine with its relics of Spanish medievalism; and here is Orlando with the wonderful water beach that holds the world's automobile speed records.

The St. Johns River is navigable to Sanford, 220 miles from its mouth; while the beautiful winding rivers of the interior, the lakes, and the smaller streams are ideal cruising waters for launches and paradises for house boats.

DRAWN BY ANTHONY H. EUWER

When the Ministry was Ordered to the Front

(Continued from page 122.)

served to this day in Mississippi in the form of a little pamphlet.

Some said it was a prayer, some a speech, some a philippic, some an impertinence, but all agreed nothing like it had ever been heard in a legislative chamber. As the speaker proceeded cold chills ran down the backs of the legislators. He implored God's mercy on the misguided men who would convert the ministers of the "Lamb of Peace" into the instruments of hatred war. He criticized their action from various viewpoints. He intimated an equal distrust of their patriotism and intelligence. He plainly implied they were all hard cases, who would almost tax the infinite resources of heavenly compassion. His voice rose louder and louder. People on the outside thought some one was making an impassioned speech within. And through it all, with faces as which was mirrored an astonishing mixture of respect and indignation, the breasted members stood. However, it was ended at last. Rev. Mr. Harmon did not tarry for any congratulations, but passed at once into the Senate Chamber.

That body, as because its more exclusive pretensions, had not assembled quite so early as the other. In fact, the president had just dropped the gavel on the table when the theologian had once glommed when the clerical visitor entered the room. Following a natural impulse, he did as the Speaker of the House had done. He invited the minister to open the proceedings with prayer. The minister was expecting the invitation. He had doubtless thought of a few points inadvertently suggested in his other prayer, and was anxious to gratify the omission. He was preparing to read the request when a clarion voice rang out, "I object."

It is easy to leave the surprise of the speaker at this totally unexpected and apparently unseemly objection. Every one looked indignantly toward the man from whom the interruption had come. Fanned demands for an explanation came from all sides.

And it all stood the hellfrenzied minister, seizing an opportunity to repeat his recent performance. The Senator did not hesitate to state his objection. He had been present in the other chamber, he remarked, and had heard the prayer offered by the renowned statesman. He then repeated the objection as nearly as he could, and a very effective speech it made in the mouth of a layman.

The Senate listened for a while in silence. But when the situation dawned on the members there was an outburst of laughter that shook the rafters of the prime old building. Even the preacher had to job in before it was over. When it had subsided he remarked that as his prayer had already been said, and especially as the Senate did not seem to be exactly in the mood for that sort of thing, he would not insist on praying. This, of course, brought a polite repetition of the request from the president. Whereupon the minister read a brief prayer in which there was not the remotest suggestion of a political allusion. That closed the affair as far as he was concerned. He had made his point.

However, it was not the end of it in the legislation. The protest had had its effect. The members began to question it, in their mind, they had not given a bit beyond the last. The conviction quickly arose that they had. The bill was revealed from the reading clerk and once more brought up in the Senate session. The vote to amend the entire which landed ministers in the hall in the end was practically unanimous.

The House adopted a similar course. When the House finally went to the Governor's office, where it was signed and became a law. It looked the president when he read the law of Rev. Mr. Harmon. But the only case in which the clerical was ever called to the colors in the New World house a bit of which occurs this volume. From both of which sources this volume is drawn.

AN OPEN LETTER

Much has been printed about the life insurance business during the past year. Let me call your attention at this time to a few things regarding The Equitable Life Assurance Society. It is as solvent as the Bank of England.

Every contract with it will be carried out to the letter.

Every asset claimed by the Society has been found by independent expert accountants, and re-appraised in value on a conservative basis.

Loans have been verified; liabilities have been measured; bad accounts have been charged off or marked doubtful.

The income of the Society from investments and savings has been increased over \$1,200,000 per annum. A still further increase can be relied upon. This will in time result in larger profits to policyholders, even if not reflected in this year's dividends.

The Society has complied with the new laws of the State of New York with exact preciseness. These laws provide every safeguard that a wise Legislature could devise to protect policyholders. They restrict the investments of life insurance companies. They provide that expenses shall be kept within proper limits and control the cost of new business. They prevent rebating and political and other blackmail. They prevent many questionable things that insurance companies have done heretofore.

Hereafter every policy issued by this Society will bear the hall-mark of the State of New York.

The new management is committed to the interests of the policyholders. It understands thoroughly that the best advertisement it can have is a satisfied constituency. The effort of the present administration will be to make this Society the best life insurance company in the world.

Life insurance in the Equitable is the best asset you can have. It will grow better with time. If you have no insurance, or if you can afford to increase the insurance you already have, you are doing your family an injustice if you do not take it. Nothing can take its place.

We want new policyholders. We want new agents, both men and women, but none except energetic, able and truthful men and women need apply. For such there is a splendid opportunity.

A life insurance policy runs longer and means more to the average man than any other contract he ever makes. Therefore the necessity for great care in selecting a company in which to insure or a company to represent. Safety and strength are paramount to everything else. We intend to keep the Equitable the safest and strongest company in the world.

Address The Equitable Life Assurance Society, 120 Broadway, New York, for full information as to insurance or an agency.

PAUL MORTON, President.

Exports of Manufactures from the United States

Exports of manufactures from the United States in the year just ended aggregated more than seven hundred million dollars. The Bureau of Statistics of the Department of Commerce and Labor has compiled the figures for the eleven months ending with November, and adding to these a conservative estimate for December, finds that the total exports of manufactures for the full year will, beyond question, exceed seven hundred million dollars. Ten years ago, in the fiscal year 1900, they amounted to but two hundred and fifty-eight millions; in 1880, but one hundred and forty-five millions; and in 1870, one hundred and five millions. The share which manufactures formed of the total exports was, in 1900, 42 per cent.; in 1880, but 30 per cent.; in 1870, but 22 per cent.; and in 1870, 20 per cent. Thus the exports of manufactures in 1900 are three and one-half times as great as a decade ago, and the share which manufactures form of the total exports about one-third greater than at that time.

This is the first time that exports of manufactures have crossed or even approached the seven hundred million dollar line. Even in the fiscal year 1900, which is only six months away, the total exports of manufactures were but six hundred and eighty-six millions; in 1899, six hundred and twenty millions; in 1898, five hundred and twenty-three millions; in 1903, four hundred and sixty-four millions; in 1902, four hundred and fifty-four millions; in 1901, four hundred and sixty millions; in 1900, four hundred and eighty-four millions; in 1899, three hundred and eighty millions; and in 1898, three hundred and twenty-five millions. Thus the exports of manufactures in the calendar year 1900 are actually twice as great in value as in the fiscal year 1898, having thus doubled eight years.

Practically one-half of the manufactures exported from the United States go to Europe, the great manufacturing sector of the world. Of the six hundred and eighty-six million dollars' worth of manufactures exported in the fiscal year 1900, three hundred and eighteen million dollars' worth went to Europe, one hundred and eighty-two millions to North America, seventy-nine millions to Asia, sixty-four millions to South America, thirty million to Oceania, and thirteen millions to Africa. Of the three hundred and eighteen million dollars' worth of manufactures sent to Europe, seventy-three millions was manufactured of copper, forty-six millions of steel, thirty-two millions of iron and steel, twenty-seven millions of leather and manufactures thereof, eight millions of naval stores, thirteen millions of agricultural implements, and the remainder miscellaneous manufactures.

The United States now holds third and among nations as an exporter of manufactures.

Modern Shakespeare

The following quotation comes from "Lear's Lear's Lear," Act V, Scene 2, London. "The omnipotent Mary of the almighty. Have better a gift—Blessed. A gift of nature. Bless. A lesson."

Couldn't Answer

Mr. BROWN is daily on the subject of scientific problems, but his wife has no sympathy with him in this direction. The other evening he laid down his paper and remarked to his wife:

"What?" she inquired.
"Why," he stated, "that it would take 1,000,000 years to pump the sea dry at the rate of 1000 gallons a second."
She thought over the statement for fully half a minute, and then innocently asked:
"Where would they put all the water?"

Making a Business Pay

(Continued from page 124.)

all-where improvements can be made, prevent defects, and the repetition of errors.

"We interest men in the general welfare and policy of the firm; this is a difficult thing to do, and every company must work out its own specific means. If such a feeling can be aroused, especially among foremen, it works to immense advantage. We surround men with pleasant, healthful conditions. The object of surroundings is on a man's spirits and on the quality and amount of his work needs no emphasis—it is a granted fact."

It is possible that nowhere can system, as applied to the thoroughly intelligent work of the personnel, be brought to a higher plane of effectiveness than in the large railway organizations.

One railway organizer and systemizer who entered boldly into almost unknown fields in search of practical systems, came into a railway combination west of Chicago. This man holds in the hollow of his hand the secret of success. And like most successful men he plays the rational combination of brains and system. When he began the reorganization of his various lines several years ago, he decided to make use of the brains of every man in his employ. His files total almost ten thousand ideas, and he has an employee in some capacity or other for every mile.

The head of each department of each road was instructed to place small boxes in convenient positions, and to each employee was given a printed announcement requesting him to offer any criticisms or suggestions concerning his particular line of work. The employees, from engine-wiper to general superintendent, were asked to write their ideas without fear or favor, and to deposit the replies in the boxes posted for the purpose. The conductors and guards were encouraged to criticize the present method of running trains, and a note-power house was asked to criticize the type of engines and to offer suggestions, and the general accounting department was requested to suggest new and improved methods of bookkeeping.

It was promised that the letters would be considered by a regularly appointed board composed of the various general managers, and as a stimulus to good work a series of cash rewards totalling \$10,000 was offered for the most intelligent criticisms and practical suggestions. The result exceeded the most sanguine expectations of the railway organizer. Fully eight thousand replies were received, and today that particular railway system is being managed along lines practically suggested by its army of employees.

There is a large manufacturing plant not far from Boston that makes "opportunities" its watchword in dealing with the ten thousand men in its employ. From the lowest to the highest merit wins all the experience, and knowledge of the business.

The present manager and all of his immediate assistants began with the criterion, a sufficient capacity. The present superintendent of construction began as an employee in the draughting department. The wing department foreman rose from the bench, and the present secretary came to the company as a bill clerk. This company's methods automatically lift its employees and send the best ones to the top.

In a room adjoining the president's office are laid a number of card index cabinets divided according to departments. The cards are large and there is one for each employee. On each card are noted the man's history and a record of his work.

There are four classes of merit, and each has its particular color. The first, or "star" class is white, the second is buff, the third is light blue, and the fourth, or "average" class is light green. As a man progresses in merit and value to the company his card is changed. All promotions and a man also is in that class is invariably advanced as a "star" man. Merit in this class brings a five-per-cent. bonus each year.

**THIS IS THE
STEAMSHIP**

The magnificent S. S. "Duchess," built, owned, and operated by the New York & Naples Steamship Co., is the only ship of her class in the world. She is a marvel of speed and power, and is the only ship of her class in the world.

Leave New York February 4th, 1907, for Naples in 7 days, 16 hours, 45 minutes; return, 19th, 16 hours, 45 minutes. Leaving New York, 19th, 16 hours, 45 minutes; return, 4th, 16 hours, 45 minutes.

THIS IS THE OPPORTUNITY

To travel in comfort and safety as a steamship that contains every modern convenience and appliance that money can suggest, or that money can purchase.

The S. S. "Duchess" leaves New York February 4th, 1907, for Naples in 7 days, 16 hours, 45 minutes, making the trip in 19 days, 16 hours, 45 minutes.

Steamship, Italy, to the South of France, and the American Division, can be conveniently visited, also excellent connections made at Naples with the S. S. "Duchess" for Alexandria, Egypt.

First Cabin Rates, \$15.00 upward, including steamer accommodations and meals.

Two special rates, rates including all necessary expenses, have been arranged in connection with this sailing as follows:

<p>Year A 36 Days Cost \$350</p>	<p>Including sightseeing in Spain, Italy, and the Riviera, returning on the "Duchess," leaving Genoa Feb. 12, 1907.</p>
<p>Year B 66 Days Cost \$350</p>	<p>Including sightseeing in Italy and the Riviera, returning by the S. S. "Duchess," leaving Genoa March 1, 1907.</p>

Also regular sailings to Gibraltar, Naples and Genoa by the steamers "Melita," "Bambino" and "Bianca."

The FLOWER of FRANCE

By Justin Huntly McCarthy

This is the story of Joan of Arc, charmingly retold in Mr. McCarthy's inimitable style. The Maid of France is represented as a lovable and engaging heroine—not the mailed warrior and half-mad fanatic, but the simple, steadfast peasant-girl—who leads the armies of France quite as much by the power of her innocence and faith as by her strange guiding voices.

While the romance follows history in the main, the author has given it here and there imaginative touches that enhance the beauty and interest of the romance.

COMMENT

Discontented Swettenham

PHILIPAS GEORGE SWETTENHAM'S nerves were so upset by the Kingston earthquake as to leave him in imperfect possession of his faculties. Perhaps he has lived overlong in the tropics to the prejudice of his liver. Whichever is true, his letter to Admiral DAVIS offers on its face such evidence of his profound indignation that there is nothing important to be said about it except to express sympathy for the British government in having such a man in such a place at such a time.

Secretary Root on the Tariff

Secretary Root has spoken once more for the administration. This time his utterance was on the tariff question. He insisted that the time has come for the adoption of a minimum and maximum tariff. This may foreshadow the next important controversy between the President and his party, including some of the leaders who are now more or less with him. But experience teaches us to wait before determining that any Republican tariff movement is in the interest of the consumers; that is, of a real revision. If the minimum tariff is to be the Dingley tariff and the maximum something higher, it will be a cruel jest. But it is clear, at all events, that Mr. Root's own view on the necessity of some tariff action has been impressed on the President, and that the commission to Germany, compelled by German complaints against our tariff law, may work some good. In the mean time Mr. DE ARAGONE has introduced a bill in the House of Representatives providing for further instruction of the consumer by putting upon each bundle or package of our domestic products the rate of duty which the purchaser pays for its protection from foreign competitors. "Line upon line, precept upon precept, here a little and there a little," is the motto which the Kansas City Times suggests for tariff-reformers.

The San Francisco School Question in Court

The Federal government has now taken the proper action on the order of the San Francisco School Board segregating Japanese children in separate school buildings. The courts, both State and Federal, are called upon to decide whether the United States may enforce a treaty provision notwithstanding opposing State laws, including a city ordinance authorized or acquiesced in by the State. If the decision should be against the school board and its members refuse to obey the order of the courts, the question then will be whether the President will enforce an order of the courts to arrest and imprison the members of the school board for contempt. It is to be hoped that this point will never be reached. The people of the Far East are still entitled, like us, on the other hand, Japan's authorities seem to be taking the view of

Baron JUKURI, that the whole matter is not of enough importance to warrant war.

The House Subsidy Bill

The House substitute for the Senate subsidy bill is not agreeable to the thick-and-fast subsidy advocates. The fact that it was agreed to after Mr. GIBSON'S amendment of the Senate bill, and that the new measure has the approval of Speaker CANNON and the President, is significant. It means that Congress, at least the Representatives, do not believe that the country is ready to build up the American foreign shipping trade by direct grants of money. Intelligent and well-informed people recognize the truth of Mr. Root's admission, that a subsidy is intended in reality to bring into vigorous life what the tariff has nearly slaughtered. It seems to be incumbent upon a Republican statesman, one of even so liberal a frame of mind as is Secretary Root, to devise some way for the improvement of the shipping business other than the removal of tariff burdens and of severe restrictions. Therefore it is proposed that the tariff to shipping by reason of the tariff law and the rest shall be made up by increasing the burdens upon the people in general. The Senate is ready, it seems, to apply this economic commercial device which, characteristically, contemplates further taxation of the consumer. The Senate bill proposes a subsidy for freighters; but the House, not being minded to agree, would not have the Senate bill. But some must be paid to ocean-going ships, so it is proposed to pay more for mail service to vessels sailing to certain East American, Central American, and Pacific ports. This will cost the taxpayer several million dollars—how much we cannot guess, although both advocates and opponents of the bill are busy with estimates. Experience teaches us, however, that such preliminary estimates, especially when made by partisans, whether for or against, are likely to be fairly actual results. What we do know, however, is that a vote for a fast mail is only really a vote for a subsidy for commerce, and that, if the bill passes, the subsidy camel will have its head in the tent.

Governor Hughes's Appointments

By the appointment of Mr. STEVENS to be Superintendent of Public Works, and of some others, none of whom was the choice of those who have hitherto distributed the patronage of the State, Governor HUGHES has maintained his reputation and has gratified the good people of the State. It was not our intention to eulogize the new appointees, but we ought to be permitted to speak for ourselves by the manner in which they perform the duties of their offices. The error says that he will be his way, and it is the best way, the only way. Apparently he is not trying to kill the personal machine. It was Governor ROOSEVELT's assertion that he was not attempting to displace President OHLEBY by ROOSEVELT's losses. In a measure he succeeded, for he was Governor, but he has met with some disappointment since he has been President. However, the interesting fact is that Governor HUGHES is not only convinced that he must do his duty by not building up a personal machine, but he is also certain that his obligations to the State involve the necessity of consulting old losses. The loss of losses in the public welfare is secondary and inferior. This makes his advice to Governors often misleading. Governor HUGHES is justified in working out his own reforms. One reason why the people like Mr. ROOSEVELT is that they believe that he has done what Governor HUGHES is doing. It has been, however, a real drawback to Mr. HUGHES that he has undertaken, in Washington, to make losses, or the Senators, select "good men" for him. WAYNE McVEIGH has pointed out, this is to impose the losses an impossible task. Governor HUGHES's better; he is seeking the good men himself.

The Race Question in Politics

The controversy over the Birmingham affair is doing much to bring to the attention of the people the race question. It is an important question, or important question, as it is called by the President's dismissal of the negro "Yellow Hammer" and the indictment upon them of the president show he had heretofore considered the race question in the navy, it is so complicated and so difficult a question that it is not possible to do justice to it in this article. It is a question of the first importance to the nation.

Mr. SEVEN's advice to him, the President has admitted that he had not the power to deprive the men from employment in the civil service; therefore he revoked that part of his sentence. It was agreed between the Republicans that there should be adopted a simple resolution to investigate the affair. But before this the race question had inflamed the minds of Senators, and a bitter debate broke out. The race question could not be quieted, and it was inevitable that it should inspire all the speeches as it infused the thoughts of men. It is unfortunate that there is so much politics in this unhappy controversy, which should really be settled by temperate councils, by men whose object is to get the two races out of an unhappy scrape, and who are moved by love for their country and their kind. Unfortunately both Republicans and Democrats find in it too many opportunities to put their opponents "in a hole," and the South especially suffers from the prevailing base and sordid kind of statesmanship. It may be that the Democratic Senators generally believe that the President had the power to dismiss the black troops as he did without trial. The evidence against them has convinced good men; but their guilt may not justify the specific act of the President. That point is important, and should be settled. To try to make it a party question will not settle it; it will convince no one of anything but that Senators are willing to play politics in so grave an affair.

Brownsville and the Constitution

For many reasons it would be well to have a Congressional inquiry into the facts of the Brownsville affair, as JAMES D. LONG pointed out in his recent speech in Boston. The country wants the facts, and if the negro troops are guilty, as on the President's evidence they seem to be, the total penalty inflicted upon them was, as the President said, inadequate for the crime committed. But there is no reason whatever that the color of the men should come into the discussion. It is unfortunately true that it does enter, and that this contest is just now characteristic. Senator BLACKMAN's resolution admitting that the President has the constitutional power to dismiss without honor raised an unfortunate contest, but the resolution itself was not of grave importance, for any action or view of the Senate as to the constitutionality of an act of the President would not be controlling, except as it affected its own legislation. The unfortunate feature of it is that the Senate, by reason of this resolution and of the party passions which at once broke out on its introduction, seemed at once to be called upon to pass upon an important question without regard to its merits or to the real opinions of Senators. The President deplored this misfortune, if reports are true, by insisting that any Republican member of the Senate who voted that he had not the power was the enemy of all his policies. In effect he said, "You must take my view of my constitutional power or be regarded as my foe on the railroad rate question, on the Federal Reserve question, on race wars, or on any other device that I may invent or policy that I may announce." The situation is so intense, when it comes to this sort of thing, that reason no longer rules. The Senator who votes on a constitutional question because he believes in all that the President thinks or feels, or because he disbelieves in it, expresses an opinion that is not entitled to respect. As to the question itself, the Senate has no power to judge the constitutionality of an act of the President, any more than he has the power to judge of the constitutionality of a law of Congress. The tribunal to determine such a question is that of the judges—the courts; and any one of the dismissed men can procure a decision from the courts on this subject—a decision that would bind the President and Congress. Why is it that the political opponents seem to be avoiding the obviously proper course?

A Tradition Strengthened

It is worth remembering that the President's order to dismiss the Brownsville companies of the Twenty-fifth Infantry was published and took effect after the President had put out to sea on his way to Panama. What he might have done had he been at home and observed the impression that the order made on the public mind can only be guessed at. When he did get back, the order had been enforced and the fat was in the fire. Considering the duration and possible effects of the resulting rampus, there seem to be grounds for the opinion that the tradition which directs that

the President shall not leave the country during his term of office will not be seriously weakened by the only breach of it which has occurred.

The Money We Have

Have we enough money? The question has been raised, and it carries us back to 1890, when the country's mind was wreathed by the debate between the advocates of the quantitative and those of the qualitative theory of money. In that portentous year the amount of money in the United States was equivalent to \$53,62 a head, while only \$21 41 of this was in actual circulation. That is, the business, pleasure, and extravagances of the country had use for about four dollars less than could have been had from the banks and the Treasury. The people decided then that the country did not want more money of the kind that was proposed by Mr. BAXTER, and now, it may be said, with the concurrence of Mr. BAXTER himself, that the people have been justified in that decision. In the mean time the volume of money has increased, both in this country and in Europe, and the volume of business also. This was to have been expected. This increase is in accordance with the law of progress, or, in a word, with the law of nature. In the mere matter of coin, the United States is coming annually about \$100,000,000 in gold; Great Britain, nearly \$60,000,000; Australia, a little more than Great Britain; France, about \$15,000,000; Germany, about \$25,000,000; and Japan, more than \$10,000,000. In this country the amount on the 1st of October, of gold and silver coins and certificates and of United States and national bank notes, was \$5,148,719,552. Not all of this by about \$137,000,000 was in circulation, although, as we know from the controversies which have been frequent between Secretary SULLIVAN and some of the bankers, that more of it was needed now and then and here and there. The sum of \$137,000,000 was in the Treasury, and in its depository banks was \$125,000,000. The official description of "money in circulation" means money lying about and money in the banks. It means money that is passing from hand to hand, as well as money that is lying in bank to secure circulation and deposits. Besides the actual money in the country, there was in the banks individual deposits to the amount of \$4,199,038,410. If we add to this amount, against which checks could be drawn—and checks constitute currency as well as national bank notes—we had in the country in the fall of last year nearly \$7,500,000,000 available for all the transactions of the people, less the \$137,000,000 in the Treasury. We had a *per capita* circulation of \$53.68, or nearly eight dollars more than the abundant circulation of 1890. Some of the money in the Treasury was held as security for outstanding certificates, and some of it might easily and safely have been deposited in the banks.

Do We Need More Money?

When we note the amount of money that we have, and the amount of money that is added to our own stock and to that of the rest of the commercial world, we see that the amount increases at a greater rate than that of the increase of population, and, furthermore, it is the fact that the increase is at least equivalent to the increase of the demands of business. It is not a sign that money is lacking in amount because it is hard to borrow it or to secure it for use from the vaults of the banks. That is a sign of distress, of a general lack of faith, of a consequent loss of credit. In 1903 there was abundant money in the country, but it could not be had. The banks would not lend it. The result was that men and corporations were put to shifts to procure currency with which to pay their way, their necessary expenses. They issued orders on shops, and a kind of shingle currency that was wholly illegal, although the illegality was overlooked on account of the necessities of the unfortunate situation. We have now doubtless money enough for all our needs. The present relations between London and New York will doubtless adjust themselves. Business itself will see to that, as it has always done, and if we need more gold for our foreign exchanges, the Bank of England cannot keep it from coming here by raising its rate. In our domestic affairs we want a better distribution of money than the national government has yet been able to give us. There are times when we want more currency than we have, and there are times when we want

less; but we have money enough to sustain all the currency that we need. If the Federal government will so amend its banking laws as to permit automatic expansion and retraction, it will go better with us.

Independence for the Philippines

We have got to think again presently about the Philippines. It is a duty, and a pressing duty. We forget how pressing it is—forget all about it as much of the time as we can. The Philippines are like a tooth in the head of a busy man which he knows needs attention, but which he neglects as long as it does not ache. The simile is imperfect because the Philippines do ache, but we who are responsible do not feel them. When are we going to have that tooth filled, as Secretary TAYLOR would have us do by amending our tariff so as to give the Philippines a market for their products and a chance to live! When are we going to have the tooth out altogether! This last is what Mr. JAMES H. BLOUNT would know. He is a lawyer from Georgia, the son of Congressman BLOUNT, who was President CLEVELAND's special commissioner to Hawaii in 1893. In the Spanish war he served first in Cuba, and later in the Philippines, where from 1891 to 1895 he was a judge of the Court of First Instance. He has had a chance to learn both from the military and the civil standpoint how matters are going in the Philippines, and he seems to have improved it. To the current number of the *North American Review* (January 18) he has contributed an article, entitled "Philippine Independence—When?" which we wish every citizen who has a sense of political obligation might read. Mr. BLOUNT believes, out of his considerable experience, in independence for the Philippines, and thinks a date should be set at which it shall be given them. He thinks ten years is long enough to wait. His reasons are very persuasive, especially because they are so obviously based on real knowledge, and are so reasonably and dispassionately conveyed. The chief points he makes are that the Philippines could easily be protected from foreign conquest by treaties negotiated by our government; that all the Filipinos are now of one mind in wanting independence; and that things go very ill with them now, at vast expense both to us and to them, and will continue to go ill until they have clear assurance of independence at a stated time.

To Raise Government Salaries

On January 18 the House voted, 133 to 92, to increase the salaries of the Vice-President, the Speaker, and the members of the cabinet to \$12,000 a year, and the salaries of Senators and Representatives and delegates from the Territories to \$7,500. The increase voted to the cabinet officers is imperative; the increase to the Vice-President and Speaker is unquestionably proper. As for the Senators and Representatives, their case is less pressing. Yet they too should have, in our opinion, the increase of pay proposed. It is really not so much an increase of pay as an adjustment. The cost and standard of living in Washington have increased so much since the pay of members of Congress was last fixed that \$7,500 goes no farther now than \$5,000 did then, and if \$5,000 was a proper salary then, \$7,500 is no more than proper now. The same reasoning applies to the pay of the army and navy, the Federal judges, and many others, including especially the ambassadors and other members of the diplomatic and consular service.

Mr. C. F. Adams at the Lee Centennial

Writing in the *North American Review* about the Ethics of Corporate Management, President HUGLEY says:

Just when things were at their worst a really great man appeared on the scene of affairs in CHARLES FRANCIS ADAMS, of the Massachusetts Railroad Commission. He promulgated as *idea*, essentially ethical in its character, which not only was of great service at the time, but has been the really vital force in all good schemes of corporate regulation ever since.

"A really great man," Dr. HUGLEY calls Mr. ADAMS, and so calls him because he has great and useful ideas. He has also an excellent faculty of imparting them. The papers which he reads from time to time before the Massachusetts Historical Society, and which relate chiefly to the Civil War period, are of a most unusual liveliness and interest. Mr. ADAMS made the chief address on January 19 at Washington

and Lee College in Lexington, Virginia, on the centennial of the birth of ROBERT E. LEE. Whoever had the thought to send to Massachusetts for an orator to speak of LEE had a happy inspiration, so long as the orator was Mr. ADAMS. His ideas about General LEE had been for forty-five years in process of formation, and very interesting they were—more so, probably, to his Southern hearers and readers than would have been those of an orator of General Lee's own State, or any State beyond the Potomac.

Custodian of Dynamite

The New York State Senate has voted to give its clerk the power to expel a reporter from the floor of the Senate. The clerk did not ask for this accession of authority, and is not likely to exercise it impulsively. It may be flattering to be made the custodian of the Senate's dynamite, but a wise man would as soon not be too much flattered.

The Thaw Trial Impends

The trial of THAW for the murder of STANFORD WHITE is impending as this issue of the WEEKLY goes to press, and the newspapers have already for some days been preparing the public mind to deplete itself intelligently to the contemplation of the proceedings of justice. While the trial continues, however protracted it may be, it will no doubt compete successfully with all other occurrences, no matter what, for the attention of the great American reading public. Not the conflicts of the Senators and the President, nor further earthquakes, nor railroad accidents, nor railroad investigations, nor stock-market agitations, nor any happenings we can imagine, are likely to crowd the record of its daily progress off the front pages of the daily papers. In respect to murder trials of special note human nature does not seem to change much. All classes of people have always been interested in them, and are as much interested in them now as they were a century or two centuries ago. The main difference is that in our time the means of feeding the popular taste in this respect are very much more comprehensive and efficacious than they were when white paper cost more and type was set by hand and printing-press took longer to do their work. We shall all want to follow that trial, though many of us will wish to avoid the immense mass of supplementary slush, pictorial and literary, that will accompany the reports of the court proceedings.

New York's Canal Appropriation Decried

Mr. J. J. HILL's requisition of \$1,000,000 a year for five years for railroad building looks like a hundred millions that the State of New York is going to spend on its canal lock considerably smaller than it did. Moreover, Mr. Hill says that the best and cheapest form of project aid that can be given to a congested country is the improvement of a waterway, to wit, a fifteen-foot channel from St. Louis to New Orleans.

Barroom Rows and Soldiers

Newspaper despatches published on January 22 indicate a row at Columbus, Ohio, which, *malitia mafandis*, is the duplicate of the Brownsville trouble which has so befogged the gazyety of the nation. On the night of January 21 about fifty white soldiers, it seems, raided the negro quarter of Columbus, broke windows, terrorized colored citizens, and cleaned out saloons, until they scattered before a mob. Unlike the Brownsville aggressors, these white soldiers were not armed. Another difference is that about half the marauders were promptly arrested by the police working with two companies of soldiers sent out by the officer in command of the barracks. The trouble arose out of a recent barroom row between whites and blacks. It would be interesting to know whether any one in Congress is taking notice that these difficulties of barroom origin might be less frequent if the army canteen was restored and more encouragement was given to enlisted men to keep out of low-down dives and grogeries.

Fictitious Man in a Real Place

Very acceptable is the suggestion of the *Sun* that Sir ALEXANDER SWETENHAM is a fictitious character invented by Mr. W. S. GILBERT. Somehow he cropped from the "Bab Ballads" and "Pinafore" and got to be Governor of Jamaica at an inopportune time. That is really about all there is to it.

Recent Discussions of the Negro Problem

THE Atlanta riot and the Brownsville riot have had the effect of concentrating anew public attention on the negro problem to the temporary eclipse of every other, and have evoked a great deal of more or less heated and illuminating discussion, culminating in the remarkable speech delivered by Senator TILMAN, on January 12, in the Senate-chamber. No man has brought out more forcibly the gravity and urgency of the problem than has Mr. TILMAN, who reminded us that in six Southern States—South Carolina, Georgia, Florida, Alabama, Louisiana, and Mississippi—the aggregate number of negroes exceeds the total number of whites, while in South Carolina and Mississippi the colored population greatly preponderates. He points out that although, within the territory named, the negroes are for the moment disfranchised by State laws, yet these laws, as being evasions of the Federal Constitution, as amended, are in their nature temporary, and raise with no permanent cure, so that in the not-distant future negroes will again be able to vote, and thus make inevitable the struggle at the ballot-box for mastery between the races. It follows that race antagonism is destined to increase in intensity with every day, if it be true, as Senator TILMAN declares, that the white men and women of the South are just as determined now as they have been for forty years not to recognize race equality in social or in political life. Hence the question which he pressed home to his fellow-Senators: Is the statesmanship of our time adequate to avert a direful crisis? Or will it fail to solve the negro problem, just as the statesmanship of 1868 failed to find a solution by the bloody expedient of civil war? That is undoubtedly the one great question for American civilization to answer.

If we review and analyze the various palliatives or remedies offered with the aim of preventing the threatened race conflict at the South, we find that they may be reduced to four: namely, deportation, segregation, serfdom, and, finally, the ultimate elevation of the negro in the social scale by a full recognition of his political rights and the improvement of his technical and general education. The first proposal may be quickly and decisively rejected. For two reasons: the Southern whites do not want the negro to be deported. They want him where he is. They need his labor. The testimony on this point is emphatic and well-nigh unanimous, including that of Senator TILMAN himself. There are, indeed, some indications that Southern farmers would like a substitute for negro labor, if they could get it. Governor J. M. TERRELL, of Georgia, has lately cited on the lack of farm-laborers in his State, due to the relatively higher wages paid in other fields of work, and to the indisposition of the average negro to toil any more than is needful to feed himself. He earnestly recommends, therefore, the encouragement of white immigration, and would direct the influx of Germans or Scandinavians to the upland regions of his State, and that of Italians to the more southern counties. Exposed to the competition of the newcomers, the negroes would have to settle down to steady work or go elsewhere. Even though, however, a time should come when, so far as economic considerations are concerned, the Southern whites might be willing to witness a voluntary negro exodus, they would not, for humanitarian reasons, insist on compulsory deportation. In his speech of January 12, Senator TILMAN recalled the miseries and horrors incident to the deportation of Moriscos from Spain in the first quarter of the seventeenth century, and he might have added that he was comparing small things with great, for the total number of Moriscos expelled from the Iberian Peninsula at the period named has been variously computed at from half a million to a million and a half, whereas there are nearly six million colored persons in the six States from Texas to North Carolina. The transportation of so vast a multitude would prove impracticable, even if public opinion at the South and at the North would tolerate such an act of oppression, and even if it were possible to provide an area adequate in size and climatologically suited to the accommodation of the exiles.

The second remedy, segregation, has lately been advocated by Mr. WASHINGTON GLADEN in the *American Magazine*. He is convinced, he says, that the outcome of interracial strife would be the intervention of the Federal government, which, in order to keep the hostile races apart, would have to set aside certain Southern States for the blacks, who thereafter would govern themselves therein, and be represented in the Congress at Washington. It is easy to see what Senator Mr. GLADEN has in view, to wit, South Carolina and Mississippi, together, perhaps, with Louisiana, Alabama, and Florida. This proposal is even more impracticable than deportation. There is not a white man in any Southern State who would not fight to the last gasp rather than renounce his home in favor of a negro. Moreover, the injury inflicted on the negro himself would be almost as serious in the one case as in the other. For, relegated to States in which there were no white inhabitants, he would be left to his own resources, and would in his isolation be almost certain to deteriorate as he has deteriorated in flight. This proposal also, then, must be dismissed as entirely out of the question.

We come to the only two practicable methods of averting a

conflict of races. As was pointed out by CARL SCHURZ not long ago, we must either, avowedly or tacitly, sanction the reduction of the negro to a permanent condition of serfdom, or we must, as a nation, resolve to move in the direction of recognizing him as a citizen in the full sense of the word. That, for the moment, at all events, the South prefers the former alternative there are many indications. Governor YARBAMAN, of Mississippi, who evidently has behind him a large majority of the whites of his State, has frankly announced that he desires to be sent to the United States Senate for the purpose of advocating the repeal of the Fourteenth and Fifteenth Amendments. Such a programme is undoubtedly favored by Mr. HENRY STARR, of Georgia, who won a signal victory at the recent election in his State because he stood forth the champion of the rigorous and lasting repression of the negro in political and social life. The policy personified in Governor YARBAMAN and Mr. BLOK SMITH points, of course, straight to serfdom, and might not prove so difficult of fulfillment as Mr. SCHURZ assumed that it would be. No doubt, it is a very different thing, as he said, to keep a race in slavery than that which had been in that condition for many generations, and to reduce that race to slavery or serfdom after it has been free for half a century. The latter thing has been done, however, and we need not go back to ancient or medieval times to find a precedent. It was about A. D. 1600 that by an arbitrary decree of the emperor Boris Godunov, the Russian peasant, who had been immemorially free, was tied to the soil and thus reduced to serfdom. No dissolution of society, no far-reaching catastrophe followed. But, while the gradual introduction of negro serfdom might be practicable in certain Southern States—a step was taken in that direction when the negro was disfranchised—such a retrograde policy would never be sanctioned by public opinion in the Northern and Western States, although, as a matter of fact, racial prejudices withholds from the colored man at the North many industrial opportunities which are open to him at the South, and which would remain open under serfdom.

Under all the circumstances, it seems probable that the temporary disfranchisement of the negro by State laws will be the farthest step that the South will be suffered to take in the direction of serfdom-creating regulations. But, as Senator TILMAN has pointed out, the State disfranchising laws will become ineffectual in proportion as popular education is diffused among the negroes, who will ultimately recover their vote, provided the Fourteenth and Fifteenth Amendments of the Constitution are repealed. There is absolutely no ground for believing that three-fourths of the States will ever consent to a repeal of those amendments, unless, indeed, the people of the whole country should arrive at the conviction that, for whites as well as for blacks, universal suffrage is a blunder, and that we ought to revive property qualification for the franchise. Such a conviction will never be reached by a numerical majority and embodied in law by a popular vote, and, therefore, the Southern whites will, apparently, have to make the best of things as they are, and help the negro to make the best of himself, individually and collectively. That is what they are advised to do by such representatives of Southern high-mindedness as the head of the University of Virginia, as President KILGUS and Professor WOODWARD of Trinity College, South Carolina, and as the Reverend EDGAR GARNETT MURPHY, of Alabama. These men do not dread, but would welcome, the elevation of the negro in the scale of civilization.

Is Shakespeare Read?

HOWEVER ahead TORLATO's strictures upon SHAKESPEARE may seem to those born in the tradition that he stands upon a lonely promontory of excellence unreachd by all others, it does at least give us pause to find three living authors, all of admitted excellence in their own kind, disclaiming the Shakespearean allegiance. TORLATO denies SHAKESPEARE'S greatness on the grounds that he is not universal and makes no appeal to the average man of to-day. One may entirely admit TORLATO'S premises and refuse his deductions. MARTELINCK denies SHAKESPEARE'S greatness on the grounds of the lack of spiritual wisdom in his characters, of the low plane upon which his humanity lives and acts. Mr. DENHAM MAW denies SHAKESPEARE'S supremacy on the grounds of his being "dead" over three hundred years; he claims that it is only natural that there should be a new stock of ideas and, he hopes, better points of view. What he quite truly asserts is that the most indiscriminate eulogies of SHAKESPEARE come from the least considerable and most ignorant sources.

The tradition that SHAKESPEARE is the greatest and most widely read of all English authors is universally accepted, and, in view of it, it is interesting to stop our casual acquaintances, literary and otherwise, and find out how many of them have read all of SHAKESPEARE'S poems and plays. The result of one such personal canvass was that a lawyer in a small Western town was found who had read and reread all the plays, but did not read for the women and other persons; a naval officer was found who did not care for books in general, but who always carried the sonnets in his pocket

and enthusiastically recommended them; a professor of literature was found who had read some of the plays many times, had dissected and analyzed them, and who was fairly sure that he had read all the plays at least once; one little girl of twelve had read all the plays, and had played out many of them with her paper dolls. Nearly every one in the educated class who was questioned had read one or two plays, usually at school, but nearly all held mistaken ideas about what they had read, and had a most superficial knowledge of the construction of the plays, the significance of the characters, and the points of prominent experience.

The commonest fallacy is, of course, that SHAKESPEARE is direct and simple, that he told a tale for the sake of the tale without artifice or adornment. As a matter of fact, SHAKESPEARE is extremely difficult reading. The mere fact that he lived three hundred years ago shows that historic sense and knowledge are required to understand him. Second place, while SHAKESPEARE is very skillful in dramatic construction, he was notably more interested in manner than in matter. He took his tale wherever he found it, quite regardless of how or where it had been used before, and embellished it with his wonderful style. If ever there was a lover of the word for the word's sake, and style for style's sake, it was SHAKESPEARE. As for thoughts, he seized them to the right and the left, wherever they might be lying. In *Brutus*, in *Livy*, in *Marlowe*, at the tavern, in the street; but he translated them into the wonderful style of SHAKESPEARE, euphuistic, affected, elaborately adorned in the early plays, but tending ever toward a method more obscure, rarer, highly changed, elliptical in the later plays. He was in plot-structure, in the systematic building up of the play to hold the interest tense to the end, in emotional force and in word-magic, the supreme master of English literature. But HERMAN SHAW is right when he says a new type is needed to express the modern mind. *Gilbert's* ill-founded jealousy, *Macbeth's* crude ambitions, *Roslin's* doubt and hesitancy and, above all, his escape into the realm of men's words, are out of date; the stress laid upon the sexual motif is old-fashioned; the swiftness of impulse, the strong play of emotion, the subservience of the reason and judgment, all belong to another age than ours, and HERMAN SHAW'S *Caesar* is much more heroic, according to present-day thinking, than SHAKESPEARE'S *Antony* counting a kingdom lost for love.

MAFFEIOLLO's complaint against SHAKESPEARE is perfectly well founded, that his characters have not spiritual wisdom and insight, and that they do not control destiny, but that destiny falls upon them from the outside, like a hail upon its prey, and destroys them. Heron lies the very basis of tragedy, that a man finds himself not great enough to cope with his fate, and in more or less painful circumstances he succumbs. SHAKESPEARE belonged to a precursor of humanitarianism: the quietest acceptance which discards destiny, and the spiritual insight which circumvents it, belong to religious eras.

If TOLSTOY's theory of art is correct, then, too, SHAKESPEARE must yield to his accusations. TOLSTOY'S thesis is that that art is best which makes the most universal appeal and reaches the simplest and most uneducated classes. If that can ever be proven, SHAKESPEARE, MILTON, and SHILLER must doff their hats while we crown MARK TWAIN and HALL CAIN. These are the people who reach the masses. The truth is, great beauty and great virtue are always inaccessible except to those who strive, who learn to accept, understand and enjoy them. Profound subjects, beauty of treatment, absolute sincerity of wisdom, are by no means matters readily understood, nor are things we may, perhaps, grow to understand by humility, perseverance, study; the reward is great when won, but nothing that we know without pain is worth knowing, and this is the fact in TOLSTOY'S argument. In his desire to feel all men equal in endowment and power of enjoyment, he has asserted that whatever is not universally liked is bad. It is perfectly true that SHAKESPEARE is not universally liked or read; that to an average illiterate person he would be, except in parts, totally incomprehensible; but that only proves how great will be the reward of those who learn to know him.

Personal and Pertinent

COLUMBIA HENRY WATSON has been nominated for President of the United States in a letter from *Carmes* to the Paris edition of the *New York Herald*. The writer suggests that it is time for the Democrats to put up a Southerner, recounts the Colonel's distinguished services, and declares that "his latest pronouncement, 'I am so old-fashioned as still to believe in the Constitution of the United States,' would ring over the whole continent." It is a first-rate pronouncement, and is likely to ring in the Democratic platform, wherever the candidate is.

The intelligent women of Washington, and there are many who are inclined to like politics, much after the manner of Lady GLEN-COURA PALMER, will find Mrs. JAMES BRYCE very entertaining. She is the daughter of a wealthy cotton-spinning house, the As-

turns of Flowery Field, her father being one of those British manufacturers who flourished intellectually, as well as pecuniarily, in the time of GLADSTONE, BRIGHT, and CORBET. The ASHURTON daughters were brought up in an atmosphere of politics when politics consisted especially of questions of principle, and the houses of the northern and western capitalists of finance and industry resounded with argumentation limited in the fire of moral indignation. The women of that kind of family know about that kind of politics, and if any ladies in Washington are ready to discuss free trade, reciprocity, universal peace, woman suffrage, or colonial problems, Mrs. BRYCE will be a very stimulating lady for them to know. But perhaps they would not find her caring much for the personal fortunes of any statesman but Mr. BRYCE. Besides, she is very pleasant to look upon.

A New York clergyman whose down-town church is in the heart of the office-building district sought to benefit his neighbors by proposing a guild for women employed in the neighborhood of his church as stenographers and typewriters. A chief feature of his plan is to offer the stenographers a pleasant lunch-room and some club-rooms where they may spend the noon hours. Dr. GREEK's church is well situated for such a work, and the plan seems a good one. Unluckily, in proposing it he dwelt at some length on the dangers to which a small minority of the stenographer ladies were exposed by having to "sustain relations of business intimacy for eight hours of every working day with men wholly unworthy of the confidence reposed in them." That has led, as might have been expected, to spirited denials from writers to the newspapers that the business relations of stenographers with their employers are dangerous. In the great majority of cases they are not, but now and then they are. But the last argument to use in public in starting a downtown lunch club for stenographers is that some of them need such a place for the protection of their morals. It would be a pity to have a good plan marred by a possible indiscretion in the launching of it.

SIMON GLOUGHEIM, the new Senator from Colorado, is a very rich man, and it is said that this is the reason why he was elected. However that may be, he has not made all his money by his own exertions, for his father and the family made a fortune by selling lace in Philadelphia and New York. With the money made in this sort of business he invested in mining and smelting, and SIMON went out West in 1892 for the purpose of looking after the millions—actually called interests—of the family. There he became a celebrated millionaire, and he was also a philanthropist, his good works being done out there and here. He is a fair man and a good man, if, indeed, a twentieth-century millionaire can be good. He may even give up his official places in the "smelter trust," as it is called, and he may not. He says that he is not going to represent mines, working dollars, but the people of Colorado. It is to be hoped that he may know how to stick to his words, and then stick. It is certain that he will not be a radical, and men who are not radicals are needed now in politics. If only to balance things. He knows nothing, of course, about the art of statecraft, but he knows prosperity when he sees it, and may escape being denounced as a lander.

Mr. CHARLES FRANCIS ADAMS, who has just eulogized General Lee at the celebration of the Washington and Lee University, is a typical ADAMS. More than any of his brothers—HENRY and HENRIETTA, now living, and JOHN QUINCY, dead—he is concerned in national questions, and he is a liberal and far-seeing man. He has long taken a generous view of the Southern man who fought for States' rights, as he fought—for he was a United States officer in the war of secession—for the Northern conception of the Union. It is characteristic of the ADAMSs, and it has been for four generations, never to permit personal feelings, affections, or dislikes to govern their public conduct or their views of public questions. CHARLES FRANCIS ADAMS long since abandoned public life for historical study. He abandoned it at the same time as Boston and Quincy, and procured for himself a new and beautiful home at Lincoln, in Massachusetts, a town that adjoins Waltham, and is behind a range of hills which exclude the ocean breeze, particularly damp down that way, and give to its people the breezing inland air more like that of western Massachusetts. In this home Mr. ADAMS works in a study which looks far over the Sudbury and its marshes, past the Wayside Inn. Mr. ADAMS, surrounded by historical memorabilia of his own family and of others, thinks and writes about our historical problems. When he is tired of this he takes a ride on horseback, or goes to Boston and looks after ADAMS property, while for a complete rest he gets a friend down to Lincoln and plays at violent mental and conversational exercise with him until two or three o'clock in the morning. He long ago came to the conclusion that in 1961 Southerners were as legitimately believers in the right of the States to secede as he and his were believers in the indestructibility of the Union. It took a combat between the LEYS and the ADAMSs to establish the Supreme Court principle that this is an indestructible Union of indestructible States.

KINGSTON SHARES SAN FRANCISCO'S FATE

THE EARTHQUAKE SHOCK WHICH VISITED THE ISLAND OF JAMAICA ON JANUARY 14 DEVASTATED THE BUSINESS PORTION OF THE CITY OF KINGSTON, AND RESULTED IN THE DEATH OF AT LEAST 600 PERSONS—MOST OF THEM NEGROES. THE HEAVY SHOCK WAS FOLLOWED BY AN OUTBREAK OF FIRE, WHICH COULD NOT BE FOUGHT BECAUSE OF LACK OF WATER. THERE IS LITTLE DOUBT THAT THE LOSS OF LIFE WOULD HAVE BEEN FAR LARGER HAD NOT A TREMENDOUS WINDSTORM, ACCOMPANIED BY HEAVY RAIN, GIVEN WARNING OF THE IMPENDING DISASTER. THIS AROUSED WIDESPREAD FEAR, AND CAUGHT THOUSANDS TO LEAVE THEIR HOMES

THE DUST ON THE BACK STAIRS AT ALBANY

GOVERNOR HUGHES'S POLICY OF "GOVERNMENT IN THE OPEN," AND ITS UNHAPPY EFFECT UPON THE POLITICIANS TRAINED IN THE "PRIVATE-EAR" SCHOOL OF STATECRAFTINESS

By CHRISTIAN MACDONALD

ILLUSTRATED WITH SKETCHES FROM LIFE BY W. A. ROGERS

ALBANY, January 25, 1907.

OF all the offices in the \$23,000,000 and unfinished pile of bad construction that tops Capitol Hill in Albany, three are set aside for the use of the Governor of the State. They occupy the southeast corner of the second floor of the big building. From their windows may be had one of the finest views in Albany. The Capitol is invisible. The rail-roads yards are in full view. The unparalleled collection of steps that leads up to the main entrance of the building may be seen in all its grandeur. Up and down these steps corpulent citizens of Albany walk and trot, scuffle and trudge, reliving their weight. They afford relaxation and amusement to the Governor and to the rising generation of Albany. Just below their exercise-ground is the Ten Eyck. In its ample bar great statesmen gather and curse the Governor. As fine a collection of curses as can be found anywhere on earth may be gathered in Albany to-day.

The three offices in the Governor's suite consist of the public reception-room, or Executive Chamber, in the extreme corner of the building, the secretary's room to its west, and the Governor's private office to the west of that. Albany treasures a tradition that there is a private staircase somewhere in these rooms, by which one may gain the lower corridor and the street without being seen. Perhaps there is. If so, Governor Hughes doesn't know it. Hence the curses in the bar of the Ten Eyck. Hence the terrors of ruin on the marble brow of the lion, Timothy L. Woodruff. Hence many unhappinesses that rend the statesman's breast at Albany.

Since Cleveland trailed for the Presidency in the Executive Chamber at Albany, that noble apartment has been more or less neglected. Hill sat there when he had no business on hand. Flower used it when the private office was too small for his purposes. Morton utilized it. Black considered it an incident in his office-building. Roosevelt put himself behind his big desk at intervals. Hill received a few delegations there and looked bored as he did it. Higgins allowed it to be an entryway for the inner sanctum. But none of them thought of making it his headquarters. None of them considered it an instant as the place in which to transact business. It served as a hall for formal receptions. That was all. Cleveland alone of all these did the real work of government in the Executive Chamber, and when Higgins went out of office, looking so sick and weak that his friends thought he would faint before the inaugural ceremonies were over, the idea of using the front room for the actual work of the

Governorship was one which no true patriot harbored. Ask Rains. Ask Woodruff. Ask Odell. Ask Whipple.

These statesmen knew where the working Governor has sat during these past twenty years. Many others know. They know that the front room, the maligned-paraded, Spanish-leathered Executive Chamber has been merely the show-place of the floor. In it citizens in quest of a "pull" were welcomed and talked properly. In it Governors recited with great show of virtue the phrases that in their campaign speeches won the most applause. In it the noble platitudes about "the people's interests," and the resounding talk about the "salvation of our institutions," and the soothing assurances of devotion to the public have been repeated so many times, that the walls automatically re-echo them at the slightest provocation. In it Governors have appeared in their frick-outed, tail-batted stage. In it Governors have felt painfully like glass-enters in museums, conscious that they were on exhibition to Seering Albany tourists at so much for the round trip. In it they have been formal Governors serene, calm, majestic—that is, as majestic as was possible.

But the real Governors, the Governors in working clothes, the men with the power of appointment and removal, the designators of justice, the signers of appropriation bills, the conveniently unalumniated masters of little jobs, have sat in the inner chamber, where none but the pre-eminent qualified might penetrate. In the small room no platform phrases have been heard. There has been no waste of time over the public interests. "Our institutions" have survived despite complete neglect among those who have had the power for the third office from the southeast corner of the building. That is, until Hughes came up here and began his work.

Hughes is an odd sort. He is mostly independence. The rest is self-reliance. He also knows things. He knows all about the inner office, for instance. He has heard of the crowds of men that stood in the Executive Chamber, waiting to see the Governor, while ward patriots walked through the room, past the secretary's desk in the second chamber, and entered the private office beyond. He knows that few of these men left by the route that led them in. He knows that they walked out of the private door to the corridor and went their ways, and that the words they spoke to Governors while the crowd waited in the Executive Chamber were seldom repeated, but carried weight.

He knew, when he began his first day's work, that he might lock himself up in that little room, pop out into the big room only when it suited his convenience, and that his conduct would be

The new Order of Affairs at Albany—"Government in the Open"

GOVERNOR HUGHES AND HIS SECRETARIES. THE SMALL DOOR ON THE LEFT LEADS TO THE FORMER "KITCHEN CABINET" CHAMBER

in perfect harmony with that of the men who have been making precedents at Albany for years. He knew that he was looked on as a cold and unsocial man, and that if he refused to be seen much in public no particular harm would be done. He knew that he might send to any part of the State, call for any man, have him enter by the back door and depart as he came, with none to know anything about it. He knew that this was the approved way to build up a "machine." He knew that it was the only way to do if he was to have an all-powerful kitchen cabinet to run him and his administration, and to work its own little games while he took the responsibility and the blame. So, knowing all these things, Hughes didn't use the little back room. He established himself in the front office. He began to tear off the work there at a rate that astounded the civil servants in the Capitol.

There, in the big public room, he sat him down. There he began to receive his visitors on the principle of first come, first served. It was a revolution in State affairs. Woodruff was one of the first to learn of the new conditions Hughes had brought from New York with him for the edification and instruction of Albany and its hangar-on. Woodruff visited the Capitol in all the importance of a State chairman. To be sure, he was a State chairman who had lost everything except his collar-button, and Hughes had that. That made no difference. Woodruff pranced up the hill with all the assurance of Odell when Odell was Governor and chairman, and State Committee, and Legislature, and a few more. Woodruff led himself into the Capitol as though he were the proprietor, just home from a trip abroad, and found the Executive Chamber deserted. He asked where the governor was. He was told that the Governor was in the private office. Then he was informed that the Governor was too busy to see him, thank you kindly. Whereupon the Capitol walls cracked a crack that was not the result of bad construction, but was moved of their cracks, and Woodruff led himself down the hill. He eased himself over the rough spots. For Woodruff was sore, and he feels the hurts yet. Later, he saw the Governor. What he said to the innumerable Hughes is now known except those who do not talk about it, but it did not close the wounds of that denial to the lower office. The day Governor Hughes sent word to Charles Woodruff that he was too busy in the inner room to see him, he let it be known that he was going to govern in the daylight, where every eye who cared to watch might look on and see the wheels go round. A revolution? If the Capitol had stepped suddenly down and knocked Harry Benson's "Talk" at its fountain, it would not have been more revolutionary.

Hughes sat in the Executive Chamber a few days later, performing his unique act of governing without the aid of a confederate, when in came a delegation from an up-State judicial district anxious to tell him all its troubles. On the right of the Governor sat his secretary. On the left of the Governor sat his military secretary. All around the room sat waiting citizens on sofas. Some were great men, some by no means so great. The delegation took its turn among those who were to see the Governor—for not all who enter the room get the ear of that office. In time his opportunity to be heard came. It moved forward with that queer, self-conscious shuffle that all delegations get when they stand before authority. The delegation's spokesman spoke. Each side was told. The Governor listened, analyzing, sifting, arranging, weighing, appraising, every statement with the wonderful severity that enables him to give his final answer in the time another would use in asking for a few days to think it over. It was not a matter that could be settled offhand. The Governor said it would have prompt attention. The delegation bowed and moved away. As it neared the door, one of its members, a smart little man, a politician trained in the "private-war" school of statecraft, darted back to the Governor, who had not yet sat down.

"Now, Governor," said this wily little man, "I know a lot about this thing that you ought to hear. I'll be glad to let you have all the facts whenever you want them. I'd like to talk with you about it."

The Governor looked his returned visitor over. The Governor is the politest of men.

"There is no better time than the present," said he. "I want to get all the facts at this time, so that the matter may be disposed of finally when we get the documents bearing on the subject."

"Now, wasn't that fine for the pretty little man?" It was just what he had been looking for. He almost hugged himself for joy. He thought of those less accomplished politicians who were sifting through the day, and he thought of the Governor's ear. Then—

"Messenger, call back those gentlemen who are leaving the room," said the Governor. "They will be glad to hear what you have to add to what has already been said," he continued, turning to the sharp little man beside him. Back came the delegation, surprised and wondering, and what he acute member who had been so proud of himself a few moments before had to say did not take long in the telling. And to think that this man Hughes was never trained under Odell, and really knows no politics!

How does Hughes expect to keep out of trouble without confidential agents, spokesmen, representatives, and back-stairs visitors? Such have been the instruments of all Governors for generations—political penitentiaries—past. How can this inexperienced man avoid the pitfalls that are being dug for him by the most experienced hunters of Governors in the State? His plan is simple. It is not the deep plan of a man who fears himself or for himself. It is going to run out out of the State government as he believes it should be run. He is going to take care of the Executive Department just as he has taken care of the business of his clients in his law practice. He is going to tackle each job as it comes along, and dispose of it with the interests of the State alone in mind.

Now will the Governor become prey of cranks and bores. Dis-

Not like Old Times
"I DON'T YUFTER HAY" TO WAIT"

continuing the back stairs did not mean that front door and Executive ear were open to the purposeless ramblings of those who merely wish to "lay the details before" some victim in office. No man in public life can turn away an unrelenting or useless milder more quickly, more effectively, than this same Hughes.

Another time of some importance, not without bearing at this time: Hughes is no professional "be of the politician." It causes no surprise in his mind that a man has won a place in his party. It causes him no grief that a man has attended caucuses, or been of conventions. He is able to restrain his reverence for publicists whose whole stock he trades in vituperative denunciation of party workers. He is not without knowledge of the usefulness of party management and party organization. He looks on a corrupt politician as he looks on a leader of trust funds, but he does not consider an corrupt politician every man who has been in public office simply because of that fact. If some over-gentle partisans have been surprised at the Governor's leaning toward them, at the abolition of the kitchen cabinet, at the locking of the private door, at the disuse of the back stairs, there are those on the other side of the fence who are shocked for few revelations before the end of the Legislature's session.

Before he announced his appointments, a delegation from Kings County visited the Governor to urge the nomination of one of its men for an important office. The Governor listened to them with the utmost attention. When they had said all that they could think of in favor of their choice—it was not a long session—he thanked them, and then added: "You know, I must rely on my own judgment, after all." To which, manifestly, there is no adequate answer. If what possible use, as a political asset, is a man who intends to rely on his own judgment, after all?

The easily-reached Ear of the Governor

UNDER THE NEW CONSTITUTION GOVERNOR HUGHES REJECTS VISITATION AT HIS PRIVATE DESK,
NOT BEING CLOSED DOOR

Enter now the head of a State department, a man of some consequence in State affairs, and only a month ago of great bulk in the panorama of State politics. He takes his seat to wait his turn. He does not have long to wait. The Governor is not one who wastes time in his conference. The State officer gets the chair to the left of the Governor. The Governor swings his chair around so that he looks straight into the eyes of his visitor.

"Governor, I do not know whether you are aware that the statute requires me at this time to inform you of the conditions that—"

"Yes," interrupts the Governor, "I am quite aware of the requirements of the statute. I have been wondering why the report was delayed."

He has been Governor two weeks and he wonders why a report only a few days overdue is not in hand? When a man begins his term like that there is no telling where he will end. Already, in Albany, public officers are beginning to wonder what their next jobs will be, and whether they can get on the Federal pay-roll. Nor do they expect to be dismissed from the State service. They see that the Hughes party is too fast, and that they will not be able to keep up with the procession. Besides, government in the daylight is new to them. There is something unsteady, to them, about it and the rule of perfect equality. They miss the days of the little side door into the inner office, when all that was necessary was to make sure their political standing, and the rest would care for itself.

This Executive Chamber style of doing things has advantages for its practitioner not immediately apparent. The best way, the easiest way, to tame a Governor who shows signs of independence is to "get something on him." To "get something on" a Gov-

ernor who works in the dark is but child's play. Many things were "got" on Odell, for instance. Odell was a strong, husky man, however. Things would not stick on him, he shook them off. He shook those who "got" them until they sickened of their experiment and quit, or came over to his side. But how can anything be "got" on a man whose work is all in the light of day? Hughes greets about his business without caring whether others overhear what he says, without trying to keep under cover, without any of the time-honored subtleties of the man who has something to hide. He was asked what he would do if he found the Legislature playing tricks on him, for the Legislature loves not Hughes. Some Senators would almost sacrifice their special interest even if they could make him

pay through the nose. The answer came naturally to Hughes. He said he would appeal to the people. Not that he has been thinking of this contingency seriously; he has given it thought, but he is not expecting trouble. Yet he knows what he would do. He knows, too, that he could tell all of his side of the story. The other fellows would have to keep part of their side dark. More daylight government; more work in the Executive Chamber.

The estimable Haines, whose contempt for criticism is so great that he and friends have amended the rules of the Senate this year to enable them to punish any newspaper whose writers may displease them, prepared, this year, a list of committees so offensive to decency that there was a State-wide howl of rage when it was published. Woodruff helped to make up the list. Accounts differ as to whether the Governor ever saw it before the appointments were announced. He says he did not, and his word is accepted. Woodruff said the Governor was "consulted," which was not true. What probably happened is this: Woodruff took a list of the committees to the Executive Chamber, and held them where the Governor could see them if he looked sharp; the Governor did not look at them, and Woodruff called it a "consultation." Woodruff tried to stave off the wrath of the public by shouldering the responsibility on the Governor. His statement that the Governor had helped select the committees had been in circulation about ten seconds when it came to the Governor's ears. The Governor's denial travelled even faster than the original statement. It was accepted at its face value.

And this teaches that the Governor is not far wrong if he believes that he is not without resources in the contest that the Legislature intends to make against "Government in the open."

The Retreat of the dismayed Army of ex-Governors

SO FAR AS THE "PRIVATE" POLITIANS ARE CONCERNED, IT HAS BEEN KNOWING HAIR AT ALBANY SINCE JANUARY 1892

O WHERE ARE THE STATES THAT WERE

AN IRREGULAR BALLAD INSPIRED BY AN IRREGULAR PROCEEDING

by JOHN KENDRICK BANGS

O WHERE are the States that used to be:
New York, Dakota, and Maine;
Kentucky, and good old Tennessee,
The home of the liquid grain?
Will grand old Texas come again?
Will Rhody once more occur?
Or green Vermont, with her hill and sprain?
O where are the States that were?

When Teddy retired the Union free
From valley, and hill, and plain,
And wiped them out with a one, two, three,
Like snow-drifts before the rain;
When out of the massive, fertile brain
Of Teddy's Prime Minister
There came the edict, men cried with pain:
"O where are the States that were?"

They sought them upon the land and sea;
They sought them in mountain chain;
In valley and glen right faithfully,
In highway and country lane.
In places sacred and eke profane;
In lands of the pine and fir;
Nor was that ardent search in vain
To locate the States that were.

For at all points of the weather-vane,
O President Roosevelt, sir,
Those sovereign States did yet remain
Just as they used to were.

SPENDING A BILLION AND A HALF DOLLARS TO MAKE A DESERT BLOOM

THE STUPENDOUS WORK OF THE RECLAMATION SERVICE IN THE WEST, WHERE TWO-FIFTHS OF THE AREA OF THE UNITED STATES ARE BEING CONVERTED FROM ARID LAND INTO FERTILE FARMS

By C. H. FORBES-LINDSAY

OUTSIDE of the regions in which its field of operation lies, little is known of the wonderful work of our Reclamation Service. This fosterhood of masons and ditchers is too intensely occupied in accomplishment to give thought to advertisement. Its members are men of the resilient type—slow of speech, but with unbounded imagination, and the daring that defeats difficulties at the first assault. The creed of the corps is expressed in the homely adage, "Where there's a will, there's a way," and they hold to it with an unshakable faith that prompts them to the performance of miracles, for such, surely, are the marvellous jugglings with rivers and mountains that conform the handiwork of Nature to the designs of man.

To these latter-day Lombardians, slow titanic labors transform the sandy wastes into gardens of luxuriant growth, the words of the ancient prophet are literally applicable:

"The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as a rose."

Viewing the achievement of the Service during the short term of its existence, and remembering that its men are practical to the last degree, we must treat its boldest projects with a respect which we would not otherwise accord to them. Nevertheless, our amazement is excited by a proposition to convert two-fifths of the area of the United States from arid land into fertile farms. Yet this stupendous enterprise is seriously entertained by the youngest division of our government. It contemplates nothing less than the ultimate salting of the 50,000,000 acres of waste comprising the Great American Desert. The undertaking will involve the expenditure of \$1,500,000,000, but it will create \$2,500,000,000 worth of taxable property, and will provide homes for 3,000,000 of our future population. This is the prospective goal to which the bureau

aspires, and its engineers declare that it is attainable within the present half-century.

During the four years since its organization, the Reclamation Service has rendered productive 250,000 acres of desert, being one-fourth of an area that has been mapped out for irrigation under twenty-two projects. The prosecution of this work involves some of the most unprecedented and spectacular engineering feats of modern times, of which a few only may be described within the limits of this article.

In the Uncompagere Valley, the old-time hunting-ground of the Utes in Colorado, there are 150,000 acres meagrely fed by a scanty stream. It is rich land—as rich that, with sufficient supply of water, a five-acre homestead would amply support the average family. Along the eastern edge of the valley flows a copious river, but its flood is cut off from the thirsty plain by a solid wall of rock two thousand feet high and six miles thick. The engineers of the Reclamation Service determined upon the daring expedient of tapping the futile flow through the Gunnison Canyon, and diverting to the valley as much of it as might be deemed necessary. This conclusion was reached after the feasibility of the scheme had been determined under dramatic circumstances. There are legendary tales of lives lost in the effort to make the passage of the canyon, but the Indians declared that no man had ever survived the attempt, and they pronounced the feat impossible of human-being achievement. Nevertheless, two men of the Service, Mr. A. L. Folsom and Mr. W. W. Torrence, volunteered to essay the necessary work of inspection. They were lowered by ropes, and encumbered by their few indispensable surveying instruments, made an almost perpendicular descent of two thousand feet to the bottom of the fearful abyss. Here the most perilous part of the undertaking

One of the Cement-lined Canals which will convey Water from the Truckee River over the Nevada Desert, opening to Agricultural Use more than 400,000 Acres of hitherto Arid Land

One of the Dams of the Truckee-Carson Project, in Nevada, showing the Method of diverting the Truckee River from its Bed to the irrigating Canal

begin. Lashing their instruments and provisions to a rubber mattress, they committed themselves, upon a raft of logs, to the racing flood, in which a boat could not have lived for an hour. borne along by the swift current, they contrived from time to time to secure footing upon the slippery rocks in mid-channel, from which uncertain vantage-ground they made observations. A party of their comrades helplessly followed their progress from the brink of the chasm. When at length they became lost to the sight of their friends, and when no sign of them was seen for forty-eight hours, it was taken for granted that they had sacrificed their lives to their sense of duty. After several days, however, Mr. Fellows and his companion emerged from the mouth of the canyon, bruised and hungry. Their raft had been wrecked and their instruments and provisions lost. For two days they had been without food of any description, but secured to their bodies, in oil-skin casings, were the precious notes which proved the tunnel was to be practicable.

Following the heroic exploit, the canyon was mapped by topographers dangling at the ends of half-mile lengths of rope. Next, with indomitable perseverance, the engineers cut a wagon road out of the face of the rock, hauled in machinery, and installed a power-plant. That was two years ago. Since then the force, working day and night, has established a world's record in tunnel excavation, and has traversed more than half of the six miles through the granite wall.

This quite unique aqueduct lies 2000 feet below the surface of Verinal Mesa. Its cross section is 10½ feet by 11½ feet, and its capacity will be 13,000 cubic feet per second. It is to be cement-lined throughout, and will be completed in 1908, at a cost of about \$2,000,000.

The work of this tunnel is beset by constant and various dangers. The drills are driven unceasingly night and day, the while giant pumps draw out noxious gases, supply pure air, and drain the subterranean springs that threaten the lives of the workmen. In May, 1903, the roof of the tunnel caved in, cutting off nine-tenths of the excavators. When, after forty-eight hours of herculean labor, their comrades cleared an opening in the debris, the imprisoned men stood cowed to their armpits in the rising water. At its outlet, the tunnel will connect directly with an elaborate system of canals and ditches extending in a network all over the valley. The completion of this operation will add 3000 homes to the Pecos-pulvere Valley, and will increase the value of its lands by not less than \$10,000,000.

In the Valley of the Salt River, in Arizona, the Reclamation Service has one of the most remarkable engineering operations in the world well under way. In a narrow portion of the rock-walled canyon of the Salt River, a dam of solid masonry is rising to a height of 270 feet. It will create a storage lake 25 miles long and 200 feet deep, with a capacity about fifteen times that of the New Canton reservoir in New York. From this lake water will be carried to the arid lands of the valley through canals and ditches.

In the construction of the Roosevelt dam, 240,000 barrels of cement are required. The isolation of the site and the apparent lack of alternative source of supply on the part of the government,

tempted the cement manufacturers to put the exorbitant price of \$1 per barrel on their product. Before accepting a bid which would so greatly enhance the estimated cost of the work the Service determined to investigate thoroughly the possibilities of the situation. As a result, limestone of the best quality and an abundance of blue clay were discovered in proximity to the operation, and it was decided to erect a cement-plant. This unexpected development evoked from the interested corporations a loud protest, and an offer to furnish the material at one-half of the former quotation. The Service, however, precluded in its plan, and for many months its mill has been turning out 250 barrels of excellent cement daily at an expense which will ultimately save to the settlers of Salt River Valley upwards of \$1,000,000. The town of Roosevelt, situated at the lowest level of the lake site, presents the curious condition of a city built upon substantial lines, although with an assured prospect of early destruction. When the dam is completed the place must be abandoned and submerged. Nevertheless, the inhabitants, most of whom are engaged in the construction of the dam, have erected dwellings and stores, schools, and churches of permanent material, and have installed electric lighting, sewer, and water systems. The present population of Roosevelt is more than 2000.

The Salt River project will cost \$5,450,000 and will effect the reclamation of 260,000 acres. The operation is located in what was an almost inaccessible spot, and before the work could be entered upon it was necessary to construct a wagon road sixty miles in length, three-fourths of the way being through the wildest and most precipitous canyons in this country. Experts have pronounced this road a marvel of skill and one of the most spectacular pieces of engineering in the world. It opens up a new region of beautiful scenery that will doubtless soon attract the tourist.

A still higher dam than that which is named after the President, and the highest in the world, is in course of construction in northern Wyoming. The Shoshone dam will rise 310 feet above its foundation, and will lock a narrow granite canyon so as to form a lake covering 5000 acres. From this reservoir hundreds of miles of canal will radiate. When completed, the Shoshone project is calculated to reclaim 310,000 acres of waste at an approximate cost of \$9,250,000.

Flowing among the clouds in the mountains of western Wyoming, the Teton River pursues its erratic course to the Gulf of California, now cutting a bed at a depth of more than a mile, and anon flowing on the top of a self-made dike, at a considerable elevation above the country on either side. This river, which has been aptly called the American Nile, periodically floods an extensive delta, depositing over it rich layers of silt. Here the problem of reclamation involves the difficult task of confining the mighty stream to its channel. The system of boxes which is in course of construction will open to occupation 120,000 acres of the richest land on the face of the earth. The diversion dam is in connection with this—the Yuma-project will be one of the most remarkable structures on our continent and the only one of its kind. In the utter absence of bed-rock for a foundation, the engineers had recourse to the methods employed under similar conditions in India

and Egypt. The structure is of the East India weir type—a mass of masonry weighing 600,000 tons and resting upon sand. It will be less than twenty feet in height, and about 5000 feet in length.

One of the most vexing features of this project is the disposition of silt, of which the river carries 1,500,000 tons past the dam site in twenty-four hours. The difficulty has been surmounted by an ingenious arrangement at the head-gates, contrived to draw off only the top foot of water, which is comparatively clear. An auxiliary effect will be secured by using the sluiceways and heads of canals as settling basins, constructed upon plans that will permit them to be scoured out at intervals.

Another notable engineering feat harnessed in this enterprise consists in carrying a canal across the Gila River to the arid lands on the south side. This will be contrived by means of a siphon of steel and cement, 3000 feet long, passing beneath the bed of the stream. The uncertain trend of the river, with its frequent changes of channel, necessitated the erection of extensive levees at this point to guard against the possibility of the stream diverging so as to leave the crossing on one or the other side of it. The climate and the character of the soil under the land affected by the Yuma project marvellously fertile. Seven or eight crops of alfalfa are harvested annually, producing frequently from ten to twelve tons per acre. All manner of grains and fruits flourish in this locality.

An Arizona Home built on irrigated Soil formerly bare Sand and Stone

acres of land at present absolutely worthless. It will cost \$1,000,000, but will create values in the soil of not less than \$30,000,000.

Settlers are drawn, as by a magnet, to the localities in which the Reclamation Service has begun operations. Land is eagerly taken up long before the completion of the projected improvements. The transformation wrought by these pioneers is truly wonderful. The Minidoka project, in southern Idaho, affords an example in point. A little more than a year ago, when the engineers went into the country to select a site for their works, they found themselves surrounded by a vast expanse of sage brush, without a sign of human habitation within thirty miles. To-day one may traverse, in a railroad car, the trackless route taken by those surveyors, and on the way he will pass three new towns

The first of the great works entered upon by the Reclamation Service, and the farthest advanced, is the Truckee-Carson project in Nevada. This undertaking contemplates lifting the waters of the Truckee River, and casting them into a great canal which will carry them to the Carson reservoir. Thence they will be conveyed by laterals over the desert in every direction. The beautiful dams on the Truckee and Carson rivers are models of engineering skill. The long lines of canals, many of them large enough to carry rivers, are cement-lined through a considerable portion of their lengths, and invariably so in the several places where they tunnel through hills. This project, when completed, will open to agriculture more than 400,000

The Gates of the huge Minidoka Dam. An important Factor in the Plans for the Reclamation of the Western Deserts

Building the Laguna Dam, which will control the Colorado River for purposes of irrigation

which have risen in the wilderness in anticipation of the priceless boon presently to be bestowed upon the desert land. These centres are not camps, but permanent settlements, comprising almost two hundred houses, three newspapers, and three banks. Furthermore, every eighty acres embraced in that project is occupied and has upon it a dwelling, so that where, less than two years ago, the land was absolutely tenantless, it now has a population of 4000; and this development has occurred before the water has actually been supplied to a single acre. During the four years of its activity, the Reclamation Service has constructed upwards of 250 miles of main canal, 120 miles of distributing system, and 400 miles of ditches, including dams, headworks, etc. Tunnels having an aggregate length of more than six miles have been driven. More than 600 miles of telephone lines have been installed and are in operation; 250 miles of wagon-roads, much of them cut in solid rock through almost inaccessible canyons, have been made, and 110 bridges; and numerous buildings have been constructed. All the irrigation works are of the most complete and durable character, utility rather than economy being the guiding principle of the operations. The government is pledged to maintain these works in good order for ten years, and at the end of that period to transfer them to the people in the condition most effective for the object sought.

Not the least remarkable feature of the Reclamation Service is the system under which the operations are being carried out.

The funds are derived, in the first instance, from the sale of public lands. The cost of such operation will be spread over the lands reclaimed by it in the form of a water tax to be paid in ten annual instalments. Then the fund, which now amounts to \$10,000,000 and is constantly increasing, will be continuously available for carrying out new projects. When it is conclusively proved—as it will soon be by the projects already on foot—that reclamation is in every instance a paying enterprise, Congress will be asked to make direct appropriations for the extension of the work.

In the words of President Roosevelt: "The pressing danger just now springs from the desire of nearly every man to get and hold as much land as he can, whether he can handle it profitably or not, and whether or not it is to the interest of the community that he should have it. . . . Speculation in lands reclaimed by the government must be checked at whatever cost. The object of the Reclamation Act is not to make money, but to make homes."

The act requires that the land shall be put into the hands of actual cultivators and settlers, and that the size of the farm unit in each section shall be limited to the area which will comfortably support one family. If the present policy is faithfully pursued, the next generation shall see the American desert "blissful as a rose," and bear abundantly the fruits of the earth at the hands of a prosperous and independent yeoman population.

One of the Newborn Cities which have sprung up in Idaho as an immediate Result of the Reclamation Projects

THE MOUNTAIN

By MARY TAPPAN WRIGHT

DRAWINGS BY LUCIUS WOLCOTT HITCHCOCK

Monday, August 7.

OUT of the silence and the night I am calling! I, who know not true speech, nor hear in mind the echo of any single sound. I, in whose memory lingers no shadow of human form nor light of human smile, for those the people of the outer world, which is my lost inheritance, tell me their faces gleam and gleam.

Something welling up within me demands expression, my own expression in my own language—not my dumb tongue, taught to speak, haltingly, in terms of color and sound—for tonight I rebel, I bitterly rebel, before this compulsion of expressing myself in another language and living another life than my own. They insist that I distinguish with my fingers between red and blue. They read me their verses, fall of azure skies where floating clouds move stately, like snow-white ships; a mass of fleecy sail. They make me learn their poems all about the purple of the hills, the green of the trees, the scarlet flame of the autumn woods, and the deep dark blue of the sea. I have learned it all by heart; I speak of it intelligently; and they expect me to be glad.

It is as dust in my nostrils! Still, I have not desisted, and when I have laughed and talked with my friends I have been honestly cheerful. I love them! Under the delicate touch of my fingers I recognize them, one from the other—none are alike in me. I am even conscious when they are gay and when they are sad. There are days when I know that an instinct is given me which they do not possess, and there are times when the lack of eyes and of ears means that there are but two barriers the less between their souls and mine. I cannot hear the deceitful tone that makes the grave saying light, nor the light saying that is full of heartache. I cannot see when their eyes contradict the smile upon their lips; nor their lips curve with fun while their tongues are uttering bitterness.

And if to a disembodied spirit all things are known, why may it not be that, in so far as I lack the perceptions of sense, just by so much do I come near to the essence of the true knowledge of souls?

But how I have striven to see with others' eyes, and to hear with others' ears, and to speak with others' tongues!

And how I am alone!

This evening I have been sitting a long time with Mamma and the rest of them on the porch here. They tell me that before as stretches a fertile valley; a winding river glitters at the foot of the pine-covered hills on the other side of it, and beyond those, all about as, piled high in the air, rise the great, still mountains, occasionally a hand would drop into mine, spelling out to me, with sad, reverent touch, some secret, trivial incident of the moment. They warm breezes puffed against my forehead and blew back my hair. The atmosphere seemed all still and free from confusion. Without being told, I knew that the little children who romp and scream daily upon the lawn were tucked away snugly in their beds. From the hill above as a faint, keen vibration struck downward upon my closed ears. Some one was playing a violin. I felt it; still, I did not say so—I grew so tired of their constant surprise—but even this ceased before long, and as it became later the others, one by one, went away, and we two were left alone together.

I wonder why I have the night? Is it because then people come nearer to me, being all blind? Is it the darkness that makes them tread softly and move carefully and cautiously, like me? The touch on my hand that told me, a little while ago, that I was lonely, was the tender, fleeting touch of the blind. He does not touch me thus in the daylight.

How quickly he has learned to make me feel his fingers! A month ago he did not know how to make the letters! Four weeks ago, our short weeks!

The people of the outer world say "weeks" and "days" and "months" to me, while I only know that I rest, and rise, and eat, and drink, and sleep, and study at their times.

My dear mother is reading to me from the works of a great old man whom they call George Meredith, and—she laughed when I told him of it. I could feel the quiver in the air of the sudden little explosion of mirth.

"You poor child!" he said, spelling it slowly. "Do they make you wade through all that?"

And when I said that I did not wade, that I loved it, he did not believe me; not even when I told him that the book gave me a feeling as if I, myself, were climbing the mountains, would he be convinced.

"You shall try it some day," he said. "I will take you up the Giant—then you will find the difference."

No tomorrow we're going together. We have been together this morning, we were together yesterday, both days in the warm sunshine; and last week when it rained almost constantly, we trudged along the muddy roads together in the showers. The water soaked in my face. I wonder if his was wet. It must be strange—dreading!

Mamma trusts me to him in these long rambles, because they say that he is good, noble even. With all his great wealth, he is simple and honest and wise. He gives to the poor, he sacrifices his own pleasure and comfort for the sake of many, many rates. He gives to education; he gives to art; he works, himself, in the depths of the mines, with his own hands. The older people told me all this.

One of the girls said that he was dull.

I know by myself that he is young, and that he is not bad to look upon; for, that first day when they brought him to me and I let my fingers wander over his face, I remember a straight nose, deep eye sockets, thin mustache, and a square, determined chin under a short, pointed beard, but—when I touched his lip it trembled. One quick, short quiver. I could never touch his face again!

Oh, women that have eyes! Oh, women that have ears!

Tuesday, August 8.

How do I know that, to some people, I am repulsive? No one has ever told me, but I have learned it—from the shrinking motions of their hands, from the slight withdrawal of their heads backward, away from my groping fingers. I think I know it, too, by the warnings that I have had not to laugh. Oh! never to be able to laugh! And they have taught me that I must not open my eyes and turn my face towards people; but they have not told me why. Is there a different look in my eyes from that in other eyes? Is there a different sound in my voice from other voices?

I know that I am not ugly, for they have trained my fingers in the lines of other things that are beautiful. They let me feel the statues—I have caressed all my own that I touch reverently, carefully, and I think that their loveliness gives me pleasure; or is it because I can investigate and try and measure with these unresponsive things, where, with shrinking faces I am withheld? I do not know. I only speculate; everything is a vast, dark speculation!

This morning we started out to climb one of the lesser mountains not far from the cottage, but we had scarcely got to the foot of the first slope when Mamma slipped and fell. She caught my hand, wrenching and squeezing it, and I knew that she was in pain, too great to spell out to me what was wrong. Then I felt him come and kneel beside me, where I held her as she rocked back and forth.

In that real outside world they asked each other questions and answered and returned answer, while I knelt, not knowing what had happened. I became so frightened that I reached out my hand to him, but he did not see; and so in my terror, wishing to know what he was saying, I put my fingers to his lips to feel the words.

Then suddenly he drew back his head, quickly, sharply, away from my touch.

Yes, there are people to whom I am repulsive.

And yet—was it yesterday evening?—he told me that I was lovely!

Saturday, August 12.

All this week I have stayed with Mamma. I have fetched and carried for her, almost as a seeing girl would do, and he and others have helped. She has let me handle her ankle, for she had sprained it badly, and I have rubbed it and taken care of it. The tips of my fingers search out the pain, and know how to squeeze and knead and press it away.

What a joy of service, every day, comes to those who see and hear and speak. What a joy of service is denied to me! But I have tried to be happy with what I have. Dear child, I have had to try so hard, for all the time I could not but remember that there were people to whom I was repulsive! I would ask my mother about it, only I know she would not tell me.

Sunday, August 13.

This morning I asked my cousin, Belle Lambert, whether she ever felt that feeling towards me. She said no, never since I was a little, little girl.

I had rather a million times that she hated me now than that her repulsion should have been such a real thing that even the sweetness and loveliness of childhood could not overcome it! Things come brutally to us that are reversed to the seeing and the hearing ones in half a glance and the faintest inflection of a word, and we must suffer all our suffering within.

But, in spite of all that, it has been a long, sweet, pleasant Sunday. He has been here, in and out, reading the Meredith book to Mamma, and she has told me in my hand, as he went along, what he was reading.

I have carefully kept my face turned away all the time, that it might not disturb him. And then he came to me and said that he thought I looked pale and ill and weary, and that Cousin Belle Lambert was going to take care of Mamma tomorrow, and he was going to take me with him for a long day on the mountain. It was kind of him, out of his pity.

Monday, August 13.

I awoke this morning to the steady drumming of rain upon the roof. I could feel it thrilling through the walls, and when I went to the window and stretched out my arm, the water splashed down and wet my sleeve.

He came and read again. The day was dark; we had to move Mamma's chair away from the fireplace nearer to the light, and he and I sat together on the window-seat. I could feel him move restlessly from time to time, and once he drummed with his fingers impatiently.

The little tap, tap came to me, and I asked why he did it. "He can hardly believe that you felt it," Mamma spelled out in my hand.

"I could even feel the different quality of the strokes," I answered.

They talked together a moment and I waited. "He thinks that you might learn to telegraph," Mamma said to me at last. "Let him explain."

I stretched out my hand towards him, and he took it in his. I felt him lean forward, between Mamma and me.

"Don't change countenance," he spelled: "it makes no difference whether you learn to telegraph or not, only will you please let me speak to you alone some time to-day?"

Mamma's hand took mine from his. "Do you think you could do it?" she asked.

I nodded my head at both her question and his.

He spent the rest of the morning trying to teach me; my progress was not rapid. I do not think he knows very much about it himself; but when he tried to say things to me that were not meant for Mamma, something made me refuse to answer. I did not wish to deceive her; moreover, she is very quick, and I felt that it was as wise to try, so that he has had no opportunity to speak with me alone.

It cleared this evening; we are to take our walk up the mountain to-morrow; perhaps he will speak to me then. They have often told me of the great crouching mountain in the distance, lying out along beneath the sky, all its sides ribbed by rain and torrent, and torn by lightning. I have felt its presence, huge, lofty, silent; and every night when I go to bed here, I have stood in the window and called across to it in the same dumb language which it uses to me:

"Oh, you, that have borne and suffered and never spoken, that in the daytime and in the night-time endure without complaint, strengthen and uplift your dumb sister!"

Wed., Aug. 16.
I was tired last night, more tired than I ever have been in my life, and all day I have been busy with Mamma.

We started early yesterday morning, and drove to the foot of the mountain—a long drive in the fresh air. I asked him if he felt it so, too, and he said: "Of course; that was the way it was."

They are so sure of these things!

We left our carriage at a farmhouse. The farmer's wife scarcely wanted us to leave her. She was so curious to see and talk with me that she kept my hand to her lips, asking me why I wanted to go to the top of the Giant when I could not see the view. Then he said that we had no time to waste and pulled me away; his touch felt quite angry. I wondered what I had done.

It was a long climb, but not very hard—that is the reason that he chose this mountain, because there is a logging path nearly all the way to the top. As we went, sometimes in the sun, sometimes in the shadow, sometimes in the deep woods where the air scarcely stirred, and sometimes out upon the steep pasture slopes; and the higher we went the more he told me of the far mountains we could see in the distance. A deep excitement took possession of me—I began to feel as if I were ascending slowly, slowly into the company of my own. We did not talk very much, and I was careful most of the time to keep my face turned away, remembering that little quiver in his lip when my finger had touched him.

It is kind of him to take so much pains with one for whom he does not care; but I began to forget even my trouble about this in the joy of getting home. Further and further we went; under my feet I could feel the hard stones, and for the last long pull we scrambled over bare rugged cliffs where, more than ever, he had to drag me up bodily for fear I should slip. All breathless we came to the top; I caught his hand and spelled out to him that I knew we were there.

Space trembled through me; I was a part of it; between me

and heaven there was nothing, and far down, away below, lay the puzzling, puzzling world of little human creatures who needed to look and speak. There, almost, I dwelt with my own, and he seemed to be one of them, for he made no sign, told me no word. If he had described and pointed and said, "Here is the field behind the cottage and there the tall twin elms that border the brook," I think I would have broken my heart. It was enough that we two sat alone, part of the very eternal Silence itself!

The heaving of the hills encompassed all my torn and suffering spirit, and my heart spoke: "Brothers," cried, not in the hideous voice which grates on bearing ears, but in the dumb language of the mountains, my kindred—"Brothers, I am here alone with one I love! No, through countless ages, you, too, have been alone. Perhaps in dim, clear nights the great angels sweep down and, resting on your pinnacles, fold, for a time, their tremendous wings; and only here, vast, silent, unspoken and unrecognized, throbs in your deep hidden hearts; then you suffer as I suffer a sorrow whose well-spring

When I touched his lip it trembled

Illustration by J. M. W. Turner

is joy. Brothers!
brothers!"

I forgot myself and stood up with my arms stretched out wide, holding my face to the sky; and he also rose and gently put his hand on the skirt of my dress. I dropped my arms and turned towards him. "This mountain is my brother," I spelled out to him; it was a quotation from the book we had read together the day before.

And he answered me back, "I put my hand upon your dress to stay you lest you should start forward; if you were to slip or stumble upon the edge of this precipice, you would find your brother cruelly hard."

"On these heights we do not stumble," I told him.

He waited a minute, and then he answered: "You always are on these heights. I had not thought of it before, but the feeling you give me—"

But I pulled my hand away. I could not have him tell me the feeling that I gave him then; I wanted to be happy in the warmth of the sun as the mountains are.

After that, as if he understood, he tried to make things pleasant and gay. We went back to a little hut that was a built for camping further from the chasm; he had had wood

carried up the day before, and our luncheon had been sent ahead of us, so we made a fire and cooked things. I am so young that there are times when I cannot help being happy. I was happy then; I shall remember it as matter what comes—nothing can steal it away. I shall wear it, as people who see wear beautiful things, it will make me happier—forever.

The cooking and the fire made me thirsty, but, as an unguarded movement, I had overturned the canteen, and as the climb to the spring was too steep for me, he said he would leave me and get me a drink of water if I would promise not to stir. I begged him to take me back to the precipice above the valley; for a while he refused, but at last, when I had almost cried for disappointment, he consented, and telling me that he would return in ten or fifteen minutes, he left me facing the great open space only two feet away from the edge. The sun had been shining there all day long, and as I leaned back, I could feel the rocks warm against my shoulders. I held up my face to the sky, and a sense of self-possession, of rest and peace, came upon me. The indignity of my blind, dumb, silent poverty was forgotten, and in the strong protecting embrace of this greatest of my kindred I fell asleep.

I must have slept some time, when the terrifying, shaking, soul-shattering concussion of thunder waked me; it seemed all about me; I did not remember where I was until I had taken one or two steps; then I remembered! The rain began pelt upon my head, and the wind, suddenly lessening my I lashed it like whips about my face. As springing up I had

I was drawn backward sharply

Drawn by Louis Robert Blacklock

my sense of direction. For a moment, in the awful terror of it, I believed he had been killed, that he would never come to me any more; but I had hardly thought this when I was drawn backward—so sharply and violently that I lost my balance and staggered into his arms. Something pressed my head—once, twice, a third time! So it is when my mother strokes and kisses the parting of my hair. Only—it could not have been. But I leaped against him and a little sob broke from my lips.

"Are you frightened? Are you hurt?" he asked.

"I thought that you were killed, that the lightning had struck you."

"The storm gathered behind the wilderness; my back was to it, and I had not noticed how near it was coming. This fury has passed, but I see another thunder-cloud coming up down the valley; we must be as quick as we can," he spelled back to me, and throwing his arm about me, he hurried me over the bare face of the rock towards the trail.

Alas, that rush downward! The mountain spoke: the mountain laughed. I could feel the deep tremors of its tramping feet, shaking, jouncing, thrilling, all about me, as we

strode on together, we three; he and the Mountain and I. The breath of his shouting tore at my hair and heaved my garments about my limbs; the rough stones rolled under our flying foot-falls, and my face was stung by a thousand little whips; my teeth chattered with the cold, and my heart sang with the glory of it.

"It is hailing," he spelled on my head. "Hear my head."

But I would not hear. With my eyelids closed and my lips shut tight I moved it, rushing on down the path, and, though he tried, he could not hold me back. I had come to my own. I was mad with joy.

I cannot remember which became stilled the first, but all at once I knew that my brother the Mountain was left behind, and we two were walking along quietly in the warm rain had in hand.

The carriage was waiting for us, and we drove home without attempting to talk. The damp fresh air blew in our faces, and from the roadside came the delightful odors of the wet woods: ferns and helons and haws of tillands; and the storm on the mountain seemed a wild, glorious dream. But Maxima was frightened when we told her of it. She made me let them wrap me warm in blankets and sent me to bed. I slept long and sweet, and to-day I have taken up the old life, reading, doing little errands for Maxima, handbagging her foot, and trying what I could be of use.

But—have I lived? I have lived!

Therefore, August 17.

A strange thing happened. He thinks that I dislike him. He says that I trust him; but he feels that he is stupid

and dull and unable to interest me. I told him that it was not true.

"Are you sure?" he asked.

"Very sure," I answered.

"Then why is it that, while you are willing to feel what other people say with their lips, you will never use that method with me?"

"I thought that you preferred this way," I returned.

"I am going to say something to you now," he spelled; "I want you to feel it!"

I turned my head from side to side, thinking there were people near.

"They are none of them here," he said. "They have gone over to look at the comet through the telescope; we are alone."

I stretched out my hand; he beat his face nearer. I felt his breathing upon my fingers, and all at once I dared not do it. Slowly, slowly I stepped backward, and in the still darkness where I dwell I moved through the hall, and with that other sense of which they knew nothing I found the stairs. The treads, pushing, each, against my senseless feet, seemed to lift me of themselves.

My door is shut and I am alone with happiness. I do not understand myself.

Ah, why do I laugh and hide my face? He understands me!

Friday, August 18.

What have I done? He has gone away. Belle Lambert came over at noon and told us that he went off on the early train before breakfast. I did not think it was possible for him so to misunderstand.

And yet why should he misunderstand?

I must think. He asked me to let him tell me something and I ran away. What he meant to say seems common, every day, trifling thing, as people do when they ask me to feel their speech? What if, in my foolish joy, I betrayed myself?

Dear Lord, I pray that he may have misunderstood!

But no, I must go down deep into my heart and grapple with this thorny pain. He has gone away quietly to let me know how useless it is. He needs to have done that! In my soul of souls I knew it already; but I had rather it had come some other way. If only we might have drifted apart, gradually, as other people do!

I have always known that this was what would happen to me. I began to understand it with the first poetry I ever really felt. I have always been prepared.

A person like me, shut out from normal things, must not expect—to live, continuously.

Saturday, August 19.

Let me put it down!

Yesterday morning the people of the house all went away to spend a day in the woods near Moose River, where I had been before. As there was no walking to be done, they persuaded mamma to go with them, but I, for once, set myself obstinately against everything else and would not leave home. They seemed to think it ill-natured. I could not help it; I had to be alone. Even darkness and silence were not seclusion enough; I wanted the World to myself.

I brought my books down and sat out-of-doors on the porch. And as I passed my hand across the pages, it seemed as if my mind went on working about the thoughts that came to me through the touch of my fingers, and this so cold and heavy a sorrow began to beat in my veins like joy. For, all at once, the tie drew tight between me and all human-kind. I need never stop loving him—never, so long as I lived! I was not cut off; I could love as others loved and sorrow as others sorrowed. I need no longer tell myself in bitterness that sight and sound and speech were accidents, mere gross and fleshly aids in our knowledge of each other, for what I had learned in bitterness I now understood in peace. All the deepest things are in common; and people who love and suffer, love and suffer in their hearts and not with their eyes nor their ears nor their lips!

(I wish I might write this as I felt it then—but I cannot! The fountain of youth is welling in my heart—it makes me childish and immature.)

I sat thinking this way when I felt Belle Lambert's step. It seems to me as if Belle had learned the deaf-and-dumb alphabet for the sole pleasure of being able to tell me things that were unpleasant! She came along the porch and sat down beside me, taking my hand in hers. I knew, by her clumsy fingers, that some thing disagreeable was coming. "Why have you not gone to the picnic?" I asked.

"I have no heart to go, since I have heard this dreadful news," she spelled out to me in her stupid, precise way.

"Terrible news," I waited; but there was no use in that; she was bound to tell me even if I had asked her not to.

"I suppose your mother has explained it to you," she went on.

"What?"

"About this dreadful sale of the mountain. All the trees are to be cut down and sent to the pulp-mills to make paper of. Such a desecration!"

It made me angry. "They cannot desecrate the mountain!" I said.

"But they will!—Please use your fingers; you know I can't understand your speech.—These lumber companies are absolutely ruthless. I don't think that I shall ever be come here any more, with that hideous bare hill looming at the end of the valley. How glad you must be that you can't see!"

I did not try to answer; all my strength was concentrated in keeping the tears back from my eyes.

So my Brother must also suffer; all the youth and beauty of his life, too, must be swept away. "I must go back into the house," I told her at last.

"Oh, very well; if you don't need company, of course I shan't stay!" I thought that you would be lonely when I saw them all going."

"Did you stay at home on my account?"

There was quite a long pause, then she took my fingers and put them to her lips. "No, I didn't stay on your account," she said, in short puffing breaths; "I stayed in order to drive over to Moose River with your friend when he comes back on the eleven-o'clock train. I think you don't quite realize that—that—he and I are very dear to each other. I have felt for some time that you ought to be here." Then she went away.

I did not believe her, but I was angry, very angry, and as soon as her steps ceased on the boards of the porch I hurried into the house. Catching up my hat, I ran out of the back door and began to climb the steep path that leads to the pasture behind the cottage, where they always allow me to go by myself.

I knew very well what Belle Lambert wanted me to understand, but I also knew that there was no truth in it. From the beginning I had it in my plain to me that he couldn't endure her—she doesn't need sight or hearing for a thing like that; and so, by the time I had climbed to the flat rock at the top of the hill, Belle and her live had faded from my memory. I sat down and turned my face to the end of the valley, where I knew the Giant was lying still in the sandstone, to silence his mighty presence hailed me across the intervening space.

"Shall you mind," I called back to him, "when the youth and the beauty, and the flower and leaf of life have been shorn away—shall you mind?"

And the mountain answered: "Not to mind were cowardly. In the vast ages that have gone I have learned to mind; to mind and not despair. Fire has swept over me and left me rusty and scarred, with blackened tree trunks standing stark, signalling the swampy, evil places that have been my hidden disgrace. Three times have the heavens opened, and all my pines and birches, my hemlocks and my beeches, were swept to destruction in the floods. My children and my children's children have been cut down to warn the households in the valley; they have carried the sails of great ships across the seas; they have been tortured into strange shapes for the common use of little men. I have borne them and lost them and borne them again; but ruin cannot touch me, for in my heart the seeds of fresh life slumber always. Think of this and be steadfast."

"But it is hard," I said. "It is hard."

It is hard, for pain is always new and grief never grows old," the mountain answered. "Yes, it is hard."

"Have I strength to endure?" I asked.

"Wait," said the mountain. "Wait—and trust a little longer."

The hot sun was burning on my hands; I rose and moved about a little, never giving the landscape that I could easily recognize by touch. I could not be quite unhappy, for Belle had told me that he was coming back, and as I waited I felt some one climbing from the direction of the cottage. I knew who it was.

He came and sat down beside me. "Are you talking with your mountain?" he spelled into my hand.

"How did you know?"

"It seems natural—you two," he answered.

My heart beat fast. "They are going to cut away all the trees, the streams will dry up, and the sides be all bare and hideous," I told him.

"No, they are not," he answered.

"But you don't know. They have said it to the pulp-mills."

"But they haven't! That is what took me away. I have bought the mountain!"

"The whole mountain?"

"The whole mountain." Yesterday evening, after I went back to my room from your house, I read of it in the newspaper, and this morning the first thing I hurried away. There was no time to lose and I knew you would understand. I have seen your face turned towards that mountain day after day—you take comfort in it as I don't want to have a tree on it touched."

Without thinking, I rose to my feet and stretched out my arms. Silently I called across, "Do you hear?"

And the mountain answered back to me, "I hear."

"Do you not rejoice?"

"Little sister," answered the mountain, "I rejoice in your joy."

Then I felt my hand taken, "I did not know that you cared so much. Will you let me give it to you?" he spelled.

"Let you give me the mountain?"

"Yes, for yours. Let me make you a deed of it so that you may own it forever."

"I cannot take it," I said. "It would make you sorrowful to think of it—as mine."

"If you do not take it"—he made the letters hard on my hands—"If you do not take it, I shall sell it back to the pulp-mills."

"But I know that I am—regularly—not to you only—to every one, and I covered my face with my hands; but gently, gently I felt them drawn away."

"What cruel person has given you this thought?" he spelled to me. "You are so kind, so loving, to every one; foolish, sweet, dear!" And drawing my fingers towards him, he placed them upon his lips.

Then I knew why he had never done so before; but I cannot write what he said. I cannot, cannot write it!

THE FREE-FOR-ALL RACE FOR FOREIGN TRADE

THE LESSONS THAT ENGLAND AND GERMANY HAVE TAUGHT THE WORLD

By HENRY HARRISON LEWIS

WHEN a well-known English economist arrived in this country some time ago he was interviewed at length, and one of the questions asked by the press representative was what, in his opinion, was the principal cause of Great Britain's success in securing an important share in the world's export trade.

"There are many reasons why our home manufacturers are successful in exporting," he replied, "but the principal reason is that our merchants and manufacturers work in a systematic manner. There is not a manufacturer in Great Britain but has a thorough system of conducting his foreign trade. He brings to his international business the same care and thought that he utilizes in looking after his domestic trade. Not only do our business men apply system to their exporting business, but the government also has established departments devoted exclusively to the promoting of Great Britain's foreign trade, and there are schools and colleges too where the principles and theory of selling English goods abroad are systematically taught.

A few years ago such a statement as this would not have been given save in American newspapers simply because it would not have been considered of interest, but today those who are able to read the signs of the times observe many significant indications that an important change is about to take place in the commercial conditions of the United States.

Undeniable facts that the American manufacturer is awakening at least to the fact that an export trade, systematically conducted, is worthy of attention are found in the fact that our exports of manufactured goods during the calendar year 1906 exceeded \$750,000,000, and that our manufacturers and merchants are deluging the government with requests for reliable information concerning the opportunities for selling goods in foreign markets.

This increase means that during the past few years we have more than doubled our sales in foreign markets in the same class of goods as those manufactured and exported by our great trade rivals. It is a thing to have a large foreign trade in crude products found only in this country, and quite another to steadily progress in direct competition with such formidable rivals as Germany and England.

During the past half century the United States has presented the curious spectacle of a nation of industrious men reluctant to take advantage of splendid trade opportunities. An efficient corps of consular representatives—so efficient in fact that its work in behalf of foreign trade has been eagerly copied by other nations—has constantly tried to pilot American cargoes to distant ports, a watchful government has inaugurated special departments of commerce directly concerned with the encouragement of foreign trade, and the technical trade publications of the country have devoted their columns to the promulgation of foreign trade information, yet today we have less than a twentieth of Asia's trade, and barely one-fifth of South America's.

The explanation is simple. It is found in the fact that to the average American manufacturer or merchant domestic trade has been everything, foreign trade only that which may be worthy of consideration some time in the future. American factories have been working overtime supplying the domestic demand, and it is only now when indications point to the possibility of overproduction that we awaken to the necessity of seeking other markets.

To the casual observer it would seem that America is no laggard in the race for the world's trade, inasmuch as our total exports during 1904 exceeded two and a half billions of dollars. Of this amount, however, only \$215,251,000 consisted of manufactured articles, the great balance being products needed by foreign nations, such as corn, wheat, beef, lumber, and raw cotton.

Lewis M. Shaw, former Secretary of the Treasury, whose interest in the development of our foreign trade is well known, said not long ago:

"The world never has gone, and never will go, after manufactured goods as it does after food and raw cotton. It will require salesmen, foreign agents, foreign warehouses, and a merchant marine to dispose of our surplus manufactures. We will not always win fifty per cent. of our surplus for Great Britain, France, and Germany. We must learn to export our surplus. In my opinion the coming economic issue before the American nation will be the question of how to increase our export trade in manufactures."

It is beyond dispute that what portends to be our coming economic issue has already come to our great trade rivals, Germany and Great Britain. Neither nation is leaving any stone unturned to make more secure its hold on the world's trade. Germany's new tariffs are designed for that purpose, and England is outlining new trade relations with its colonies with the same idea in view.

Several months ago a number of British manufacturers and merchants interested in foreign commerce organized a commercial association to promote and expand British trade in foreign and colonial markets. The functions of the new organization are interesting, and should be followed by our own manufacturers. They include the appointment of correspondents in all parts of the world to report on openings for trade and local changes and conditions in their respective spheres, and the distribution of such information among firms whom it will benefit most.

In addition to this comprehensive and practical effort to increase their foreign commerce British associations have been formed in other countries. A delegation of two hundred representative English manufacturers recently invaded France and spent several weeks inspecting commercial plants, trade schools, and the offices of possible buyers. It has been planned to make a similar visit to Germany and other continental countries. The advantages of this personal contact with future customers are obvious.

It is in Germany, however, that we find the most earnest and systematic attempts to capture the trade of the world. A description of Germany's efforts along that line would be an epitome of all that is sensible, shrewd, and practical in foreign commerce.

The profitable conduct of an extensive foreign trade is based on certain well-defined lines. It is necessary, first, to manufacture for export the goods required by the country in question; second, properly to display these goods through the medium of travelling salesmen; third, to outstep competitors from other exporting countries; and, fourth, to give the credit to which the customer is accustomed.

To-day the German manufacturers have their agents in Central and South America, in China, Japan, and in Africa, whose duty it is to send to the home plants in Germany all new articles expected by rival countries that show any signs of proving salable. For instance, if an American manufacturer should fill, through an export commission house, an order for some American novelty, the novelty will be duplicated and offered for sale by a German plant at a reduced price within a few months.

These German agents also study the likes and desires of the foreign customer and make suggestions to their employers that invariably result in increased business. If it is discovered that prospective customers in South America, for instance, prefer high heels to their boots, the Germans make a special grade of high-heeled boots for that trade. It is the American custom, on the other hand, to select in South America the style prevailing in the United States at that time.

It is well understood that every German exporting house of any importance belongs to some sort of commercial syndicate which maintains a corps of trained experts abroad. These syndicates get together a certain number of manufacturers in the same or allied line of goods, and pool the expenses of a systematic campaign in some particular country selected for the purpose. During the past three years campaigns of this character have been carried on in China, Japan, and Central America.

While making a tour of Central America my attention was called to the systematic efforts of the Germans in extending their trade, and I was told that every shop of importance in Guatemala City, for instance, had one or more German clerks employed. On investigation I found seven young Germans serving their apprenticeship in the five principal shops. The proprietor of one large emporium told me that he paid his German assistant—a youth of twenty—only two pesos a week and his board, an amount equal to about eighty-five cents in American money.

I found a similar condition of affairs both in Brazil and the Argentine. In every coast port of Brazil can be found German youths working for next to nothing, and devoting a part of their time to the study of Portuguese. In the Argentine Republic, where the Germans form a fair percentage of the foreign population, the system followed by the large German exporting houses has borne satisfactory fruit. In every Argentine market German goods are met with, and they are being pushed with a tenacity which promises that German trade will continue to increase.

After all is said and done the greatest point in favor of the German, and partially so in favor of the English, exporters, is their willingness to extend credit to foreign buyers. It must be admitted that this is the weak spot in our export trade efforts are shattered. The most formidable obstacle that is encountered by the American manufacturer or merchant who seeks to expand his trade in foreign countries is the system of long credits that has become established in most of these countries.

The German houses led us more liking for a credit system than would give their money for a long period than the American rivals, so they arranged a system of bank credits in their home towns through which long time notes could be shamed. In selling a bill of goods to an importer in Montevideo, for instance, where credits sometimes extend to nine months, the German exporter accepts the foreign buyer's note as "shaved" if it at the local bank, including the bank's commission in the commission charged the importer. As the German exporter is enabled to secure a satisfactory credit report on the buyer through the German bank's correspondent he seldom makes a loss.

In considering the American manufacturer's reluctance to follow such a practical plan there seems to be only one explanation. The American's interest in the entire subject of foreign trade has not been strong enough for him to take action. Otherwise it would be inexplicable to the average understanding why an American exporter does not realize the fact that there are as many people in the average country abroad with financial brains as there are in America. And also that a market found profitable by the German manufacturers should also be found profitable by the American.

MAN AND HORSE

By E. S. MARTIN

HOWARD SMITH

32

Drawn by Howard Smith

WHAT will not men consent to do
For to improve the horse's breed,
And make him comelier to view,
And mend his gait and lift his speed!

Supreme the work! Nor time, nor gold,
Nor skill, nor strategy they stint,
From long before the cult is foaled
Until the veteran's final sprint.

Whatever is there about Horse
That stirs this tireless zeal in man
To make him do a staid course
A little faster than he can?

The locomotive long ago
Upset the claim that he was fast;
On common roads the automa-
bile has him hopelessly outclassed.

Good animal to ride, to plough,
Or to embellish rural scenes,
But if you really want to go,
He isn't in it with machines.

And yet the brains of men still buzz
With zeal the horse's loved to bless,
And call it fettered when he does
His mile in half a second less.

The tracks they build! the crowds they lure!
The legislatures they enthral!
Protesting that their aims are pure,
And mostly agricultural!

Queer, isn't it! that equine zeal
Should seem so geared to human ruth.
Do men dissemble what they feel?
They like a horse race, that's the truth.

They always did; they always will,
—Some of them, anyhow—and risk
A wager on it, or a spill,
And reck not, so the pace be brisk.

Best was the good old rural way,
Afar from cops and pool-rooms too,
When John and James, each in his sleigh,
Debated what their nags could do.

THE SEASON'S PLAYS

GRAFT AND GAITY

By "I"

MR. GEORGE BROADHURST, who has hitherto been generally known as a writer of entertaining fare,—he is the author, it will be remembered, of "Why Smith Left Home" and of "What Happened to Jones,"—has accomplished a play of a very different order in "The Man of the Hour," which is now to be seen at the Savoy Theatre. Mr. Broadhurst's new play is a serious drama dealing with modern conditions of government in "any large American city," as the programme deftly and cautiously puts it. One is permitted to guess, however, that the theme of the play strikes at municipal conditions in a "large city" not a thousand miles from Manhattan Island. The central figures are an upright and rather youthful Mayor, college-bred and of distinguished military ancestry; an "organization" boss of domineering personality and a conventionally flexible attitude toward graft and preferment; a street railway "magnate" who is putting through a suburban deal with the boss; and the magnate's charming and eminently lovable niece, whose presence in the world is not unsuspected by the fearless and estimable young Mayor.

Drawn by G. E. Cogan

Frederick Perry

AS THE INCORRUPTIBLE MAYOR IN
"THE MAN OF THE HOUR"

will sign a bill intended to favor a stock jobbing deal surreptitiously planned by the Guardian in conjunction with the boss. To the discomfort of these wicked ones, the Mayor proves incorruptible. "The Man of the Hour" is a strong and sincere and unmercifully interesting play,—indeed, one may go further, and say that it is in some respects better than Mr. Charles Klein's very vigorous performance, "The Lion and the Mouse"; for its characters are more truthfully and less extravagantly delineated, and it avoids the bombastic tone which not infrequently mars Mr. Klein's phenomenally successful play. On the other hand, its most striking weakness lies in its too great complexity of incident, which often confuses needlessly the main lines of the action. However, it is a powerful and convincing play, and it deserves its success. It remains to be said that it is, in the main, admirably acted; one must bestow special praise upon Frank McVicar's superb characterization of the domineering boss; upon Mr. Frederick Perry's quiet yet forceful portrayal of the youthful Mayor; and upon George Fawcett's infectiously human demonstration of Phelan, the kindly abolitionist.

So rarely does a national comedy bearing the English hallmark (not that all are sterling, by any manner of means) come to

this country with a "book" which any one on this side of the water can assimilate as humor, that a prayer of surprised thankfulness should arise from a non-enduring public for "The Belle of Mayfair" which is now being played and sung and danced at Daly's Theatre. Not since "The Gaiety Girl" has such a successful English production of this kind been seen in New York.

While the "book" may have been more or less Americanized, it, fortunately, bears little evidence of it, and yet it is really abundantly filled with amusing lines at which even the most tried New York audience laughs gravely. Of course, an important factor in the success of the production is the excellent cast which presents it. The pretty girl, the star qua non of musical comedy, is abundantly in evidence, and the men in the company have unquestionably been selected with skillful care.

There is not enough plot to "The Belle of Mayfair" to tax one's brain, and what there is of it follows the most approved illogical standards. But plot has precious little to do with the success of such a thing. Success lies simply with the tunefulness of the songs, the rhyme of them, the pithitude of the women, and the speed with which everything may be made to move. In these essentials "The Belle of Mayfair" is more than qualified, for success.

"Phonora" will long be remembered as one of the most tuneful musical things of its kind, and Leslie Stuart, the composer of its music, is also the author of "The Belle of Mayfair's" lyrics, so one knows in advance that there is something "wholesome" in the production. The makers of the "book," who are entitled to a great measure of praise, are Charles H. E. Brockfield and Cosmo Hamilton, the latter almost tempted to believe that these librettists wrote "The Belle of Mayfair" for the American market, so well suited is it to the New York appetite.

There are a number of "New York Favorites" (country papers, please copy) in the unusually long cast. Miss Christie Marchbanks is "the daintiest little thing, all smiles and skipper" (the country papers again) who plays the part of Lady Chatterbox's daughter Julia, taken by Miss Edna May in London. Miss Irene Beasley, the prettiest woman in the cast, has ample opportunity to show off her burnished hair, her voice, and her shoulders. She sings a very good song by the way: "And the Weeping Willow Weeps." Another "favorite" who, however, does little else than stand around and look pretty, is Miss Annabelle Whitford. One of the successes of the performance is achieved by Miss Valeria Sureski, who, in a black velvet gown, so tight and so severe that one wonders how she ever gets into it, poses with Mr. Van Rensselaer Winkler and several young women in a series of tableaux representing the best-known Titian pictures. The song which accompanies the series, "Why do they call me a Titian girl?" is delightful.

Irene Beasley

IN "THE BELLE OF MAYFAIR"

THE HOUSE OF LORDS AS THE MASTER ISSUE IN ENGLISH POLITICS

By SYDNEY BROOKS

THERE are no signs at present, or very few, that the House of Lords has done itself much harm by forcing the government to drop its education bill. It was thought up to the last moment that a compromise would be arranged: there was a momentary flash of angry disappointment when those hopes were frustrated; but—let me say, of course, he owing merely to the truce of Christmas—I see very few tokens of such an upheaval of opinion as would compel the Lords, were the same bill to be reintroduced next session, to pass it. People are exasperated that the whole wretched question should still remain unsettled. They have noted the fact that a measure which passed its second reading in the House of Commons by a majority of over 300 was defeated by the action of an assembly that is largely beyond popular control and composed of legislators who owe their position and powers chiefly to the accident of birth. The anomaly of such a dissonance is felt and admitted, but partly because the bill itself was too complicated to be really understood by the people at large, and partly because its provisions were almost equally obnoxious to the extremists on both sides. Its collapse has not so far produced anything resembling a political earthquake. There has been some menacing talk from the Radicals and the Labor men; there is a resolute suspicion that the Lords in pursuing the rejection of the bill were shirking a good deal more of the interests of the Church and of the conservative party than of the interests of education; but the symptoms of a really national agitation against the Upper Chamber are significantly lacking. So far as the specific question of education is concerned, it may easily prove that the deadlock induced by the Lords will be chiefly memorable for the encouragement it will give to those who hold that the problem must be taken out of the hands of the theologians and settled on a secular basis. For the real government are aware that an appeal to the country on the educational bill would result, no doubt, in their victory, but a victory very different from their overwhelming triumph of a year ago. They have not, in other words, enough public opinion behind them on this particular issue to warrant them in pushing the fight against the Lords to extremities.

Nevertheless, it is clear that the whole question of the House of Lords is coming within the sphere of practical discussion, and that before the present government passes out of office it will have become the master issue of English politics. The English are growing much more materialistic and less than they used to be in their views of public problems, and from the standpoint of logic and mathematics an easy case may be made out against the House of Lords. It is an assembly that seems to contradict most, if not all, of the fundamental principles of democracy. It is not elected by the people, yet it has the power of thwarting and sometimes of overriding the popular will. Some of its members owe their place in its composition solely to the fact that they are bishops of the Established Church; others to their eminence as lawyers, authors, soldiers, scientists, or to past services in the public career that cannot otherwise be repaid; but the vast majority are hereditary legislators to whom a seat in the Upper Chamber has descended along with their titles and estates. Whatever his competency or character, a peer, the moment he becomes a peer, becomes also a member of the governing oligarchy. Some peers have no taste for politics, others have no capacity; others again are men of notoriously unwelcome reputation. Nevertheless, they are *ipso facto* units in the House of Lords, and unless they commit a felony or become bankrupts they cannot be got rid of. As consequence of this is that at ordinary times the House of Lords is a gilded desert. It is an odd job that the best case for admitting the Upper Chamber is to go and see it. A score or so of members loitering about on the red benches do not make an impression of efficiency. But see the House of Lords when a measure that really affects the aristocracy is under discussion. Strange faces crowd the lobby—the hereditary legislator who had to ask a policeman the way to the House of Lords was probably no more false; from remote country-seats forgotten peers rush up to town, and say little that touches the *parvula* of the landlord or the Church may be sure of a short shrift at their hands. There is, however, one provision to be attached to this statement of the case—the bill is *generally* more likely to be introduced by a Liberal government. It enormously complicates the problem of the House of Lords that its members belong almost altogether to one party. A man who was a Liberal before he joined the peerage inevitably takes the color of the class into which he steps. He begins to share its prejudices and its instinctive means of handling its affairs, and even though he himself may not fall directly from the faith, his own aims times out of ten is an out-and-out Conservative. To-day, for instance, the Liberals, who are an immense majority in the House of Commons and in the country, are outnumbered in the House of Lords by men of the opposite persuasion. The consequence of this is that when a Conservative government is in power the House of Lords, except as a ratifying chamber, peacefully crosses to exist. It passes automatically all the bills that are sent up to it; it forgets altogether that it is supposed to be a revisory and suspensory branch of the legislature; it links into the position of a mere annex to the Carlton Club. But when a Liberal govern-

ment comes into office, the Lords at once wake up. They are immediately on the *qui vive*; they scrutinize the government's measures with hostile minuteness; their constitutional prerogatives take on a sudden and expanding activity. Those prerogatives, the most things in the British constitution, are ill-defined and rather a matter of understanding than of hard and fast regulation. They amount practically to this, that the Lords may reject any bill they please, other than a financial measure, but that if the Commons send the bill back again, and if public opinion is clearly on their side, the Upper Chamber is bound to pass it. Thus, had Mr. Gladstone dissolved Parliament when his Home Rule bill of 1885 was rejected by the Lords, and had the constituencies returned him to power with an equal or increased majority, the Lords would have had no option but to pass the bill. The fact that Mr. Gladstone did not dissolve Parliament was rightly interpreted that it was evidence of not having the country behind him. The House of Lords on that occasion as on many others was a truer exponent of the national will than the House of Commons.

The defects, then, in the House of Lords are that it is undemocratic, that it contains some objectionable and many inefficient members, and that it is much too partial to one of the two great parties. That it is a wholly unrepresentative body cannot, however, be claimed by any one who really knows England. Mr. Sidney Low, in his admirable work on *The Governance of England*, has rightly pointed out that the Senate cannot be deemed unrepresentative of the best elements of a nation, when among its members may be included the greatest, or nearly the greatest, poet and painter of their age, the most famous savants, philosophers, and jurists, the most eloquent preachers, the most famed theologians, and many of the masters of science, industry, and commerce. . . . In spite of the great weight of the more titled nobodies, there is probably more intellect and ability in the House of Lords than in any other Second Chamber that could be named. . . . The House of Lords has the influence which belongs to wealth, to high rank and ancient lineage, to landed property, to ideas and tastes which have few interlovers into the texture of English society, and to traditions, usages, and habits of mind which are the growth of ages. . . . Moreover, as the House of Commons becomes less and less able to discharge its multitudinous duties efficiently, the old constitutional powers of the Upper Chamber, as a revisory body, become of much more actual and practical importance. Again, the Lords do admirable and essential work in the domain of private-bill legislation; they are able to criticize the government of the day with a freedom denied to the Opposition in the House of Commons; and while unable to make unamiable ministers, they are an invaluable rewording ground from which ministers may be drafted.

Nobody in England wants a single-chamber form of government. The House of Lords is in not the slightest danger of being blotted out of the Constitution. Nor, again, do I believe that there is any wide dissatisfaction with the powers with which it is vested.

These powers, I need hardly stop to point out, are infinitely less than the powers exercised by the United States Senate, or the French Senate, or, I believe, by any Second Chamber in the world. Indeed, as Mr. Low has insisted, the strength of the House of Lords is its weakness. A Conservative statesman, the late Lord Eldon, long ago pointed out that "the House of Lords would be perfectly tolerable if it were as powerful in reality as it is in appearance." Its principal function is to provide that time is given for mature reflection on matters of importance, to act as a check on hasty legislation, and to make sure that the national will is finding its genuine expression in the government's measures. It does not, of course, fulfill that function in the ideal manner, but at great crises it has, on the whole, fulfilled it adequately. The real objection of the Radicals to the House of Lords is less, I think, to its powers than to the fact that the fact that the members sit altogether outside the representative principle. But there is this difficulty about reforming the House of Lords: You may bring into it elements more directly and obviously representative of the nation, but directly you do so you make the Upper Chamber more and more aristocratic, less than it is at present. Do the Radicals want that? I don't think so. So long as an Upper House exists it must have certain prerogatives, and those prerogatives will increase in proportion as the Upper House becomes more immediately representative of the people. As things are at present, the characteristic of the Lords, who wield their state-ship not so much tyrannical as timidly. Make it more of a popular chamber and its timidity will disappear, it will be more insistent, more sure of itself, ready to stand by its guns.

This dilemma, however, may be avoided if the Lords themselves take the lead in reforming the constitution. The peers who sit in the Upper Chamber for Scotland and Ireland are elected by the body of their order. If the English peers were to come together in the same way and were to choose, say, 200 of their members to represent them in the House of Lords, that House would at once be free from its most unwholesome mixture of titles, ineptitudes, and detriments.

MUSIC AND THE OPERA

A SYMPHONIC CLEOPATRA

By LAWRENCE GILMAN

MANY men of many temperaments have given voice in music to needs inspired by the engrossing tale of Cleopatra and her Antony. That most undaunted of musical historians, Mr. Philip Hale, has marshalled an impressive list of operatic and orchestral pieces written upon this seemingly inexhaustible theme. There are half a hundred works named by Mr. Hale in his (proceedingly incomplete) list—from the early opera of Castrovillari, produced at Venice in 1662, to the "lyric poem" for chorus and orchestra, "Antoine et Cléopâtre"—text by de Hérédia, music by R. Torre Alfina—performed in Paris in 1904. Among the more familiar music-makers who have concerned themselves with this subject, one notes Puccini, Weber (who wrote a farce on the subject for the entertainment of his intimates, himself impersonating the Queen), Berlioz, Camille Saint-Saëns, Vincent d'Indy (whose early overture, "Antoine et Cléopâtre," has been dropped from the list of his works), Anton Rubinstein, and the remarkable Missa Ethel M. Smyth, the only woman who has yet achieved the feat of having an opera performed at the Metropolitan Opera House, New York—an opera which, it should be said, had nothing to do with Cleopatra. Mr. Hale does not mention one of the most effective musical transcriptions of the Cleopatra tale—Mr. Henry Holden Sharp's score for soprano and orchestra, "The Death of Cleopatra" (the text from Shakespeare's play), performed in New York by the Philharmonic Society in 1878, when Madame de Vere Sapiro, if memory serves, sang the music of Cleopatra.

The latest composer to reach a final setting of the story of the "true Egyptian" is Mr. George W. Chadwick, one of the most distinguished of the older school of American music-makers, whose works have been known to the concert stage in this country for more than a quarter of a century—his "Overture to Rip Van Winkle" was played in Boston by the Harvard Musical Association in 1878. Mr. Chadwick composed his "Cleopatra," a symphonic poem, in 1904. It was performed for the first time in New York on January 12 by the Boston Symphony Orchestra, under Mr. Nikisch, after having been played both at the Worcester Festival (in September, 1903) and in Boston by Colonel Higginson's Orchestra (hand clapped, before the New York performance).

According to an authorized exposition of the work, Mr. Chadwick has gone for his basic material to Plutarch's Life of Antony, from which, it is asserted, the above said exponent "those situations having the most direct reference to Cleopatra have been chosen for musical suggestion, although the action of the tragedy is not literally followed." Those phases of the tale selected by Mr. Chadwick for particular definition appear to relate—in the order of their place in the score—in the range of Cleopatra up the River Cydnus in her barge (that barge which, "like a burnished throne, burst on the water"); the martial approach of Antony; the passion of the lovers; Antony's melancholy end, and the burial of the pair in one grave.

Now it is clear that not all of us are fitted by temperament to appreciate in music Cleopatra and her adventures, her inherent goodness, her "infinite variety,"

her conquering ardors. To accomplish successfully such an endeavor, one must needs have, it goes without saying, a rather uncommon sense of color, and a divinely acute and vivid sense of what one may denote, for the sake of convenience, as the more conspicuous side of life. Such music must, to say the obvious thing, be, before all else, sensuous and passionate (though it then would hardly require us to say that it should be also "simple"). Obviously, it must be sensuous and passionate in the most magnificent manner—a subtle and insinuating sensuousness and passion can never do: these were great matters, heroic matters, and they must needs be greatly set forth. It is regrettable to have to say that Mr. Chadwick, admirable and accomplished musician that he is, does not command the heroically sensuous, or even the subtly sensuous, note. It is, of course, a deficiency that lies beyond any power of remedy; yet it is one that must be noted in any truthful estimate of such a work as his "Cleopatra." This music is richly and adroitly scored, it is deeply sincere in feeling and exceedingly skillful in accomplishment, and it has one superb passage—that at the beginning, intended as a picturing of Cleopatra's voyage upon the Cydnus; the music in this place calls up almost the precise equivalent of Shakespeare's splendid picture—one is exquisitely reminded, in this languorous and gleefully beautiful music, of that wonderful floating pageant—the barge whose pomp "was beaten gold" . . .

Purple the sails, and air perfumed that

The winds were lovèd with them; the oars were silver;

Which to the tune of distaff kept

stroke, and made

The water, which they beat, to fall

low faster.

As moments of their skies.

One recalls few lovelier pages in American music, few more finely poetic. Would that Mr. Chadwick had maintained the whole of his tone-poem upon this level! He has not done so. His "Cleopatra" theme promises well in the opening measures, but contents itself with hinting vaguely and tastelessly at some unrecalled magnificence of curve and color. The music devoted to the characterization of Antony is pompous without being either distinguished or impressive; the ancient's passions lack passion and exaltation; and the burial music is not moving in its sedateness, nor fails to enter any deeply tragic emotion.

In the whole, one recurs, after listening to this most modern of musical Cleopatras, in an exalted exultation from the same land—the "Mephistopheles" creature—as containing a far greater measure of power and validity.

Mr. Josef Lhérisse, the admirable Russian pianist, gave a recital in Carnegie Hall on January 13, which served a pleasant purpose in demonstrating, beyond any possibility of doubt, Mr. Lhérisse's possession of a very high quality of art. Mr. Lhérisse made a worthy sacrifice to the cultivation of his program-making by playing, as his first number, Beethoven's "Andante and Rondo" variations, which lack even the minor compensation of even the most notable of his recitals; but he stood for this briefly; but he stood for it as an achievement which was not only one of the most notable in

Geraldine Farrar as "Cleopatra"

THE YOU NO AMERICAN OPERA OF THE METROPOLITAN OPERA COMPANY, IN AN UNFAMILIAR ROLE.

Celebrating the One-hundredth Anniversary of the Birth of Gen. R. E. Lee, in Richmond. THE LEE MONUMENT WITH ITS 45' AND 60' DIAMETER AND (ON THE RIGHT) THE SERVING MEMBERS OF GENERAL LEE'S FAMILY WATCHING THE CELEBRATION

Recollections of General Robert E. Lee

By Charles Marshall Graves

THE centenary of the birth of General Robert E. Lee was recently celebrated in many parts of the South—namely at Richmond, Lexington, Washington and Lee University, and Petersburg and Charlottesville, Virginia, and at New Orleans and Washington. In Richmond the Lee Monument was decorated, and there were commemorative exercises of various kinds.

Probably no one would have ventured, forty years ago, to prophesy that the American people, at the beginning of the twentieth century, would be claiming Robert E. Lee as only as the idol of the South, but as the pride of the whole country. In this day of thirst for personal history, anecdotes and incidents in the life of a famous man are eagerly seized upon.

When General Lee returned from Appomattox to Richmond he approached the city from the Manchester side, coming down Hull Street, the main thoroughfare of that city, and crossed the pontoon bridge below the present Mayo Bridge, which had been burned at the evacuation of Richmond. He came up Fourteenth Street, in Richmond, to

Main Street, and at the corner of Fourteenth Street a number of Northern and Southern men were standing, the Northern soldiers being then in possession of the city. Southern men at once recognized the distinguished figure mounted on old "Traveler," and one of them spoke up:

"Here comes General Lee. I am going to take off my hat to him."

A "Yankee" soldier at once said, "Demand if I don't, too," and as the General passed by every man of them lifted his hat and saluted. General Lee, looking straight ahead of him, lifted his hat gravely and bowed on up the street.

The following story has never been published. It illustrates vividly the humanity and tenderness which were the essential characteristics of Lee. It was while he was President of Washington College, now Washington and Lee University, a short time before his death, that he attended as a delegate the Episcopal Convention in Louisville. He was a guest while in that city of Mr. John William Murrell. He was, of course, assigned to the best chamber in the

house, and proved himself a most agreeable and pleasant guest. During the night he arose, and going to the door of Mr. Murrell's room, aroused him, saying: "Mr. Murrell, there is some one ill in this house, and I cannot find where he is. I was awakened by groans and have searched the house as far as I know. It is the effort to ascertain who is sick." Mr. Murrell and his sons at once made a thorough investigation, but failing to find any one in distress, eventually went retired. In less than an hour General Lee was again at Mr. Murrell's door, saying:

"Mr. Murrell, I dislike greatly to worry you again, but there is absolutely no doubt that some one in this house is in distress."

Again the house was lighted from top to bottom and a far more thorough search was made. After a long interval the cause of the disturbance was found to be an old pointer dog, which was lying under General Lee's bed and growling in its sleep, as dreaming of the happy hunting days of the past. The bed which General Lee occupied was of the old-fashioned kind, with curtains reaching to the floor, and no one had thought of looking under it.

An Heirloom

PROFESSOR MASSON, of Edinburgh, author of a compendious *Life of Milton*, was once expatriated by the listlessness of a student in one of his classes. After bearing long silence the young man's intention of the Professor one day broke off in the midst of his lecture and addressed himself to the student.

"May I ask, sir," said he, "whether you expect to pass this course?"

"I have hopes, sir," answered the student. "Then when the examination comes, sir, you will wish for notes on these letters. What will you do for them?"

"I have my father's, sir," was the reply.

Helping Him

A CERTAIN politician of Chicago went to Washington during the early part of the present administration armed with all manner of recommendations for a position in the consular service. The applicant had been so confident that he would secure the fat berth desired that he insisted to his Chicago friends, before his departure, that he should be glad to see them abroad at any time.

To his great chagrin, however, the Chicago politician soon found out that the President was not in the least disposed to favor him with an appointment, either foreign or domestic. Whereupon the Chicago man became most despondent. Said he:

"Mr. President, when I left home I had told all my friends that I was confident you would give me something. I hate to go back empty-handed. It isn't as much to offer that I care for, but I shouldn't like to have that Chicago crowd laughing at my expense."

The President is reported to have smiled grimly at this. "About the best suggestion I can make in the matter," said he, "is I that you tell your Chicago friends that I offered you the post of consul-general at Paris and that you declined it."

Without Pain, Two Dollars Extra

A BALTIMORE man was one afternoon seated in a dentist's ante-room, waiting his turn, when a young woman, evincing every evidence of utmost agitation at the thought of submitting to an ordeal, entered and sought a seat beside him. Very shortly thereafter a series of piercing shrieks came from the operating-room; whereupon the timid young woman, having from her seat in terror grasped the arm of the colored attendant, gaspingly exclaimed:

"Oh, what is that? Oh, what is that?" "It ain't nothing." "It's only a patient hastened to assume the chair." "That's that's been treated free of charge."

Only Eight Great Navies

SEPMAN OF THE NAVY Metcalf declares there are only eight great navies on the globe. They are in the order of their relative strength, England, France, the United States, Germany, Japan, Russia, Italy, and Austria.

"England," says the Secretary, "ranks so far above all the other nations that it really stands in a class by itself, having built on January 1, 1907, and ready for active service, 34 battle ships, 35 armored cruisers, 101 cruisers, 147 torpedo boat destroyers, 52 torpedo boats, and 29 submarines. It has under construction 5 battle ships, 38 armored cruisers, 26 destroyers, and 19 submarines. England has no continuing shipbuilding policy, but usually lays down each year four armored ships, with a proportional number of smaller vessels."

"Japan has made rapid strides in its naval strength within the last two years. Its quota consists of 11 battle ships, 9 armored cruisers, 22 cruisers, 54 destroyers, 75 torpedo boats, 9 submarines, and 3 coast defense vessels. It has under construction 4 battle ships, 4 armored cruisers, and 1 cruiser, but no smaller vessels."

"The United States Navy does not stand third in the matter of relative importance, however, when the question of consolidated and unified personnel is considered. It stands fifth, being ranked in order by England, France, Germany, and Japan. For instance, where Japan has forty-nine officers of flag rank—that is, rear admirals, vice admirals, and admirals—the United States Navy has only eighteen."

"This difference in strength of personnel is carried out through all the grades, and naval officers of this country are frank to admit that this is the one weak spot in the United States Navy. Japan, with a smaller number of vessels, has many more officers, and 3000 more enlisted men. But I guess when it comes down to putting shot in the right place our navy holds the world's record," concluded the new Secretary of the Navy.

Merely a Suggestion

An elderly gentleman was riding on a street-car the other day. A boy began to laugh, and laughed by him. The old gentleman told his mother that the boy needed a spanking, and she replied that she didn't believe in spanking on an empty stomach, whereupon the lady said: "Mutter de!; tuss klein oder."

"The Star-spangled Banner"
Now Official

"The Star-spangled Banner" has been officially recognized as the national anthem of the United States, and its dignified notes will hereafter be by authority of the government heard upon all suitable occasions. Among the other honors which will be accorded the air will be a military salute, the Army Regulations having been so amended that when the national anthem is played by the band on any formal occasion, or at any place where persons belonging to the military service are present, they shall stand at attention, and even if not in ranks they shall render the prescribed salute. The position of salute must be maintained until the last note has been played. The Regulations further provide that when the air is played it shall be played through once, without repetition or variations, except where repetition is called for by the score.

It is also directed that the same respect be accorded "The Star-spangled Banner" shall be observed when the national air of any country is played as a compliment to official representatives of the foreign country.

An Educational Pointer

SOPHY OF KRAVONIA

By ANTHONY HOPE

Author of "The Prisoner of Zenda."

A romance like "The Prisoner of Zenda." The heroine, a light-spirited, penniless English girl, goes to Kravonia to seek her fortune. She has the good-luck to save the life of the Prince, who falls in love with her. Stirring times then begin for the adventurous beauty; the story of her career becomes a galloping romance, in which reckless adventures, court intrigues, and hairbreadth escapes follow one another in quick succession.

THE MAN WHO BID LOWEST FOR THE PANAMA CANAL CONTRACT

William J. Oliver

THE CONTRACTOR WHO HAS MADE THE LOWEST BID FOR THE CONTRACT OF BUILDING THE PANAMA CANAL

WILLIAM J. OLIVER, in association with Anson J. Bangs, has made a proposition to build the Panama Canal for 65 per cent. of the total cost, and this bid, at the time of writing, is under favorable consideration by the government. In the combination which made this bid, Mr. Oliver has the dominant interest. Other bids were for 7.19, 12.50, and 28 per cent.

Mr. Oliver is thirty-nine years of age. He was born in Maize, Mo., a suburb of South Bend, Indiana. When he was twelve years of age he started out on the Cotton Belt railroad with a fifteen-team outfit as a railroad contractor. He has gradually progressed from one branch of railroad contracting to another, and was one of the largest manufacturing plants in the United States for the building of contractors' machinery.

Mr. Oliver has also made a specialty of what contractors call "concrete work," and has built a number of concrete buildings, viaducts, and river bridges for railroads. He has over \$100,000 of contracts now under way, including the tunneling of Lookout Mountain for the Southern Railway Company, concrete buildings in Louisville and Nashville, a concrete dam at Chattanooga, sixty-five feet high, in which there will be 50,000 cubic yards of reinforced concrete work. He is also laying double tracks and building extensions for various railroads.

In view of the announcement that Mr. Oliver proposes to use negroes from the West Indies as laborers on the canal, under the superintendence of white men from the South, it is interesting to recall the report that Governor Norrington of Jamaica is opposed to the use of negroes from that island as foreign laborers, and has imposed a prohibitive emigration head tax to prevent the natives from leaving the island for America or Panama.

In the case of his award, Mr. Oliver will go to the island to superintend personally the work of construction; he will take over the entire plant owned by the government, and will at once proceed to ship additional materials to the Zone.

The Centennial Anniversary of Steam Navigation

AN international maritime exposition which will be held in Bordeaux, France, from May to November of this year, commemorating the one hundredth anniversary of Robert Fulton's successful application of steam navigation, marks an important event in the history of the maritime world.

The beginning of steam navigation, properly speaking, was born on the Hudson River one hundred years ago, and was fostered and nurtured by that illustrious American inventor, Robert Fulton.

This exposition, which is of an international character, will be participated in by nearly all the great powers, who have signified their intention to take an active part and to send exhibits. There will be exhibited models of every kind of ship, ancient and modern, commercial and naval, together with a display illustrating all that pertains to ocean geography and to river and sea navigation.

It has been suggested that the United States erect a special pavilion wherein the relics of Fulton, together with specimens, models, and documents affording an idea of the growth of the invention in the country of its birth, could be placed on exhibition. It is also planned by the organizers of the exposition that each country build a pavilion on land provided them, so that each will have its distinctive building. Sections will be reserved for advances made in the merchant and naval marine, automobile navigation, coast and inland fisheries, hygiene, and life-saving.

The first experiments in steam navigation in America were made in 1783 by Fitch and Rumsey. Fitch launched a paddle wheel steamer in 1788 which moved at the rate of four miles an hour, but only proceeded a short distance when the boiler burst.

Later in the same year a Mr. Miller, of Edinburgh, Scotland, experimented successfully with a small double hull, which moved about seven miles an hour. In 1807, a man by name of Stratton built the *Charlotte Dundas*, intending to tow boats on the Clyde Canal. This venture appears to have been successful, but, owing to the fact that the

agitation of the water by the paddles caused the banks to wash down, the use of the vessel was given up.

It was in August, 1807, that Robert Fulton, in conjunction with Robert Livingston, built and launched the *Clermont* at New York City, on which was installed a 20-horse-power engine, with a cylinder measuring twenty-four inches in diameter with a four-foot stroke. This boat, which was schooner-rigged, of about 100 tons burden, made the trip from New York to Albany, a distance of 110 miles, in twenty-four hours against the tide and wind. Dry pile was used as fuel, which sent forth thick black smoke, giving the ship a terrible aspect, and spreading terror among the watermen of New York Harbor. While in the course of building she received the nickname of "Fulton's Folly," and many were the jeers and sarcastic remarks made about Fulton.

Soon after her memorable trip she was used as a regular packet between New York and Albany. Later Fulton built and furnished the city of New York with ferries for use between that city and the Jersey shore. He was also the inventor of the torpedo which now plays such an important part in warfare.

It was this first trip of the *Clermont* which was the first really successful voyage made by a steam-vessel on water.

It is especially fitting, therefore, that France, in taking the initiative, should now give her thankfulness to the artisans of "progress," and her sincere friendship for the United States in commemorating the centenary anniversary of Fulton's victory, for it was in France that a great dream of his existence was made, even if he was unsuccessful. That these experiments were of enough significance is shown by the fact that in 1801 Napoleon, in writing to a friend, stated: "Citizen Fulton's propositions mark the force of the world." That this statement has come true goes without saying.

President Roosevelt has intimated that he desires this government to be represented at the exposition, and all matters being favorable, Secretary of the Navy Nelson has ordered the attendance at Bordeaux of several of our finest war-ships.

Great interest has been manifested in American naval and merchant-marine

circles, and the numbers of the American Committee of Honor comprise men well versed in these matters.

This exposition will afford excellent opportunities for our manufacturers of sailing boats, canoes, life-saving appliances, optical and scientific instruments, etc., not only to exhibit the superiority of the products of American genius and enterprise, but to greatly increase their business.

Ruin and Ruin

LITTLE Willie, one day, tore
All the clothes off Theodore;
Tidily he shouted, "There!"
Now you're just a Teddy bear."

Going Up!

PATRON of a big office-building in St. Paul, who had long been accustomed to the familiar sign, "All your feet when the elevator will not return to your start," the elevator will not return to your start. It has passed 85, were ready to start the other day to find in its place the following:

"Call your feet when the car starts. The elevator-man is no mind reader."

Expert Advice

THERE was a general litter recently in a pond church of Portland, Maine, when a pious father brought his first-born to be christened. The good man was more at home on deck than in his present position. He kicked and held the struggling infant, who giggled and squallied in a most alarming way, and for a while it looked as if the father was at one time his bearings. In fact, there was at one time a considerable confusion. The ceremony came to a stop and the congregation began to giggle continuously.

Then from a pew near by came the reassuring voice of a good dignitary:—"I send it! Hild, speed it! Its head's below water!"

He Wanted to Know

JEREMY BARLAN, of the United States Supreme Court, recently celebrated the golden anniversary of his wedding, and the event brought to light some stories of the stalwart jurist.

One relates how the justice was riding towards Washington on a sleeping-car from Louisville. Before retiring he went into the smoking compartment to get a drink of water. There were half a dozen men in the place, and a flask had been passed around and the glass used for the liquor. Justice Barlan took up the glass, sniffed it, and turned on the smokers:

"Who," he roared, in his deep bass voice, "has had the temerity to drink whiskey out of this glass?"

"I did," piped up the owner of the flask, somewhat awed by the great bulk of the justice.

"Then, sir," said the justice, sternly, "where are you hiding the bottle?"

The Connecting Link

TEACHER. "Is there any connecting link between the animal and the vegetable kingdom?"

BRIGHT PUPIL. "Yes, indeed, there's hash."

Equity

UNTIL recently there was a partnership existing between two darky blacksmiths in an Alabama town. The dissolution of this association was made known by a notice mailed upon the door of the smithy, which notice ran as follows:

"The partnership heretofore existing between me and New Drinking is hereby re-sold. All persons owing the firm will settle with me, and all persons that the firm owes to will settle with New."

HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, NEW YORK

Concerning Pantomimes

stanzas' tales belong to all the world, his respect, as England is the home of mine, which keeps alive such tales, fictions from their performance in it Britain this last Christmas season of interest. Of the 120 pantomimes chosen, "The Bales in the Wood" and the most representations, with twenty productions to its credit at different times. "Hindrella," always popular, next, with several. Fourteen houses, "Aladdin"; ten "Red-riding Hood"; eight, "Dick Whittington" and "Simon Cruise"; "Mother Goose" and "The Sultan" filled the bill in seven two apiece; the "Pony Tilters" and "Weaver" each in five; "Jack and the Beanstalk," "Goody Two-shoes," each in four; "Puss in Boots" and the "Sleeping Beauty" had respectively two houses set for them, but the "Fair One with Golden Locks," "The House that Jack Built," "Boysen," "Jack the Giant Killer," "Little Hans Andersen" could find only one apiece for their performance. I list, it will be seen, ignores a number of old nursery tales as "Beauty and the Beast," "Jack and Jill," "The Queen of Hearts," "Simple Simon," "Humpty under," and "Robin Hood." Children and these omitted pantomimes, however, are taken heart, for they are sure to be vivid.

Intolerable

As every one knows, the great Von Moltke was a wastrel and despised anything at approached gaudily in others. German army officers are fond of telling an anecdote illustrative of this peculiarity: Von Moltke was leaving Berlin on a railway journey. Just before the train pulled out of the station a captain of hussars entered the general's compartment and, recognizing him, saluted with "Guten Morgen, Herr v. Moltke!"

Two hours later the train stopped at a station. The captain rose, saluted, and with another "Guten Morgen, Excellenz!" left the train.

Turning to one of his companions, Von Moltke said, with an expression of the greatest disgust, "Intolerable gas-bag!"

A Mere Suggestion

I think the Middle East
With only half upon it
Might properly be called
And well, the unobscured.

R. K. MURKINBICK.

Retort Courteous

They were quarreling over their children.
"Well," she exclaimed, spitefully, "it is certain John has your temper."
"Well," he replied, quietly, "it is also certain he has half yours, because you've got it all yourself."

A Thrilling Repast

"What a fine dinner!" said the husband, as he sat down to the table.
"A fine dinner?" said the wife, looking at him with a look of surprise.
"Yes, a fine dinner," he replied, "but I don't know whether you are enjoying it or not."

Unccrain

"I don't get your name," said the man, looking at the woman.
"I don't know," replied the woman, "but I don't know whether you are enjoying it or not."

HOLIDAY CLEARANCE! 1/2 TO 2/3 SAVING

Without Money and an Approval

IMPORTANT! TO THE PUBLIC For twelve years I have been in the publishing business, selling my books at wholesale to publishers and to all agents. I own and operate my own bindery, one of the largest in the country. Beginning NOW, I intend to deal directly with the PUBLIC. On account of the failure of these large publishing houses recently, and my bindery agreements with several others, I can temporarily offer the following bargains at the most UNBEARABLE prices, and I am prepared to send the goods ON APPROVAL, without money, until you can satisfy yourself that you are getting the greatest book BARGAIN ever offered.

THERE IS ONLY A LIMITED NUMBER OF THESE SETS

It is evident that at present prices, I cannot afford to sell at a loss. I am therefore offering these sets at a price which is so low that I cannot afford to sell at a loss.

I have a large stock of these sets in my warehouse, and I am prepared to send them to you on approval, without money, until you can satisfy yourself that you are getting the greatest book BARGAIN ever offered.

FREE!

A \$1.00 in the form of a GIFT (BOOKS) FREE OF CHARGE

COMMENT

The German Elections

It is a very interesting and important victory which the German Emperor and his Chancellor have gained in the recent elections for the Reichstag. The main issue of the campaign was obscured by Chancellor von Bismarck, and yet he is in a position to insist, in the language of our own politics, that the people have given to the Reichstag a mandate in his favor. This means that he can now have the money for his colonial enterprise which was denied him by the dissolved Reichstag. It is, moreover, the fact that once more the Germans have declared their allegiance to the empire—next to that of the Czar and the Sultan, and notwithstanding its constitution, the most absolute monarchy in the civilized world. This seems to be all the stronger, perhaps, in view of the Chancellor's eighteenth-century threats of the application of force against the Socialists. In a letter to Lieutenant-General von Loebner he intimated that if the Socialists made too strong an impression on the German mind, compulsion might be employed, and he darkly hinted at the sword of BONAPARTE, which was used so effectively against ROUSSEAU, "the frenzied bourgeoisie." At any rate, the Chancellor appealed successfully against the Socialists as a real menace to the state, and against the Centerists, their allies. The people have sustained the monarchy by depriving the Socialist party of nearly twenty seats on the first ballot. How they fared on the second balloting is not known at this writing. The Centerists held their own, while the Emperor is supported by a strange combination of Radicals, National Liberals, and Conservatives—clearly a combination for a passing moment. Congratulations have been showered upon the imperial victors, but evidently many troubles are before them by reason of the conflicts that are sure to arise between the various groups of their supporters.

Evil Days for the Boss

Clearly the boss is having a serious time everywhere. The bosses of New York State, of both parties, have their serious troubles, and now BOSS BRATTON, of Rhode Island, is in misery. His pursuit of his ordinary political business is sadly interfered with, and he is under surveillance, like the New York gamblers, or like a suspected criminal, or like a red-light district. Having installed himself in his usual quarters at the State Capitol, very much as our own OWEN used to do, he is publicly insulted by Governor HOBBS, who denounces his presence in the State House, declaring that he is a "disreputable and disgusting character, and is not fit company for any decent man or woman." He even names the room—No. 207—in which he has ensconced himself. In the mean time the Providence Journal is keeping tab on this well-known boss, and is recording and publishing his movements, giving the names of the unhappy legislators whom

he interviews. Surely there is a moral uplift in public life which must be encouraged.

Mr. Root's Visit

Secretary Root returned from Canada, having had a good time and having made an admirable impression. He has said nothing about important conversations, but of course he had them, and it is fair to assume that he learned that he and LAURIER would find it difficult to come together on the seal-fisheries question, but that they might agree on reciprocity. He doubtless also learned that LAURIER would never consent to make the first move.

The Assault upon the Courts

One of the peculiar activities of the day is the assault upon the judiciary by the political power. The latter is aided more or less by some hasty and misinformed people who have become so enamored of "doing things" that in order to do them they are willing, though ignorantly perhaps, to violate the law. The sum and substance of the enterprise is that if the reason for it is sound, the judges attacked are unfit for the bench; and, in the last analysis, who is responsible for these particular judges but the political power? It must be borne in mind that the district judge against whom the President has directed his most caustic criticism was appointed by Mr. McKINLEY, while the other who concurred with him was appointed in Mr. ROOSEVELT's own administration, necessarily by Mr. ROOSEVELT himself. The criticism is that these judges, on the authority of JOHN MARSHALL, declared unconstitutional a law of Congress. In doing so they differed from Mr. ROOSEVELT. If Mr. ROOSEVELT's opinion upon the question of the constitutionality of a statute is invulnerable, if he is so sure-minded an authority on constitutional law that to differ with him is as offence, such ill-furnished lawyers should not have been appointed to the bench; but it does not follow that for the crime of these individuals the whole Federal bench should be deprived of a power which, for more than the one hundred years that have elapsed since JOHN MARSHALL asserted it, has been regarded as one of the chief bulwarks of our free government.

Shall the Courts Remain Free?

Two bills affecting the courts have been introduced in Congress which require especial attention from thoughtful Americans. The first contemplates the denial to the inferior tribunals of the power to declare a Federal statute unconstitutional. There would probably be no virtue in such an act, even from the point of view of its advocates. It is intended, of course, that a law whose constitutionality is attacked shall be enforced until the Supreme Court may decide that it is absolutely void; in other words, that under such a law men may be punished by fine or imprisonment, or property may be taken, or business and other activities enjoined, notwithstanding the fact that the law itself may be eventually declared unconstitutional. Here is also a most illogical attempt to deny to the courts in which actions must be begun the right to say whether there is really such a law as that under which the case is brought, for an unconstitutional act is void—is as if it were not; in other words, the bill would deny to the courts of original jurisdiction the right to decide whether or not they possessed any jurisdiction whatever. The bill is an assault upon the rights of individuals and upon the dignity and efficiency of the courts. It questions the capacity of the judges to perform an essential part of an ordinary and usual duty. The courts perform, so far as the citizen is concerned, the most important functions of government, and any law that would tend to diminish their legitimate powers or to lower the respect in which they are held will do a grievous wrong to the citizen and to his government itself.

The Power to Remove

The second bill proposes to give to the President the power to remove an obnoxious judge. The Constitution provides that the judges "shall hold their offices during good behavior." This provision is qualified by the general provision requiring removal from office by impeachment and conviction of "treason, bribery, or other high crimes and misdemeanors." It is contended by the advocates of the second bill that it will not be an unconstitutional law that gives to the President

the power to remove a judge without a trial because, for example, he does not like his decisions. It would give to Mr. ROOSEVELT, for instance, the power to remove the judge in Kentucky with whom he differs on a constitutional point and because of that difference. A good title to such a law would be, "A Law to Induce Judges to Agree with the Man who Alone has the Power to Promote or Dismiss Them." The friends of the measure and the enemies of the courts have now convinced themselves that they may make the phrase, "holding their offices during good behavior," sustain a law which would transfer the judiciary back to the executive. It is the fact, however, that the phrase has always meant that a judge shall hold office until he is guilty of some act or some neglect which will bring him within the jurisdiction of the impeachment provision. The phrase meant this in its origin as well as now. It was devised to put an end to the control of the executive over the judiciary which had been exercised by the STUARTS, and which would be revived in this free country by the passage of such a bill as Mr. DE ANSON'S. The Act of Settlement of 1700-1, seeking this end for the first time in the history of England, provided as follows: "Judges' commissions [shall] be made *quamdiu se bene gesserint* . . .; but upon the address of both Houses of Parliament it may be lawful to remove them." A bill providing for removal by the whole political power, executive and legislative, following the provision of the Act of Settlement and of the Massachusetts Constitution, would be consistent with the meaning of the phrase; but a law providing for the removal of judges by the President alone would be the adoption by the American Congress and the President of the principles and the practice of JAMES I. and his son.

The Federal Government and Child Labor

The reason why Senator BREWER asserts that the United States may legislate concerning child labor clearly illustrates a prevailing attitude of mind which would not have been characterized as honest not so many years ago. This is not to say that it may not be honorable now, although old-fashioned persons, who all their lives have loved uprightness in public as in private dealings, will not understand how it may be. Mr. BREWER asserts that the United States may legislate against child labor by excluding from interstate commerce the products of such labor. This is a common kind of suggestion, but it savors of tricks and of pettifoggery. If this argument is sound, Congress might have legislated against slavery by excluding from interstate commerce cotton raised by slave labor; but no abolitionist of intelligence would have denied that such legislation would have been contrary to the intention and spirit of the Constitution. Not many years ago Congress undertook to legislate against "stock gambling" and gambling in the products of the farms of the West and South. Would Mr. BREWER have favored a law, or would he have considered it constitutional, that prohibited his constituents from shipping any of their corn which had been made even by themselves the subject of gambling?

Leave it to the States

The truth is that the regulation of labor, the labor of men or of women or of children, is within the police power of the States. It was intended by the framers of the Constitution that it should be left there, and all evils associated with labor or arising from its abuses may be best provided against by the lawmakers of the State, of the neighborhood, by lawmakers who are familiar with the peculiar social conditions out of which grow their peculiar problems. Moreover, it is true that the States are now dealing with child labor for the same reason that Mr. BREWER is waking up to its iniquities—because public opinion is aroused against it. All legislation for the public welfare, whether State or national, is likely to be in obedience to public sentiment, in answer to public demands; and legislation of the kind is not only likely to be better if enacted by the States, but Federal legislation must be tainted if it be the result of such self-deception as that which impairs the ethical quality of Mr. BREWER'S argument.

Federal Forest Reservations

No State-rights contention can properly be made against the measures for establishing national forest reservations in

the White Mountains and the lower Appalachian range. Nor is any evasion of the Constitution required to bring the subject within the jurisdiction of Congress. The creation of these two forest reservations would be primarily for the benefit of navigable waters in New England and the Southern States. It would be well if the States should undertake the work, but nothing can be said against New Hampshire for not doing so, paying for what would be of great advantage to all the New England States except Rhode Island; nor against any Southern States—Virginia, North Carolina, and Tennessee—for not being inclined to pay for what would benefit themselves and all the other Southern States south of the Ohio and east of the Mississippi. New York's reservation in the Adirondacks is of more value to its own people than to those of any other State, while the reservations made by Massachusetts are purely for the pleasure and advantage of her own inhabitants. No better work can be done for river improvement than through the making of these two reservations, and if Speaker CAYTON and others who opposed the project for its extravagance would secure a reduction of the aggregate of the river and harbor bill equal in amount to the cost of the reservations, they would not only help a good cause, but would greatly improve the appearance of the national pork-barrel.

The Fields and the Beechers

Mrs. ISABELLA BEECHER HOOKER, who died at Hartford on January 25, in her eighty-fifth year, was the last survivor of the eleven children of the Rev. LYMAN BEECHER. The Rev. HENRY MARTIN FIELD, who died on January 26 at Stockbridge, Massachusetts, also in his eighty-fifth year, was the last of the seven sons of the Rev. DAVID PUSEY FIELD, of Stockbridge. So ends a famous generation in two American families of very high renown, and it is interesting that the end should come to both of them within a day. The progenitors of both these distinguished families were eminent clergymen of old New England stock. The FIELDS came from Stockbridge. The BEECHERS were early and long associated with Litchfield, Connecticut, though LYMAN BEECHER came from New Haven, and lived in various places where his ministry called him. We see nowhere nowadays families of that stock approaching these in size and distinction. Large families of the old American stock are rare now. They seem to be no longer born to ministers. Neither is distinction achieved in our day in the same way that the BEECHERS achieved it. The most notable contemporary family that we can think of at this moment is that represented by the seven auriferous sons of the late MEYER GUGGENHEIM. We hear more just now of the GUGGENHEIMS as a family than of any other, not even excepting that of ABRAHAM LAMSON, of Indiana, three of whose sons are Representatives in Congress, besides other sons and daughters worthy of preferment and likely to win it. The energy of the GUGGENHEIMS has been spent in the acquisition of material treasure. They are wonderful as a family because all seven of them have long been in business together, apparently harmonious, and prodigiously successful. One from the fold has just been spared to go to the Senate, to the family's further exaltation.

Distinction in Our Generation

The energy of the GUGGENHEIMS was spent in the diffusion of moral and theological ideas. Nearly all the sons were clergymen of note, and one was the most noted preacher and one of the most eminent public men of his day. The daughters, especially Mrs. FROST, contributed their full share as writers, teachers, and leaders to the family renown. None of them were notable money-makers, though as an incident of their work some of them did earn considerable amounts of money. Of the four more notable FIELD brothers, HENRY was a clergyman and editor, DAVID a great lawyer, STEPHEN an eminent judge, and CYRUS, merchant and financier, was a man of genius. These men were famous in their generation. Whether they would be famous in our generation—as famous, say, as the GUGGENHEIMS—is debatable, so noticeably in our day has shrunk in relative consequence the men who diffuse ideas as compared with the men who accumulate dollars. To our generation the great FIELD is neither DAVID the codifier, nor STEPHEN the judge, nor CYRUS, who laid the Atlantic cable and died poor, but MARSHALL, who bought and sold shrewdly and left a hundred millions. So far as we observe,

the most distinguished clergyman's son of our day is a member of the New York Stock Exchange and a dealer in railroads. How the BEZEMERS with their brilliant abilities would have turned out if they had been born half a century later is a question as to which there is room for much rumination.

The Shrinkage in Families

We can afford to take the more thought about such famous families as the FIELDS and BEZEMERS because, as we have said, no such families are any longer being born of the same stock. LYMAN BEZEMER's eleven children and DAVID DUNLEY FIELD's seven sons, and BISHOP ALONZO POTTER's eight sons, and the WASHBURNES, and the notable generation of SUZEMAN, EYARTS, and HOWES, were born in country villages or small cities at a time when it was comparatively easy to start children in life. The kind of parents who have it in them to have children like those of these families have quit the country towns and moved to the big cities, where only rich people can afford to raise large families, and they have too much else to do. Mr. EYARTS, to be sure, raised a family in New York, but he had exceptional qualifications as a provider, and he preferred Second Avenue to Fifth Avenue as a place of residence. Another adventurous gentleman who raised an old-fashioned family more or less in New York was former Congressman CHANLER, one of whose six or seven sons is now Lieutenant-Governor of New York, and another is high sheriff of Dutchess County. But Mr. CHANLER was a rich man. Some Jews raise large families in these times, and some Roman Catholics, but the old-time confidence that the Lord will provide is much impaired, and the folks who are of the greatest promise as parents of gifted offspring no longer live where simple life prevails and large families are easily subsisted.

Some Trembles of Apprehension

The "Third Term National League" of Illinois is out for ROOSEVELT for President in 1908. It has issued a circular, which says that we have come upon days fermenting with distrust, and view-with-alarm the abuse of corporate power with resulting evils that give a great chance to the demagogue; that THEODORE ROOSEVELT has done fine, and has the confidence of the people; that to eliminate him "at a time when the people as a whole are restive and trembling with apprehension is to invite national disorder"; consequently he has become "a public necessity, an essential part of things in the social and political fabric." Therefore he is "the only logical President for the people"; and though he has said he will not run, that is no matter, because he who acts as President acts solely as a servant of the people, and must come when called. "Already it has been demonstrated," say the Leaguers, "that the frightened and vengeful wealth-controlling forces of the country will resort to any means to defeat his nomination for a third term." If that is the case, the Leaguers ought to recognize that all the people are not trembling with apprehension for the same reason, since while some may be trembling for fear Mr. ROOSEVELT won't run again, others are ashake for fear he will, and whichever happens there will be some whose hopes will be revived. Another comforting thought for the Leaguers is that even if he adheres, as we believe he will, to his purpose not to run again in 1908, he will not absolutely abandon the country to its fate; for though he may go shunting to Africa, he will come back, and will very likely go to the Senate from New York. The truth is he owns property here and has a family and a stake in the future, and we have no idea that he believes that the state of the country is so critical as the Leaguers suggest, or that the capacity for self-government is so nearly extinct in us as they fear.

What William Allen White Says

WILLIAM ALLEN WHITE says (in the current *McClure's*) that "the square deal" which our President believes in means, in simple language, "that this government shall guarantee to every man every dollar that he honestly earns, and he may be sure of getting it only when no other man shall have a dollar that he does not actually earn." "Of course," adds WILLIAM, "that is not 'socialism'; it is merely justice." Beg pardon, WILLIAM, but it is nonsense, or at least an impossible abstraction, and we think you do Colonel ROOSEVELT injustice when you impute to him a belief in it.

"Earn" is a loose word, but no government will, or should, guarantee to every man every dollar he "earns," much less deprive his fellows for his benefit of their unearned dollars. Each man must bargain for himself in great measure, estimating for himself what his earnings are, and making his own arrangement to get them. Government should protect him as far as possible in possession of his property and in the security of his person, and in liberty to work where he will and at what he will, but it cannot safely venture to assess the value of his earnings or to guarantee that he gets them. Government! Why, WILLIAM, you are part of government in this country. Do you know what even you yourself honestly earn? Do you know what anybody honestly earns? Can't even you live in Kansas, WILLIAM, without talking Kansan?

The Unused Dollar

Again, you say that when a man "takes more for my service, however great, than he and his family can use in their lifetimes, he takes dollars which he cannot use, and which of necessity must be put to accumulating other dollars which . . . come from people who really earn them, and are taken from those people without giving society value received." You call these dollars "unused dollars." Useless! Not a bit! They may be useless to the men who control them, so far as promoting their welfare or happiness goes, but they are useful to society: useful as capital, to pay wages, promote enterprises, and furnish work. No dollars could well be more useless to their possessor than the pile lately relinquished by the late RUSSELL SAGE and at present a source of embarrassment to his widow, but they have never been useless to society. Uncle RUSSELL kept them all busily at work facilitating the transmitting of labor into wealth, and incidentally raising wages and promoting prosperity. You seem somewhat to seek in political economy, WILLIAM, but you probably appreciate that a large mass of accumulated capital is useful to a country. Are you sure that it makes such a vital difference to society whether or not large masses of capital accumulate in certain hands? Capital must be used whether it exists in large chunks or small, and when used it promotes development of industry and prosperity. We all prefer that it should be well distributed, but there are some advantages as well as drawbacks about the existence of it in the large chunks.

Fight Oppression and Privilege

What we ought to fight is not mere accumulation—though that may come to need attention—but the oppressive and unjust use of great resources, and especially the concession by government of privileges to one citizen at the cost of another. That great capitalistic concerns should control the railroads in their own interest and to the ruin of rivals we have come to feel is intolerable. We want fair play in the use of railroads, or the nearest to fair play that it is possible to give and to get. That great and rich commercial interests should control the action of Congress in the making of tariffs has been, and is, a vast evil and injustice from which we have suffered much and will suffer long, and in so far as is possible we want to abate it. But the mere accumulation of money in large heaps is not so awful an evil. It bothers the accumulators more than the other folks.

Property Rights

You say, WILLIAM, that whereas ten years ago a man's dollar was his own, "now his legal title to it is not much stronger than his moral title." And that you feel to be a great advance! "Moral" is a loose word, as "earn" is, but if you live, WILLIAM, to see the day when folks hereabouts are deprived of their legal possessions because their moral title to them has been questioned, you will see some wonderfully bad times and monstrous suffering. We don't protect owners in possession of property because we think they have a moral right to it, but on grounds of public expediency, and because we believe that if everybody's property rights are not respected, nobody's will be. But if we must, we can have an income tax. That's fair.

Requesters

Of all dead-and-buried people, there are very few so ill adapted to disinterment as OSCAR WILDE. Why not let him stay buried!

Anglo-American Relations and the Swettenham Incident

It is, perhaps, just as well that the SWETTENHAM incident occurred, for, since the Venezuela affair, it is the first test applied to the tenacity of the bonds ostensibly uniting Englishmen to their transatlantic kinsmen. The fact that the rebuff administered to Admiral DAVIES by the Governor of Jamaica should have evoked on the part of our national government and of the American press neither indignation nor resentment, but merely good-natured tolerance and amusement, bears witness to the magnitude of the change that has taken place in our attitude toward Great Britain in the eleven years that have elapsed since January, 1906, when Mr. CLEVELAND issued his Venezuela message. By the action of Mr. CLEVELAND and all of our influential newspapers combined to treat the offender as a crank; and declined to hold the British Ministry or the British people responsible for a foolish act of discourtesy and impertinence. The time has gone by when we regarded Britons with habitual suspicion, and when a minor British official, or even an ordinary British subject, had it in his power to wound our national susceptibilities. We have outgrown the sensitiveness that used to be evoked with regard to the opinion of Americans that might be held by Englishmen. For as the term "Yankee" has lost its sting; no longer ashamed of it, we are proud of it. We know what rank among the nations we have attained, and, if any doubt yet lingered concerning the position conceded to us in world politics, it would be dispelled by the persistent and earnest efforts of Germany, Russia, and France to secure our good-will. We do not need Great Britain. She needs us. Such a relation is incompatible with jealousy, or irritability, or suspicion on our part regarding the prevalent sentiment and controlling motive of the British nation, as distinguished from individual vagaries. In a word, so far as England is concerned, we have attained our majority. We look at things from the viewpoint of self-respecting manhood. We have put away childish things.

As might have been expected under the circumstances, the SWETTENHAM incident caused much more annoyance, not to say anxiety, in England than it did on this side of the Atlantic. We do not say that the annoyance was universal in the United Kingdom, for the Irish Nationalists may have welcomed it, not being particularly pleased with the strong drift toward friendship with Great Britain which of late years has existed between the United States. Aside, however, from Irish Nationalists, who have held their peace, the cross-grained Governor of Jamaica was the recipient of almost universal disapprobation and rebuke in the lands of his countrymen. The British Ministers had no time in disclaiming responsibility for the unpleasant affair, and there is a credible report that a more exalted personage has heartily commended their desire to wash their hands of an indelicate and perverse subordinate by dismissing him. From the English press the ungracious treatment of the American admiral has called forth a chorus of reprimand and apology, in which even the voices of the *Pall Mall Gazette* and *Saturday Review* have, with more or less reluctance, joined. The apology has been received on this side of the Atlantic with the utmost good humor, coupled with the comment that exculpation was superfluous, inasmuch as we should never dream of holding the British nation accountable for the folly of a cantankerous individual, or condemned to demand his punishment. So far as we are concerned, Governor SWETTENHAM may continue to rule the island of Jamaica, if the British Colonial Office considers that he subverts its interests.

To understand it is to forgive. We can easily forgive Governor SWETTENHAM when we comprehend him. The truth is that in his latest enmity to men and things American he is not precisely individual. He is no unique exception. He is rather, in a limited sense, typical. He does not, of course, represent the British nation as a whole, or even a majority of it, but he does represent a class with members of which most American travelers have occasionally come in contact, not usually, to their satisfaction. We refer, of course, to the landed interest, which, up to 1846, dominated the House of Commons, and which comprised not only landowners, great and small, and Anglican clergymen dependent upon tithes, but also farmers, bailiffs or stewards, country lawyers, and country tradesmen—in a word, all who could be said, directly or indirectly, to live "off the land." The whole of this once dominant class has been well-nigh ruined by the ultimate results of the repeal of the Corn Laws. Curiously enough, this outcome of the repeal was not foreseen by all of the promoters of that measure. Some, however, himself a great landowner and one of Sir ROBERT PEEL's principal lieutenants, predicted that those who feared and those who hoped that the abolition of the corn laws would have profound and far-reaching effects on the price of wheat and flour in the home market would alike find themselves mistaken. For a few years, indeed, the event seemed to justify the rash prediction. This was because American producers did not at first appreciate the magnitude of the opportunity offered them by Sir ROBERT PEEL, and did not immediately increase to any remarkable extent the area devoted to

wheat. Up to 1840-50 the rents of English agricultural lands were not appreciably affected. By the middle fifties, however, the pinch began to be felt, and the pressure of transatlantic competition went on increasing, until the rent of farms sank to a fraction of what they once had been, and the whole landed interest, with all of its dependents, was reduced to a condition not far removed from penury. By the early sixties the process had gone so far that exasperation and vindictiveness were evoked by the sufferers against PEEL and the Yankee grain-producers, who were held jointly responsible for the straitened pecuniary condition of the lords of the English soil.

To the existence of this feeling may be largely traced the outspoken desire to see the American Union broken up, which, during our civil war, was exhibited by the landowning class and in the English universities. Almost every fellow of a college, it should be remembered, then looked forward to becoming the occupant of a college living when it should fall vacant, and he was naturally irritated by the knowledge that his prospective income had been much reduced, and threatened to be brought much lower, by the free importation of American wheat. So prevalent, indeed, was this feeling that in 1862-3 there were in the University of Oxford but two outspoken and influential defenders of the Northern cause, to wit, GOSWELL SMITH, regius professor of modern history, and THOMAS BURNES, professor of political economy. Now in these days, when it is doubtful that the landowners, who still retained much influence, would have brought about British intervention on behalf of the Southern Confederacy, but for the vehement resistance to such a step offered by the manufacturing interest that was fast acquiring the preponderance in Parliament which now for many years it has possessed. The operatives of Lancashire, though some of them were almost starving through deprivation of their new material, cotton, were yet grateful to the Northern States which had brought down the price of wheat in England, and their feeling was shared by the manufacturers, who were not oblivious of the fact that the cheaper price of the necessities of life, the lower might be the standard of wages. It was with great bitterness that the landed interest witnessed the defeat of ROBERT'S motion for the recognition of the Southern Confederacy. But although their vindictiveness was balked, the members of the class or classes that had been wont to live off the land did not forget that they were the victims of the American invasion of the British market for wheat and flour. Nor have their descendants been suffered to forget it. Governor SWETTENHAM and those of his class, who are accustomed to turn a sulky and sour face toward Americans do but express the sentiments of those who were brought up in an atmosphere of incessant repining and complaint, and who had the shrinkage of rents from the paternal acre brought home to them in a hundred galling ways. To them the name of PEEL is still anathema, and a part of the dislike they feel for him is directed toward the Yankees, when they look upon as beneficiaries of what they call his "treason." Traces of this prejudice are particularly frequent in the army and navy, in the civil service, the diplomatic service, the Indian service, and the colonial service, in which the younger sons of landowners and many sons of Anglican clergymen still seek a refuge from destitution. We cannot blame the survivors of a once mighty but long since decadent class if they look back upon the period before the repeal of the corn laws as upon a golden age, and eye with aversion the Yankee producers of grain, but for whose ability to make good the deficiencies of Britain's home supply the corn laws might be still upon the statute-book. Under all the circumstances, we can but view the occasional outbursts of Governor SWETTENHAM and his congeners with more commiseration than resentment.

Race Consciousness

"To-day, more than ever before, we feel the bonds of sympathy which attach us to all humanity, and daily we grow more into the consciousness that we make part of a body which is the body of humanity, and of the soul which is the soul of humanity. Do we not vibrate to each sorrow which humanity feels by means of millions of telegraphic wires, a veritable network of nerves uniting us to all parts of the earth? One individual were touched, but by the nearest movements and emotions, like a lower animal. Men rejoiced, men suffered, with his village, his tribe, his province. But, little by little, the idea of a vaster heritage was conceived; and one's true country, oversteering the limits of his, is not now wherever humanity vibrates to joy or pain? We begin to understand that our life, an instant in universal duration, is enlarged by all the life of the past,—that past where virtually we were already, and that life will still grow into an indefinite future by the survival of our acts, our ideas, our deeds. We begin to understand this eternal humanity; that it is, according to the Hindu phrase, the eternal self, and death cannot annihilate us, since death cannot reach the life, the soul of the species, which is in us, and which shall survive as the tree survives its leaves."

One wonders, in reading this passage from a modern French

writer apparently but little known, if the time will ever come when youth will content itself with action in reference to the race, and if there will ever come a time when religion, as we understand it to-day, and as the mystic understands it in all time, can safely be resigned in favor of human intelligence applied to all departments of life. This is an age, the above writer thinks, when all are interested in the welfare of all, in the increase of scientific acquisition, of intellectual and moral energy, of individual and social progress, in the amelioration by hygiene of health, vigor, and physical beauty. And it is no longer, he thinks, a few of the elect who pursue the ideal, who work and struggle and suffer for reform: the elect of to-day are everywhere, souls desiring the same thing, united by the same faith, the same hopes. And from all men there is jelling forth the same cry of revolt against the injustice of man to man. The ideal is about to control force, reason to conquer folly and absurdity, and a humanity shall emerge into being which shall be more sensitive, more passionate; the intelligence shall become finer and more refined; the soul more exalted; and if thence there arise more analgesics of the nervous system, at least there will be as well more cerebral power, a livelier impulse toward the ideal—hence more joy and more ardor of enjoyment. There shall be born men ever ready to lay an intense, heroic, exalted life at the cost of suffering.

And this condition, the author quoted believes, is largely to be accomplished by a more enlightened race consciousness. Marriages will only be contracted between people who are likely to have robust, capable, clever children. It will not be enough, then, that consummatives or mentally diseased people shall refrain from marriage, but there will be a veritable conspiracy amongst philosophers and doctors to regenerate the human kind, to keep guard over the health, the vigor, the beauty of the coming species; and the augmenting of force and health in the race will be more effective than any social law for the eliminating of pauperism, for alleviating the misery and the suffering of the masses.

Our century has liberated the workingman; it has been a century of industrialism, and the next step shall be to reconquer the earth, to liberate the agricultural worker. Science and machinery may soon leave him freedom to think and to read, and instead of his work revealing to him the earth as a rude and hostile farr, it shall become to him what it is to-day to the painter and the poet. He will dry up the marshes and water the deserts till they blossom; he will control the torrens and replant forests, and clothe the mountainsides with trees, and repair the carelessness and waste of the past; and he shall go to his task as joy and not as drudgery.

There is more rational hopefulness in JEAN LAZAR'S *Comme* than in most utopias, and yet, so far as one can see, there will still be certain essential sorrows left, the sorrow of the soul demanding stability in a universe of eternal flux, and as the great region of soulful worry is closed away by the application of intelligence to life, will humanity be more or less inclined to reiterate the question as to whence and whither will man be more or less agitated at the great void that merely echoes his question. When life is really livable shall we be able to take our little moment and let it pass without lament because the race endures, or shall we sing with a more poignant grief than has yet touched us:

Oh, earlier shall the rosebuds blow,
In after-years, those happier years,
And children weep, when we lie low,
Far fewer tears, far sadder tears.

Oh, true shall boyish laughter ring
Like tinkling chains in kinder times!
And earlier shall the maiden sing:
And not there, and I not there.

Certainly, in the past, sabbies, heroes, and poets have faced death with the greater calm, because life was checked with good and evil, and the sorrows of living have often assuaged the bitterness of death.

Personal and Pertinent

THE increase of the salaries of Congressmen recalls an evening in the hall bedroom of a Washington boarding-house of that cheap kind whose atmosphere, windows and doors being sealed for six months every year, is composed of the aroma of many fried dinners. There were LAMAR, Senator from Mississippi, and a Northern friend and admirer. The friend was seated on LAMAR's little bed, while the great man was pacing up and down the room, about the size of a tiger's cage in a menagerie, drinking lazily from a big cracked water-pitcher. He was discoursing on the question whether the late war had left to the States a vestige of sovereignty. He feared that it had not. The talk was very free, but the surroundings were squalid. They were all that LAMAR could afford, however, for he hadn't a penny but his salary of \$3000 a year, and \$1000 a year was a narrow income for a cheaper time than the present. It may seem to some calculators that the pay is for service rendered during the time a Congressman is at Washington,

but in most instances, as in LAMAR's, it was the whole of the Senator's income, and the \$1500 would not have been too much for them.

THE Rev. WALTER LOWME, for the last year the rector of Trinity Church, Newport, has been appointed rector of St. Paul's-within-the-Walls, which is the American Episcopal church in Rome. There he succeeds the Rev. Dr. NEVIN, who was rector there for many years. There can be no greater difference between men than that between Mr. LOWME and Mr. NEVIN. The latter was, in the best sense, a man of the world. He made his church in Rome, FRANK-JONES, by reason of friendship with the rector, beautifying it with mosaics that make the interior notable among the beautiful churches of the Eternal City. Dr. NEVIN shone in many ways. He was a fierce fighter among the Union soldiers of the civil war. He was an ardent Churchman. He was an adept in Italian art, and his willing advice steered many an American safely among the artful art-dealers of Rome. Pictures and tapestries are decorating American homes which would not be here but for Dr. NEVIN, and pictures and tapestries of another kind are still lumbering back, none in questionable shape which would have been here but for Dr. NEVIN. He was a most useful adviser to some of our crude new diplomats. He was a man of the fields, like ERAS, and in many a way more like ERAS than like JACOB. He hunted, he rode, and he tramped. He saw the world. He died after a hard trip in the mountains of Mexico. Mr. LOWME is a quiet scholar, a man who has worked much in the American School of Classical Studies at Rome. He has been a missionary, and is, if it may be permitted, a modern patriotic writer. He will shine among the scholars as his predecessor shone among the men of action.

WILLIAM JAMES has just retired from the business of teaching philosophy at Harvard. He is a very young old man, and is just as interesting as he has ever been. Perhaps he would rather sit by his fire and spin philosophies than teach them. At any rate, he has a good fireplace in a big library in his house in Norton's Woods, in Cambridge, and he has earned the right to smoke and talk with whomsoever he wants to see and he wants always to see every one who is thinking hard and acting well in the busy world. He has always justified the question which the London woman asked: "Which JAMES do you mean: the novelist who writes like a psychologist, or the psychologist who writes like a novelist?" He has a high respect for ordered thinking and life, a pleasing contempt for lampishness, and a very strong and beautiful religious faith. He has been more widely read than any other philosopher of his time, and they especially enjoy him who have been fond of seeing HERBERT SPENCER battered with pointed language. He is much admired, and has been decorated, in metaphysical Scotland. He is an anti-imperialist of high intelligence and patriotism, but he thinks that THEODORE ROOSEVELT has done much good to the state owing to his vigorously expressed dislike of the usual politician. His special distaste has been for the F.B.I., the pedagogic young man who has so spiritualized that he may teach one facet of a single phase of a subject that his mind becomes a heret of originality, of imagination, and of humor, that it is almost inflexible. And, finally, no one reads HENRY JAMES so critically and so admiringly as his brother, the most interesting philosopher.

Whenever the Hague conference meets, whether in May or June or later, no one who was at the first conference can forget the cynical amusement of the European diplomats touching the young Cur's ideas—ideas which the young Cur's country has since done so much to discredit. It was M. BURMANS, then minister from France to The Hague, who asked Mr. NEWELL, our own minister:

"What is that meeting you have in the churches in your country every Thursday?"

"You mean the Thursday-evening prayer-meeting?" answered Mr. NEWELL.

"That's it: that's it," responded M. BURMANS. "This is like that; it's an international prayer-meeting."

And a week after, M. BURMANS, having returned from Paris whither M. LOURET had called him for the purpose of talking about the prayer-meeting, said excitedly to Mr. NEWELL:

"We must do something; I am knee-deep in petitions from the women of France who are for disarmament." The prayer-meeting was held and the permanent court materialized after a time. There is probably to be a conference this year, although the date has not been fixed. As the date previously selected was abandoned at our request, because it conflicted with the time arranged for the Pan-American conference, it would seem to be our duty to fix the date anew, although recent news indicates that Russia will make a suggestion. It will probably be fixed, and the prayer-meeting will receive another shock, for, after all, and notwithstanding our own refusal to arbitrate with Spain, and Russia's horrible war with Japan—perhaps because of them—the public sentiment of the world in favor of arbitration and of peace is growing. But the sooner the date is fixed the better.

Correspondence

A CANDIDATE FROM OHIO

LANSING, MICH., January 25, 1907.

To the Editor of *Harper's Weekly*:

Sir,—You are so graciously surveying our fine supply of Presidential timber. Which is the tree of healthful life, of soundness of mind, of finest grain? Kindly permit me to write the name of a man of the highest mental endowments, of clear and elevated understanding, of the broadest scholarship, and the most valuable experience in public life. This unusual talent is connected with the greatest personal simplicity, unobtrusive rectitude, and temperance in all things. He is one of our few great scholars who have taken the whole field of human knowledge for their province. We stand in admiration at his classical and historical attainments, his learning in science and economics, his engineering proficiency, his broad and deep knowledge of law and statecraft. Seldom are so happily united the understanding of the lawyer, the rivetness of the statesman, the temperance and fairness of the judge, and the gravity of the moralist. When you sit under his teaching you are impressed with a rare coexistence of breadth of intellect, constructive ability, resolution of will, forceful construction of purpose, and manly independence of thought. Deleter and consummate parliamentarian, with the soul of honor, his presence on the floor makes you forget the vulgarities and meannesses of political life and lifts you to a plane of patriotism.

Cardinal Gibbons may look the world over and not find a more perfect embodiment of his hope for the future of civilization and the lasting peace of the world. Here is the text of our statesman: "The genius of the American commonwealth lies in justice." With such a leader at the fore, think what advances may be made in the next ten years toward the final elimination of territorial war from the face of civilization.

He is a reliable and respected authority on "canals," waterways, and the needs of commerce, becoming such by a life of painstaking, patient, and profound study. On all the great questions now pressing for solution, you will find him surprisingly well prepared.

We know that he has the true American spirit, and have full confidence in his ability to maintain and further perfect the most favorable government on earth.

Is he a vote-getter? Well, from a very important Congressional district where the two leading parties have equal strength and there is a large group of the intermediate parties, he goes to the Congress by a practically unanimous vote. Almost no one can be found who wants to vote against him. His people know him, and have stamped him the true friend of common man. It is not hard to believe that his whole grand State will express an equal confidence, and why not the entire nation? Although he has given us twenty years of invaluable service, he is still a young man, at the zenith of his intellectual powers. I desire to cast my vote for Congressman Theodore Burton, of Cleveland, Ohio.

I am, sir, J. J. HANSHUR.

WOMEN AND RELAXATIONS

A MAPLE STREET, STORFORD, MASS.

To the Editor of *Harper's Weekly*:

DEAR SIR,—I have just come in from a race on horseback through one of the finest stretches of this beautiful Connecticut valley. The slightest, I had the firm belief, that the exhilaration and the delights of riding—the exquisite thrill of flying through the crisp air with not a care present or prospective that can hold its own against the pleasure of the moment. With every fibre tingling with the joy of living, I sat down to gain breath, and my eyes fell upon your article on "Relaxation," but refused to go farther than this statement: "The relaxation of America does not relax at all!" With that challenge, I wrote out my list: horseback riding, tennis, swimming, snow shoeing, skating, clay-modeling, embroidery, and here I stopped lest I might be thought to belong to the idle class; but if this list does not compare favorably with that of any Englishman, I can add to it. That I say not be considered an exception let me say that I can, as a rule, find a play-fellow. I have the honor to be connected with an institution where Duty is a firm and stately figure well in the foreground, while Pleasure hovers modestly in the distance, too unsubstantial to cast a shadow; but even here the college gymnasium is not aside one evening in the week for a "faculty frolic," though all did not know how—more's the pity.

That many—too many—women do not know relaxation in any form, is an reluctantly obliged to admit; but still—oh no!

It will be a long time, particularly in this fine, old, constrained New England, before the person who enjoys life in its measure is looked upon with entire approval. There are people enough who still insist that recreation is a waste of time, but let us not make it out worse than it is. And what, I wonder, can be meant by a "waste of time?"

If it is new ideas the world wants—who can tell how an idea comes?

Certainly not always for the seeking, nor to a mind unrefreshed. Here's to hoping that the next generation may never forget how to play!

I am, yours truly, MARY ETHEL TROUBLOO.

A PERMANENT TARIFF COMMISSION

BOSTON, MASS., January 25, 1907.

To the Editor of *Harper's Weekly*:

Sir,—I respectfully call your attention to the enclosed carefully considered resolve which has just been offered in the Legislature of Massachusetts by Representatives Robert Luce and Charles A. Dean, now referred to the Committee on Federal Relations.

Mr. Luce is a Republican and the leading orator of the Lower branch. He has been the author of such progressive legislation. The "Last Primary Election Law," which has revolutionized the political system of the commonwealth, is serving as a model all over the country. Mr. Luce also is an authority on questions of taxation, and long has been a deep student of tariff problems.

Mr. Dean is a Democrat and the acknowledged leader of his party in the House in matters of foremost importance. He also is thoroughly informed upon all questions of taxation, State and national, and, like Mr. Luce, is not accustomed to give his endorsement lightly to any legislative proposition. Both gentlemen have served as Representatives for eight years.

With the question of tariff revision rapidly becoming one of general interest throughout the country, it is believed that the purpose of Messrs. Luce and Dean in thus forming a non-partisan alliance to place Massachusetts upon record in favor of scientific tariff-making will excite interest and attention wherever it is known.

In view of these facts, permit me to request your careful consideration of the enclosed resolve.

I am, sir,

WILLIAM K. HEDDINGHAM.

COMMONWEALTH OF MASSACHUSETTS.

The undersigned citizens of Massachusetts respectfully represent that the interests of both Massachusetts and the whole country call for a scientific investigation of the tariff system of the United States, and pray for the passage of the accompanying or other resolve.

ROBERT LUCE, CHAS. A. DEAN.

"Whereas, The Fifty-eighth Congress of the United States, at its first session, enacted a bill to enlarge the powers of the Interstate Commerce Commission, for the purpose of securing railroad rates that should be just and equitable to every industry in every locality of the United States; and

"Whereas, Time has demonstrated that the present customs tariff of the United States is not just and equitable in its general application; therefore, be it

"Resolved, That the general court of Massachusetts, while recognizing protection as the established policy of this country, believes that Congress should take immediate action in behalf of equitable tariff rates, similar to that taken in 1890 in behalf of equitable railroad rates; and to this end it further suggests the expediency of creating a permanent Tariff Commission, to be appointed by the President, whose duty it shall be to investigate conditions and recommend legislation.

"Resolved, That copies of these resolutions be sent by the Secretary of the Commonwealth to the presiding officers of both branches of Congress and also to the Senators and Representatives in Congress from this Commonwealth."

THE MORALS OF "SALOME"

NEW YORK, January 26, 1907.

To the Editor of *Harper's Weekly*:

Sir,—The review published in the January 26 issue of *HARPER'S WEEKLY* of the notorious Wilde-Strauss opera, "Salome," your issue critic, Mr. Gilman, observes at the beginning of his discussion—which he avowedly devotes exclusively to a consideration of the opera's aesthetic qualities—that "the character of the subject matter which Strauss has chosen for exploitation in his music drama . . . is a matter for quite separate discussion." Now that Mr. Gilman has given us so complete a summary of impressions concerning the artistic merits of this much-discussed work, does not the *WEEKLY* owe it to its readers to take up the matter of its morals? To my mind, nothing more deleterious than this music drama, and more insidiously so, has ever been seen on a public stage in New York. Those who confuse the issue in this case by making it seem that the work is objectionable on the score of its exploitation of a Biblical character—John the Baptist (who is presented both by the dramatist and the composer with striking dignity and reverence)—seem to me to be worse than disingenuous. Nor do I share the views of some of the critics of the matter. The issue is perfectly clear; it is, to my mind, simply this: Is it permissible or excusable, from any point of view, to present upon a public stage a spectacle whose path and climax is the delineation of perverted sexual passion—let alone the fact that this delineation is accomplished in a manner gross, vulgar, and horrifying beyond all precedent? To attempt to justify such a thing by indignant talk of "art for art's sake" is a contemptible begging of the question. An important member of the artistic staff of the Metropolitan Opera House has been quoted as saying that he does not understand what "all this fuss" is about, since "everything in the play is historical—upon our read it all is in the Bible." I would suggest to this distinguished commentator that he turn to his Bible (Matthew xiv: 1-11, and Mark vi: 17-28), and learn, I hope to his deep regret, in what degree he has been imputing the immorality of the late Oscar Wilde to the authors of the New Testament. Of course, he everywhere except this distinguished gentleman is aware, these features of "Salome" to which objection is made—the adoration and caressing of the severed head of the Baptist by the daughter of Herodias—are altogether a modern invention, and have no prototype whatever either in the Bible or in profane history.

I am, sir,

ROBERT ANDREWSON MOTLEY.

[Our correspondent will find upon page 206 of this issue of the *WEEKLY* some discussion of the ethics of "Salome."—EDITOR.]

A METROPOLIS IN MINIATURE

By WILLIAM A. JOHNSTON

DRAWINGS BY E. V. NADBERY

STRANGER, would you, at a single glance, see something of a great city's life? Would you, within one hour, learn something of its joys, its sorrows, its work, its play, its worship, its revelry? Come away from the busy district of skyscrapers; come away from the lights and allurement of Broadway. The metropolis is ever on dress parade there. The perspective is distorted. You look upon the metropolis they would wish to be looked upon. You have but entered the dressing-room and guest-chamber. Of the whole house, from within and without, you have had at the best a grossly truthful view.

Would you tear away the mask and behold the real? Come, let me lead you to a single street, hardly more than two miles in length, which in itself is a metropolis in miniature, which in its two miles vividly portrays all phases of a great city's life. Here you will find the fretting slaves of poverty, the fretful slaves of wealth. Here you may look upon the squalor of the tenements and the magnificence of palaces. Here you may see joy in tatters and pleasure in fine attire. In this one street, within one hour—behold the Metropolis!

This street—Fifty-fifth, if you will have its name—running from river to river through Manhattan Island, divides it roughly into the district of business and the district of homes. Half the residents of old New York cross this street twice a day on one of the great railways that transect it. Not one in ten thousand of them has ever traversed it from end to end. The reason for this is the reason for many things in metropolitan life and logic—there is money to be gained by crossing this street; by walking in it, only knowledge.

The street begins with a dock and pier which run well out into the broad Hudson. Near by is the huge railway power-house, and almost shoulder to shoulder to this is a line of unmapy tenements.

A group of huge, hideous tanks rises high in air, a part of that great system of lighting, the monthly bills for which keep half a million and home-owners from sleeping. It is one of the city's "gas-house districts," which periodically rise to prominence, and, if the truth were always told in certificates of candidates' election expenses, aimed to affront during heated political campaigns.

Numerous groups of children playing in the street tell all too plainly the poverty of the neighborhood. The smaller the flats, the larger the families, is a well-recognized rule in the process by which nearly two million human beings have been packed into the twenty square miles of Manhattan Island. But think not that because this neighborhood is poor it has not its pleasures. You pass a group of young men and boys. You hear the clink of coin upon the pavement. It is the fascinating game of crap—in the tenements what poker and bridge are to the club and the mansion. The blue coat of a policeman appears around the corner,

The players scatter. The crowd surges up a convenient alleyway. A good-natured young Irishman, who, were it not for his lousy buttons, as likely as not would have been in the game himself, comes striding along with the conscious smile that comes from the knowledge of duty well performed.

If it be a pleasant afternoon, from every window of the tenements will be seen leaning the matrons of the families. You country-bred person who bewail the lack of sociability in cities, you have not looked in the right place. You will find it there. Where there are children, or where there is poverty, acquaintances form quickly. In the more luxurious apartment-houses you might live a year and not know the name of the family in the next apartment. In a tenement such exclusiveness is not possible. The tenement habit of window-watching is conducive to sociability. It is rarely a week will pass before the new head in the window is bidden by the heads on either side to come in to share "the pint of beer of a pay-night" that constitutes the recognized social function of the tenements. Sometimes this pint of beer, too often repeated, develops "the mixed-aloe row." Mrs. McCarthy goes to the hospital, Mrs. O'Flaherty to "the island." When both return to their domesticities there is begun one of those feuds that furnish never-ending amusement to such neighbors as do not become involved in them.

In the midst of this bright region a public school looms up. It is, of course, in the middle of the block. That is the way the metropolis educates her children—a school in the middle of the block and a saloon at each corner. There are some blocks where the schools are omitted.

Just beyond the school the scene changes. On one side of the street the tenements give way to more pretentious flats. On the other side the whole block is taken up by a hospital. The side looks givenly enough—bety, unadorned, built, walls, with their rows and rows of windows; but if you peep within you will find in the fresh wholesome air inviting dozens of sunny beds, white-capped, gentle-voiced nurses, bustling skillful surgeons. Here is every appliance that modern science has devised for saving life and for setting bones, for carving brains, for making life less painful and death less dreadful.

An arched gateway opens into the street. It is the ambulance gate. Fifty times a day a swift, rubber-tired vehicle dashes forth on some errand of mercy. A young doctor, leaning out of his car, here in one year than he will ever learn in any ten afterward, has tumbled in on the rear seat just as it started. Never fear but that he will make a careful, even if hasty, diagnosis of the case. Never fear but that he will use every effort to prevent his patient dying on his hands. If the ambulance comes in with a corpse it means that the doctor will have to stand a supper for his mates. Even death becomes a fest here where there are deaths each day.

The rambling of a train overhead, a confusion of gongs, break in on the grim silence of the hospital block. It is one of the shows by which metropolitans, on each morning shut down to work, to be shunted back by the same method in the evening, overhead a train passes each minute, or oftener. Surface cars go flying along a few seconds apart. In the rush hours of morning and evening there is apparently not an inch of available space left on any of them.

As you cross the street, dodging past these flying cars, look for a second at the mass on the front car platform. It is a strenuous life he leads for twelve or fourteen hours each day. You, safe inside the car, would the storm be here for many chilling hours. You, when the cars are blocked, fret at the inconvenience, while he, calm and cool, is losing part of his meagre wage, for he is paid by the number of trips he makes. You, dodging past his car, curse him for his carelessness, though to him you are but one of the thousand feet he has passed on his way down town who will persist in rushing across his path. You, waiting for a car, revile him when he does not stop, but all

A group of huge, hideous tanks rises high in the air

Drawn by E. V. Raftery

The perilous game of crap—to the tenements what poker and bridge are to the club

he knows is that he has been delayed two minutes by a fat woman getting off, two minutes more by a stubborn driver on the track, and that if he does not make up the time he will retard the cars behind him, to say nothing of being "decked" himself.

Perhaps in his haste he may run down some merry child at play, heedless of the approaching danger. Good knows he did not mean to. He has a little one himself. He jams the brake. He strains every muscle. The car stops with a jolt that piles the passengers on the floor. Sometimes it is too late. Then the ambulance comes clanging down the street. An angry crowd surrounds this hard-working servant of the public. A policeman leads him away to a cell. But worst of all is the thought that burns within him that he, a father, has killed a helpless child.

The street cure crowded, a row of boarding-houses makes its appearance. In whatever part of the metropolis you may find them, boarding-houses are always the same, whether a smart boy in buttons or a frizzy maid with sleeves rolled up answers the door. Every boarding-house has its past and its present, but there is seldom any future, unless it be the "corned beef" you look forward to with dread as each Saturday night approaches.

It is generally the landlady who has the past. If it has been glorious, if her father was wealthy and died poor, if her husband lost his money speculating, if her voice failed her and she had to give up a promising stage career, she tells it to you herself the day you engage your rooms. If her past be of a blacker type, the divorce court, perhaps, the old-maid boarder in whom she once confided will whisper it to you in the parlor after dinner, the first week of your sojourn there.

The present is generally the star boarder. Every first-class boarding-house has one. Each day he or she takes the centre of the stage when present, and when absent furnishes the chief topic of conversation. Then there are the others—the young young married couple, the girl artist who occupies the front hall-room, the husband who occasionally takes a drop too much—was ever a boarding-house without them? See them for yourself all gathered on a stoop on a summer evening after dinner.

Adjoining the boarding-houses are a few of the better-class flats. This system of storing many families in shere has aided greatly in the development of the metropolis; but, unfortunately, families, like most other things thus packed away, become shell-worms. Most of these families, it is true, are taken down from their shelves and dusted during the summer-time, when they journey to a Sullivan County farm or some Connecticut village, but when they return in the fall you can still recognize them as shell-worms. The flat-dweller knows this. He tries to hide it. He moves frequently. At least once a year he installs his larvae in some new shrine. There never was an old flat but had its faults, nor a new one but had its advantages.

Another street crowded with its flying electric cars. Here there is double danger to pedestrians. For tea level tells this broad avenue is paved with asphalt, making it the rendezvous for all manner of vehicles—automobiles, bicycles, road-wagons, and what not.

Stop at the corner and look around you. Rising up from an ex-

pensive plain in a mass of trolley tracks is the tall shaft of the Columbus Monument—a mute witness that many thousands of the Discoverer's countrymen have become metropolitans. Just beyond is the Brevoort's Gate to Central Park, where, had you the time to wander through its thirty miles of walks, you would find two great arcades, a variety of statues, the "men" shade-surrounded lakes, magnificent flower-gardens and foliage, tennis-courts, a football green, a music stand, a hundred ways of passing many pleasant hours in recreation.

But Fifty-eighth Street itself has now become a region of stables. Few metropolitans can afford to have their stables near their homes. When land becomes so costly that it is doled out by the inch, horses are relegated to the side streets. Like their masters, they get into the boarding habit. The lawyer in his office by day, his club by night, stables his horse here, close to the Park entrance. Perhaps he came up here for a morning hour in the Park to give him strength for his day's work. Perhaps he comes with the setting sun for a gallop along the shaded bridle-paths to soothe his weary brain.

Here, too, are private stables, magnificent structures of gliding white stone, where \$10,000 equine treasures are watched and tended with far greater care than half the children of the metropolis receive. Why not? You can buy all the babies you want for five or ten dollars apiece. The foaling styemens will give you one for nothing. But it takes a hundred or two to buy any kind of a horse, and it is the cost that counts with metropolitans. Even the trainers here in these stables get more than the average parson's salary.

A short stone's-throw away the aspect of the street once more changes. The very atmosphere is different. To the south rises the hub of a circle of culture and art. Carnegie Hall with its studios, its meeting-rooms, and its great auditorium.

Here is to be had a glimpse of the metropolis as a centre of culture, of study, of thought. Here the harmonies of the great masters are rendered, now by some world-famous pianist, now by a mighty chorus of a thousand voices. Here the amateur timbly seeking her way to the heart of the public weeps tears of joy or sorrow as she succeeds or fails. Here the great prima donna sings, and the hundred carriages lined up against the curb tell the character of her auditors. Here women's clubs assemble, here lecturers hold forth. Even on a Sunday there is much to be heard here. Is the metropolis stirred to a religious ecstasy? It comes here to be thrilled by the words of some soul-stirring evangelist. Is the metropolis aroused to shame by the openness with which sin stalks its streets? It gathers here in mass-meeting to protest. Would you hear the gospel preached? There are smaller chambers where at different hours you may make your choice. Would you call your loved ones from the land of ghosts? At times you may find her meditative ready to translate their messages.

But all these are but the transient tenants of this great structure. There are others, who week in and week out make this metropolis of an iron-master's assistants, their long—embryo opera-singers, struggling to live by teaching their art until such

a time as the fame their talents deserve brings its own reward. It is an art neighborhood, and there are artists by the score, located conventionally near to some of the most famous studios and schools the country boasts of. Like all artists, these folk are merry, optimistic, improvident, extravagant, but it is a jolly life they lead, even though that sketching-lag you noticed may hide piteous frankfurters surreptitiously doing duty in place of a more substantial meal, where good service and fine linen must needs be paid for.

Along the street the family-shelving process still continues, but there are no longer any flats. These are high-class apartment-houses, with aristocratic names for the tenants to have engraved upon their visiting-cards. They are furnished luxuriously. For all the wants of metropolitan ample provision is made. There are hallways in livery, telephones on every floor, elevators for you and your servants, automobile-rooms, electric lights, electric bells for everything—but you must pay for it all. With his whole year's salary the judge in a county-seat might possibly pay three months' rent here. There are butlers here who get more than the village school-master.

This is the paradise of flat-life—the one paradise to which the doctrine of infant damnation still rigidly applies. Poor babies—in the tenements nobody wants them; the food is scant enough now. In the mansions, there is no room for them; society's demands come first. In apartments, the janitor does not allow them. Well might the stork leave the metropolis off its visiting-list.

Fifth Avenue is not far away. The apartment-houses are succeeded by private homes. It is the region of society—the section where a couple of pieces of pasteboard constitute a social call, where a reception takes place in one house while a funeral is going on next door, where young women whose homes adjoin one year after year in the street. In the shops, in the church, without speaking to each other, because they do not belong to the same social set.

In this block a visitor to the city once sought the house of a friend. At the number where he supposed his friend resided he found the house boarded-up. Thinking to inquire next door, he mounted the stoop just as the mistress of the house emerged on a shopping expedition.

"I beg pardon," he said, "but can you tell me if Mr. Riddle lives next door?"

"I really could not say," she responded, in some surprise.

"Ah, presumably you are a new-comer in the neighborhood?"

"Not at all," replied this Christian matron without a blush; "we have lived here four or five years, and the family next door has been there about eight years, but I do not recall that I ever heard the name."

Smart equipages with liveried coachmen and groomed fill the street. If it be four o'clock, the fashionable hour in the Park, they turn at the corner and go whirling past the glowing statuo to General Sherman and up the broad entrance to the East Drive, through the Scholastic Gate, to become part of that continuous spectacle that every pleasant afternoon draws thousands to the Park.

Fifth Avenue, that panoramic view of the society life in the metropolis, now stretches north and south. It is society's residence, fashion's parade-ground, wealth's social battle-ground. At this one corner are massed some billions of the world's wealth. That mansion on the corner, shut in by a prison fence of iron, is one of the magnificent homes of the family of a dead railway king. Yonder hotel across the way shelters a score of millionaires. In that seventeen-story habitation, a block above,

none but the rich can afford to live. Just beyond there is a club where so many financial giants have been wont to congregate that it has become best known as the "Millionaires' Club." In that great mansion across the avenue is the home a money prince of the Pacific built, but never cared to occupy.

Were it earlier in the day, you might see the little folk of fashion, the babies with their nurses, the older ones with their governesses, perhaps driving past in their pony-car, perhaps strolling sedately along the avenue or in the Park. Poor infants, the homage of wealth is already upon them. Dancing-school and French classes claim them at the age when the happy country wren is beginning to steal cherries and climb tall trees for bird-nests. What though they have the costliest toys and the finest clothes that money can procure? The happiness of freedom seems never theirs. What do they know of the joy of being clad in blue jeans? How can they realize the pleasure of making mud pies?

Happiness is not a metropolitan attribute at any rate, and least of all do you find it here. Look at the faces of the people passing in their carriages. Is there a happy one among them? Proud, ambitious, gay, self-satisfied, careworn, worry-marked, you may find them, but nowhere do you see a face at peace with all the world. The metropolitan struggle for supremacy is ever too hard to make life happy.

On the borders of this land of wealth is a ghetto of the well-to-do, an almost wealthy Hebrew neighborhood. Fortune made in Baxter Street have been taken up their habitations. Here the saved and the emulated of their poorer cousins, dwell a community not of society, but a society of itself. Though wealth and culture have gradually worn away many of the habits to which the Hebrew clung so steadfastly through all his world-wide wanderings, though the young folk may go on Sundays to some grand temple in the avenue, you still may see on a Saturday morning the gray-bearded father of the family stealing off to some more humble synagogue, where, with head devoutly covered and with praying-shawl about his shoulders, he will conscientiously perform the rite of his religion as it was taught to him in some far-distant land in bygone days.

Are you weary with looking at people? Look to the south. Standing directly over a dozen busy tracks of a railway line, you can see the great bulk of the railway station in the heart of the metropolis. If you are here at the right moment you may see the wonderful "never late" train, the Empire State Express, the fastest in the country, the second fastest in the world, start on its daily dash up through the State.

A step further on and, were it not for the sumptuously American architecture, you might imagine yourself transported into some city of the German Empire. You are in the midst of a German colony. On either hand are the palatial houses of two great singing societies. Here and there is a beer-hall where cooling brews and appetizing delicacies of the fatherland are to be had at the hands of "kellners" as Germans as you would wish to find. Street signs point out the meeting-place of a housewives' society, where thirty matrons meet to talk about their servants' shortcomings, and subjects of that ilk. Charvante and astrologers, too, proclaim their calling; for was ever a Hunsawer who did not believe that the stars could prophesy and the cards foretell events to come?

Turn to the right—you find yourself inside a spacious theatre. Turn to the left, and you are in one of those great department stores where metropolitans have learned to buy their mislins and their pet dogs, to rest pious and get fresh fish, to purchase diamonds

To the south rises the hub of a circle of culture and art, Carnegie Hall, with its studios, its meeting-rooms, and its great auditorium

and procure clothes-plas, and to leave their teeth pulled, to bank their money, and to get their pictures taken.

As Fifth Avenue marks the city's centre geographically, so too is Third Avenue a great boundary-line upon the map of the metropolis. A continuation of the notorious Bowery. It cuts off into a section by itself the great picturesque East Side, into which, between Harlem River and the Brooklyn Bridge, are wedged a score or more of foreign colonies, each almost a city in itself.

For a block or two just beyond this boundary-line each dingy house leans upon its portals a white, or once white, slip of paper. You who have ever looked about for "furnished rooms" know but too well the meaning of these signs. What lies they tell! "Large light room," "comfortable hall-room," "cozy front parlor"—you have seen them all. You have tried them all. Was ever a hall-room "comfortable" or a front parlor "cozy"?

Hardly one of these white-tokensed houses but has its living tragedy. Here dwells the younger son of a titled German family, sent with his five thousand marks in the great United States to earn a livelihood, and perhaps build up a fortune. His money quickly gone, it is a precarious existence he now leads, starving himself for weeks while he awaits the coming of that small quarterly remittance that is all he can depend upon. Here, too, no was and sickly that you would hardly recognize him, is the village youth who only a year or two ago came so enthusiastically to the metropolis to realize his dreams of wealth and fame. Those dreams have vanished now. All too bitterly he feels that he, with his life but begun, has made his life a failure. But stubborn pride will not permit him to return from whence he came. Stiffing the gnawing pangs of hunger, he writes a cheerful let-

Drawn by E. V. Sullivan

The scene is almost that of a foreign land. The men you meet are warthy, black-haired creatures, the dark-eyed women waistless

street. Again the scene is almost that of a foreign land. The men you meet are warthy, black-haired creatures, the tuxon, dark-eyed women waistless; the children playing upon the pavement call out to each other "Dips," and a dozen other names our Pilgrims fathers knew not.

Suddenly the street comes to an end. Before you lies the East River, and to your left the slowly progressing span of the great bridge, one of whose feet rests upon Blackwell's Island. Before you, across the swirling currents of the ever-troubled river is the Island itself, that dismal place of punishment where thousands suffer for a city's sins.

EBB-TIDE

By NATHAN HASKELL DOLE

HAVE you ever gone a-sailing all a lurching Summer's day, While the gulls are circling round you—white and brown and buff and gray, And the courteous-hoarding partridge, off a gun-shot, plunges his way, And the coy and modest Zephyr in the rigging sings her lay, And you watch the clouds like lambskins in their aure pastured play?

How delightful, how inspiring, how exhilarating—gay When your keel slips thro' the willows and the bright yachts dot the Bay!

But returning hungry, sobered, weary, eager for the distant dock, Suddenly you feel the salt-lust pause with short subversive shock And in nightingale crankiness begin to roll and rock, And at all your anxious efforts like a bronze seem to mock, While the saucy squawking seafowl toward their island night-rests look,

Crying:—Hawhaath! Lower mother, it is after seven o'clock! And you find to your ventouse, as you pry and push and shout, That your keel is on the bottom and the tide is going out!

So it is with Life, good Comrades:—If your sailboat or your ship (Courtship or his consort Marriage!) you with ample means equip And you give it coarse untrammelled, you will have a merry trip! Overboard the clouds will gambol, round you graceful gulls will dip And your keels thro' sunny waters unconsciously will slip; Or—to speak without a figure—let me give it as a tip—If your salary or income is enough to pay your bills You will spend your lives in comfort undisturbed by petty ills.

But if every week your outgo more than swallows what you earn, If you cannot seize the bargains meeting you at every turn— All the wondrous cuts in prices which so make the home-life burn—

Cannot pay the cook or landlady or the greener hand and stern, Cannot clothe your wife and children in the garb for which they yearn,

Then you're like to come to shipwreck, as from all the books we learn—

For the shrewdest Luck Life's seven offers is—beyond a doubt— When our keel is on the bottom and the tide is running out!

MARK TWAIN AND THE CAT

By HERMAN SPENCER

KLING has a story of a strange revenge that was wrought upon an Italian household by one Diana Du, a Hindu of supernatural powers. His vague but expressive expression in a violation of the law. Like the rats and mice in the legend of the Pied Piper of Hamelin, cats were everywhere. They were young cats, unpleasantly young, but otherwise not especially objectionable save for the fact that they were there—unexpectedly and unaccountably there. There were cats in the bathroom, cats on the library mantle, cats in the dining-room, cats on the bed, cats under the chair cushions, cats in the victim's boots, cats in his under pockets, cats in his saddle-roll, cats sitting on his chest when he awoke in the morning—everywhere, cats. It had a fiendish back. They were too young to have gotten there of themselves, and much too numerous to have gotten there by ordinary generation. There was no rational accounting for them: they were a "swelling"—the swelling of Dam Du.

Mark Twain is the Diana Du of contemporary literature. He has sworn to cats. There are cats in his essays, rats in his novels, cats in his short stories, cats in his books of travel, cats in his philological studies, cats in his doctrinal discourses, cats in his Autobiography. Cats, cats, cats, cats, cats, cats, cats. It is, therefore, obviously impracticable to present here a complete cat-ontology from his works, or even a cat-concordance to them, but it may be said in general that the cat appears very early in his writings, and despite the unusual cruelty of his treatment of it, has survived until the present day. It has even bred. It disappears constantly, but it always comes back, frequently with kittens. It always comes back, no matter what he does to it. He killed it the first time it appeared, and though he has often killed it since in various ignominious ways, there was a deliberate cruelty in the manner in which he did this one to death that would have discouraged and estranged any other animal. It would have alienated the affections of the ordinary home-loving cat, even, but this cat, Mark's cat, seems proof against all manner of death. It is imperishable, indestructible, and forever encouraged and undiscouraged. Though he brayed it in a mortar, yet would it return.

Cat Number one in the Mark Twain canon, or better, perhaps, the Cat in its first avatar, perished in this wise. Mr. Clemens was involved, some thirty years, in a controversy with an Englishman over an international copyright law. He was made ill, he said, by one of the Englishman's arguments, but this did not deter him from reading it to the cat. "And you never saw a rat take on so." Later, he referred again to the cat, but withdrew his allusion hastily: "The cat—but never mind the cat. The rat is dead." So ended the first cat.

But not permanently. As has already been said, it is out of the question to compile a catalogue of his literary reappearance, and a few taken at random will have to suffice. One was in the following *Epitaph*, when, somewhere in the Orient, Mr. Clemens remarked the absence of the cat from a fuma otherwise satisfactory, "and yet," he meditatively observed, "a cat would have liked that place." Another was in his story of the appetite-cure, where he described his room at the infirmary as too small to "swing a cat in," without detriment to the cat. Another was in his story of one of his earlier experiences with "the absent treatment," when, though in great pain, for he had broken all the bones he could remember the names of, he gratefully noted the presence of the cat among the other "decorations of a German doctor's den. Then it disappeared again for a while, and fear was entertained by those who had become interested in it, and had learned to watch for its return, that it was, or nearly and nine, fifteen had been numbered, but that fear was happily proved to be unfounded.

It has been observed by specialists in the diseases of the nervous system that, among people, other than normals, whose sensory perceptions in the matter of cats are abnormally acute, so that, whether by the sense of smell or some other as yet unexplained sense the doctors confess they cannot say, they can detect the presence of a cat even at a distance of several yards and with closed doors between. Some such occult intuition came to the writer of this article when, in perusing Mr. Clemens's enthusiastic appreciation of Christian Science, he started in on that Rababian lid of things which, Mr. Clemens says, the average person, though dispossessed by ignorance from expressing an opinion on theological subjects, may yet be reasonably expected to know something about. And the instinct proved true. The passage follows—part of it:

"In every church assembly of five hundred persons there will be four hundred and seventy-five men and women present who can draw upon their training and deliver incoherent but judiciously concerning cheese, and leather, and rattle, and hardware, and soap, and tar, and candles, and patent medicines, and dreams, and apparitions, and garden truck, and cats, and baby food, and warts, and lemons, and time tables, and freight rates, and summer resorts, and whiskey, and law, and dentistry, and surgery, and"—there are nineteen more subjects in the list—no one in among the five hundred will be competent to take hold of a complex abstraction of any kind and make head or tail of it." Mr. Clemens, it

may be remarked in passing, regards Christian Science as a complex abstraction.

But to return to the cat. After this rather furtive and stealthy visit to its old haunts, the cat seemed to be encouraged by the fact that no hostile demonstrations had been made against it, and began to return more frequently and stay longer when it came. The next occasion was when, in his study of the Italian verb, Mr. Clemens found that the dog was an unsatisfactory object to conjugate a verb with, "saw that the dog was a mistake, and not fashionable; we must try something else; something, if possible, that could evoke interest, sentiment, feeling."

"What is cat, in Italian?"

"Gatto."

"Is it gentleman cat, or a lady?"

"Gentleman cat."

"How are these people as regards that animal?"

But then it was found that the cat has not in Italy those affecting associations which the word brings to an American, and could not, therefore, be utilized for the purpose proposed.

The next visit of the cat, however, proved that its new-found confidence had been misplaced. An absent-minded woman was being described. She "put the cat in the wash, and fed milk to the soiled hairs."

This treatment, one would think, would make it stay away awhile again, but the case is contrary to expectation. In his article on Mr. Howells, we see the long-suffering "home cat" bursting into tears. Just why, we do not know, but we are sure, from that last happening, that a sufficient cause is not far to seek. The wonder is, not that a house cat should ever burst into tears, but that she had restrained herself for so long.

If anything were needed to elicit this conviction, it is supplied by a confession, dictated, we should like to think, by feelings of remorse, which appears in a recent instalment of the Autobiography:

"It was not right to give the cat the 'Pain-Killer.' I realize it now. I would not repeat it in these days. But in those Tom Sawyer days, it was a great and sincere satisfaction to see Peter perform under its influence—and if actions do speak as loud as words, his conduct must interest in it as I did. It was a most detestable medicine. Perry Davis's Pain-Killer. Mr. Perry's negro man, who was a person of good judgment and considerable curiosity, wanted to sample it, and I let him. It was his opinion that it was made of hell-fire."

If Mark Twain ever takes out a coat of arms, there should be on it these two devices: a cat, sabb, rampant, and a bottle of Perry Davis's Pain-Killer, empty.

But we have brought this history, imperfect and fragmentary as it is, down to the present day. There remains but one more incident to record, in one of that series of Mark Twain photographs which has recently been published in Hazen's *Wax*, there may be seen a young and sprightly kitten. In that, we wonder, the Cat? If so, then it must be that out of all these killings, and drownings, and dopings, it has come forth with miraculously restored youth, like that wrinkle and decrepit old man in the story of *Ma*, which went into the wife's cabinet in discovered fragments, and came out again, as a little lamb that gambled about with blithesome blattings, heartening the suspicious and reluctant Iolias to be likewise carved and stewed and so rejuvenated.

But if not—if this is another and as yet an unskilled cat, and if all these were different cats then there comes another train of reflection. We look back over this record, and muse upon what we have seen, and we think that if all the cats that have lived—and died—in the pages of Mark Twain could be brought together, one, in one place, and if Mark could stand there, there would come such a yowling, and spitting, and sneezing, and catenawling generally as never was on sea or land. Not since Noah's time, at all events. Not since Noah looked out

Upon the emergent slopes of Ararat, crying open the doors of the ark and shouting, "Get in!" turned loose that priceless collection, ululant, to be dispersed to the four corners of the earth. Would that Mark could have been there! He "would have liked that place!" But no, that is withdrawal, with apologies. If he had been there, he would not now be here, as may be far many good years in come!

For it is when we are reading of the foibles of the Frog, the Frog, and not that batrachian chorus that dined the ears of the Sygrian voyagers with their eternal *koar, koar*, and of the bewildered Blue Jay, and of the unaccountable Cat, that we feel that we are in the high places of the literature of humor, and we yield us to the will of the master of laughter. And this is not that laughter that is likened to the crackling of thorns under a pot, but the laughably laughable of the gods. For it must have been remarked that his rat is a Cleverine, not a Shalloe, nor a Persian, nor any other of all the obscure tribes that revisit the glimpses of the moon, for, though it appear and disappear, as before the eyes of the astonished Alice, one thing stays with us—the grin remains!

THE INDIAN SENATOR FROM KANSAS

By FRANK N. BAUSKETT

Charles Curtis

THE INDIAN SENATOR WHO WILL REPRESENT KANSAS

CHARLES CURTIS, of the First Congressional District, Shawnee County, Kansas, received the nomination of the Republican caucus on the night of January 11 for the United States Senatorship against his five opponents, and has since been elected.

Senator-elect Curtis's mother was a full-blooded Kaw Indian, and he will have the distinction of being the first man of Indian blood to claim a seat in the Senate. To-day 117 of his tribe live in Indian Territory, a few miles below Arkansas City. Every September, during their tribal festivities, Mr. Curtis pays a visit to them and is greeted with much ceremony and great rejoicing. Feasting and dancing are indulged in. His tribe is proud of him, and he is always admitted to the council-chamber and his voice heard with great respect by the older members, whose esteem and affection have advanced many marks.

The new Senator is a selfmade man, having begun his life in Shawnee County, Kansas, where North Topeka now stands. He earned his first money in the days of the Old Kansas City Interstate Fair Association, when embroidered table-covers, patchkins and spider-web tidies divided interest with the \$10,000 in cash prizes in the speed ring.

One afternoon, when all the buildings on the fair-grounds had been devoted for the race-course, there was mounted on a horse known as Crazy a little fellow with cool black eyes and the high cheekbones of an Indian. Crazy had the reputation of bolting after a certain portion of the race had been run, and his new rider was unaware of the fact.

At the crack of the gun off they went in a bunch, Crazy and his rider gaining almost three lengths at the very start. This position was held up to within a few hundred yards of the home goal. The crowd was shouting itself to a frenzy, when suddenly Crazy bolted, landing his boy rider in a heap against the board fence enclosing the race-course. The little fellow was picked up unconscious, hemorrhaged with blood and dust, and carried off the course. This little fellow was Charley Curtis, and to-day he bears the scar of that fateful race.

As he grew up he took to selling peanuts, and later on drove a cab. Most of his schooling he got himself by studying at home at such odd moments as he could find. Finally he gave up his sub-driving for a position as office-boy in the office of a Topeka lawyer. This was the initial step of his future career, for it was there he studied law and was taken into partnership by his employer. After three years of the practice of law in Topeka he was elected county attorney, but after two terms in that office he ran for Congress, to which body he has been elected eight consecutive times. In the House of Representatives he has been the most conspicuous figure as the Committee of Indian Affairs, a position which, by his brightlight, would seem to belong to him, and his service in behalf of the remaining few of his race has been indefatigable. His bill, known as the Curtis Act, for the allotment in severalty of the lands and monies of the Five Civilized Tribes, wound up the communal affairs of 57,500 Indians. As a member of the Kaw tribe he obtained allotments for himself and children aggregating between 2000 and 4000 acres of land in Oklahoma.

That a United States Senator is a man of might and power in this republic was never more forcibly illustrated than in the manner in which all the Republican factional leaders in Kansas get in line to rally to the support of the honorable Charles Curtis, something hitherto unknown in Kansas. Thus Mr. Curtis will begin his Senatorial career under unusually auspicious circumstances in his State. Heretofore a Senator from that warring State of factions has had to devote nearly all of his time to settling quarrels at home, and in his efforts he has generally had the misfortune to stir up fresh troubles and multiply the factions. Wherefore the Senator-elect from Kansas will not only have the unique distinction of being the first of his race to wear a Senatorial toga, but also that of being the first Senator from his State who enters upon the duties of his high office with the support of all the party factions at home.

The honorable Charles Curtis is forty-seven years of age. He is a sturdy, well-built man, his Indian blood showing in the straightness of his figure as well as in his black eyes and swarthy complexion. "He is possessed of an excellent voice and is a ready speaker."

SUGGESTION FOR THE EMBELLISHMENT OF THE NEW PALACE OF PEACE

War

Peace

BY LEONID ANDREWEFF

ILLUSTRATED BY G. W. PETERS

A STORY IN FOUR PARTS—PART I

FIFTEEN days had passed since that memorable occurrence, and yet it filled his mind—as though Time itself had lost its ascendancy over thought and things, or else had stopped like a broken clock. Whatever he might turn his fancy, in whatever strange and distant channels, still his haunted thoughts returned to that same incident and ran helpless against it, as upon a great silent prison wall in a blind alley. And what strange paths those fancies took! He thought, for instance, of an Italian trip of long ago—a journey full of sunshine, youth, and song. He pictured one of those Italian beggars, and directly rose before his vision the mesh of workmen, the valley of misquetry, the swirl of powder, and the blood! Or perhaps a perfume rose to his brain, and at once he remembered his handkerchief—that had been perfumed too—and with that he had signalled for the first!

At first the sequence of his thought had been logical—quite comprehensible; and though barrenness, had caused him no uneasiness. But soon everything reminded him in that occasion, abruptly and with most painful intimacy, like a blow from around the corner. Here, thoughts, and suddenly, it seems to hear general laughter on all sides, and sees with hideous clearness the face of one of the dead—although at the time he had not really thought of laughing; nor had the others laughed! . . . Or else he hears the swallows twittering in the twilight; or sees a chair—just a common oak chair; or reaches for the everything—everything in his mind one and the same hellish scene—the white waving handkerchief, the slats, the blood! As though he lived in a room with a thousand doors, and whichever one he tried to open, the same fixed picture met his gaze: the signal—the smoke—the blood!

The affair was simple enough of itself—though sad, of course. The workmen in a munition factory, after a three weeks' strike, had gathered, some thousand strong, together with their women and children, their old and disabled, and had appeared before him with demands which he as Governor could not grant. And they had carried themselves impudently and defiantly; had screamed; insulted the officials; and one woman, who seemed quite beside herself, had plucked at his sleeve till the seam gave way. Then when his staff had led him back on to the balcony (he still only wanted to speak with them and pacify them) the workmen had begun to throw stones, had broken a number of windows, and wounded the Chief of Police. Then his rage got the better of him and he gave the signal with his handkerchief!

The people were so turbulent that they had to be shot at a second time; and so there were many dead—forty-seven, according to the report—among them nine women and three children, singularly enough all girls! . . . The number of the wounded was even greater.

Drawn by a strange, unconquerable passion of curiosity, and against the advice of his people, he had gone to see the dead where they were laid out in the engine-house shed of the Police Station No. 3. Naturally there was no urgent reason for his going, but he felt that in some unaccountable way they would be the better for it if he saw in them himself, as some one who has shot nervously and at random feels moved to find where the bullet had lodged and to handle it.

It was dark and cool in the long engine-house and the bodies lay under a strip of gray canvas, in two precise rows, like a strange display of curious wares. They had probably been arranged for the Governor's visit and were laid in careful order, shoulder to shoulder, with faces up. The canvas covered only their heads and the upper part of their bodies; the legs were exposed as though to facilitate their counting—these stiff, immovable legs, some in old worn boots, some with tattered little shoes, and others bare and dirty; the sunken skin showing strangely enough through the grime. The women and children were laid by themselves; and here, too, one felt there had been an attempt to simplify the count.

And it was still, far too still for such a throng of people; and the living who entered were unable to dispel the silence. From

behind a wooden partition came the sound of a groan at work. He evidently thought himself alone—but for the dead—and talked to his horses with careless joviality. "When there, you devil! Stand still while I carry you!"

The Governor glanced at the rows of legs that lost themselves in the gloom, and said in his smothered bass, almost a whisper, "How many are there?"

The Assistant Police Commissioner, a young beardless fellow with a plump face, stepped up from behind and, snatching, answered in a loud voice, "Thirty-five men, nine women, and three children, your Excellency!"

The Governor frowned involuntarily, and the Assistant Police Commissioner bowed himself into the background. He would gladly have called the Governor's attention to the neat lane between the corpses that had been carefully strewn with sand, but the Governor had no eyes for this, though he was staring fixedly at the floor.

"Three children?"

"Three, your Excellency. Would your Excellency wish the canvas removed?" The Governor was silent.

"There are all sorts of persons here, your Excellency," continued the Commissioner, deferentially but briskly, while he took the Governor's silence for consent, and commanded in hoarse whispers; "I beg! Quick, ladieshank, take the other end—here, pull away now!"

With a soft, sliding rustle the dingy canvas came away and one after the other the white spots of faces dawned into view—heard and old, young and smooth—all different, but united in the common likeness of death. One hardly saw the wounds and the blood—they were mostly hidden under their clothes; only in one face the eyes appeared unnaturally dark and sunken, shedding strange black tears that looked in the dusk like tar. The majority had the same pale blank state—some had kept their identical twinkle, and one covered his face with his hand as though to shield it from the glare. But the Assistant Commissioner gazed with a pained repression at these corpses that so disturbed his sense of order.

The Governor felt that these pale faces had been among the mob that morning—in the foremost ranks, he knew; and many of them he had seen personally as he paraded with them. But now they were all beyond his recognition. This new community with death had lent them a most singular expression! They lay there lifeless and motionless on the floor; like plaster casts made flat on the back that they might rest more firmly. Yet this immobility seemed counterfeited—one could hardly believe it real. They were dumb and the silence seemed as artificial as their rigid pose; but something about them of anxious expectancy made it painfully impossible for the observers to speak. If a busy city had suddenly been turned to stone, and all its inhabitants petrified at one blow; if the sun had stood still, and the waves had hushed their rustling, and all that walked or moved had stiffened, they might have shown this same strange look of interrupted effort, of breathless expectancy and mysterious alertness for what was yet to come.

"May I ask if your Excellency wishes to order coffins or whether they shall be laid in a common trench?" asked the Assistant Commissioner with dead earnest; the exigencies of the emergency impressed him with a certain deferential self-confidence, and, furthermore, he was very young.

"What sort of a trench?" asked the Governor, perfunctorily.

"You just dig a large ditch, your Excellency." The Governor turned abruptly and left the place. As he entered the carriage he heard behind him the heavy grating of the rusty hinges—they were shutting in the dead.

Next morning he visited the wounded in the city hospital, still driven by that same tormenting curiosity, the longing to undo the inevitable and to blot out the past. The dead at least stared at him, but these would not deny him a glance! And in the stolidness with which they averted their eyes he read the immutability of his accomplished act. It was finished! Some-

thing monstrous had been done, and it was idle and useless to strive to alter the fact.

And from that very moment, Time for him had stood still, and this certain something inexorable and unreplicable had come over him. It was not remorse, for he felt himself in the right; nor was it pity, that gentle feeling that softly veils the heart and calls forth tears. He could think of these dead quite calmly; even of the little children. Their pain and their sorrows hardly moved him. But he could not rid his thoughts of them—they were constantly before his mind in sharpened outline—these puppets, these broken dolls! And therein lay the horrid mystery—a something like the tales of magic of one's nursery days. According to others, four—five—seven days had elapsed since the catastrophe, but for him in the mean time not one single hour had gone by. His thoughts played yet about that time—those clots—that signalling handkerchief—the realization that something irrevocable was about to happen—And happened!

He was convinced that he could far more easily be calm and forget the things which no vain regrets could alter, if the people about him would be less pointed in their attentions. By their artless looks and gestures, their respectful sympathetic manner, and their voices as though something a fretful invalid, they finally fastened in his brain the thought of that irrevocable occurrence.

The Chief of Police announced the next day in soothing tones that two or three more of the wounded had been dismissed cured from the hospital; each morning his wife, Maria Petrova, pressed her lips to his forehead to see whether he had a fever—as though he were a child. And those dead bodies—unsure fruit, of which he had eaten too freely! What nonsense!

And eight days after the event the Right Reverend Bishop Mihal himself rolled upon him, and at his first words clearly showed that he had the same notion as all the others, and had come to lighten the Governor's conscience. He spoke of the workmen, and as sinners, and called him a peace-maker—and all this without introducing a single one of his well worn Bible texts—for he knew the Governor was not particularly fond of clerical prating. The old man appeared to distressing disadvantage as he lied so clumsily in the face of his God.

During the interview the Bishop turned his head toward his companion, and purple with rage (he could feel himself how the blood mounted to his brow), the Governor panted his lips and trumpeted into that great bloodless ear that was turned toward him from that soft gray bush of hair. "Sinners they may be, your Eminence; nevertheless, if I were in your place I should certainly say a Mass for their departed souls."

The Bishop turned away his ear, smoothed down his waistcoat with a bony hand, and nodded his head as he answered in his softest voice: "Earl station has its own cross. Had I been in your Excellency's place I should never have ordered them shot nor hounded the Holy Office with Manies for their souls. But that is neither here nor there—they were undoubtedly sinners!" With a parting benediction he swept to the door—his gown rustling and swaying, bowing to each object that he passed as though blessing it. In the vestibule he fussed a long time with his hargolkei patches, turning first one ear and then the other to the impatient Governor, who was helping him with unworldly politeness. "Don't trouble, your Excellency! Oh, please don't trouble yourself!" and these words of his sounded to the Governor as if he were a helpless invalid to whom the least exertion might be fatal.

That same day the Governor's son, an officer in a Petersburg regiment, came home for his Sunday furlough; and though he was in gay good humor, and gave no special reason for his unusual visit, it was evident that the same incomprehensible anxiety for the Governor had induced him to

come. He made light of the whole affair, and assured them that in St. Petersburg they were delighted with the pluck and energy of Peter Ilitch; and yet he strongly urged that they should ask for another Cossack regiment and double their precautionary measures. "What sort of precautionary measures?" asked the Governor, stern and amazed, but there was no answer. These apprehensions seemed all the more absurd, as perfect calm had reigned in the city from that day on. The workmen had resumed their labor; even the lazzaroni had passed off unnoticed, though the Chief of Police had felt some anxiety and ordered out all the reserves. Yet nothing indicated the possibility of a repetition of the incident of August 17.

Finally he received from St. Petersburg a flattering acknowledgment of his detailed report of the occurrence, this would have thought that this would lighten the load and sink his burden in the sea of the past. But the fact will not sink. As though deriving his power from Time and Death, it stands rigid in his remembrance—the unhurled corpse of a vanished event. Stagnantly, night after night, he seeks to bury it: the darkness passes, day breaks, and there again, the beginning and end of his own voice between him and the world, stands that indelible picture: the signal with the white handkerchief, the crack of rifles, the blood.

II

The Governor's audience has long been ended and he is about to drive out to his villa, waiting only for his aide-de-camp, Kozloff, who is shopping for her Excellency. He sits in his study, his papers before him, and yet he cannot work—he broods. Then rising, he thrusts his hands deeper into the pockets of his red striped trousers, throws back his great gray head, and paces the room with heavy, sidelong tread. He pauses at the window, spreads the strong thick fingers of his hand, and says in strident tones, "But what is it all about?" And he fancies that as long as he sat and thought he was an ordinary man, like any other, simply Peter Ilitch—but with the first sound of his own voice, this gesture—he has suddenly become the Governor, the Major-General! An uneasy feeling creeps over him, his thoughts whirl and tangle; and with a rust official shrug of his left shoulder—strap he turns from the window and paces the floor again.

"This is the way the *dis-memors* walk!" The rhythm jerks through his brain, keeping time with his heavy footfall, until he seats himself again, carefully avoiding all movement that shall recall his official capacity.

The sound of a bell.

"Has he come yet?"

"If you please, *on*, your Excellency."

speaks the title softly and respectfully.

And while the lackey

he suddenly realizes.

"Ah, yes! They

looked like you

there that day, and I

have not seen them

yet. . . . Call me

when he returns. I

shall be in the draw-

ing-room."

The high old-fashioned

windows had

eight small panes,

which gave the room

the gloomy look of an

office; the appearance

of a Court of Clancery

or of a jail. The three

windows nearest the balcony

had new panes, which

still showed the marks

of putty-daubed

fingers; apparently it

had never entered into

the idle brains of any

of the countless ser-

vants that all traces

of that disturbance

must be wiped away

as if it were the same

old story—if you ordered

them they would do

it; if not, they'd never

lift a finger of their

own accord. . . .

"Let this be

renewed directly! I

can't stand this dis-

order!"

"Yes, your Excel-

lency."

He would have liked

to step out on to the

balcony, yet he seemed

unwilling to draw the

attention of the

passers-by, so he

stared through the

glass at the square

where the mob had

surged that day,

where the rifles had

crashed—and forty-

seven restless people

The Assistant Police Commissioner, saluting, announced in a loud voice, "Thirty-five men, nine women, and three children, your Excellency"

ARE THE GERMANS TIRED OF THEIR KAISER?

By SYDNEY BROOKS

EUROPE is watching the electoral campaign in Germany with an extraordinary interest, and in a deeper sense than it marks the beginning of a new phase in German political development. All through eastern Europe a spirit is stirring that recalls the brave days of '48. Russia is seething with a turmoil so penetrating and pervasive as to justify the name of revolution. There has been talk of a constitution in Persia. The Balkans are agitated with an impulse of self-awareness and self-realization, in which observers detect a fresh note. In Austria the demand for a more complete democracy has chosen a path through inextinguishable obstacles of race, tradition, and bureaucratic despotism. In Hungary universal suffrage is the question of the hour. Even from Turkey come rumors of a movement of reform. And now it is Germany's turn to be drawn into the stream. The people are beating against the bars. They are asking for a share in the government commensurate with their power and intelligence. They are questioning the social and political success of a system under which parliamentary government serves merely as a fig-leaf for personal rule. They are beginning to realize that the ballot, as an end in itself, is insufficient; that divorced from direct responsibility it is little more than a national plaything, and that it affords no adequate security against the prostitution of government in the interests of a single class or against the capricious and hazardous policies of absolutism. A constitution is one thing; its daily workings are another. Theoretically, Tannman Hall, under the American system, is an impossibility. Practically, it exists. The paper the German Emperor has little more power than the King of England. In actual fact he is scarcely less the sole director of the Empire's internal and external policy than the Tsar of Russia. The German people are coming to test their governmental machinery by its products. They do not find those products as satisfactory as they might be, and they are working round to the conclusion that no Emperor, however patriotic, and no chancellor, however detestable, can be quite so safe a guardian of the national interests as the nation itself.

I do not say that they have yet reached that conclusion, or that even if they had they would be able to present it in a practical effect. But unquestionably that is the direction in which the German mind is moving, and in this election we have the first clear indications that the struggle for responsible, as well as for representative, government is about to open. Public opinion in Germany has for many years displayed a growing restlessness, as though at uneasy peace between the old ideal of order and the new ideal of liberty. It is becoming impatient of a parliamentary régime without the party system, and of ministers responsible to the crown instead of to the people. And much has happened of late to raise impatience to a state of discontent little short of dissatisfaction. The Kaiser's Morocco adventure was a stroke altogether of his own bat. The nation had no share in shaping a policy that for months kept Europe in tense perturbation, and vast numbers of Germans not only did not approve of it, but showed unmistakably that their longing was for peace. The time, indeed, may come when the imperial intervention in Morocco will be looked back upon as the last manifestation of the old régime. It was sharply criticised all over Europe, but nowhere more sharply than in Germany itself. The people have examined its fruits all the more closely, and perhaps all the more captively, because they were not consulted about it, and had no hand in directing.

The fruits do not commend themselves either to their palate or their judgment. For what did the diplomatic victory at Algiers amount to? It was a victory without a struggle. It checked the French policy of peaceful penetration; it put the end of international approval upon the perpetration of chaos in Morocco; it gave the Wilhelmstrasse a standing in a question that hitherto had been thought to lie beyond the range of German interests, and in which, as a matter of fact, German interests were all but nonexistent. But so far from dissuading it, it cemented the Anglo-French entente; it emphasized the steady drift of Italy away from the Triple Alliance; it drove the Austro-Hungarian Foreign Minister into retirement; and it inspired throughout Europe a profound mistrust of German diplomacy. Reviewing the whole transaction, the German people find that the balance falls on the wrong side. Taking it as a typical instance of personal rule, they find in it the best of all reasons why personal rule should be modified.

Never has criticism of the Kaiser been so free and personal as during the last twelve months. Never did the press in Germany seem so little congenial to the national instincts. In spite of a record year of prosperity and commercial progress, Germany throughout 1906 has been penetrated with a universal discontent. The exactions of an exorbitant tariff have produced a scarcity of bread, have emphasized the preponderant influence in the scheme of German government of the agrarian class, and have widened the already calamitous deep cleavage between the upper and the lower ranks of society. The Hohenzollern memoirs accentuated these tendencies by resting in the popular mind that same anachronism of the nation's leaders, of rulers and cliques, and hidden,

selfish but omnipotent, influences that England chafed under a century and a half ago. The Germans have always been inclined to look at their rulers through a mist of mythological illusions. They stood positively agast at discovering from the ex-chancellor's piquant pages that kings have tempers, that statesmen are human in their likings and their prejudices, that national decisions are often the outcome of personal whims, that civilians and soldiers are in the habit of jostling one another for the imperial favor, that acrophages are less than ever an extinct species, and that pettiness and strife hold their own as successfully in "court circles" as among the middle or lower classes. No nation, probably, whose policy is so successful and triumphant, could so commonly unweathen through the ordeal in which Prince Bismarck subjected German state-manship; but nations with a longer experience in self-government than the Germans have had would hardly have taken the ex-chancellor's revelations quite so much to heart. They jarred on the idealistic idealism of the German people, and stirred within them a sense of distrust and insecurity that testified indirectly but accurately to their political immaturity.

Apart from this there has been a definite reaction against the general policy of *Weltpolitik*, and a rising consciousness that it has led to few tangible results, while its prosecution has entailed an altogether disproportionate expense. A galling series of colonial scandals has been exposed within the last few months, and the war in southwest Africa, now officially declared to be over, has proved harassing and wholly undignified, and has reflected little credit on German arms. The Empire came too late into the colonial field to do more than pick up the crumbs that had fallen from more fortunate tables, and one of those crumbs has struck painfully in her throat. In these circumstances a certain irritability against the whole policy of expansion overseas is not unnatural. Any country would feel it, but in Germany it goes further because German imperialism is closely associated in the popular mind with the system of personal rule, against which the nation, for domestic reasons, is visibly rearing. How close the connection between the Emperor and the policy of imperialism was shown a few months ago when the Reichstag was discussing the vote for a military railway in the receding southwest African colony. The German practice allows ministers and other persons who are not members of the House to appear before it and speak on behalf of the government's policy. On this occasion an officer who had just been appointed to the command of the colonial forces in southwest Africa appeared before the Reichstag to argue the case for the projected railway. His argument amounted to a blunt assertion that the railway would be built, however the representatives of the people voted, and whatever action they might themselves be taking in the matter. The Emperor, he intimated, had sanctioned the railway, and the Reichstag's approval or disapproval really made no difference. That was a most illuminating incident. It showed that, according to the official view, the Reichstag is a mere registration instrument for what the Emperor has already decided. It showed that if that view were to obtain, the power of the purse would be a mere sham, and the people, in spite of universal suffrage, would have no effective representation whatever. Guided by the contempt with which they had been treated, and aided by revelations of jobbery in the Colonial Office, and of shameful cronies committed by certain administrators in the German colonies, the members of the Reichstag began to assert with unusual vehemence their right to examine, and, if necessary, resist the colonial estimates. It was the successful assertion of this right a few weeks ago, when a majority refused to vote money for the German colonies, that precipitated the Emperor's dissolution. A blow of emancipation was struck that day which may prove the forerunner to a powerful revolution.

All these phenomena point one way. They point to a dissatisfaction with the present scheme of German government. They show that Germany has not yet succeeded in establishing a compromise between the fact of universal suffrage on the one hand and the fact of personal rule on the other. It is getting more and more doubtful whether such a compromise can ever be established.

When you have parties elected by universal suffrage it is too much to expect them to act for all time as the mere ratifying agents of measures imposed upon them from above, and to accommodate themselves with eternal meekness to policies they have had no hand in shaping. The essential issue at the German elections is, therefore, whether the government is in debt to the people, or whether the people are to be the government. That issue is, of course, enormously obscured by the internecine polemics in which the thirteen parties are viciously indulging, and it cannot anywhere be said to have taken a definite shape. Nevertheless there is nothing less in the question than is fermenting at the back of the German mind. And it is a question of immediate and practical urgency as well as of constitutional theory. The struggle upon which the German masses, more or less unconsciously, have now entered is a struggle to make all Germany a government of the people, by the people, for the people.

THE TINGLEY HOUSE-MOBILE

By RUPERT

HUGHES

THE rent problem solved at last! No more stairs to climb. No windows opening on an area. No more lawless homes. All four sides of the house with southern exposure at will. No dumb waiter to hoist. No janitor to obey. No piano overheard. No flute-flead below. No neighboring alarm-clock going off at the wrong hour. No anything apartmentlike.

It sounds like Utopia. Who but Oliver Tingley could have wrought so wisely well? Oliver Tingley, inventor of the "Pat. Prandial Trap," or "Blaqueting Made Easy," inventor of the "Pocket Elevator," or the "Flat-Roller's Vase-Mecum," and many another first aid to the injured.

It was a bright day in May, and a short, high, rakish craft may have been seen rolling south along Fifth Avenue, now luffing up to allow some street-car to cross its bows, now shooting swiftly past some shagbarked vehicle drawn by that anarchistic, the horse. It looked like a small cottage except that it had wheels. About it clung the odor of respectability mingled with that of an automobile. On a projecting balcony was a trolley-carlike equipage. At the wheel stood, or rather sat, Mrs. Oliver Tingley, on her brow an air of authority.

Under the guidance of his fair (also fat and forty) pilot, the curious craft made its way past staring crowds to Washington Market. There Mrs. Tingley dropped anchor, so it were, and gave two short barks on the ramous horn, which had a voice like a seagull with bronchitis. At her signal a grocer's clerk bounded from a booth. He was the usual grocer's clerk, apoplectic, shirt-sleeved, pencil-behind-ear, and toilet-in-hand.

Mrs. Tingley priced various staples and luxuries, sighed profoundly to think that eggs were three cents more a dozen than last year at this time; she gazed with horror to learn that apples showed a tendency to rise (contrary to all of Mr. Isaac Newton's observations); she vented her righteous indignation at the helplessly clerk's meek statement that butter was higher, and realized him that the last he sent was simply awful.

Marketing was with Mrs. Tingley something like a Greek tragedy. Over the quality of dried apples or the price of prunes she could reel in emotions that would have exhausted Prometheus and sent Medea into hysterics. But when it was all over, she was happier and felt better, for she had gotten just so much out of her system, and was fairly cheerful until the time approached for her husband's return from his office.

So now, having given her orders and had all her packages packed and safely bestowed on board the housemobile, she felt young again, and went her way up Fifth Avenue to the Park. Here she drew up alongside a grassy playground, and, opening the door behind her, called:

"You may come out and play now, my dear." At these words issued a pretty child, that bore a faint but ominous resemblance to her mother. She brought forth a hoop, a doll's peniculator, three dolls, seven Teddy bears, a tea-set, a cherished comic supplement, some building blocks, and a few other childish triss. These she spread upon the turf, using the "Keep off the Grass" sign for a support. On the balcony of the craft the mother sat reading the morning paper.

By and by a policeman came sauntering along. Seeing the child, he charged fearlessly upon it, ordered it to disperse, and drove it off the sacred enclosure. Mrs. Tingley looked at him with a contumacious smile and passed him a brace of her husband's company cigars. In some mysterious way the officer took them without seeming to, and moved on, blid to the existence of the child, who went back to grief.

Mrs. Tingley withdrew within and began to prepare her fragrant luncheon, looking out occasionally to see that Gwendolynne did not fall off the earth. After a time she was startled by a sharp rapping on her window. She looked into the bluest blue eyes of a mounted policeman, who said:

"Here, where youse folks tink dis is—a public park or a private garage?"

Mrs. Tingley answered him in the clear code, but he objected to conspicuous bribery and was adamant. So Mrs. Tingley, hastily throwing on an automobile cover-all, hooked to her child, laid her gather her impediments together and came again on board. This Gwendolynne did, not without tears and delay.

Then Mrs. Tingley moved on to another spot, where she rested till another incorruptible policeman appeared. Thence she proceeded several paragraphs to yet a third resting place, and so on until it reached the hour for luncheon, which was enjoyed in the cool shade of Metcalf's Pass.

Then, putting Gwendolynne to bed for a nap, Mrs. Tingley went shopping. She locked the child within, carried the lever into the shop, and there revelled in counter-faith to her heart's delight, while the housemobile blacked traffic and drove helter-skelter almost to the verge of profanity. When Mrs. Tingley was "good and ready" she returned, remonstrated the bulky housemobile from the tangle of vehicles, and spun forth on a round of mills. She visited chiefly the unfortunates who still lived in flats. To hear her talk you would never have dreamed that she herself once knew the agonies of condensed life.

And so the day wore on to dusk, at which time, with port and starboard lights all, Mrs. Tingley took the housemobile far downtown to the sky-scraper which held her husband's office. He came down from his eyrie on the twenty-third floor, and greeting his wife with respectful cordiality, took the wheel and turned his prow north by northwest. The exigencies of steering so burly a craft through the shifting mazes of Broadway traffic took Mr. Tingley's mind entirely off his business, and he revelled in the chaotic delights of the chauffeur.

As he chaffed his wife cooked the family dinner on the hanging electric-stove. When the folding table was laid, the housemobile was well toward the core of Central Park, where a belt was made of a secluded spot and Mr. Tingley joined his family at dinner, while the breeze blew through the open windows the sweet odor of the verdure without.

At dinner Mr. and Mrs. Tingley debated whether or not they should go to the theatre, storing the housemobile in the garage that sheltered them in bad weather at a nominal charge for storage space. They decided that, as the night was fine, they would get nearer to Nature's heart. So Mrs. Tingley brought out a chair and, taking Gwendolynne on her lap, sat at Mr. Tingley's left as they traversed the park's streets and darkening roads till the child was soothed to sleep. Mrs. Tingley put her to bed and returned to her husband's side. At times she spelled him at the wheel while he indulged in a nap.

At her signal a grocer's clerk issued from a booth

"All cigars taste alike outdoors in the dark," said Mr. Tingley, and, accordingly, knew the luxury of economy, while the wind carried back the fumes to be merged in the general aftermath of gasoline.

The wind in the eyes and the sooth of swift motion invited slumber, and the housemobile was drawn up at one side of a moonlit lane. Then Mr. and Mrs. Tingley, after locking the doors and windows, retired, and knew nothing but the blissful oblivion of sleep until the alarm-clock warned them that another day of toil had arrived.

Mrs. Tingley put on her auto cover-all and, tucking her uncoiled locks under a commodious cap, took the wheel and sent the car flying south, while, within, her husband lifted the upholstered lid which served for couch and disclosed a small but sufficient tub. Water drawn from the reservoir supplied his bath, while Geraldynne slept behind the curtains of her folding crib.

By the time Mr. Tingley dressed and shaved the housemobile was well within the limits of town. Then he relieved his wife at the wheel while she prepared the simple but elegant breakfast. When this was ready, Mr. Tingley checked the car at a restaurant in Madison Square, and went within to his breakfast. He read his paper as he sipped his coffee, and then, in all the vigor of his breakfast food, once more took the wheel and sent the housemobile flying to his office, where he arrived in ample time, exhilarated by half an hour's extra sleep and his strength husbanded by escaping his former servitude as a strap-hanger. Kissing his wife and child the farewell kiss of a happily married luxurious man, he entered his office building a different being from the humped and car-sick dyspeptic that used to crawl to his desk.

And Mrs. Tingley, hale with exercise and pure air and the joy of a home whose limits were as spacious as all-outdoors, set her course north for Washington Market for another bout with bargains.

But how came all this to pass? Epoch-making inventions like the housemobile do not spring full-blown from the brow even of an Oliver Tingley. They grow or (as Mr. Tingley himself admits with all the modesty of the truly great) "evolute."

So this solution of the problem of the day "evolute." Mr. Tingley, it seems, had an uncle—that dear synonym for hope. This uncle, Dudley Tingley, was in the furniture business, and had hoarded up an apparently large fortune by selling goods on the installment plan to the imperious. Thus, he bought an eighteen-dollar sideboard from the wholesaler, marked it up to \$43, drew a red dagger through the price and marked it down to \$39.40. A poor but respectable young couple would enter the store and buy the sideboard on the installment plan. But the installment plan price would be \$49.40.

This was all well and good, and the uncle should have got rich

"Hey, what do youse folks tink dis is?"

quick if it were not for one thing, the uncertainty and difficulty of collecting the installments. Accordingly, when he came to die, the settlement of his affairs brought to light an enormous sum of bad debts secured by badly used furniture. Mr. Tingley had counted on at least \$35,000, and he and Mrs. Tingley had his weak alpha quarreling over what was to be done with this sudden rush of wealth to the bank account. But all they got for their share was \$82.34 in cash and a large auto-truck used for delivering the bulkier sorts of furniture.

But Mr. and Mrs. Tingley lived in an apartment-house and up three flights of stairs. The truck could not have been got through

The fire was quenched without the usual loss of time. . . . To meet the firemen half-way is indeed an advantage

the doors except in places, and would have been of no conceivable use or ornament were it was in.

"Talk about the man with an elephant on his hands!" said Mr. Tingley. "Here I've got to pay storage on a gasoline Noah's Ark. Why didn't he leave me a pair of roller skates?"

Mrs. Tingley thought it would seem ungracious to Uncle Dudley to sell the truck in less than a year. They must keep it as a sort of mourning, so store it they did in a garage. On the first of

Drawn by Albert Loring

Rescued the battered and asphyxiated burglar from Mrs. Tingley's ministrations

the next month Mr. Tingley received a bill for rent and a bill for storage. The collision of these bills struck a spark as from two smitten flints.

"Bureka!" he cried, "we will live in the truck." Mrs. Tingley began to feel nervous but his mind had given way, but he soothed her by outlining his plan. First he gave his landlord a month's notice. The following thirty days he spent in designing the interior arrangement of the truck.

You have already seen the glorious success of the design. It has many other virtues which will suggest themselves to the imaginative. Emancipation is not the least of these—emancipa-

tion from the myriad slaveries of the apartment-dweller or the flat-bird.

Two anecdotes will illustrate the extra advantages of this method of houseboating in a great city.

One afternoon as Mrs. Tingley was preparing luncheon she carefully set the place on fire. In an ordinary apartment this would mean that she must lean out of the window and yell to a passerby to run to a distant alarm, and then spend the time jettisoning the cargo while she waited for the remote fire-engine to arrive.

But Mrs. Tingley, calling Gwensdylane out of danger, rushed to the wheel, shouted to a policeman to turn in an alarm, and then went full speed along the route the engine must follow. She reached the engine-house just as the horses bolted forth, and the fire was quenched without the usual loss of time.

To meet the firemen half-way is indeed an advantage. Imagine a small group of greyhounds speed and carrying its house on its back, and you have Tingley's truck.

On the top of the truck, by the way, Mr. Tingley raises vegetables. As he puts it, he does "truck gardening in town." A and wag, Mr. Tingley.

One night Mr. Tingley's dreams of wealth were interrupted by Mrs. Tingley's shrill whisper:

"Ellie, there's a man in the house."

Her womanly intuition taught her that the intruder could not be under the bed, for the bath-tub was under the bed. There was not much doubt which corner he was in, for in one was the folding stove, in another the folding china-closet, and a third the baby's folding crib. Clearly the man must be in the fourth corner.

No Mrs. Tingley with one lionel-like leap flung all her availing powers into the fourth corner, and found in her grasp the cowering burglar.

As soon as he heard that the thief was under control, Mr. Tingley rose from his bed, swung on his greatest, and hastened to the platform, where he pulled the throttle wide and sped toward the police station. At that hour all the night patrolmen were sound asleep in the saloons which are legally closed at 1 a.m. So he was not arrested for exceeding the speed limit, and soon arrived at the sign of the green lamp-posts. There he called out the reserves, who rescued the battered and asphyxiated burglar from Mrs. Tingley's ministrations.

Thus the office of petrol-wagon is added to the other utilities of the housemobile. Space does not permit further discussion of the invention. It need suffice to say that the housemobile is now being manufactured in large quantities for the general market. The advance orders, however, are so many that it will be some months before the public can be served.

The real estate men are already dressing an exodus from the houses of the people, the landlords are fearing starvation and are already becoming more delicate. In many a sky-high denouement the dumb-waiter will at last deserve its name. It is expected that rents will fall at least forty per cent., and a panic is feared on the Real-Estate Exchange. Mr. Tingley regrets this, but realizes that individualism must be sacrificed for the good of the greatest number. Progress is ruthless.

THE CONSOLER

By ALFRED DAMON RUNYON

THEY was slippin' Wingy Wo in a lonesome hole
An' they ples 'is coffin 'evy with some grub ter feed 'is soul.
Oh, they ples 'is coffin 'evy with their rice an' easy too
When 'is 'appens by th' boardyard an' 'is smells th' savory stew.

Then 'is sees 'is widder settle 'by 'is grave an' weepin' sad
Fer ter keep 'is soul from goin' to th' place o' things wot's bad;
An' 'is drags up chest beside 'er an' 'is whispers in 'er ear
Til she gives a little giggle an' she dries 'er bitter tear.

An' 'is was mighty hungry, so 'is tells 'er on th' spot
That 'is met th' 'ol' 'ol' 'ol' headed fer th' place wot's hot;
An' 'is tells 'er that 'is told me fer ter eat th' 'ol' 'ol' 'ol' grub
'Cause 'is time was satter presen' fer ter catch th' 'ol' 'ol' 'ol' Stab.

An' 'is eats it with a relish an' so fast 'is like ter choke
While she watches her bewilderin' from a ring o' pinky smoke;
Then 'is wipes my lips an' tells 'er that 'is 'ol' 'ol' 'ol' free
'Ad sent 'er back a lovin' kiss an' 'is sent it back by me.

Oh, 'is gives to 'er a whackin' kiss upon 'er puzzy nose
An' she blushes down beneath 'er paint just like a bloomin' rose.
An' 'is wraps my arm around 'er waist so neat an' trim—
She set, "E went a kiss ter me—take this an' back ter 'im."

An' we're a-livin' 'appe an' a-livin' quite a lot—
An' often thinks o' Wingy Wo down in 'is place wot's hot.
To ghost 'is every bothered an' 'is watches every day—
'I wonder if ole Wingy's soul was starved upon th' way?

THE LANDING OF CARTERET IN NEW JERSEY

HOWARD PYLE'S IMPRESSIVE HISTORICAL PAINTING WHICH IS TO ADORN THE ESSEX COUNTY COURT-HOUSE AT NEWARK, NEW JERSEY

The picture represents the landing of the first governor of the province of New Jersey, Captain Philip Carteret, at Elizabethport from his ship, the "Philip," in August, 1665. His secretary is reading to the assembled colonists his credentials as their Governor. Directly behind Carteret stands a companion who would be likely to have borne him company on his mission. The fourth figure of the central group is that of the master of the ship. Behind the soldiers and the immigrants are the tattered immigrants from the island of Jersey, who added on the "Philip" to a home in the New World. The painting is seven feet high and sixteen feet long. It will hang in the room of the Board of Freeholders.

THE SEASON'S PLAYS

TWO "SALOMES"

By "I"

IN the current outburst of literary, dramatic, and musical enthusiasm concerning the career of John the Baptist under which New York is at present laboring, the production by Mr. E. H. Sothern and Miss Julia Marlowe of Herman Sudermann's play "Johannes" ("John the Baptist" in the English version) has occupied a conspicuous place. The production of this play at the Lyric Theatre preceded by one night that of the Oscar Wilde-Richard Strauss opera two blocks farther downtown—a curious coincidence, if nothing more. Mr. Sudermann derives the basis of his plot—as did Wilde and all the other poets, dramatists, and painters

who have concerned themselves with the story of the Forerunner's death—from its source in the New Testament, and his emblem. Emblem of it has furnished forth a fire-art drama. The rising curtain discloses the Prophet, surrounded by his followers, in "a wild rocky country near Jerusalem." Here he is informed of the death of infancy about to be committed by Herod in marrying his brother's wife, Herodias. In the course of the following acts, which take place, progressively, in Herod's palace, in a room in Joseph's house, in an open space in front of the temple, in the prison yard near Herod's palace, in a hall, and finally, within this palace) the conflict between John and the house of Herod, and its effect upon the soul and the understanding of the Prophet, are elaborately revealed. We are shown the infuriated malevolence of Herodias against him who has held up to public scorn her abominations; the growing passion of her daughter Salome, for the fiery and commanding leader; the heroism and magnetic exaltation of John; the vacillation and superstition and ineffectuality of Herod; the dawning consciousness, and, finally, the triumphant realization, in the heart of the Forerunner, of the divinity and might of love; his resistance of the seductions of Salome; and his tragic death.

Julia Marlowe
AS HERMAN'S "SALOME"

As presented at the Lyric Theatre, it does not, on the whole, gain in impressiveness. The part of the protagonist is not ideally taken by Mr. Sothern. He has moments of fine dignity and force, and his make-up is excellent—the sunken, burning eyes, and wild and unsmooth mark, the noble intensity of the inspired fanatic. But Mr. Sothern does not succeed in conveying the sense of spiritual exaltation, and the culminating fear of the play—that in which he drops the stone which he had intended to hurl at Herod, in obedience to a sudden consciousness of the full meaning of the message of the Messiah—is ineffective, whereas it should be sublime, triumphant and compelling. The Salome of Miss Marlowe, while it is charmingly graceful and winsome, lacks the sense of jangling sensuality and allurement which it should suggest. The play itself is long and dull, but in the Sothern-Marlowe version the auditor is gravely aroused by the visible horror of the Baptist's severed head.

One of the poignant charms of Miss Eleanor Robson's acting is the refinement with which she invests an impersonation. For this

reason, while not denying the wide range of her abilities, she seems more adequately equipped with a rôle requiring this exaltation than with one which presents her in rougher mould. She is now at the Liberty Theatre in "Salome Jane," a play by Paul Armstrong, founded upon incidents in Bret Harte's California story "Salome Jane's Kiss," and, while her acting is admirable, she does not quite convey the unpollished, decidedly lawless young woman who thinks nothing of asking that murder be done for her sake, when Bret Harte portrayed in his tale. Miss Robson does make her very tender, and, of course, very alluring, but from time to time throughout her acting there are moments when the refinement creeps in when perhaps it should not.

Salome is an impetuous young person; in fact, the entire play is built upon an impetuous kiss she gives to an unknown young man who is about to be hanged for horse-stealing and says he has no message to send to any one, nor is there any one to bid him good-by. The men who are to hang him suggest, in a moment of generosity, that Salome shall perform the office of speeding him on his long journey with a few kind words. She does this, and stricken by the realization that the young man is about to die unjustly, suddenly flings her arms about his neck and kisses him. It is her second meeting with him, and she has already lost more of her love to him, because it is he who, for certain personal reasons, has killed the man whose death she had sought at the hands of her unwilling and cowardly lover.

While the bestiality of the kiss was a severely admirable act, it does not happen as a logical sequence. But, to be sure, Salome is an illogical, impulsive thing, and women are not on this score to be held accountable for their vagaries. Miss Robson does not give one, in the moments before this time, sufficient indication that she is the sort of young woman to do this thing. She is impetuous, but it is not the impetuosity of affection which she suggests before she has kissed the young man. And as a sudden awakening of her heart, here too it is not quite convincing. After the kiss, however, Miss Robson's Salome is delightful in its warmth and tenderness and its truth. Which, of course, goes to show that the kiss not only did the young man a great deal of good, being the means of saving his life, but that it was of great benefit to her.

The kiss was the means of inducing the young man to escape from his captors, to return to Salome and to win out against all odds in the third act. His part was played by Mr. H. B. Warner, one of the best-looking leading men (and an excellent actor, too) New York has seen in many a long day. Besides *Far* as a fire-eating, melting-down Kentucky character, Edward G. Robinson, and Ralph Delaney as John the Baptist, the stage-driver, were thoroughly well cast. Too much praise cannot be given to the acting of three little children, Donald Gallaher, Frances Golden Fuller, and Ruth Abbott Wells.

SAFEGUARDING THE AMERICAN WORKMAN THE IMPORTANT PROJECT OF THE NEWLY ESTABLISHED MUSEUM OF SECURITY

THE first definite step towards the establishing of an "American Museum of Safety" was made last week at a large dinner given in New York, attended by several hundred men of prominence—manufacturers, merchants, publicists, physicians, capitalists, and editors. Men who have the handling of men were the guests. The text of the night was a single idea—America's heedless waste of her workmen, the fact that this country's mechanical triumphs are being overshadowed by the danger to life incidental to its wonderful advance.

The new movement for some sort of security for the American workman as he bends over his machines is on a firm foundation. In a wing of the huge American Museum of Natural History, New York, through the instrumentality of Morris K. Jesup, president of the New York Chamber of Commerce, an "Exposition of Safety Devices and Industrial Hygiene" has been opened, with exhibits, photographs, and models for protecting the lives of working people, gathered in this country and abroad. The exhibit will last for several weeks, and a feature of it will be illustrated lectures given by Dr. William H. Tolman, director of the American Institute of Social Service, under whose auspices this movement is being carried out.

According to the census, 57,513 persons in the United States suffered violent deaths in 1900. Where we have exact figures for comparison they show more than twice as many accidents in this country, relatively, as in Europe. A large proportion of the victims perished needlessly and heedlessly, while half a million more were injured.

In Europe, Museums of Security are in active existence, and make known, popularize, and force into use devices for guarding machinery. Even in Russia such a museum exists. A few Museums of Security have been established in Moscow, and guard the Russian working man. "We talk," it has been said, "of the barbarities of war, and do well to establish our peace societies. Is it

not time to do something to stop the increasing barbarities of peace?"

But what, after all, is a "Museum of Security, or Safety"? However effective abroad, it is a completely new idea for this country, and one that "loss" and "wastefulness," generally speaking, know nothing of. What does a Museum of Security do; how does it stop accidents?

As indicated by its name, the Museum of Security aims to become a permanent exposition not only of devices for the prevention of accidents to laborers, but a repository of suggestions originated by any person or institution to help workmen in any way. It is really divided into two great sections, one comprising all that has to do with the prevention of accidents in the various branches of industry, and the other comprising social and industrial hygiene.

The New York exposition consists as much as possible of "live exhibits," that is, machines or devices in operation; models of actual or reduced size, and photographs. It will show safety appliances relating to wood and metal working machinery; stamping, grinding, and polishing machines; presses, textiles, the building trades, elevators, winches, cranes and hoisting machinery, transportation by sea and land, safety lamps and explosives, quarrying, agricultural and chemical industries.

The section of Industrial Hygiene includes improved dwellings; first aid to the injured; prevention of tuberculosis and other dread diseases harmful to the life of workmen; respirators and devices for supplying and maintaining pure air and industrial betterment.

It is intended to present in each exhibitor a diploma designed by a prominent artist. A handsome medal has been made. Its obverse shows a graceful figure of a woman against a background of machinery, and the legend is, "Security for Humanity's Sake." On the reverse is, in panel form, "First International Exposition of Safety Devices and Industrial Hygiene by the American Institute of Social Service."

MUSIC AND THE OPERA

A MALEFICENT MUSIC-DRAMA

By LAWRENCE GILMAN

A FEW hours after Richard Strauss' cataphorism music-drama, "Salome," had been made known in its completeness to its first American audience, Mr. Walter Damrosch and the New York Symphony Orchestra performed in a concert-hall not far distant two tone-poems by Claude Debussy—the "Prelude" to Molière's "L'Après-midi d'un Faun" and the "Fêtes"—one of the set of three orchestral "Nocturnes." Since these were typical utterances of composers whom many would rank as the two most considerable figures in modern music, the contrast offered by their juxtaposition was, to say the least, piquant. On the one hand, a music-dramatic portrayal of a psychopathic condition literally unapproachable in its horror and abnormality, accomplished by means that sicken the mind and wreck the nerves; on the other hand, two studies in tone-painting conceived in the most refined and exquisite spirit of fantasy, and baying forth moods and images of indescribable subtlety—aural tone-pictures that have their origin in a state of being remote from the ordinary conditions of space and time; moods of reverie and enchantment that altogether delight the senses and quicken the imagination.

Johanna Gadski

WHO JOINS THE METROPOLITAN OPERA COMPANY THIS MONTH

the day following the first performance of Strauss' opera we considered in this place the artistic quality of the music which Strauss has conceived as an embodiment of the play of Oscar Wilde, as the matter of immediate interest, reserving a discussion of its ethical aspects for a later occasion. One may properly conceive that that occasion has arrived; for the current interest in "Salome" can be compared with nothing in the history of musical art in this country save that aroused by the production, three years ago, of Wagner's "Parsifal." For any one who refuses to subscribe to the preposterous contention that art and ethics have nothing in common, the case of "Salome" is very far from being closed when one has arrived at an estimate of its æsthetic merits.

The present witness is not of those who, with the scalpel of criticism, seek anxiously in art for evidences of that which is normally noxious; nor does he presume to set bounds to the sphere of activity which music, in particular, may occupy in its concern, as an expressive agent, with the human drama, so long as its concern is with those phases of life which are truly representative. But one may solemnly, without dogmatism, that sexual perversion cannot by any kind of construction be regarded as humanly representative. It is a matter in which plain speech is requisite; yet it is impossible adequately to indicate the enormity of that which is said and done and felt in "Salome" without invoking the precise terminology of the physician and the alienist; and that, for obvious reasons, may not here be resorted to. It is the ultimate function of all art to enlarge the sense of life—a somewhat different thing from enlarging the sense of depravity; yet that "Salome" does precisely this, has not been, so far as one is aware, denied. Those overcautious friends of Strauss who have sought to justify the offensiveness of "Salome" by alleging the race of Wagner's "Die Walküre," and the relationship that is there shown to exist between the ill-starred Valkyrie, are worse than

misguided; for however unlawful and unallowable that relationship may be, it carries no taint of degeneracy or disease; whereas the thing that is delineated in the music-drama of Strauss and Wilde is fitted to no less an epithet than monstrosity. Moreover, it is precisely in the most pedantic phases of the drama that the literary invention of Wilde and the musical inventiveness of Strauss attain their greatest eloquence. It is in the culminating scene of the drama, where Salome ecstatically caresses the severed head of Iokan, that the words of the text and the music of the score exert their most potent and horrible fascination; in particular, those passages in the music which accompany Salome's exultant reception of her prize from the executioner, and, later, her interval of ghastly self-gratification just before the end, have inspired (if one may so grotesquely misuse the term) the two supremely expressive moments in the score. Strauss has enforced those things with an appalling intensity, with a beauty which is repulsive, poisonous, sinister, and obscuring in the extreme; and precisely because it is so showcasing is it intolerable and abhorrent. That the great art of music can be successfully involved in such a cause, that it can speak such things with so dreadful an eloquence, is a revelation for which few of us are apt to be prepared, and which is, to say the least, disquieting.

It remains to be noted—and it is only just that it should be noted—that the production of "Salome" at the Metropolitan Opera House, viewed simply as an artistic achievement, was nothing less than superb. It had involved miracles of accomplishment, orchestral, vocal, and histrionic. Mr. Hertha's mastery of the multifarious and stupendous complexities of the orchestral score was complete and amazing; Miss Fremstad's Salome, Mr. Burrian's Herod, were masters of identity and effectiveness; Miss Wood and Mr. Dippel, in the minor rôles of Herodias and Narraboth, were altogether satisfying, and the mounting of the opera was at that could be desired—poetic, atmospheric, fairly cooperative. Indeed, the production as a whole can be adequately praised only in

Has the music of Chopin begun, in the minds of any considerable number of musicians, to take on a certain jejune quality? Is the elaborate embroidery of his art beginning to seem a little superfluous, a little cheap? Mr. Vincent d'Indy, in his recent biography of César Franck, had occasion to pass hastily in review certain great composers of music for the piano; he spoke of Beethoven, of Schumann,—who "found for the expression of the poetry of his soul, in his little compositions of genius, a style more orchestral than his orchestration and spreading itself in charming and intimate sonorities" of that,—who, "sketching at a blow the whole scaffolding of classic pianism," enriched the instrument by means of com-

Emil Paur

CONDUCTOR OF THE VISITING PITTSBURGH ORCHESTRA

positions provisionally uncompleted, and gave a decisive impulse to its virtuosity." Mr. Philip Hale, in the course of some interesting and valuable comments on Mr. d'Indy's book, protests regretfully over the passage from which the above remarks are quoted. "Not one word," he exclaims, "about Chopin, the supreme composer for the piano!" . . . Is it possible that Chopin does not exist for Mr. d'Indy? The omission of this great name is simply inexplicable."

Is it possible, one retorts, that there is a growing crisis for whom Chopin "does not exist"—who acknowledge the historical importance of his contributions to the æsthetic music of our time, yet find in him to-day no living voice, no vital beauty, but rather an art that has become remote, faded, and outworn?

Novel Motor Equipments and Experiments

By George Ethelbert Walsh

THE automobile exhibitions in the different cities serve as a sort of clearing-house for new ideas, new plans of design, new announcements for the coming year, and a summary of past achievements. There may be nothing new in the world, but automobiles certainly will be interpreted to give a somewhat modified interpretation to that ancient doctrine. Any visitor can satisfy himself of this within an hour after listening to an official spokesman of the industry.

"Of course the motor is not new," is the explanation, "but we're making many new departures in equipments, and these inventions are new things. Take the latest Pullman touring-car and see for yourself. Here's a travelling home for you, with seven ice-chest, hamper for food, a dining-table that turns up when you touch a spring, a complete toilet set for man or woman, an automatic electric bell, buttons to direct the chauffeurs, all sorts of instruments to record the weather, the speed of the machine, the grade of the hill you may be climbing, and the direction you're travelling. Reclining-chairs are provided, and even beds which open and close automatically. You can dine and sleep on your motor-car, read the latest book, carry on your correspondence, and be just as comfortable as in your own home. In short, the up-to-date touring-car contains everything needed, and everything is packed away in such compact space that no one would suspect its existence. On account of portability, so servant other than the chauffeur touching a button you can summon almost anything you need."

One such palatial touring-car contains, by actual count, twenty-five different compartments, in which travelling accessories are stored away. No ship ever left port with a more miscellaneous assortment of novelties than the modern touring-car equipped for long journey through a hostile region. Provisions are sufficient to last a week or two are carried, and with the exception of an occasional purchase of more ice and gasoline the car can travel across the continent independent of stores and food supplies. Duplicates of nearly all parts of the machinery are ingeniously stowed away over, under, or in the car so that repairs can be made on the road.

A prominent motorist who has covered nearly ten thousand miles in ten different countries the past year said that he rarely suffered for the lack of any of the essentials of good living, and was almost as comfortable as if travelling on a regular Pullman car of a standard railroad. A good many of the new ingenious contrivances in automobile equipments are the result of suggestions made by practical tourists. In some cases crude contrivances were made by the motorists while travelling abroad, and after a practical demonstration of their usefulness they were patented, and are now added to the general equipment of touring cars.

"As an independent travelling unit the automobile is coming nearer to perfection every year," said one of these touring enthusiasts. "Last year I travelled through all of Europe and part of Asia, and had a mishap which could not be readily remedied on the road. For one whole week we were out of touch with civilization, but we had provided for it by laying in sufficient supplies. We had a small gasoline cook-stove which made our meals tempting, a warming device to keep away the chills of night, a patent ventilator in the roof of the car, a folding-bed which made rest comfortable, light read by day or night, and plenty of fuel in the tank to carry us to our destination. That method of exploring a new country is almost ideal. A man can take a trip in this way which surpasses anything heretofore achieved in history."

The effort to make the touring-car an ideal unit for travelling across the country has resulted in an increased demand for better and more complete equipments, novel equipment. Last summer, it is estimated by dealers that upward of fifty thousand people took their vacations in automobiles. Instead of spending the regu-

lation two weeks or a month at some summer or mountain hotel, they put their money in motor-cars, and went off on novel exploring expeditions. They covered thousands of miles all told, and lived out in the open air as much as if camping. The cars for each summer-vacation trip were provided with adjustable ramps to make that sleeping on the road is made comfortable and safe. In anticipation of even a greater number of vacationists and tourists, hundreds of such fully equipped touring-cars are being hurried to completion.

But it is not only for summer vacationists that the modern cars are equipped. Even in midwinter touring trips lasting from a week to several months are being undertaken. A thousand touring parties will leave our Northern cities this winter for trips South or to some points in the West Indies, and South and Central America. A winter trip in a touring-car is an ideal change from the strenuous rush of business life. Physicians have sent many of their wealthy patients away on such journeys.

The cars for each winter-vacation include another novel experience to the motorist. Racing with balloons has become a recognized sport. When the balloons are sent up, the motor-cars follow them or race against them to a given point. As the balloons take a straight line in one direction, the swift motor-car is often beaten in the race across country. Owing to the necessity of towing the balloons at many points, the cars are often equipped with special towing and releasing devices. By means of the telephones in the cars and balloons the motorist and aeronaut can be kept in constant communication. This sport has become so popular that it is likely to find a dozen cars enlisted in the service for every balloon. The combination of the two sports has increased the number of enthusiastic amateurs. The men who may hesitate about making an expedition do not miss the chance to follow the aerial travellers in a speedy motor-car built for the special purpose. Experimental tests have been conducted with wireless telegraphs between the motor-cars and drifting balloons. The cars carry a sending and receiving apparatus, and with similar equipments in the airship communications are established. In one notable trip across country, constant communication was maintained between the balloon and motor-car for ten hours. Reports of the progress of the balloon at an extreme altitude were thus made to the ground every five minutes.

The motor-car equipped with sled runners for travelling across country on both snow and ice has been with us in an unfinished condition for some time; but an ideal combination of sled runners and wheels can be reached this winter by a number of patent attachments. These attachments are easily adjusted. The runners can be lowered or raised as quickly and easily as the speed can be changed in the ordinary car. The runners are broad and flat so they will support a heavy car on a comparatively thin crust of snow. By means of quick adjustment they can be made valuable in driving on snow, or on a frozen lake. No drift has no terrors for the motorist in such a car. The wheels are also broad and notched to cut firmly into the snow.

So successful have these motor-sleds proved that a number of touring parties will undertake the exploration of northern Canada this winter, where snow lies on the ground several feet thick all winter. Lakes and streams freeze over and are crossed just as easily as the smooth surface of snow. The driver of the car simply lowers his runners so that the wheels cut into the ice to get tractive force.

Another snow-equipment consists of a broad gauge which is extended on either side of the runners so that plenty of supporting surface is obtained. These extra skid-runners are a foot and more broad, and can be lowered within an inch of the wheels without sideways. When not needed they are folded up on the side by turning a lever. They are not only supports for the heavy cars, but runners as well. They can be lowered within an inch of the wheels, thus practically floating the car over a soft snow-drift. Nothing but a very soft snow or melting snow could stall the car equipped with such additional snow supports.

This opens up a new field of sport for the touring enthusiast. It will enable one to explore regions in the far North in the dead of winter. Wild animals can thus be hunted at a season of the year when even the trapper equipped with his snow-shoes is often troubled. As the cars will carry provisions for sustenance and fuel for power, light, and heat, hunting in this way would be much more comfortable.

So successful has the automobile sleigh proved in exploring that one authority says: "If the North Pole is ever reached it will be in one of these touring-cars. A man can travel over the snow and ice much faster, and far more comfortably, in a motor-car than by any other method devised. Within a year or two you may expect to hear of automobile parties trying to find the pole. There will be a relay of these cars travelling back and forth to carry provisions and fuel. With stations regularly supplied with fuel and provisions, the pole should be reached on the snow and ice. Of course open water would stop them. If necessary, the work would have to be done at a season of the year when no open water is possible."

ADVERTISEMENTS

MAY BE COFFEE

That Causes All The Trouble.

When the house is alive it's like a body when disease begins to show; it's no time to talk, but time to act. Delay is dangerous; remove the cause of the trouble at once.

"For a number of years," says a Kansas lady, "I felt sure that coffee was hurting me, and yet I was so fond of it I could not give it up. I pained with my appetite, and of course yielded to the temptation to drink more. At last I got so bad that I made up my mind I must either quit the use of coffee or die."

"Everything I ate distressed me, and I suffered severely almost all the time with palpitation of the heart. I frequently woke up in the night with the feeling that I was about to go—my heart seemed so swollen and weak in its action that I feared it would stop beating. My breath grew short, and the least exertion set me to panting. I slept but little, and suffered from rheumatism."

"Two years ago I stopped using the old kind of coffee and began to use Postum Food Coffee, and from the very first I began to improve. It worked a miracle! Now I can eat anything, and digest it without trouble. I sleep like a baby, and my heart beats full, strong, and easily. My breathing has become steady and normal, and my rheumatism has left me. I feel like another person, and it is all due to quitting coffee and using Postum Food Coffee, for I haven't used any medicine, and none would have done any good as long as I kept drinking with coffee." Name given by Postum Co., Battle Creek, Mich. "There's a Reason for the Little Book, 'The Road to Wellville,' in page. All grocers.

RUSSIA'S EVER-PRESENT WAR PERIL

By CHARLES S. GERLACH

RUSSIA'S foreign policy is oppressed by a nightmare, an apprehension of approaching danger, which impels her free movement in Europe. In clear-sighted Russian military circles, in the Foreign Office at St. Petersburg, and in influential journals, the late Japanese war is regarded as merely the prelude of a future tragedy. The blow of the new Japanese sledgehammer upon the Russian shield was felt to its very edge, and raised a tremor in the heart of the old empire of the Cæsars, on the shores of the Baltic, in Poland, in distant Turkestan, the scene of Russia's glorious wars, as well as in the Caucasus. It is certainly a strange historical anomaly that the yellow fist striking its blow in far Eastern Asia did inflict a lesser wound there than in European Russia. It elevated its own sea-girt land to the rank of a world power; yet Russian possessions were hardly touched. Now Russia is fearful of a struggle for the possession of her immense Siberian territory, up to Lake Balkal, the Trans-Balkal and Amur regions; in the latter are situated about 30,000 square kilometers of already prospected gold-fields not yet opened, which, according to the estimate of a prominent engineer, Krenoski, will produce one and one-half million pounds of gold. (A pound is about thirty-two pounds.)

It cannot be denied that Russia has ample cause to feel anxious regarding a repetition of the war, for conditions are far more unfavorable for her now than at the beginning of hostilities in 1904, and the armament of Japan since the conclusion of peace shows that, having accomplished so much, she is preparing for greater deeds. In place of her original thirteen, she now has sixteen divisions and nineteen reserve brigades of an increased strength, together with an army of one and one-half million of men. Formerly a sea threatened by a Russian fleet separated Japan from the mainland. Now this sea, in the undisputed possession of Japan, connects her hosts with the divisions pushed forward into Korea and Manchuria. On the former occasion Korea had to be traversed by railroads war marches continuously menaced by Russian; to-day the Japanese troops can be transported upon the Pusan-Seoul Railway to the Yalu River, and in a very short time even into Manchuria. Korea is a vassal of Japan, her troops commanded by Japanese officers. In southern Manchuria Japan is the undisputed master; every railroad there is at her disposal.

Moreover, there is little doubt that the next time Russia will have to reckon with China also, and this not with theatrical forces, such as opposed Japan in 1905 and the allies in 1900, but with divisions trained according to European methods, or, we might better say, Japanese ways, armed with the best modern weapons and with peace-practice fighting in larger aggregations. Their performance in this line has been commended by European attaches. At the present time China has six divisions so trained; by 1910 she will have sixteen, and she intends to increase those later to forty. While Japan approaches the Russian boundary, China advances likewise, by means of the projected railway through Mongolia from Peking to Urga, within 200 kilometers of the Russian frontier and the commercial city of Khabarovsk. Work on this road has already begun.

Even if China was not willing, Japan would force her along, in

case of war, for she need only blockade the Chinese ports to force Germany to do her bidding. Russia would then have to face two powerful enemies, and would not, as was the case before, be fighting for Chinese soil, but for her own valuable possessions.

Russia's position, already shown to be more favorable than before, even if we disregard the loss of her fleet, would be a trying one indeed. The Russian General Staff calculates that in two years Japan will have thirty-four divisions, inclusive of reserve brigades, and ten Chinese divisions trained on European lines, all of which, in view of the favorable conditions above described, she can have at a desired point several months earlier than Russia could assemble there an approximately equal force. Although Russia is much stronger in western Asia than three years ago, she could muster there first only thirteen divisions, inclusive of reserve brigades; and to assemble these two or three months would be required. The bringing up of reserves from Europe over the one-track Siberian railway will not be as safe as before, for heretofore this road men will run parallel to the hostile front, and will no longer be menaced by inferior Tschukchee, but by well trained Chinese troops.

The formerly difficult situation of having to fight in one place and to cover a fortress hundreds of kilometers distant will be unchanged to-day, for, instead of Port Arthur, then protected by the Russian fleet—there would be Vladivostok, without naval support.

In addition to this we must consider that in spite of Japan's preparations, Russia, shaken to her innermost foundations, has done nothing in the Far East. We hear frequent talk of a second track on the Siberian railway, also of a railroad along the Amur River, which would certainly be of great strategic importance; the connecting of the mighty rivers is under discussion, but so far all remains in the old conditions. Completely occupied with her internal disturbances, Russia's government, without money, energy, and the right men, is unable to take up these matters. The reports we have about her Siberian troops are scarcely reassuring; they appear to be still infected with the mutinous spirit which caused the former risings, which were suppressed only with great difficulty.

Under these circumstances, we need not wonder if Russia looks with an anxious eye toward the Far East, for there her future in Asia is at stake. If beaten in the next struggle, which she fears now as greatly as she underestimated the last, she will, in spite of her vast territory in Asia, cease to be a great Asiatic power. The empire of the Cæsars shatters wisdom by trifling the gravity of its foreign policy to the Far East. Rightly, therefore, the idea gains ground in Russian military circles that it would be more judicious to employ the hundreds of millions which the building of a new fleet will absorb, to improve the communications with the far-away East. They are more needed there. Russia has no commerce worth mentioning, and she need not apprehend trouble in Europe; a fleet, therefore, is not an absolute necessity for her. She cannot hope to equal Japan on the ocean; her great men-of-war would probably serve only to increase the sea-power of her mighty opponent.

BY MOTOR-BOAT TO THE JAMESTOWN EXPOSITION

By A. S. ATKINSON

THE coming Jamestown Exposition, which will celebrate the 300th anniversary of the first permanent settlement of English-speaking people on the American continent, will be an event of unusual interest to owners of motor-boats. Besides the great naval and motor-boat parade and races on the waters of Hampton Roads, there will be offered an opportunity for motor-boat owners to explore some of the oldest and most picturesque scenes on the whole Atlantic coast. The exhibition is scheduled to open April 26, at the very beginning of the motor-boating season, and closes November 30, comprising practically the whole vacation period. It is estimated that owing to the unusual water facilities of the region, and the attractions presented by nearby scenes along the bays, rivers, sounds, and channels, the largest assemblage of motor-boats ever witnessed in this country will be gathered there next summer.

Fortunately for the motor-boat owners, this region is easily reached from the North by a series of canals, rivers, and bays. Thousands will undoubtedly take advantage of the occasion to explore for the first time the waters off the coast of Virginia, Maryland, and Delaware. To a great many who have not attempted to navigate the inland waterways from New York to Norfolk, the route to the Jamestown Exhibition is not only a novelty, but an extremely vague and indefinite thing. Few boats drawing only four or five feet of water the trip is eminently practicable, and one worthy of the attention of all who plan a visit to the exhibition.

It is a journey that carries one through some of the oldest and most picturesque parts of the country, and provides it made all along the way for rest, and for side runs to various harbors and rivers.

The total distance from New York to Norfolk by the inland waterway is about 332 miles. In a straight line it is much less. The passage down the 332 miles Bay of New York harbor and skirts the single body of water traversed in the Chesapeake Bay from Elk River down to Norfolk, which is approximately 150 miles. But the bay is one of those bodies of water which the navigator never tires of seeing. Whether one skirts the eastern or western shore or strikes out into the middle of the channel, the panorama is always a picturesque one.

The start is made from New York, with provisions and supplies to last only twenty-four hours, for at no time will the boat get far from towns and villages where all necessities can be purchased. One passes down the 332 miles Bay of New York harbor and skirts the north coast of Staten Island, passing through the Kill van Kull and Arthur Kill, around the Great Bed Light House, to the entrance of the Harlem River. On a clear day the smallest motor-boat can take the outside course through the Lower Bay, giving around Staten Island and Barren Bay. The railroad crosses Arthur Kill at Elizabethport, but there is an abundance of room on either side of the bridge pier, averaging over 200 feet on either side. (Continued on page 216.)

Miller HIGH LIFE

The Champagne of Bottle BEER

The main point of beer, like everything else, is **SUPERIORITY OF QUALITY**. Try a bottle of **HIGH LIFE** Beer and compare it with any other brand, and the question of Superiority and Quality will be settled for all time.

We use only the best materials money can buy.

We have spent fortunes to obtain, and are still spending large sums annually to maintain "**PERFECT PURITY**."

You will find **MILLER HIGH LIFE BEER** for sale at all first-class hotels and clubs and on dining cars and steamships.

HENRY C. BOTJER, Distributor, 353 Broadway, Long Island City, N. Y.

MILWAUKEE

His Excellency—the Governor

(Continued from page 158.)

and nobody, as though he had been barefooted, and that he felt rarer as if looking backward. "What a singularly unpleasant person!" thought he. Evidently the two men following the Governor thought so too. They were sleeping late in a carriage close at hand. With the rapid glance of professional acuteness, they turned simultaneously to note the fellow, but finding nothing questionable about him, hurried on to precede the Governor.

They were in a smart rubber-tired trap—the wheels leaped, the body wobbled, and they sat leaning forward on account of the rapid motion, and had soon left the Governor far behind in order not to annoy him with their dust.

"Who are those two?" he asked his aide, looking at him suspiciously from the corner of his eye, and the other answered carelessly, "Secret Police."

"What's that for?" asked the Governor, abruptly.

"I don't know," said Leo Andrejitch, excitedly; "that's the Pike's affair."

At the corner stood the beardless young Police Commissioner, strutting and admiring his shiny lustrous boots—the same one who had accompanied the Governor on his inspection of the hotels; and as they passed the police headquarters two mounted guards rode out from under the arch, their horses' heads pounding behind in the dust. Their faces beamed with officious zeal, and they both gazed steadily at the Governor's back. The aide pretended not to notice, but the Governor threw a lowering glance at the men, and then, with his white-gloved hands lightly elevated on his knees, he lost himself in gloomy thought.

The road to the villa cycled the outskirts of the town, through a ham called Kanat-najia Aller, where factory hands and their families lived, crowded by all sorts of miserable beings from the city—some in wretched tumble-down huts, and some in two-story brick tenements of barracklike uniformity. The Governor would gladly have turned if he had seen any one; but the street was empty as though it were late at night—even the children about. Only one little

lad appeared for a moment behind a fence, among the red leaves of a rose-tree, but even he did hastily from the trunk and hid in the gateway. Through the summer the alley had been crowded with children, and now, dirty pigs, but these were none left now—apparently they had all been eaten in the three weeks' famine.

Nothing even indirectly recalled the catastrophe, but the empty silence of the street, so indifferent to the Governor's passing, lay something heavy, sultry, brooding—and a light cloud of incense seemed to hang in the transparent air.

"Listen!" cried the Governor, suddenly grasping his companion's knee. "That man there—"

"What man?"

The Governor did not answer. Firmly clutching his knee, he gazed at the aide with a face like a barred and shuttered house whose doors and windows have suddenly been thrown open. Then he knit his heavy gray brows, deliberately turned his ponderous back, and gazed intently out of the carriage. The horses of the guard pounded down the road, and the dismal lonely lane, dark on the side, bright sunlight on the other, was also stark in dreary brevity.

Like a stampered herd the cottages huddled together, with their riddled roofs, their broken benches, and their overhanging windows, like graybeards' chin-thrust-out. Then came a row of houses with a broken fence and an old well, sunk about the rim and boarded over; then a row of great line-trees behind a high broken wall, and a stately old home that had drifted somehow to these wastes, but was now long since abandoned. Its shutters were closed, and on a sign could be read, "This House for Sale." Then beyond came cottages again, and a row of brick houses—large, bleak, and hideous, with deep-set, narrow windows. They were quite new—you could still see the calked plaster lying about, and the holes where the scaffolding had been; but they were already squalid and neglected. They looked like prisons, and life in such a place must be fully as sad, as hopeless, and as narrow as a life in jail!

There is the gateway to the open fields and the last little house of vegetation about it, no fence. It stands there leaning forward, walls and roof both, as

though some one had shoved it violently from behind—and neither in the windows nor anywhere about a single person visible. "After the fall rains you'll have trouble, Peter Ilyich, getting the carriage through here. I should think you'd literally sink in the mud!"

To Be Continued.

No Longer Cheap

"Twist all supplies there seems a race To reach the top-notch first: The cost of living grows apace, And now we have the worst."

It almost makes the nation weep, This rise of one and day.

For even *tell's* no longer cheap—

The Senate's raised its pay!

EARLE HOOKER KATON.

Amen

FEARON, aged five, had been naughty all day, and at night her mother suggested that she tell God she was sorry. Kneeling down, she recited with great emotion, "Oh, Lord, I hate to mention it!"

Couldn't Tell Which

SMITH had come home later than usual, and had ready a good explanation, but his wife gave him no chance, and immediately began to tell him what she thought of him. He reduced it patiently all evening, quietly read his paper, and went to bed. His wife was still talking.

When he was almost asleep he could hear her still scolding him unmercifully. He finally dropped off to sleep, and awoke, after a couple of hours, only to hear his wife remark:

"I hope all the married women don't have to put up with such conduct as this."

"Amek," said Smith, "are you talking again or yet?"

(Continued from page 268.)

inside route to Perth Amboy, where good anchorage is to be had, averages seventeen miles; the outside outcrop is a little longer. The channel is deep enough to accommodate almost any motor-boat, and is, indeed, ample enough for any craft that intends to make the run to Jamestown.

An afternoon start may bring one to Perth Amboy so that the night can be spent near the river's mouth, in preparation for an early morning trip, or New Brunswick can be reached before night if the start is made earlier. The distance by the Raritan River from Perth Amboy to New Brunswick is only eleven miles. The river is very tortuous, and its places are shallow depths, but, by following the channel, any motor-boat which draws not more than five feet of water can pass down the river without trouble. In places the channel has only six feet of water at low tide, but in the early spring of the year it is frequently deeper. When the tide is at the flood the lanes of the river are partly covered, and the greatest danger lies in the possibility of running too close to the marshy points and striking soft, muddy bottom. If the channel is followed so much mishap will occur. At low or half tide the channel is more distinctly marked out by the banks.

The river takes one to New Brunswick, where the old Delaware and Raritan Canal begins. It is a pleasant afternoon's trip of about 35 miles from New York to New Brunswick, and anchorage should be made for the night at this place. The canal itself is 44 miles in length, and it is only seven feet deep and has thirteen locks; it should be navigated by day, when there is ample time ahead. The locks are 25½ feet in width and 210 feet in length. All bridges and overhead parts of the lock are high enough to permit of boats to pass through without trouble. The stone bridge at New Brunswick has a clear height of 50 feet. A toll is collected at the entrance, and the company operating it is very arbitrary in changing the price at different seasons of the year, but it is not much for a motor-boat. Great speed is not allowed through the canal, but 4½ miles per hour is permitted, which should make the trip a ten-hour one, after allowing for delays at the locks. Notice that you wish to pass through a lock or a closed bridge can be given by a whistle, bell, or horn about 600 feet before it is reached.

The canal brings one out at Bordentown, below Trenton, on the Delaware River. The State of New Jersey is thus crossed in one day, passing through such old picturesque towns as New Brunswick, Bound Brook, Millstone, Kingston, Trenton, and many minor places. The most picturesque portion of the trip begins after one crosses the Delaware River. The next objective point is Delaware City, sixty miles down the river. The run is through such cities as Camden, Philadelphia, and Wilmington. There is, consequently, ample opportunity to stop and replenish. The trip down the Delaware River to the head of the bay of the same name can easily be made in a day, or, with a good swift motor-boat, in half a day.

There is no speed regulation on the river, and the full power of the engine can be stirred in driving the boat. The river is sufficiently wide at all points, and increases gradually until it broadens into a bay. The first part of the trip requires the greatest amount of care, for the channel from Bordentown to Kinkora Bar is only from 4 to 7½ feet in depth, although ample enough in all other respects. At low water many of the shoals are bare, showing to the navigator the course of the channel. At high water the shoals are covered, and in trying to make short cuts there is some danger of running aground. Such an accident is attended by no evil results, for the next tide will lift the boat above the shoals. If navigated at half tide the channel is easily found by the marshes which line either bank.

Delaware City is on the western shore of the river about twenty miles below Wilmington, and marks the beginning of the Chesapeake and Delaware Canal. This canal, like the first across New Jersey, is better navigated in the daytime when there is no rush to make speed. It is only 14 miles long, and has only three locks, while the depth is nine feet. The locks are 220 feet long and 24 feet wide. Consequently the motor-boat need be proceeding steadily and quickly through it. The speed limit is 4½ miles, or three hours for the entire trip. Tolls are collected at the entrance, and a fine of \$20 is imposed for exceeding the speed limit. It is therefore wise to keep within the limits and make the trip in four hours, rather than risk the danger of delay and fine. A close watch is kept upon motor boats to see that they do not run too fast through the canal, and many a motor boat owner has been held up for supposed infraction of the speed laws. When entering the

canal and paying the toll a pass bill is given to the navigator, and this must be shown at each lock before entering.

Once through this canal the motor-boat comes out upon Back Creek. This is a short waterway connecting the canal with Chesapeake City on Elk River, a tributary of Chesapeake Bay. Back Creek is only a trifle over three miles in length, but it is very crooked. The average width of the creek is about 100 feet, but in places it is less. The stream is unusually wide, ranging from 120 to 400 feet, but the channel is often just broad enough to permit two boats to pass comfortably. There is no good anchorage place on it, and the trip should be made without stopping. No danger of motor-boat hire exists on the Creek in this short run, and they may be picked up for a few dollars.

Elk River is next reached, and the channel here is deep and wide enough for all purposes. The run to Turkey Point on the Chesapeake is only eight miles, and it can be covered in a fair speed. The broadening waters of the Chesapeake then leave the navigator, and the trip of about 102 miles to Jamestown can be made to suit the convenience of one. Good harbors are abundant on both sides of Chesapeake Bay, and they increase in frequency as the run is made. It is hardly profitable to attempt to reach Jamestown or Norfolk in one day from Turkey Point, even in a swift motor-boat. The channel is somewhat crooked in places, and shoals abound. Running at great speed may therefore cause an accident when the goal is in sight.

A good run for one day is to Annapolis, where one can find good anchorage and good docks. A stop for a day or two at this point is well worth while, and a visit to the Naval Academy will diversify the trip. From this point south the channel is wide and deep, and the sea on a windy day may prove somewhat heavy, but on quiet days it is as calm as a mill-pond.

All the way down the Chesapeake the scenery is charming. Small islands, bays, and marshes, interspersed here and there with towns and cities, spread in an endless vista before the eye. The fishing and shooting are good at nearly all the points. Little coves abound on the east coast, where one can run in for the night and camp on clear sandy beaches to enjoy a rest.

Motor-boating on the Chesapeake is enjoyed by thousands today. In many more who do not know of these waters will extend their sphere of pleasures by spending a month or more in that region. The Jamestown Exhibition is, after all, only a side issue, for the motor-boat owner finds his greatest delight in exploring new waters and experiencing a change of scenery, which was not possible before his craft reached its present state of efficiency. Following the regular channels of travel may have its attractions for some, but the owner of a craft which can make independent trips in new waters away from the beaten track is never so happy as when exploring little-known corners of the coast. The climate of the Virginia and Delaware coasts is entirely new to most of us. Little coves abound on the east coast, where one can run in for the night and camp on clear sandy beaches to enjoy a rest.

There are a few provisions required to make the trip successful. Besides the ordinary equipment for a trip, it would be advisable to take a tent for camping on the beaches. Within a few hours' run of the exhibition there are numerous beaches and stretches of wooded land where one can establish a camp of his own. The run back and forth to the exhibition will then afford pleasure of an unusual nature; while the owner and his party will not be cramped for accommodations and pay exceedingly high living rates. An evening should be provided for the boat, to ward off the hot rays of the sun, for on such a wide expanse of southern waters the glare of the sun at midday is sometimes uncomfortable.

In addition to this, a good set of charts should be laid in. All of these waters are charted accurately, and by following them there is no trouble in navigating both the rivers and the bays. The total cost of charts describing the different bodies of water mentioned can be secured for about eight or ten dollars. The cost of the charts covering the whole distance from New York to Florida is only a trifle over \$13. Besides a complete description of the coast, the charts give a list of the harbors, bays, shoals, and depths of the channels. Large-scale charts can be obtained for any particular section, so that one may feel fairly confident in navigating the whole of Chesapeake Bay, or the Delaware, if it is desirable to take a run down the coast of the western shore. It is a trip that will be long remembered, and the chief thing will be, not that you visited the Jamestown Exhibition, but that you crossed the States of New Jersey, Maryland, and Delaware in your own motor-boat.

Ahead of the Game

A WELL-KNOWN attorney of New York tells the following anecdote of a prominent physician of the same city, who was compelled, a short time ago, to go to a sanatorium up in Jamestown for a summer rest. While there his usual morning walk through the grounds he was met by an old Yankee minister, who was noted for his vulgar curiosity, being more interested in other people's affairs than in his own, and the following conversation took place:

"How are you this morning?" inquired the minister.

"Very well," replied the physician.

"What ails you?" asked the Yankee.

"Nothing much," said the doctor.

"Well, you must have something the matter with you or you would not be here," returned the old Yankee.

The physician, becoming annoyed by the persistent questioning of the minister, walked up close to him and, grasping his coat with both hands, said in a very grave and impressive voice: "I'm suffering from a very strange and mysterious ailment; it is supposed to have a keeper who follows me with a bucket of water and a sponge; but this morning I managed to escape him for a few moments."

At this point the old minister, very much frightened, endeavored in vain to escape, but before doing so he murmured, "What does the keeper look like?"

"He is required to erase what I write on the walls, fences, and buildings," answered the doctor.

"What do you write?"

"I write 'Hell and Damnation,'" replied the physician; "and the best of it all is I am one hell and two damnations ahead of the keeper."

The old minister, now shocked as well as thoroughly frightened, escaped from the supposed lunatic, and never again entered any of the patients in the sanatorium.

In Love and War

By David Starr Jordan

This is a true story, and I tell all that I know of it. And being wholly true, it is a very short story and very sad. It was in 1861, eleven years after the close of the civil war. I had taken the train at Louisville, on that branch of the Louisville and Nashville Railroad which then formed its terminus at Livingston, in Rock Castle County, in Kentucky. A lady shared my train as far as Crab Orchard Springs. She was calmly and finely dressed, a condition not uncommon in Kentucky, and withal modest; and in those days that too was common North and South.

Before we had reached Crab Orchard she had told me her story, and this it is, as well as I can recall it.

She was in Kentucky on a visit to kin-folk at Crab Orchard. Her home was on a plantation in the Tennessee bottoms not far from the town of Corinth in Mississippi. In the days when the struggles of the war centered about Corinth and which this plantation was between the Confederate and Union lines, more often just inside the latter. She was a Southern woman, with all the intensity of feeling which this implied in better times, and her two brothers were officers in the Confederate army. Though she had no love for the war, yet a soldier is a soldier, and a man is a man. There was a lieutenant of the Federal scouts, he may have been a sergeant—but that does not matter—who had charmed her into a sort of friendship by his bright wit and his cheerful humor. Somewhere in Ohio he claimed as his home, and when stationed at the plantation he and his men had shown a degree of consideration and courtesy not always seen among soldiers. Moreover, she had let him tell something of his life at home. He spoke of his sister and his mother, and there were times when she almost forgot the hated army of invaders to which he belonged. But not for long. And one night—for the plantation was between the lines—a group of Confederate officers came in, and she heard them tell of a scheme to cut off this Ohio squad and the young fellow in command of it. They were sure that they knew how they could do it.

The next day the boy rode up to the plantation again. He brought his sister's picture and the mother's too, and the picture of the farmhouse in Ohio. Should she put him on his guard? Just a word would be enough. Should she be true to herself as a woman, or should she be true to the cause of her brothers, in Mississippi, to the South? And at last the problem settled itself, for the boy rode away unharmed. And when, after the little skirmish, they brought him back to the house again, the pictures were stained with blood.

These pictures she still holds. And this was the question she asked me—the question she has doubtless asked of many others, for all this had happened thirteen years before. Did I do right? What should I have done? What could I have done? And to this question there can be no answer, in love and war there is no standard rule of ethics. The story of war is written in the blood of men and the tears of women.

The Chilling Reply

Arriving in a Washington hotel light, there are times when a lawyer regrets the use of an illustration which a moment before has appeared especially felicitous.

"The argument of my learned and brilliant colleague," said counsel for the plain-railway company, "is like the story of a fellow outside—a fellow outside the law and justice."—It is scattered here, there, and everywhere.

Whereupon opposing counsel improved his opportunity.

"All I can say," he said, "is that the gentleman who has been my opponent in the case now falls into the point to which I have myself a considerable extent, it has covered all the ground in a very short time."

Conservative Investors
Bank by Mail

Ⓐ growing number of business men throughout the United States are looking upon a

4 per cent. savings deposit

in a strong bank like The Cleveland Trust Company as the best form of a conservative investment. The income is assured and the principal available at all times. It is also adaptable to any amount from one dollar to ten thousand dollars.

Ⓒ The Cleveland Trust Company is admittedly one of the strongest savings banks in this country. At present more than 65,000 individuals keep their bank accounts here.

Fooled 'Em, Anyway

RECENTLY a member of Congress from Missouri came racing down the iron steps which led to the train shed of one of the depots in Washington, just as the train was pulling out.

The member was stout and perspiring, and his eyes were filled with humility, for he is a convert. Everybody got out of his way as he bowed the rear car down the long platform, some shouting advice and more or less pleasant comment after him. Some of the most inclined persons offered him a hand to help him over the side of the train, while others laughed at his grim dejection.

The member caught the train, being held up on the platform by a trainman, with-out the aid of a hand. He shook his fist at the cheering crowd behind him, and went inside the car with the ill-fated sense of being "run out."

It was only when the conductor came around that he learned that he was on a change express. Instead of a local accommodation. However, he accepted the situation meekly, observing:

"There's one conductor. Those idiots in the station will never know. They think I caught the right train."

The All-absorbing Problem

"Nervous discovered why the apple fell down, did he not?"

"He did."

"Well, then, it remains for some equally brilliant mind to discover why it is that people fall to those higher up."

Honest to the Core

A SWEET, downy old West had for a long time a Chief of Police, one Alf Church, noted for his kindness and honesty. One day a gaffer went to him for information about a certain Joe White, who had applied for credit and a look at his store, and the following dialogue ensued:

"Good morning," Mr. Church.

"Morning."

"Is your name Joe White?"

"Yes."

"What kind of a fellow is he?"

"Pretty fair."

"Is he honest?"

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

"Honest? I should say so. Born good."

LIQUEUR
Pères Chartreux
—GREEN AND YELLOW—

This famous cordon, now made at Tarragona, Spain, was for centuries distilled by the Cistercian Monks (Pères Chartreux) at the Monastery of La Grande Chartreuse, France, and known throughout the world as Chartreuse; the above can represents the bottle and label employed in the putting up of the article since the Monks' expulsion from France, and it is now known as Liqueur Pères Chartreux (the Monks, however, still retain the right to use the old bottle, and label as well), distilled by the same order of Monks who have securely guarded the secret of its manufacture for hundreds of years and who also possess a knowledge of the elements of this delicious liqueur.

At the place where this liquor is made, in France, Italy, Spain, and elsewhere, it is sold in bulk, and is not bottled for exportation.

The Americanism of Washington

By Henry Van Dyke

This little volume not only makes clear what our national spirit really is, but it carries a patriotic and inspiring message to all whole-hearted and high-minded men and women. Dr. Van Dyke sets forth the ideals of Americanism as expressed by Washington, and answers those critics who have been disposed to deny Washington the title of "American."

Of Their Bearskins

ANNE CHAMBER tells the following to illustrate that a Celt is a Celt in Scotland as well as in Ireland:

In a winter-parched is a small church in Glasgow, the pastor, after inquiring about donations, said, by way of remark: "Do you think that Adam and Eve went about the Garden of Eden with their hands in their pockets?"

Lo, the New Indian!

It was a man tells of an amusing incident in connection with an exposition held in the State, where one of the attractions was the Indian Department, where the red men in their robes and moccasins, their hair in their locks and their hands in their pockets.

After one of these exhibitions the last of the Indian girl undertook to talk to a young Indian boy. "Hear much fight," she said.

The man smiled grimly, drew his rifle, and said:

"Yes, this is indeed a great Exposition. It is a very fine one, and I am very glad to see you here. May I presume to ask what it is that I have the honor to address?"

The Indian girl had been talking to a white graduate.

Side-Lights on Astronomy

By
SIMON NEWCOMB

General readers who are interested in astronomy but not in its technicalities will find in Professor Newcomb's volume interesting chapters on the problems that astronomers are facing to-day: How large is the universe? Has it definite bounds? How long will it endure? These and kindred questions are discussed in the light of the most recent knowledge.

BY THE LIGHT OF THE SOUL

By Mary E. Wilkins Freeman

A NEW novel by Mary E. Wilkins Freeman needs no further word of recommendation. "By the Light of the Soul" shows this popular author in her chosen field of fiction, and at her best. A delightful heroine of New England ancestry; an unusual plot which hinges on a youthful marriage that is never revealed; scenes of village life—pathos and humor—all make up a story of unflagging interest that will add to Mary E. Wilkins' enduring popularity.

Are You Opinionated ?

You ought to be.
Especially about flour.
Many blame the oven-
Many blame the cook-
All the time it's apt
to be the flour.
Give a carpenter rusty nails-
dull saws - nicked chisels!
Ask him for good work !
It's just as absurd to
expect good work of a
cook if she has poor flour.
Give her GOLD MEDAL FLOUR.
Her delicious bread and
biscuit will be ample reward.

COMMENT

Japan and the School Question

THE prophets of ill are continuing their predictions of war between Japan and the United States. There seems, however, to be a pretty general ignoring of the facts in the controversy, while there is an apparent approach of the spirit of reasonableness, tentative, perhaps, towards the minds of the San Francisco magnates. Mayor SCHMITZ appeared in Washington last week at the head of a delegation. If it be true, as he says, that the San Francisco School Board adopts his advice or obeys his directions, he may be potent for good; but the Mayor wants a bargain to which the Japanese object. He announced, on his departure from San Francisco, that he would be willing to have the order of the school board rescinded if the general government would make a treaty with Japan providing that no Japanese coolies shall for the future be admitted to this country. The Japanese, on the other hand, say that they desire the matter settled on their treaty rights, and not complicated with another question. There has been a prediction of war by Senator PENNAC, of California, and a withdrawal by him of the unsettling prediction. English people fear war and its complications for them. But Viscount ITOHARA, Japan's Foreign Minister, and Baron KASER, with whom and whose attitude we are familiar, say that there will be no war between the United States and Japan. Nor, for many reasons, is war likely over the school incident, although Japan, as has been asserted with some authority, is likely to prepare for one, because the people of the Pacific coast are intent upon wounding Japanese pride to the fighting-point.

Who Is Responsible?

The President has had a "confidential" talk with the members of the California delegation in Congress, and, as usual, his confidence has been betrayed. Two members of the delegation talked to the newspapers. It seems that the President informed the members of the delegation that the situation is dangerous; that the Japanese are greatly annoyed by the attitude and talk of the California people; and that if the Californians do not desist from their conduct towards and their speech about the Japanese, war is likely to come. The school question is but a phase of the general situation. If the President has been correctly betrayed or reported, he was not the kind of talk in which, at such a crisis as he described, a President of the United States should indulge. Our relations with Japan or with any other foreign power, so far as we are concerned, are in the control of the Federal government. We can have war or peace with Japan as the nation determines. If Japan will go to war with the United States because the local government of San Francisco denies to her children privileges promised them by treaty, the United States may enforce these treaty rights (although it is doubtful if

they exist), as it is now justly attempting to do, notwithstanding the city of San Francisco, or the State of California, or the laborations of the Pacific coast. If Japan will fight if a Japanese exclusion act is passed, it is the Federal government only which has the power to enact such a law. If these, then, be the cause of war, the United States alone may invite the conflict by its failure to do its duty in the one case, or by its own perpetration of the wrong in the other case. The Federal government has full and complete power over all foreign relations, and a State cannot stand in its way; it will not be permitted to stand in its way unless a fear of the possible loss of votes have too much influence. May the Federal government take away the undoubted police powers of a State in order to court local popularity; and may it, for the same reason, neglect its duty—a duty which the States have assigned to it? It may do both, it is true, but in both instances it would violate its duty. The question is not whether California shall drive us into war, notwithstanding our desire for peace, but whether we shall permit it or any other State to drive us into this or any other contest.

Some More Paternalism

What power has the President to accept or reject the proposed Constitution of a Territory seeking admission as a State? This question is suggested by facts and by rumors and guesses, some of which are more and some of them less authenticated. They relate to the work of the Constitutional Convention of the proposed new State of Oklahoma which is now in session. It is understood that President ROOSEVELT has warned the convention that he will reject any Constitution adopted by the State which forbids the employment of armed men by railroads in strike times. This warning is said to have been followed by a request from the convention, asking the President what he will do if they put a "Jim Crow" clause in. There seems to be an extraordinary confusion of the public mind, so far as the public mind has paid attention to the subject. Senators of the United States are reported as saying that the President may only reject the Constitution if it fails to provide for a republican form of government, or contains provisions that are contrary to the Federal Constitution. May he reject it then? Has he any sole power in the premises? Is he charged with the duties of creating new States? It is asserted that Congress may give him the power, authorizing him to accept or reject the Constitution, and, therefore, to accept or reject the new State. But even if Congress has done this, has it the power to authorize the President to exercise the whole political power, executive and legislative?

The Power to Admit New States

The Constitution provides as follows: "New States may be admitted into the Union." It may be said that Congress does not delegate its legislative power by authorizing the President to declare that a State shall be admitted on the performance of a certain condition; but that condition must be very clearly defined if it is to escape the general rule. Discretion must not be lodged with the President. He must be authorized, in effect, to declare that a certain law, the law of admission, shall go into effect when a designated fact shall occur—a fact about which there is no room for dispute. Here the claim is that the President may intervene in the formation of the Constitution, may compel it to be enacted to please him. This claim and the effort which the President is making is paternalism run mad. It is true that under the decisions of the United States Supreme Court it is for the political power to determine whether a State possesses a republican form of government, but the political power consists of the executive and legislative departments together, while it was never intended that the right to guarantee a republican form of government should include the right to frame the Constitution of the new State. In this Oklahoma case the President is, indeed, playing the part of the father of his people. He will not permit Oklahoma to perfect its Statehood unless its people agree to govern themselves as he commands or directs. They may not have the fundamental laws which they desire; they must have those laws which he desires. And to compel them he threatens to exercise a power which he does not possess, and which Congress cannot grant to him. Congress itself has never sought to interfere with the rights of a people as the President is now seeking to interfere with the rights of the people of

Oklahoma. It has been the custom to admit our States with all the rights of older States; but now the President proposes to deny to Oklahoma the right to have in its Constitution a provision that is to be found in several existing State constitutions. How futile it is will be seen on reflection; for the Constitution which the President may compel this year can be changed by amendment or replaced by a new Constitution after the State has been admitted.

Senator Beveridge's Child-labor Bill

The most that seems likely at this writing to be accomplished by Senator Beveridge's child-labor bill is, possibly, an examination by Federal agents of some sort into the conditions of child labor in the several States, and a subsequent report. If by that means the evils and abuses of child labor can be brought home to people who do not know about them now, it will be a good result. Senator Beveridge's bill undertakes to prohibit the transportation from State to State of products of mines, factories, and sweat-shops, into the making of which the labor of children under fourteen years old has entered. It is, therefore, an attempt to authorize the national government to regulate the employment of children in the several States; a duty that heretofore has belonged to the States and, like other State duties, has been imperfectly performed. The Senator made a long speech in support of his bill, in which he set forth that the employment of young children in mills and mines was a very great evil, which is true; that the States cannot stop it, which is debatable; that the interstate-commerce clause in the Constitution could be stretched to cover his bill and make it constitutional. As to this last contention he may be right. We do not yet know the limits to which the courts will permit the power over interstate commerce to be stretched, but if it will cover this bill of Mr. Beveridge's, it will cover regulation of almost any other details of production that can be suggested. To place the care of children in the custody of the Federal government was so far from the intention of the fathers that we very much doubt whether Mr. Beveridge's argument in favor of the constitutionality of his bill would prove convincing in court. Nevertheless, let that pass. (Constitutional or not, the bill ought not to pass, because it extends the Federal powers unwarrantably, and because it would probably do more harm than good to the admirable cause that it undertakes to benefit.)

Mr. Edgar Murphy's Objections

All decent people want to protect children from abuse, and such work as young boys do in the coal-breakers, and as young children in considerable numbers still do in the cotton-mills of the South, and in New Jersey glass-factories, and in sweat-shops and other places of employment in nearly all the States, is an abuse that cries to Heaven to be abated. A man who has worked long and intelligently and effectively to abate it is EDGAR GARNER MURPHY, of Alabama. He was the first chairman of the Alabama Child Labor Committee, and has been called "the father and founder" of the National Child Labor Committee, from which he withdrew because of its endorsement of the Beveridge bill. Mr. Murphy does not believe in Mr. Beveridge's short cut to a healthy childhood. He believes in State restriction of child labor, but not in Federal restriction. He says that already the whole country is moving right in the matter of child labor, and that the Beveridge bill was due not to prevailing apathy, but to the fact that already the public mind was so much stirred up on the subject, and that those who have been struggling for State action have made so much progress. The protection of children, he says, depends on local public opinion. In order to pass a State law that has to be aroused. Unless it is aroused Federal enactments are impotent. Mr. Murphy deprecates division of responsibility for the welfare of children between the State and Federal governments. Mr. Beveridge's bill applies merely to children under fourteen. It is not adequate. It makes no provision for its own enforcement—can make none. It can do nothing about the hours of labor for older children or for such matters as factory inspection. It divides responsibility, makes a partition among the people who are working against child labor, leaves the job less than half done, and checks the work. Everybody who is interested in Mr. Beveridge's bill, including the Senator himself, should read Mr. Murphy's argument

against it. It goes to the root of the matter, and does it dispassionately and with a statesmanlike thoroughness that is convincing. The interests of the States and the interests of the children are in the same parcel, and we are glad to be able to feel some confidence that Senator Beveridge—however benevolent his intentions may be—will not succeed in separating them.

The War on the Railroads

W. C. BROWN, the senior vice-president of the New York Central lines, has written a letter to some one who is described as "a friend in Washington" that commands attention. The letter deals strongly and lucidly with the present condition of the war on corporations. In one aspect this war is like physical contests between nations; it may have been begun from righteous motives, but it has, incidentally it appears, its attendant evils. Mr. Brown states, what all well-informed persons know, that one of these attendant evils is the unsettling of confidence in the future of railroads. Investors—and Mr. Brown, notwithstanding his official position in the Central lines, is one of these—are parting with their railroad shares. The falling prices of such shares—some six-per-cent, stocks now selling at the price which they brought when they were five-per-cent, stocks—tells the reason why. The spirit of distrust, according to this authority, is growing rapidly. This spirit, bred by a constant war against the corporations, has been fostered by an unrestrained war which knows no bounds, and which, consciously or unconsciously, recognizes no good in railroad corporations, whatever its leaders and inspirers say to the contrary. This with the threats of future and more radical assaults on the roads must have its effects, and one of these will naturally be to prevent the great extension of mileage which Mr. HULL has said is demanded by reason of the present inadequacy of existing roads to meet the growing demands of business, or, indeed, any extension whatever. The present roads will be maintained, but it is possible that improvements will stop until there is a cessation of the general and indiscriminate war upon them which is now carried on. Mr. Brown's letter is discouraging, and must awaken apprehension, for there are many facts which sustain both his statement of facts and his fears.

A Grafters' Game

It is one of our human misfortunes that vice invariably seeks the protection and concealment of the garb of virtue. Holy wars, fine out of mind, have bred greedy sutlers, camp-followers, shoddy contractors—the whole nauseous horde of men whose noisy patriotism is assumed for predatory purposes. It is characteristic of this breed that they denounce, discourage, and even silence those who try to point out their hypocrisy and other iniquities, and they often succeed in injuring modest virtue with the venom of the warm-hearted multitude, who are sometimes deceived, at least temporarily, into acceptance of rectitude for the true article. And so it is with moral movements, especially as moral movements are very likely to run into extravagances which frequently cause such unhappy rebounds or reactions. There is nothing that a born grafter likes better than to roll up his eyes and follow after the moral leader who is making war upon heaped-up capital that seems to him to be doing wrong. The grafter also becomes furious at corporate wickedness, and nine times out of ten is the one who rails the "good trusts," because the fervor of the reformer of "good motives" is so intense that it causes people to smile at the suggestion that there can be any such thing as good trusts, or good railroads, or good corporations. The phenomenal activity against railroads of some of the politicians who were willing to fatten on them when they were not so unpopular ought to teach us all the value of self-restraint and caution in attacking what may easily be the prey of the blackmailer, especially when the object of attack, the prey of the plunderer, has been, and is, of such vital importance as the railroads.

The Dago Doctrine and Disarmament

It is a gratifying bit of news that while the Dago doctrine and disarmament are questions that are not to be in the programme of the coming Hague conference, they will be considered, and at the instance of this government. It will be, perhaps, startling news to a good many people that Mr.

ROOSEVELT not long since wrote to a distinguished man that some day or other, or words to that effect, he would urge disarmament. Perhaps this, or when the conference meets, is to be the propitious time. At any rate, there will be a general consensus of opinion in this country that the TASON doctrine is not only one which we should have discussed, but that it should be discussed vigorously, and that it, or something very near akin to it, by becoming a part of international law, would mark one more progressive step in civilization.

Mr. Lodge and San Domingo

The President of the United States ought not to stand in need of constant defence, but Senator LODGE thinks that Mr. ROOSEVELT does, and it is to be presumed that the two together know what they think they need in their own behalf. But constant and reiterated defences of the President are not reassuring. Among other defences is that made by Senator LODGE on the subject of the San Domingo treaty. That treaty, as we all know and as Senator LODGE admitted, is hanging fire in the Senate. Nevertheless it is, at least in part, being carried out by the President. The President, says Mr. LODGE, is not usurping powers that are not his, has not, in a word, made a treaty with San Domingo, because he has not entered into an agreement—into a formal agreement, we presume he means; but if no executory contract has been made, he is acting under an executed contract, which, so far as the Constitution is concerned, amounts to the same thing. The President is, in fact and in law, employing powers and forces of the United States in the furtherance of a real, if unwritten and unconfirmed, agreement with foreign powers. Such an agreement requires for its validity the ratification of the Senate, and this requirement cannot be satisfied by evasive technicalities. The treaty should be ratified, or the President should withdraw from his participation in the pecuniary complications of San Domingo. Mr. LODGE cannot help his friend by defences which suggest arguments and practices that are not considered high-minded in petty courts.

Help for the Starving Chinese

The famine in China is due to excessive rains continuing for nearly a hundred days, and affecting a low-lying area that covers about 50,000 square miles. In this district, with an estimated population of ten millions, the crops have failed partly or wholly, and there will not be another crop until May or June. Mr. LITTLE, of the Central China Relief Fund, estimated in a letter to the President, dated December 21, that at least a million persons must be fed from day to day until next summer if they are to be kept alive. A Washington despatch, dated January 27, quotes Consul HAYES at Nanking as saying that the famine is much worse than any known in that part of China since 1878. Consul-General ROBERTS, of Shanghai, bears like testimony, saying that newspaper reports are sustained by investigations made by American naval officers, and that his own inquiries, made through private sources, give basis for the opinion that by March 1 the famine will be quite as severe as that of 1878, by which ten million lives were lost. Dr. WOOD, of the Southern Presbyterian Mission at Hwai-an-fa, estimates that of ten million people affected by the famine four millions are starving. Consul-General ROBERTS is acting as representative of the American Red Cross. The readiest way for our people to help these sufferers by famine is through the Red Cross, of the New York State branch of which Mr. JACOB H. SCHUR is treasurer. Money sent to him at 300 Fifth Avenue will be applied where the need is greatest.

Give Back the Boxer Indemnity Now

The Springfield Republican suggests that this is a particularly suitable time to return our unused residue of the Boxer indemnity of 1901. Our share of that exaction was \$24,168,357. Payment of legitimate claims of American citizens for damages took about two millions, and we have about \$22,000,000 left, of which part is now in the Treasury, and the rest is being paid by instalments. Secretary HAY favored returning this money to China, and that will probably be done. Whether money paid back to the Chinese government would help these starving people we do not know, but if it would, this seems a first-rate time to turn over whatever Boxer money there may be in our Treasury.

A Service-pension Law

The Senate has passed a service-pension bill, and the House of Representatives has agreed to it by a vote of 196 to 29. The bill provides for the payment of pensions to all survivors of the civil war and the Mexican war, whether they are disabled or not, or whether they were wounded or not. This bill contemplates the application to the veterans of those two wars of a policy that has been applied to the veterans of the Revolution and the war of 1812. It will add to the annual pension expenditures \$10,000,000 or \$15,000,000. This will gradually diminish and finally cease altogether. Opposition to the service pension, once so vigorous, has disappeared. The question has been settled. The political fight is over. The veterans who are to get the money will average sixty-five years old, and the general feeling is to let them have it. There has been great extravagance in pensions, and a good deal of fraud, some of it most contemptible, but evidently nothing is to be saved or gained by opposition now that the old soldier is indeed so old.

The President and the Subsidy

The President has been so much interested in the subsidy bill which was substituted by the House committee for the Senate bill that he addressed to Congress a special message on the subject. Cautiously employed, the special message on a specific topic is of much value in enforcing a President's or a Governor's views. It seems, however, necessary to correct a misapprehension into which the President unhappily has fallen. He speaks of this bill as a measure that contemplates the building up of the ocean-carrying service. Following the arguments of the advocates of a subsidy for such a service, the bill, if enacted into law, will build up ships that will benefit those who pay freight charges—that is, those who transport goods—by giving to them an opportunity to pay the charges to Americans instead of to Englishmen or Germans or Scandinavians. The bill, however, is nothing of the kind. It is not in the interest of freighters or of commerce, but in the interest of "greyhounds," except as it may eventually help freighters by getting the now unsympathetic American mind accustomed to the idea of subsidies.

Goldwin Smith favors Drift

Professor GOLDWIN SMITH's satisfaction in hearing that military drill is not to be abolished at West Point is in interesting contrast to the protest of the fourteen worthies against the army and navy show at the Jamestown Exposition.

The Qualities of Sake

In the *Life and Letters of Lafcadio Hearn* one will find some instructive remarks about sake, the "rice wine" of the Japanese. It is a cheap intoxicant, the best costing about \$3.50 a barrel. It is also a quick intoxicant. In the language of the prudent man who wants much for his money the "drunk comes quick." But what would not please him who wants to forget the cares of the world as cheaply, as soon, and for as long a time as possible, the drunk quickly vanishes. Every one at a banquet is expected to become exhilarated, and to drink some forty or fifty cups of the seductive beverage, and in doing so, to become happier. A Japanese gentleman with a stout head will consume a quart and a half or two quarts without reaching the staggering stage. These introductions to the convivial habits of a nation are entertaining, but sake is not morally any better than gin or whiskey. Intoxication has a single moment, apparently, no matter what the liquor, when the victim is hilariously departing into the pains and penalties of obliviousness and of wracking nerves. Our own brutal drink will, for an instant, make a man feel that he is rich and that he owns the world; in Japan they describe this state in a poem which was once recited by a member of the Japanese legation to a company in Washington. The verses tell of the beautiful visions of the gentleman who is on his way to intoxicated sleep, and culminates in the assertion that "even the voices of the unfortunate creditors bawling at the front door sound like the far-off songs of a nightingale." In a word, sake, like whiskey, will procure a deluded debtor a momentary respite for his annual bills, but the bills return to plague him with ten-fold violence after the sleep is over. One of the views of the Japanese drink is, according to Mr. Hearn, that there is no remorse-compelling headache after it.

Japan, the United States, and Great Britain

Fifteen and German newspapers seem for a time to have accepted at its face value the assertion made by an ex-officer of the United States army that he had seen the latest note presented by Viscount Aoki, Japanese ambassador at Washington, to our State Department, and that the document embodied a virtual ultimatum. Evidently, however, the ex-army officer's conception of what constitutes an ultimatum is vague and incorrect. An ultimatum, properly defined, is understood to convey the implication that, if it is rejected, negotiations will cease and a recourse to coercive measures may be looked for. That no such intimation has been received by our State Department is evident from the declaration made in Washington, on February 2, by an official who, being described as a man of world-wide reputation, good sense, and commanding statesmanship, may probably be identified with Secretary Root. This official is credited with saying that the question whether eighty or ninety Japanese boys and girls shall attend the public schools in California, to which the children of German, English, and Italian parents are admitted, is not regarded by the Japanese government as a cause for war, and the Roosevelt administration is satisfied that it can be adjusted without difficulty, provided both of the nations concerned preserve good-humor. No unseasonable significance need be attached to the statement said to have been made in the Tokio House of Representatives by Viscount HAYASHI, Foreign Minister of the Japanese Empire, to the effect that, if the resignation of Japanese pupils to a separate school in San Francisco should be upheld by a Federal court, the anti-Japanese movement in California would be considered to represent the opinion of the whole United States, in which event the matter would require diplomatic adjustment. Of course the matter would require adjustment with our Federal government, since not California, but the United States as a whole, is a party to the treaty with Japan. It does not follow that an adjustment could not easily be reached, provided negotiations were entered upon in an amiable spirit on both sides. An obvious mode of adjustment would be for our Federal government to say that, while our Constitution might be held not to permit it to regulate the public schools of a constituent State, it would cordially welcome Japanese pupils to the public schools of the District of Columbia, over which it has absolute control. Moreover, as the people of California are increasingly more about the exclusion of Japanese labor than about the segregation of Japanese pupils in their public schools, they would show a lack of common sense if they were unwilling to give way upon the minor point in order to gain a point of paramount importance. That the San Francisco affair will have no serious consequences is the conviction of Baron KATERO, a distinguished member of the Japanese House of Peers, who, it may be remembered, was sent by the "Elder Statesmen" to the United States during the Far Eastern war, to study our political and economic conditions. Baron KATERO declares that not a single soul in Japan has ever believed that the San Francisco incident would endanger the friendship of the two nations concerned. On the contrary, he holds that the affair, disagreeable and regrettable as it is, has served the purpose of demonstrating to the world how deep-rooted is the friendship between Japan and the United States. His view of the matter is shared by the Tokio Times, which, in its issue of December 27, showed itself thoroughly alive to the fact that, outside of California, and possibly a few other States on the Pacific slope, the American people have no objection to admitting Japanese to their public schools, or to according to them any other privileges of the most favored nation. Therefore, the newspaper concludes, Japanese should feel only grateful to the President and to that majority of Americans of whose good-will they are assured.

At the same time, since embarkers are regarded to see more of the game than the players, let us note what German, Russian, and Frenchmen have lately had to say. The *Vossische Zeitung*, one of the most influential of Berlin newspapers, says that from the first it received sceptically the reassuring reports from the Washington administration, and adds that, in its judgment, President Roosevelt cannot but reckon on the possibility of war. It adds that, in its judgment, the question as to who shall rule the Pacific Ocean cannot be solved by conferences and diplomatic notes. The *National Zeitung* calls the Californians narrow-minded and fatalistic, and expresses the fear that the power of the working class in that State—it dominates the municipal government of San Francisco and practically controls the State Legislature—will drive the United States into war. The *Kreuz Zeitung* warns us that war with Japan will be quite another thing than war with Spain, and advises us to get the California school ordinance revoked. The *Tagblatt* regards the San Francisco incident as the forerunner of serious trouble, and predicts that the yellow peril is about to cause the most stupendous conflict of modern times. According to a telegram from St. Petersburg, a diplomatic and anti-American who took part in the Portsmouth conference—the description indicates Count Witte—has intimated a belief that, unless America should make immediate preparation, war is

likely to become imminent. It may be taken for granted, he says, that Japan's desire for further conquest would follow the line of least resistance, which, obviously, would point to the Philippines and the Hawaiian Islands. But, while he assumed that Japan would win the first round, he was confident that no Asiatic nation could long cope with American wealth. He ended with expressing the conviction that, whether a war between Japan and the United States would soon break out depended on the attitude of Great Britain. In Paris, the *Petit Journal*, which has a commissioner in San Francisco, is inclined to think that President Roosevelt, in his view of the San Francisco incident, and of race questions in general, does not represent the majority of Americans, who, it asserts, do not believe that Japan dares to go to war with the United States, and hence deem it needless to stoop to flatteries and concessions disagreeable to the nation's self-respect. The assertion may be true of California, but not of the States this side of the Rocky Mountains.

For the Russian statesman's assertion we can see a certain basis, for we have no doubt that the Tokio government's course might be affected materially in certain contingencies by the assumption that the treaty of alliance with Great Britain, concluded in August, 1902, would hold the last-named power to side with Japan in the event of a war with the United States.

Let us see for ourselves whether it does or not. Here is the text of the treaty in full:

Agreement between the United Kingdom and Japan, signed at London, August 12, 1902

Preamble.

The Governments of Great Britain and Japan, being desirous of replacing the Agreement concluded between them on the 30th of January, 1902, by fresh stipulations, have agreed upon the following Articles, which have for their object:—

- (a) The consolidation and maintenance of the general peace in the regions of Eastern Asia and of India;
- (b) The preservation of the common interests of all Powers in China by insuring the independence and integrity of the Chinese Empire and the principle of equal opportunities for the commerce and industry of all nations in China;
- (c) The maintenance of the territorial rights of the High Contracting Parties in the regions of Eastern Asia and of India, and the defence of their special interests in the said regions;—

Article 1.

It is agreed that whenever, in the opinion of either Great Britain or Japan, any of the rights and interests referred to in the preamble of this Agreement are in jeopardy, the two governments will communicate with one another fully and frankly, and will consider in common the measures which should be taken to safeguard those menaced rights or interests.

Article 2.

If by reason of unprovoked attack or aggressive action, wherever arising, on the part of any other Power or Powers either Contracting Party should be involved in war in defence of its territorial rights, or special interests mentioned in the preamble of this Agreement, the other Contracting Party will at once come to the assistance of its ally, and will conduct the war in common, and make peace in mutual agreement with it.

Article 3.

Japan possessing paramount political, military, and economic interests in the Corea, Great Britain recognizes the right of Japan to take such measures of guidance, control and protection in Corea as she may deem proper and necessary to safeguard and advance those interests, provided always that such measures are not contrary to the principle of equal opportunities for the commerce and industry of all nations.

Article 4.

Great Britain having a special interest in all that concerns the security of the Indian frontier, Japan recognizes her right to take such measures in the proximity of that frontier as she may find necessary for safeguarding her Indian possessions.

Article 5.

The High Contracting Parties agree that neither of them will, without consulting the other, enter into separate arrangements with another Power to the prejudice of the objects described in the preamble of this Agreement.

Article 6.

As regards the present war between Japan and Russia, Great Britain will continue to maintain strict neutrality unless some other Power or Powers should join in the hostilities against Japan, in which case Great Britain will come to the assistance of Japan, and will conduct the war in common and make peace in mutual agreement with Japan.

Article 7.

The conditions under which armed assistance shall be afforded by either Power to the other in the circumstances mentioned in the present Agreement, and the means by which such assistance is to be made available, will be arranged by the Naval and Military authorities of the Contracting Parties, who will from time to time consult one another fully and freely upon all questions of mutual interest.

Article 8.

The present Agreement shall, subject to the provisions of Article

6, come into effect immediately after the date of its signature, and remain in force for ten years from that date.

In case neither of the High Contracting Parties should have notified twelve months before the expiration of the said ten years the intention of terminating it, it shall remain binding until the expiration of one year from the day on which either of the High Contracting Parties shall have denotified it. But if, when the date fixed for its expiration arrives, either ally is actually engaged in war, the alliance shall, ipso facto, continue until peace is concluded.

In faith whereof the Undersigned, duly authorized by their respective Governments, have signed this Agreement and have affixed thereto their Seals.

Done in duplicate at London, the 12th day of August, 1905.
(L. S.) LANSBURVE.

His Britannic Majesty's Principal Secretary of State for Foreign Affairs.
(L. S.) TANAKA HAKUSHI.
Extraordinary and Minister Plenipotentiary of His Majesty the Emperor of Japan at the Court of St. James.

It will be observed that article 2 prescribes that the only cause for common action in war between Japan and Great Britain is in defence of either's territorial rights or special interests mentioned in the preamble. The special objects thus defined are (1) peace in Eastern Asia and India, (2) integrity of, and open door in, China, and (3) preservation of the territories of the parties in Eastern Asia and India, and their special interests in those regions.

It will thus be seen that any war between Japan and the United States over conditions in California has no bearing on the treaty or on the action of England as Japan's ally. Indeed, the treaty, in so far as it binds each of the contracting parties not to go to war without consultation with its ally, forms one of the surest and best guarantees of peace between England, Japan, and the United States.

Personal and Pertinent

The other night JOSEPH H. CHASEY told a story at the Williams College Alumni dinner which was intended to illustrate what one Englishman thought of the American system, or systems, of education. He said that ALFRED MOSLEY told him that he thought so much of this system, or these systems, that he placed his two boys at a school near New Haven to be prepared to enter an American college. This is a trifle new. One English boy, Sir HENRY NORMAN, came of his own choice to this country to go to Harvard, but he was then regarded as eccentric, as eccentric as north while looking after with some care. Other boys have come here propelled by their fathers, but after they had been in Oxford or Cambridge. They have come to attend professional schools. Sir FREDERICK PARSONS's son and Chief Justice RUSSELL's son went to the Harvard law-school. We have a half dozen law-schools in this country that are better than any law-school, temple or inn, in England—but this kind appreciation of our preparatory schools and colleges is moving and unexpected, and it will especially delight the preparatory schools about which unsympathetic American college professors are constantly saying things.

Rev. Mr. FRANCIS, who used to be, maybe, in pastor of the so-called American church at St. Petersburg, is in this country studying American colleges, and is moving downward towards Tuskegee. He has some curious remarks to make about Father HANCOCK and M. WITTE, telling us that both are thought to be in the interest of the Russian hierarchy. His evidence against the priest is interesting, but what he has to say against WITTE is somewhat confusing, for the acts of WITTE do not altogether tally with Mr. FRANCIS's assertions. GANNO, he says, was paid by the revolutionaries, the Grand Duke, to lead the crowd on that eventful Sunday into the place where they were deliberately packed for shooting, while the troops were ordered not to fire at GANNO. Subsequently, GANNO was seen by Lord LANSBURVE at Monte Carlo spending large sums in various dissipation of an unprincipled character. Some hint of this we have read in the newspapers, but the dramatic ending of the tale is new and strange. The revolutionists sent word to GANNO, who had sought refuge from them in London, as if it came from the government, directing him to meet one of its agents at a certain place in Finland. Reaching the place, GANNO met, instead of the government agent, a committee of revolutionists, who pointed to a rope slung over the transom of the door of the room in which the meeting took place, and told the traitorous priest that he would be hanged in a few minutes, and he was. So disappear from contemporaneous history a man and a theory.

Now that Mr. ALGER is dead, and Mr. McKINLEY also, and that Mr. ROOSEVELT is still living, we may tell another story of the two who were President and Secretary of War together, and of the other who was then only a colonel. This young fighting man wrote the round-robin which protested against Mr. ALGER's order retaining the troops in the unwholesome neighborhood of unwhol-

some Santiago. Mr. ALGER replied by citing part of a letter written by Colonel ROOSEVELT criticizing militia. It was not a fair citation. Too much of the letter was left out. To one man who had denounced Mr. ALGER in the interpenetrating tones which good men sometimes employ, Mr. McKINLEY said:

"You are pretty hard on Brother ALGER."
"Well," was the ready answer, "I'm pretty read about Mr. ALGER's order. I've read ROOSEVELT's round-robin."

And then the bland Mr. McKINLEY smiled and said that TUNNOR was understood in Washington, and intimated that he was rather impetuous and might be rash, and made other similar remarks which stirred the man of wrath to plagiarize from Elizabeth who owned a German garden, to say:

In your thick it was nice for Mr. ALGER to use that private letter as he did."

And upon this Mr. McKINLEY sighed and said, solemnly:
"There is no one who regrets that incident more than Brother ALGER."

It was clear that Brother ALGER was just then giving the President an unhappy hour or two.

They say that JOHN G. CARLISLE is going to marry again, and this time to the widowed sister of HARRY ST. GEORGE TYLER. Those who know the lonely man well, the lonely and very friendly and sociable man, will wish him well, whether the matrimonial rumour be true or false. It was pretty late in his life when he was exiled from Kentucky, his native State, which he had served so long and whose great man he was until he opposed the new abandoned to it of offering of the cheap-money combination. When the second CLEVELAND administration was finished, there was no place in Kentucky for JOHN CARLISLE. He had been attacked and assaulted in his own city of Lexington because he was, so they said, GOSPEL and others, a traitor to the "white metal." They said that he had made THOMAS BRAND chairman of the Orange Committee when he was first Speaker of the House of Representatives, and had given other evidence of his fondness for silver. As a matter of fact, when Mr. CARLISLE made up his first committee there were two other men present, and one of those says that BRAND was given the chairmanship because he was the senior Democrat who had served on the committee, and not to have given him the promotion which was naturally his would have had to the tariff-reformers the support that they needed against HAYWARD and the Republicans. And it was in the tariff, and not in silver, that the CARLISLE element were interested. CARLISLE did not study the silver question until years afterward, and when he did he became a single gold-standard man. But his people thought him a traitor and exiled him, just as the people of Charlottesville, in West Virginia, exiled WILLIAM WILSON, the farmers even refusing to sell him fodder for his horse, so dalt were the silver men less than a dozen years ago. Now CARLISLE is abandoning life in this strange national, and is going back to his home in Washington, in which he lived for the many years when he was almost presenting his services to the government before he came here to make gold for himself.

The little breath of gossip about Mr. CARLISLE and his possible marriage reveals many incidents of the eventful Sunday night when three friends sat up until morning composing the new Speaker's list of committees. CARLISLE, they said, hadn't any backbone, and that WILLIAM MORRISON possessed the article. WILLIAM MORRISON still lives out in Waterloo, Illinois, a very old man, with a very clear head, and still in fighting mood. He had made CARLISLE Speaker, having carried the Democratic caucus for him against REYNOLDS, who thought that he possessed a lien on the chair, and he was to be chairman of the Ways and Means Committee, and to introduce his once famous "horizontal" tariff-reduction bill. But he could not dominate CARLISLE. He wanted SPRINGER to be chairman of the Committee on the Revision of the Law, one of some other important committee; but CARLISLE would not consent. MORRISON urged it, and then as plan after plan came up for consideration, he suggested SPRINGER's name more than once. Sometimes he made a personal matter of it with JOHN, saying that if SPRINGER didn't get a good place the people "out home" would hold him responsible, for they knew, as on-lookers generally know such things, that MORRISON could have anything that he wished of the amiable CARLISLE. But CARLISLE would be amiable as the name of SPRINGER was heard again and again, for SPRINGER had been a candidate for the Speakership against CARLISLE, and this was resented by the tariff-reformers. SPRINGER was one of them, and they did not like his running against the candidate of the party. They thought that he might have done it to get a good chairmanship. Courtesy to defeated opponents was usual in those days. At last, about two in the morning, CARLISLE said:

"WILLIAM, I've done your full duty by SPRINGER; but he'll be chairman of the Revolutionary Claims Committee."

MORRISON sighed and remarked that SPRINGER would lay it to him, and sure enough, on the next day, when the committees were announced, SPRINGER accused his staunch friend of base betrayal.

Correspondence

COMMENDATION FROM AN OLD FRIEND

ROCHESTER, NEW YORK, January 3, 1907

To the Editor of *Harper's Weekly*:

SIR.—For nearly twenty years I have read every copy of *HARPER'S WEEKLY* that has been published, but I can truthfully say that not one gave me greater pleasure in reading than your issue of January 3, commemorating HARPER'S FIFTIETH BIRTHDAY.

To us of a younger generation fifty years in the life of a man is a long, long time to contemplate, but when a journal that has been a guiding light through all the stormy days of life enters upon the threshold of its fifty-first year, I feel towards it as I do toward a friend who has been a friend of my father's, and from my heart I can say God bless you—your years, your wisdom, and the good abiding done.

Years show are your marks of age, because in every other way you have the strength of youth—the strength to stand for all that is right, all that will trend towards a higher and a better civilization.

With sincere wishes that you may round the century-mark, and beyond, with your influence near the loss,

I am, sir,

LINCOLN WHITEMAN.

WE ARE ADVISED TO FLOAT

WASHINGTON, D.C., January 3, 1907.

To the Editor of *Harper's Weekly*:

SIR.—I have been a reader of *HARPER'S WEEKLY* for about thirty years. As a general proposition, I like your paper, but I don't like the idea of the thing you say about Roosevelt, and especially what you say in first paragraph, page 5, of your January 3, 1907, number. You're getting wild, and I'm going to be good enough friend to you to tell you so. You ought to know that you can't wrap back the sea with a beam, any more than could the traditional old woman.

Do you honestly believe that the "people" think any the less of Roosevelt because of his spelling order? But his order affect the way you and I were to spell? Bend the order and see.

Do you honestly believe the "people" are laughing at Roosevelt because he went to Panama in a battleship, accompanied by some armed sailors? Ask the "people" and see.

Do you honestly believe that the "people" will not uphold Roosevelt in his discharge of the mauling negro troops? Ask some of them who have a conception of the demands of military discipline and see.

Do you think that any investigation started against any of Roosevelt's acts by a man of the stamp of Fowler will hurt Roosevelt with the "people"? Ask in this and see.

Do you honestly believe that Roosevelt has any desire to overthrow the Constitution? Of course you don't, and if you really think the "people" have any such fear, ask them and see.

Do you really think the "people" look on the Senate more than they do on Roosevelt? Ask the Senate and see.

Do you want to know what the "people" think of Roosevelt? Then read page 18, January 3, 1907, number of the *Saturday Evening Post*. It sounds and seems funny, but it's true—that writer knows what he's writing about. Have West and see. The farther West you come the more you will see.

Better come in the water's time, and float with the tide. The "people" don't believe you, as do those who are in business over these parts of Trinity Church. You can't hurt Roosevelt with the "people." Ask the "people" and see. I am, sir,

B. S. GAGAN.

X. R.—"People" means those human beings who inhabit the country lying west of the Hudson River.

CRITICIZING THE PRESIDENT

MINNEAPOLIS, MINN., January 31, 1907.

To the Editor of *Harper's Weekly*:

SIR.—For some years your editorial comments have appeared to me as being the least of their kind. They seemed to have ability equal to those of the *New York Nation*. And the easy humor and spontaneity, well made into much pleasant reading. All subjects were treated with fairness and impartiality. They were always sensible in root, and not nearly as often contrary to common sense.

Are they still written by the same man? If so, what an earth has happened to him that every act of our President is distorted and placed in an altogether false light and attributed to the worst motives? Too much hate worship is held; let every public man be subjected to the scrutiny of the sharpest critics, but if the criticism is to be worth the paper on which it is written it must, at least, assume the appearance of rationality. If personal malice is suspected it will not nearly as readily influence others. If I can be one in a thousand to add my mite to help in ousting back the pondemon of your mind in a proper place I will feel repaid for writing this. I am, sir,

F. T. TERRY.

[There has not been a grain of personal malice in the *WEEKLY'S* criticism of the President. The President's most useful friend just now is the one who can do most to persuade him to respect the Constitution, and limit his activities as President to transaction of the duties imposed by the Constitution upon the Presidential office.—ED.]

MR. WELLS SEES NO CHANCE FOR SOCIALISM

NEW YORK, January 26, 1907

To the Editor of *Harper's Weekly*:

SIR.—I am in receipt of Mr. H. G. Wells's new book, *The Future in America*. I am interested in Mr. Wells's opinion that there is little chance for the development of socialism in this country. I, too, see no chance for socialism, for, perhaps unlike Mr. Wells, I see no need for it. With few exceptions there is as much economic opportunity for the individual to-day as there was yesterday. Current economic discontent is due merely to the great rise in the standard of living of the last few years. It does not indicate a demand for industrial reorganization. As Mr. Wells says, we are still strongly individualistic. I think Mr. Wells exaggerates the danger of a horse-ridden industrial proletariat. Socialism is only speculative. Strict enforcement of existing laws will eradicate it. Nor do I foresee any danger from our present imagination.

I am, sir,

HERMAN CROW.

THE LATE MR. CASSATT

PHILADELPHIA, Pa., January 25, 1907

To the Editor of *Harper's Weekly*:

SIR.—Will you permit me to express admiration for your recent words regarding Mr. Cassatt? So much exaggeration and insinuation has appeared in the daily newspapers during the past few months regarding Mr. Cassatt and the *Washington Herald* that it is refreshing to read a just tribute to him and his work. It was my privilege to see a great deal of him during the past fifteen years, and contact with him was a liberal education for any man. The character and the absolute purity of his motives, as well as of his actions, cannot be too strongly admired. He did more to elevate the tone of not only railroad but all business ethics than any other man in America—our men.

My object in writing is to suggest that it would be wholesome for the people if they could be made to know more of this great man and to really understand his work through a more extended article in your pages. This has been done to some extent in the daily newspapers, but no one cares what they say about any man or any thing; they write merely for a day's sensation. But Mr. Cassatt's example ought not to be lost sight of through lack of some permanent and popular method of calling attention to his life. I am, sir,

E. D. MOORE.

"ON EARTH PEACE"

MINNAPOLIS, MINN.

To the Editor of *Harper's Weekly*:

SIR.—In addressing you thus it is the writer's intention to address himself directly to the author of the editorial, "On Earth Peace," in issue of December 22, 1906, to whom the writer would say:

First.—That he is always much interested in reading the editorial, or the mystical, but always religious, editorial, or most generally so, with which the editorial part of each week's issue of *HARPER'S WEEKLY* is usually closed, and,

Second.—That the criticism of the above-named editorial here-with offered is entirely friendly, as is apparent.

Third.—is to correct interpretation Luke 2:14. The writer could respectfully call your attention to two fundamental errors in your quoting the Christ in your said editorial, which errors are also very widespread, if not universally prevalent. They are as follows, namely:

(A) "The proclamation from a multitude of the heavenly host—two thousand years ago," says not that "a Saviour was born who was to bring . . . on earth peace, good will to men," but rather "peace to men of good will," and to each alone. See *Isaiah*, and also the Revised Version.

Here, also that you refer to as contradictory to the commonly accepted—that is, misunderstood—version, such as "wars," "individual striving against individual," etc., to-day, five thousand years later, etc., is in perfect harmony with the true version as given in the Douay version first, and the revised version later. Furthermore, that the Christ said never have so declared him self is apparent from his teaching as, for instance:

"Think not that I am come to send peace on earth: I come not to send peace, but a sword."

"For I am come to set a man of his father against," etc.

"And a man's foes shall be they of his own household," etc.

"Three against three," and two against three," etc.—Matt. 10: 34-35, and Luke 12:49-51.

The Christ is most correctly represented as type for all good in nature, as in this case—the two responses to him, necessary to life; hence the positive and negative, though essential to the full-acted life alone, representing each in other as society, make that condition typified by fermentation in the vegetable kingdom.

(B) The second error referred to is that you represent the Christ as teaching that "if a man love his own neighbor, he is loved as a Christian in giving him, our clock alone," etc., which is in contradiction with the teaching of the same Christ. The Word, by his servant Moses, saying (Lev. 19: 18) "Whom the jealous shall condemn, he shall pay double unto his neighbor."—Exodus 22:9; Matt. 5:40. I am, sir,

T. R. STEPHEN.

HAWAII'S LESSON TO HEADSTRONG CALIFORNIA

HOW THE ISLAND TERRITORY HAS SOLVED THE PROBLEM OF DEALING
WITH ITS FOUR THOUSAND JAPANESE PUBLIC-SCHOOL CHILDREN

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

Honolulu, Territory of Hawaii, January 15, 1907.

THE American government in Hawaii has no trouble whatever in dealing with the Japanese pupils in the public schools. Nothing can be more startling to the observer who comes from the bubbling volcano of San Francisco school-politics than the ease with which the annoying race question is handled by intelligent Americans in this garden-spot of the Pacific. There are more than 4000 Japanese pupils here, as against a meagre ninety-three in San Francisco, yet there is no vexation.

There would be nothing to wonder at in the situation if most of the Japanese residents of Hawaii were people of culture and wealth, and competing with American labor. It is the status of the Mikado's subjects in these islands that forces one to admire the diplomacy with which an awkward problem has been handled. For the Japanese in Hawaii are nearly all of the coolie type. They are cheap workers, whether as laborers in the cane-fields or mechanics or artisans of any class. There is bitter strife between them and American labor. strenuous efforts have been made to exclude Japanese laborers, to prevent Japs from working as mechanics, cabmen, or innkeepers; to prohibit them from serving drinking-saloons. The Palama, as the Japanese quarter in Honolulu is called, contains five times as many Asiatics as the Chinese quarter of New York, and the Japanese is very fond of drifting dall ease away with a glass; yet a most determined effort has been made to oust the little brown men from the profitable business of liquor-selling. An attempt was made, too, to compel the Japanese doctors who attend their countrymen here to take medical examinations in the English language, under penalty of not being allowed to practice in this Territory.

All of these anti-Japanese campaigns failed of success because the Territorial courts held that their basis was illegal, inasmuch as it was an invasion of treaty rights. I mention them merely to show how bitter and uncompromising has been the economic warfare upon the Japanese in these islands.

The great difference between the situation here and in California is that the Hawaiian Americans have fought the Japanese bitterly but according to law and the treaty rights of the foreigners, while the San Franciscans, with far less provocation, have simply disregarded both law and treaty in order to inflict upon Japan a gratuitous affront.

There are more than sixty thousand Japanese in the Hawaiian Islands. Nearly all of them are laborers on the sugar plantations.

Many of them are married, and on every plantation you will find a quaint reproduction of a Japanese village, the homes very like those of the Orient. Japanese women in kimono going about their daily tasks, and clothily checked, brown-eyed little boys and girls very gravely imitating the solemn business of life.

Whether in town or country, these little folks work with an energy that amazes an American. Their parents want them to learn as much as possible about the history and literature of the land of their fathers; so all the Japanese boys and girls go to a Japanese school from seven o'clock until nine in the morning. Then they attend an American public school from nine o'clock until two in the afternoon. The moment they are free they hurry back to Japanese school and work there until five or six o'clock in the evening. Imagine a school day that lasts from seven in the morning until dark! Yet these brown children thrive on that system. It has been going on for ten years now, and it is impossible to find any record of shattered health or injured eyes as a result of this tremendous industry.

Down in old Mulberry Bend, New Yorkers have a public school of which they are very proud, because in it the teachers receive young Italians, Greeks, Syrians, Arabs, Japanese, Chinese, Scandinavians, Turks, etc., as raw material and turn them out as a finished product of excellent American citizens. The school is unique in its mixture of races, and for that reason attracts a great deal of attention. In Honolulu that school would pass unnoticed, for in every school you will find little folk of a dozen races working amicably side by side. Such a thing as race prejudice is unknown.

Here is the remarkable mixture shown by the latest census of the schools of Hawaii, taken at the end of last year:

	Public	Private	Total
Hawaiian	4,045	860	4,905
Pari Hawaiian	2,382	1,040	3,422
American	457	242	699
British	142	81	223
German	144	119	263
Portuguese	3,239	1,233	4,472
Scandinavian	45	38	83
Japanese	3,578	719	4,297
Chinese	1,450	905	2,355
Porto Rican	538	104	642
Other Foreigners	242	104	346
Total	16,719	5,220	21,939

The Pupils of the Kaahumanu Elementary Grades Public School at Honolulu

THIS PHOTOGRAPH, THE CONTINUATION OF WHICH WILL BE FOUND ON THE OPPOSITE PAGE, GIVES A COMPREHENSIVE IDEA OF THE MANY NATIONALITIES HAWAII HAS PLACIDLY ACCOMMODATED IN THE CLASS-ROOMS OF HER SCHOOLS, AND NOW SHE HAS SET A LESSON FOR CALIFORNIA'S SCHOOL BOARD

Was there ever such a heterogeneous company since Babel? In fact they are all fused in the great melting pot of our American schools, and they are coming out of it as the people of Hawaii are coming out of it. It may be remarked that the people of Hawaii are prouder of their schools than of anything else in their marvellously rich and beautiful islands. There are 141 public schools. There are 435 teachers, and 28 private schools, with 261 teachers. The high schools and pupils to the leading colleges in the United States, and of these many have achieved distinction in letters and science.

In the Kaunakakai and Kalaheo public schools one finds the people of races hard at work. There is every hue of skin known to the human species except the black of the negro, which is conspicuously absent. At the same desk in the Kaunakakai school is a dainty little girl with pink cheeks, blue eyes, and hair of spun gold—the only native American in the school—was sitting beside a girl whose father was a white man and whose mother was Hawaiian. The half-caste child was dark as an Indian and her hair was long, straight, black and coarse as an Indian's. At the desk, before these two sat two Japanese girls, about ten years old. They were demure little things in American clothes, very clean and full of dignity. Their sparkling black eyes shone with keen speculation. A few feet away sat a Portuguese girl beside a Chinese girl who wore the loose silk jacket and flowing trousers of her native land.

The boys were a sturdy lot, and, in spite of the wide divergence of race types, one saw a great resemblance among them, the resemblance that comes of working at the same tasks, thinking the same thoughts, having the same duties, aims, ambitions and rewards. This resemblance was much more marked among the boys than among the girls. The costumes were as various as the leaves in the forest, and very few of the children wore shoes. Every boy and every girl was scrupulously clean. Order in the schoolroom was perfect. There was no giggling or whispering nor any evidence of self-consciousness. The children regarded the visitor with a curiosity that was frank but well bred.

At the suggestion of Mr. Baldwin, the principal, Mrs. Fraser, gave an order, and within ten seconds all of the 614 pupils of the school began to march out upon the great green lawn which

A Group at the Honolulu High School

surrounds the building. Hawaii differs from all our other tropical possessions in the fact that no one who grows here. In our beautiful, fertile soil and groves of pine and banana trees and banks of flowering mangroves one can find that the children of the

children, too, by far, find as great an interest in the school as they do at home. With the rarest of good practice the children of the school marched out all over the school in a compact array facing a large American flag that was dancing in the northeast trade wind fifty feet above their heads. Surely this was the most curious, most diverse regiment ever drawn up under that banner—Tay Hawaiian, American, British, German, Portuguese, Scandinavians, Japanese, Chinese, Porto Ricans, and Heaven knows what else.

Attention! Mrs. Fraser now commanded. The little regiment stood fast, arms at sides, shoulders back, chests out, heads up, and every eye fixed upon the red, white, and blue emblem that waved protectingly over them.

Salute! was the principal's next command.

Every right hand was raised, forefinger extended, and the air kindled and bristled with childish voices chanting an old song.

We give our heads and our hearts to God and our country! Our country! Our language! Our flag!

The last six words were shot out with a force that was explosive. The tone, the gesture, the gas fired reverently upon the flag, told their story of loyal fervor. And it was apparent that the salute was given as spontaneously and enthusiastically by the Japanese as by any of the other children. There were hundreds of them in the throng, and their voices rang out as clearly as any others, their hands were raised in unison. The robust child of a man who sees the children perform this act of reverence and feel a tightening at the throat, and it is even more affecting to see these young atoms from all the world actually being fused in the crucible from which they shall issue presently as good American citizens.

So much for the Japanese in the lower-grade schools. Everybody agrees that no children can be more polite and agreeable than they are. The principal teacher of the consular in San Francisco

In this Group may be found Representatives of at least Ten Nationalities
THE HAWAIIAN & JAPANESE CHILDREN IN THIS GROUP ATTEND IN ABOUT NINE GRADES UNTIL 1900, AFTER HAVING BEEN IN THEIR NATIVE SCHOOLS FROM SEVEN UNTIL NINE. AFTERWARD, FROM THE OTHER 15 PER CENT. OF THE CHILDREN IN THIS GROUP ARE JAPANESE SCHOOLS.

"We give our heads and our hearts to God and our country! One country, one language, one flag!"

THIS SCENE SHOWS THE SALUTE TO THE AMERICAN FLAG WHICH FLIES IN THE GROUNDS OF THE KAUIAIAN PUBLIC SCHOOL, WHICH HAS MANY JAPANESE PUPILS. THE DRILL IS CONSTANTLY HELD AS A MEANS OF INCULCATING PATRIOTISM IN THE HEARTS OF THE CHILDREN.

is that parents cannot endure to have their girls exposed to contamination by adult Asiatics, whose moral code is far different from our own. Whether or not there is reason for this complaint is not the question here. That there is such a feeling of apprehension among parents is readily found by any one who inquires, and it exists in Hawaii no less than in California. The Hawaiian school authorities long ago took steps to prevent the mingling of grown Japanese boys in classes with American girls.

In the Honolulu high school there are 143 pupils, including a few more boys than girls. Most of these are above fifteen years of age. There is now, as there has been for the last six years, only five per cent. of Asiatics among these pupils—three per cent. Japanese, and two per cent. Chinese. The boys are well behaved.

Professor M. M. Scott, the principal of the high school, was kind enough to call all the pupils, who were not taking examinations, out on the front steps of the building, where the visitor could inspect them in the sunshine. The change in the color scheme from that of the schools below was astounding. Below were all the tones of the human spectrum, with brown and yellow predominating; here the tone was clearly white.

What had made the change? Practically the Asiatics had been eliminated. But how? By building separate schools, and hesitantly ordering the Japanese to attend them in company with Chinese and Koreans, whom they despise? Not at all. The Hawaiian Commissioners of Public Instruction long ago made a regulation that no pupil may attend a school of the higher grade unless he has a thorough working knowledge of the English language.

"That rule," said Commissioner William Farrington, "this us of all individuals whose presence could possibly be objectionable. We have not now, and we never have had, any trouble over the presence of Japanese or any other Asiatics in our public schools. I do not think the question will ever cause us any annoyance."

"The rule under which the exclusion is accomplished is based on simple common sense, and no one can object to it. The speed of any fleet is the speed of the slowest ship in the fleet. It would be most unjust for us to delay the progress of our advanced pupils by putting in their classes foreigners who do not clearly understand English; for their presence would make it necessary to waste

time in long explanations. The fairness of that rule is so evident that we have never had any complaint from Japanese or anybody else. It is—perhaps—a mere coincidence that the operation of the rule rule the classes of certain individuals whose presence may not be desired. We make no comparison with any other way of handling the problem; but we know that in Hawaii the Americans, the Japanese, and all the others, are satisfied with the plan on which we are working."

Mr. Miki Saito, His Imperial Japanese Majesty's Consul-General at Hawaii, has just returned from a three weeks' tour of inspection of the public schools throughout the islands, begun soon after the San Francisco incident was made public. He is, of course, devoted to the welfare of all the Mikado's subjects, and during his three weeks' tour he questioned children and parents everywhere.

"You will be glad to know," said Mr. Miki to me, "that the Japanese people here are entirely satisfied with the treatment of their children in the public schools. I have not heard one word of complaint anywhere; but on the other hand I have heard our people express satisfaction at the kindness and cooperation of the Americans."

In the public schools our children have the same opportunities as the rest. On the plantations American employers have kindly put up buildings in which the Japanese teachers can hold school in our native tongue. I can find in the Hawaiian schools nothing to criticize and much to praise."

It is difficult for the unprejudiced observer to understand why the importunate San Franciscans did not adopt the Hawaiian plan of dealing with the Japanese in the schools. Surely they must have known of the easy success of the scheme, for in community of interests Honolulu is as near to San Francisco as Philadelphia is to New York.

The more one studies the subject, the harder it is to understand why the Californians took so much pains to affront the Japanese. The warlike spirit in a nation freed from great victories may well be compared to a sleeping dog on the porch of a house he has just defended. The hasty Californians seem to have acted on the principle laid down by an American philosopher whose thoughts had stripped his words, so that he airily exclaimed, "Oh, let sleeping dogs bark!"

AFTER THE WORLD'S NEWS WITH A CAMERA

A NEW PROFESSION AND ITS PERILS

By W. G. FITZ-GERALD

SOME occupations there are which are ever filled with possibilities of excitement, with kaleidoscopic change, with thrilling romance and ever-present peril. One might name, for example, ivory-hunting on the Congo; collecting orchids on the Magdalena River in Colombia; deep-sea diving for pearls in Torres Straits, and for sponges in the Azores; and, lastly, geographical exploration, both polar and tropical.

To men engaged in these I would add the news photographer, who will risk his life for a film on the battle-field; among the smoking ruins of a city destroyed by earthquake or volcano; or on the untrodden glaciers of a new sky-piercing peak, just about to be conquered by some scientific expedition.

A record of the world's doings must lie by our coffee-cup at breakfast; and one of this demand sprang the great Associated Press, which has enveloped the world with its service, and brings into our parlor, day by day, every phase of human activity. Such a demand will grow and be fed; yet how few of us realize the details of the work of meeting the demand!

It was the craving for news of human strife and endeavor that created the adventurous role of the war correspondent, who has brought vividly before us, in text and illustration, the terrible reality of the battle-field for the last half-century. As the French say, "L'effort rent en soi-même"; and it was during this period that there arose a demand for something more visual than even the most glowing war picture that could be penned by a skilled correspondent, even on the firing line.

This further demand created the war artist; but as realism was always the cry, the camera itself could not long be kept from the forefront of battle. War photography, however, and news photography generally, were seriously hampered until galling dry plates were invented. To-day we find picked troops of adventurous photographers, radiating over the world in search of pictures for our popular journals, as well as for editorial, historical, scientific lectures, and the illustration of books.

Thus, no important work of travel, whether dealing with the south pole, the mysterious highlands of Tibet, or the sources of the Nile, can hope for many readers unless the dangers and difficulties of the expedition are brought clearly before the reader's mind by means of photographs of every noteworthy episode on route.

It is clear that not all of us may travel where we will, hence lodgings, (family, or other) here to at home, are for hardly matched vacations; but that we are interested in the world's wonders and desire admits of no doubt. We have heard of Pyramids on the Nile, old as time itself, of marvellous old cathedrals, of mountainous castles, of medieval halls, and other internal wonders of historic places and noted persons. At such photographs of these we gaze with real interest. But how much keener and more

vivid the interest, how much more imperative the demand for photographs, when our own country is battling on the sea, or our legions are fighting savages and pestilence in foreign lands! Or when a great queen is laid to rest with impressive pomp, and her successor crowned with regal circumstance; is a historic abbey a thousand years old, and in the presence of an imposing throng; or when a mighty upheaval peels lakes of fire from a Mount Pelée; when one of our own great cities like San Francisco, or a neighbor like Kingston, is devastated by earthquake and fire through direct seismic disturbance; when two world powers like Russia and Japan put a million men in the field to battle for empire! When such things as these happen we must have them pictured as well as graphically described. Hence a newcomer among the adventurers who serve us—the news photographer. A moment's reflection will show that this man runs far greater risk of his life, say on the field of battle, than his literary colleague. The latter can get adequate material at second hand—probably more accurate material than if he himself courages on the firing line. But not even the much-valued "telephoto lens" will render clearly the shock of charging battalions. The news photographer must inevitably risk his life as war correspondent; he and his big camera make an ideal target for the enemy.

Of the news photographer it may be truly said that he is "born" and can never be "made." He must be a man of supreme tact, a crack shot, a trained runner, able to take charge of his own camera, and to control men. He must be a person of some polish too, for he may be attached to the staff of a distinguished commander, whose movements his camera will record, possibly for the benefit of the public of all nations.

For this reason, if for no other, the news photographer must cultivate the knack of the personable. He and his big stereoscopic camera stand idly waiting for him from day to day, and he knows not the hour when he will be dispatched to the most exotic of the earth, where, if offer lag and anguish exist, he must naturally choose to them as a temporary resident at least. Such incidents he regards as "all in the day's work."

Directly after Dewey's memorable morning in Manila Bay a news photographer set off for the Philippines. And often enough he had to these days with so great a battle his huge thirty-five-pound camera and lens a rifle-hand with a rifle.

When one of our soldiers dropped at his side, a mark for some light, showing our soldiers at close quarters, firing from behind breastworks, and charging across open fields—these marked a new era in war photography.

And let me now shift the scene to Tientsin and Peking, where the war correspondent, the greatest nations on earth were notoriously besieged by "finers." When white troops

In the Yosemite Valley. The Picture's the Thing, not the Risk

Awaiting, Bulb in Hand, a Roaring Blast from the Center of old Asia-San

volunteers, and others were streaming away from the beleaguered town, a news photographer was moving heaven and earth to get in.

In Tientsin he secured quarters in the British Consulate, the house of which were directly in the line of the flying shells. These were terrible times indeed, with the fanatic Chinese sapping and mining with naked-for-shill, and drawing ever nearer to the defenders.

The photographer's private letters home made stirring reading. The night the walls of his room was rent by bursting shrapnel, and round bullets from the shells flew in all directions, so that it was a marvel the man escaped with his life. "Each night," he wrote, "I took the precaution to haul my sofa behind some interior wall. For, you see, the houses were all brick; and our wall sufficed to explode the shrapnel by impact, while a second would stop all the dangerous flying fragments."

The relief of Tientsin and Peking by the Allied Troops has passed into history—and of course with the troops went a small army of news photographers, each with a huge camera, which no doubt was often enough mistaken by the enemy for some new and specially terrible weapon of offense designed by the "barbaric devils."

The man who set up his tripod near the famous South Gate, which had to be blown up with dynamite—and, of course, he wanted a good picture, "with plenty of smoke in it," of this period but picturesque event.

The photographer passes more perilous occurrences, the news value is departing for the curious of all ages tiger and elephant houses, or fantastic manners and ceremonies in the strangest corners of the earth.

I have in mind a photographer who did a 24,000-mile tramp through Hindostan in order that he might see, as with our own eyes, government of India, was really life.

The wild elephants of India are government property, and when game over mountain passes like the Khyber, leading into Tibet; the wild birds are periodically rounded up and driven by made of the trunks of great trees. The scene as the trumpeting and snorting herd of animals is driven against its will into the depicted in a series of realistic photographs.

Sometimes additional interest is given to the event by the presence of some member of the British royal family, surrounded by all the hereditary princes of India—Maharajah and Maharatta lords have in mind took up his perch on the timber stockade above the

rolling, screaming masses of two hundred and eighty wild elephants. Whether he wanted to view the strange scene from a different standpoint, or was moved by sheer love of danger, I know not. At any rate, watching his opportunity, the man raced steadily into the stockade itself, and earned up a tree in the very center of it, where he had prepared a fine view of the very center of the scene. And from this unique point he and his all-seeing lenses looked down on the ranged elephants as they strode back and forth, trampling madly in their wrath.

That "picture-man" was a pretty good example of them all. He is equally at home taking pecked, and rise with, ten cents at an imperial garden-party in Tokyo.

Such a man is never happy unless his routine cameras violently, singing from every platform on the crumbling walls of the Tower of David in Jerusalem, taking pictures of the walls of the of pilgrims on their way to Easter worship in the Church of the Holy Sepulcher. An hour or two later he was developing snapshots of the Greek and Russian patriarchs of the Holy Fire, watching the feet of the thousands, as their Master did nearly 2000 years ago. The next season will see him crossing the halting rapids of the Rhine River in the Himalayas by a bridge composed of a single warlike rope, or perhaps by a raft of inflated cowbells.

And remember that the news photographer depends upon no mere hand camera, such as every tourist carries; the risks of failure after enormous expenditure of time, trouble, and money would be too great. Instead he carries a heavy tripod camera, with big glass plates—an affair with three important leaves. Frequently the operator takes three of these mighty mechanisms in order to make certain of his pictures.

As in "amateurism," this recorder of the world's wonders will load up five or six dozen fragile glass plates on elephant, camel, mule, burro, or Arabian thoma; and trailing behind him—perhaps on the woolly backs of negro porters in Central Africa, or a train where all transport animals have been wiped out by the too few—will come three or four big boxes of reserve plates, each case weighing seventy-five pounds.

One may imagine the self-denial such a man would have to practice when quartered, say, with the Japanese army under Baron Sogei, who limited the equipment of every man in his service to the very small total of sixty-six pounds.

Clearly, if the news photographer were a "literary person" he could write, not one book of adventure, but an entire library! He does, as a rule, take a mild interest in crime, of which he brings home an ethnological miscellany worthy of a national collection. You will see spears enough to equip a Congo tribe; telegraph staves from Tibet; bones and poisoned arrows from northern Australia; Chinese brushes of frightful grotesqueness; strange illuminated manuscripts; gorgeous shells and precious stones of every hue.

"Snap-shooting" the Pilgrims on their Way to Easter Worship in Jerusalem

In one corner the visitor may see an obliging leopard uplifting a card-tray, on the table is an elephant's foot as a work-box. Bores of stirring big-game hunts, these, yet more episodes and side issues in a busy man's life. The walls will be faced to be covered with barbaric shields and ornaments; inbetween is announced by deep notes from the great war-organ of King Thebes of Burma; the children amuse themselves with crude dolls and moon-banjos from Java. Fairy plays with buffalo bells from far Siam.

And in the case of one photographer I know, the only member of the family mentioned in it all appears to be his lonely wife.

"He no sooner gets back from one trip," she complains, "than he is off on another. Sometimes," she sighs, "I am afraid the children will forget how he looks!"

One is not surprised to hear that one of these men has pictured the world's most stirring doings in fully a hundred thousand photographs during the last decade. And some idea of their range may be gained when I mention that they include vistas of riotous-day crowds, snap-shotted with the operator astride the steel-girders of a half-finished skyscraper, four hundred and twenty feet above the street!

From such a commission to one of picturing the historic Durbar of India is a change indeed. A hundred kings and princes were seen passing this way and that in silver towers on elephants of war, draped in cloth of gold. And the same photographer was in the thick of it all, appeared on a frail bamboo platform whose slippery legs were lashed by the gurgling trapping of peering Arabs and supercilious camels.

And scarce waiting to develop these glowing pictures, the man passed on to a state tiger-hunt, organized by the Maharajah of Gwalior, during which it was his pride to secure a snap-shot of "Stripes" himself, who, sorely wounded, charged back among the hunters.

Then swiftly home and out again the wondrous Canyon of the Colorado, to picture its wonders, as well as those of the Yosemite and the Yellowstone. Such pictures were in part destined for the education of our children. And how this man's labor turns their lessons into pleasure! In his pictures they look into the nests of our chest birds, little dreaming of elaborate gear, such as telescopic holders, and specially constructed cameras with mirrors and pneumatic tubes, which were necessary to get these photographs, not forgetting the infinite patience and quick intelligence called for at every stage.

And in the midst of such "peace work" there is news that Yosemite is in violent eruption, pouring her flaming honey-colored lava streams down her purple flanks, just as the younger Pliny described the awful sight when the classic cities of old Rome were buried by that selfsame volcano in clouds and lava d'écou.

Be sure that when the sublime spectacle is at its height our news photographer and his assistants are hammering over the flowering brown with their cameras and up the volcano's flanks to the very lips of the crater. There he will record the thunderous explosions, the eruptions of lava torrents, and the sinister opening up of screaming fissures!

But, after all, it is in the recent great war that we see this servant of the public at his best—devoted, resourceful, determined at all costs to serve his millions of masters. And with no bombast nor deception, where deception might be so easy. This is especially remarkable in the American photographer.

An American photographer was held up by officers at Port Arthur for photographing in the trenches. Major Yamawaka, Baron Negi's chief of staff, telephoned for instructions. "If it is the American war-artist," replied that scientific warrior, "let him go anywhere."

One day some one asked the artist why he did not merely depict the great 14-inch mortar at rest, and then "paint in on your negative some dust and stuff, with a little dot 'way up in the air'?" The "little dot" was a 500-pound projectile from the monster siege-gun. Merely to go near the great weapon was extremely dangerous, for the sorely distressed Russians were concentrating their fire on the famous "bunka hole," which was fast making their position untenable.

"Yes, I suppose I could do that," the photographer replied, "but then it would hardly be the real thing"; and with that the "fantasy" crept through these terrible trenches, hugging the huge camera that enabled him to serve "the people at home." Heavy as it was, he tramped twenty miles a day with it, and, wretched, he would write home an apology for the quality of his negatives!

"They're set up to my standard," he would say, satirically. "The fact is, I couldn't stand a foot farther back, because of the Russian bullets. The Japs, too, were firing from every pop-hole. And then a dynamite explosion took place while I was inside the trench, shaking the earth like a volcano, and sending down a hail of dirt. It was hell on every side."

And then a little side note: "The wild geese are going south day and night and the winter is near. My top-coat is in Yokohama, but I guess plenty of shirts will replace it! I tell you I begin to feel new sympathy for the domestic grind of our women-folk, owing to my own daily routine of cooking and dish-washing."

Washing up the other day, a Russian hundred pounder came so near that its great nearly blew my cap off! It burst thirty feet behind me, driving a huge hole in the earth. I reaped the flying fragments, and kept one as a souvenir. I saw this big fellow come and snatched for him, but my camera was a trifle low. As it was I had but a second in which to snap and wink and duck!"

What a pity some disinterested colleague was not at hand to snap-shot the camera-man as he stood photographing giant Japanese shells in screaming flight, with Russian "returms" bursting appallingly but a few yards from his slender tripod!

But every man was just then intent on deadly duty; and only the best grinner of them all lost his head—and that is a dreadfully liberal view. Little wonder General Ichinose wrote about the "American picture-men":

"They pursued their work in face of all the hardships endured by our private soldiers, and they held a permanent place in the hearts of the officers of the Third Army."

LIGHT BLACK LINE - PROPOSED SUBWAY SYSTEM

THE FUTURE OF RAPID

The peculiar physical characteristics of Manhattan Island, and the relationship that the other boroughs which make up New York City have for the construction of subways, tunnels, and bridges which will connect Manhattan Island not only with the outlying boroughs already under construction or projected. The subway system has proved to be such a success that its extension and the construction of new lines are contemplated, and conveys an excellent idea of the many lines of communication which are to be established between the various parts of the city and passengers to travel from San Francisco to the heart of the city.

TRANSIT IN NEW YORK

... make the solution of rapid transit problems a municipal necessity. Realizing this, the most elaborate plans have been framed for the mainland of New Jersey. At present, the construction of tunnels is engrossing most attention, and fourteen of them are being planned. The drawing presented above shows accurately both the work accomplished and that yet to be done. The primary about it. The magnitude of these plans may be appreciated when it is stated that their completion will permit the residents of Long Island, without once leaving their cars

His Excellency— The Governor

BY LEONID ANDREWEFF

ILLUSTRATED BY G. W. PETERS

A STORY IN FOUR PARTS—PART II

III

LAUGHTER and song and merry games—for to-morrow Peter Hljitch's son, the officer, returned to St. Petersburg, and friends had gathered to say good-by. Uniforms and gay frocks were scattered about in the open glades and meadows, under the purple and gold of the autumn foliage and in the sapphire clearness of the woodland ways. As the red sun set faded and the stars moved by in the heavens, they set off fireworks—pockets that burst with a loud report, star-bombs and pinwheels. A stifling smoke crept under the great old trees that stood there so earnestly watching; and when they started the beagled lights, hurrying figures were changed to ghosts in flitting, flitting shadows.

Commissioner "Pike," who had quipped his thirst at dinner, gazed indulgently at the gay throng, strutting comically about among the ladies, and enjoyed his fill. And when presently he heard the Governor's voice rise beside him in the smoky darkness, he was taken with a wild desire to kiss him on the shoulder, to hug him carefully—or any little thing of the kind—as an expression of his devotion. Instead of this, however, he laid his hand on the left breast of his uniform, threw away a cigarette he had just lighted, and said, "Ah, your Excellency, what a charming fire!"

"Listen, Hlavian Wassiljevitch!" interrupted the Governor, with a suppressed growl. "Why do you always set those spies here? What does it mean?"

"Some rascal might plan an attack on your Excellency's sacred person," said "the Pike," with deep emotion and laying both hands on his heart. "And I, besides, . . . it is my duty!"

Dapping of fire-crackers, shrieks of terror, and loud laughter drowned his words—then a sudden rain fell, extinguishing the red and green fires which had illuminated the smoky darkness and made the Governor's buttons and spangles shine out.

"I know the reason, Hlavian Wassiljevitch—that is, I think I can guess it. But I think it can hardly be serious."

"It is most exceedingly serious, your Excellency! The whole town is talking of it. Avoiding how badly they talk about it! I have already arrested three gents, but they were the wrong ones."

A fresh outbreak of firing and gay shouts interrupted him, and when the noise had subsided the Governor had gone.

After supper they all drove off, marshalled by the young Assistant Commissioner. Everything—the fireworks which he had seen from behind the trees, the shrieks, and the people—seemed to him extraordinarily lively, and his own fresh voice astonished him with its tenacity and its power. "The Pike" was horribly drunk, cracked jokes, laughed, and even sang the first few bars of the Marseillaise—

"Allons, enfants de la patrie,

Le jour de gloire est arrivé!" . . .

At last they had all gone. "What are you worrying about on, father?" said the lieutenant, laying his hand on Peter Hljitch's shoulder with patronizing kindness. The Governor was very much moved by his family, and the Governor's lady even feared him a trifle: but they all felt that he had aged sadly in those last few weeks, and their fondness was not without a tinge of contempt.

"Nonsense! Nothing but nonsense!" answered Peter Hljitch, hesitatingly. For some reason he would gladly have unburdened himself to his son, but then again their views differed so radically that he had feared this explanation. Yet now this very difference of opinion might be of use.

"The thing is this, you see," he continued, with some embarrassment, "this trouble with the workmen makes me seem but uneasy." Their eyes met again, but the son's face was blank with astonishment as he dropped his hand from his father's shoulder, saying,

"But I thought you had your 'honorable mention' from St. Petersburg!"

"Certainly—and it pleased me very much. And yet . . . Aljsha! He gazed into his son's fine eyes with the tender tenderness of a stern old man. "They aren't Turks, after all, are they? They're as much Russians as we—their names are Ivan and Peter like ours. And yet I treated them like Turks! Ha! How does the thing strike you now?"

"It strikes me that you are a recidivist!"

"But they wear the cross upon their breasts, Aljsha! And I—" he raised his finger—"I ordered them to fire at those crosses!"

"As far as I've seen you, father, you've never shown any particular religious scruples before. What have the crosses to do with it? That might be a telling point if you were addressing your regiment in the square, or for some such occasion, but . . ."

"To be sure! Of course!" agreed the Governor, hastily. "The crosses are aside from the argument. The point I want to make is this—that they are fellow beings, do you understand, Aljsha? fellow countrymen? Yes, if I were some German now, called August Karlobitch Schlippe-Detmold! . . . but my name is Peter—and Hljitch besides!"

The lieutenant's voice was rather dry. "You have such distorted notions, father! What have the Germans to do with this affair? And then, for that matter, haven't Germans shot down Germans, and Frenchmen the French—and so on? Why shouldn't Russians fire on Russians? As a representative of the government, you certainly know that law and order must be supported at all costs; and whenever it may be who disturbs them, the same rule applies. If I were the guilty one, it would be my duty to have me shot down like a Turk!"

"That's true," said the Governor, nodding thoughtfully and beginning to pace the floor, "that's quite true! And then he stopped. "But they were driven by hunger, Aljsha. If you could have seen them!"

"There were the peasants in Senezjeim; they rose because they were famished, too. . . . but that didn't keep you from giving them a good dose of the knout!"

"Flogging is a very different thing from— That fool laid them all out in a row! Like game at the end of a hunt! And I looked at their poor thin legs and thought, 'These legs will never walk again!' You cannot understand, Aljsha! Of course, as a matter of state, an executioner is a necessity—but to be the executioner!"

"What are you talking about, father?"

"I know—I feel it—they will kill me yet! It's not that I fear death." The Governor raised his gray head and looked steadily at his son. "But I know . . . they will surely kill me! I never understood before: I only thought, 'what is it all about?'" He stretched his powerful fingers and then doubled them into a fist.

"But now I understand; they mean to kill me! Don't laugh; you are young yet; but I have felt death to-day—here in my head. Yes, in my head!"

"Father, I beg of you send for the Cossacks! Demand a body-guard! They'll grant you anything! I beg of you as your son, and I ask it in the name of Russia, to whom your life is precious!"

"And who is to kill me but this same Russia? And why should I have the Cossacks? . . . To defend me from Russia—in the name of Russia! And, after all, could Cossacks, upon or guards, save a man with death branded on his forehead? You've been drinking a good deal this evening, Aljsha, but you are sober enough to understand this: I feel the hand of death! Even there in the storehouse where they laid the bodies I felt it, yet then I did not realize what it was. This I've just been telling you, about crosses and Russians, is nonsense, of course—has nothing to do with the thing. But do you see this handkerchief?" Eagerly he drew a handkerchief from his pocket, unfolded it, and held it up for inspection

like a conjurer. "Alexey Petrovitch, now look here!" He waved it hastily, and a subtle perfume was wafted to the lieutenant, who sat there looking anxious. "There, you doubting scientist, you *fa-dre-voile* thinker! You believe in nothing, but I believe in the old law: Blood for blood! You will see!"

"Father, send in your resignation and travel."

He seemed to have expected this advice and was not at all surprised. "No—not for the world," he answered firmly; "you can see for yourself that would be tantamount to flight. No one! Not for the world!"

"Forgive me, father, but you seem so unreasonably!" The lieutenant rocked his head and shrugged his shoulders. "I don't know really what to think. Mother grunts and you talk of death—and what is it all about? I'm ashamed of you, father! I've always considered you a man of discernment and honor, and now you're like a child or a hysterical woman. Forgive me! But I cannot understand it at all!"

He himself was not in the least hysterical, nor in the slightest degree womanish—this handsome young fellow, with his fresh smooth-shaven hair and the calm finished manner of a man who not only respects himself, but reveres himself! He always seemed to be the sole individual in a crowd; and you must be a most distinguished person (a General at the very least) to have him aware of you, and to make him overcome that slight constraint and reserve that the average public dropped in him. He was a good summer and loved the sport, and when he went to the baths on the Neris, in the summer time, he noted his own perfect symmetry as coolly and complacently as though he were quite alone. One day a Cossack appeared at the baths, and every one stared at him—more with a smothered curiosity, and some quite openly and unabashed. He alone did not withhold him a glance—considering himself far more interesting and more important than any Cossack. . . . Everything in the world was clear and simple to him; everything could be reduced to a formula, and he knew that with the Cossacks things would certainly go better than without the Cossacks.

His reproaches had a ring of righteous indignation, only tempered by politeness and the fear of wounding the old man's vanity. All this that his father had told him was not entirely unexpected. He had always known him to be a dreamer. But it struck him as something coarse, barbarous, abominable. "Cossack! Blood for blood! Ivan and Peter? How absurd it all was!"

"You're a poor stick of a Governor, even if they have given you an 'honorable mention,'" thought he, slowly, as he scanned his father's figure with his handsome eyes. . . .

"Well, what is it, father: are you vexed with me?"

"No," answered the Governor, simply. "I am grateful for your sympathy, and you'll do well to quiet your mother. As to myself I am perfectly convinced. I've explained my impressions to you now. This is my view of it, and yours is different. We shall see which is correct! But now, be off to bed. It's time you went to sleep."

"I'm not tired yet; shan't we take a turn in the garden?"

"That suits me."

They went out into the darkness and disappeared from each other's view—only their voices and an occasional hasty touch disturbing their sense of a strange, all-embracing loneliness. The stars, on the other hand, were numberless and sparkled in bright companionship, and when they reached the open, out from under the close-set trees, Alexey Petrovitch could distinguish at his side the tall, heavy silhouette of his father. The night, the air, and the stars had called up a tenderer feeling for the dark shadowy presence, and he repeated his reasoning explanations. "Yes, yes," answered Peter Hlybok from time to time, though it was not quite clear whether he agreed or not.

"But how dark it is!" said Alexey Petrovitch, and stood still. They had come to a shady walk where the darkness was complete. "You should have lanterns put here, father!"

"What for? Tell me—"

They both stood still, and now that the sound of their steps was hushed, the loneliness ringed in darkness—unbounded.

"Well, what is it?" asked Alexey Petrovitch, impatiently.

"Does this darkness mean anything to you?"

"Dreaming again!" thought the lieutenant, and observed with jaunty gaiety. "It means that you are not to wander about here alone! Anywhere in these woods they might have laid an ambush."

"An ambush! Yes, that's what the darkness tells me too. Imagine! Behind each one of these trees sits a man—an invisible man—watching! So many men—forty-seven—as many as we killed that day! And they sit there and hear what I say—and so!"

The lieutenant had grown nervous. He searched the darkness round about and took a step forward. "How unnecessary to excite yourself so!" he exclaimed, involuntarily.

"No, but wait a moment!" The son started as he felt a light touch of the hand. "Picture to yourself that everywhere—there in the town even, and wherever I go, they are lying in wait. If I walk, he walks too; and watches me! Oh I got into the carriage, and a man passes and pulls off his cap: he is spying on me!"

The darkness grew sinister, and the invisible speaker's voice sounded strange and distant.

"That will do, father, let's go!" said the lieutenant, striding hastily off without waiting for his father.

"You see now, my dear boy!" came in Peter Hlybok's deep voice with a startling ring of mockery. "You wouldn't believe me when I told you! There he sits in your own head!"

The lights in the house went so far and dim that the lieutenant felt a mad impulse to run. If he might only reach them! . . . He almost doubts his own courage, and at the same time develops a feeling of respect for his father, who strides on calmly along through the darkness.

But fear and respect both vanish as soon as he enters the well-lighted rooms; and nothing remains but the impression of rage

"Listen," interrupted the Governor, with a suppressed growl. "Why do you always set these apes how? What does it mean?"

against his father, who will not listen to the voice of reason, and refuses the Cossack guard with the stubbornness of stupidity!

IV

Summer and winter the Governor rose at seven, had his cold tub, drank his milk, and took his two-hour walk, no matter what the weather. The Governor had given up smoking early in life, hardly drunk at all, and, at fifty-six years, for all his white hair, he was as sound and fresh as a strapping, little boy. His teeth were even, perfect. The eyes were a bit puffy, but full of fire still; and his great fleshy old nose bore the marks of his glasses. He never wore a placard, but for reading or writing used a pair of gold-rimmed spectacles with powerful lenses.

In the country he basted himself very much with his garden. He cared very little for flowers or the purely æsthetic side of horticulture, but had built fine conservatories and a forcing house where he cultivated peonies. Since the day of the catastrophe he had only glanced into the hothouse one single time, and then had come hastily away: there was something so pleasant, so powerful, and consequently so grievous, in the warm, damp air.

The greater part of his days when he was not long in town he spent in the vast park, pacing with firm direct steps down the long green avenues. Now and again lively and interesting thoughts came to him, never with any particular sequence, and wandered through his brain like an unbidden flock. And sometimes for hours he strolled about, but in thought and oblivion to his surroundings; yet could not have told what matters he had been pondering. Occasionally he was made aware of a deep and mighty working of his soul; at times dominating, at times crawling, but to what it all tended he never understood. And only his changing needs, from grave to gay, from tender to severe, gave index in his character of this mysterious, secret expansion in the depths of his being. Since the catastrophe his moods (no matter what his clearest thoughts might be) had been gloomy, sick, hopeless; and whenever he woke from his deep brooding he felt that he passed this interval through a long and horrible night.

In his youth he had once been caught by the fierce current of a river, and almost drowned; and for years he carried the impress on his soul of that streaming darkness, his faintness, the eager, greedy sucking depths. And what he now endured was that same feeling!

The sunny window morning, two days after his son's departure, he was out again on the avenue, pacing in silent thought. The yellow leaves that had fallen in the night had already been swept away, and across the marks of the brown the tracks of his large feet with their high heels and broad square soles showed clear—deep pressed into the soil, as though to the selfish of the man himself had been added the burden of his incoherence, thought, pressing him to the earth! Now and again he paused, and over his head in the tangle of sunlit branches was heard the rhythmic hammer of a woodpecker. Once while he stood still, a little squirrel ran across the path. He darted from tree to tree like a fluffy ball of red fur.

"They will certainly kill me with a recycler—you can buy such good reciders now," he thought, "but I don't understand much about house or garden or anything else. I am not the man who runs Aljosa, for instance—when he is made Governor they'll kill him with a bomb!" thought Peter Hljitch, and his bearded lip curled with a slight ironical smile, though his eyes were fixed and gloomy. "I wouldn't run—no, had as it is. I wouldn't run!"

He halted and brooded a column on his fatigued neck. "A pity, though, that no one will ever know of my notion of honor and my pluck. They know all the rest, but that they can never know. They'll shoot me down like my old comrade, too bad! But there's nothing for it. I shan't speak of it! Why try to rouse the Judge's pity? It's not honorable to work on his feelings—his position is hard enough at the best—and now they come and whine for mercy? I am a man of honor, I tell you—honorable!"

It was the first time he had thought of a Judge; and he wondered how he had happened to think of it. It came to him as if the question had long ago settled, as if he had slept, and in his dream some one had explained most convincingly all the necessary details about the Judge, and when he woke he had forgotten the particulars, but only remembered that there was a Judge—a law-abiding Judge, principled with authority, and accompanied with threatening might! And now, after the first moment of astonishment, he met the thought of this unknown Judge as though he were an old and valued friend. . . . Aljosa could never understand that! According to him everything must be for purposes of state. "I am not a man of state," was that—showing a hungry mob? Interests of state demand that the starving be fed—and not shot at! He is young and inexperienced yet, and easily influenced. . . . But before he had quite finished this comfortable reasoning, he suddenly realized that he himself, and not Aljosa, had ordered the firing! . . . The air suddenly grew close, and he heard (suddenly enough) a single roar of awful thunder—"Too late!" . . . He was not sure whether it were simply a thought or a cry, or if it might be lightning. It rang on every side, and he seemed him like lightning overhead. There came a long time of bewilderment: hasty disbanding of thoughts, and painful slithering of ideas: finally, a calm so complete that it seemed indifference! . . .

The windows of the big stone house twinkled in the sunshine among the trees, and the wild grape-vine's red leaves glowed like blood-stains against the white angles of its walls. Following his custom, the Governor turned down the narrow path between the empty hothouses and into the forcing house. Only one workman was putting about, old Jeger.

"Is the gardener not here?"

"No, your Excellency. He has gone to town for cuttings today; this is Friday."

"What? . . . And is everything doing well?"

"Thanks be!"

The sunshine streamed through the open windows, driving on the close, heavy dampness. You left bow hot and strong the park was, and now so gentle—how loquacious! The Governor sat down, the light sparkling on the metal of his uniform. He could his pocket, and, watching the old man attentively, said, "Well, how goes it, Brother Teger?"

The old fellow answered this friendly but somewhat indolent question with a polite smile. He stood up and rubbed his dirty hands together. "Tell me, Jeger, I hear they're going to kill me, on account of the workmen that time, you know?" Jeger kept on smiling politely, but no longer rubbed his hands; he had tried behind his back and was apologetic. "What do you think about it, my man: will they kill me or not? Can you read and write? . . . Then tell me what you think. . . . We two old fellows can talk it over frankly, can't we?" . . .

Jeger shook his head until a lock of soft gray hair over his eyes, stared at the Governor, and muttered, "Who can tell? It may be so, Peter Hljitch!"

"And who is to kill me?"

"Who, the people, to be sure! 'The Community,' as they say in the village."

"And what does the gardener think about it?"

"I don't know, Peter Hljitch. . . . I haven't heard."

Both sighed deeply.

"It looks rather bad for us, doesn't it, old fellow? . . . But sit down!"

Jeger did not accept the invitation and was silent.

"And I thought I was doing the right thing: . . . the shooting. I mean. They were throwing stones, insulting me. They almost hit me!"

"They only do that when they're in trouble. The other day again on the marketplace a drunken man—an apprentice or something, who knows—began to cry and cry; and then he picked up a stone and lunged; he let it fly! . . . and only just because he was in trouble!"

"They will kill me, and then they'll be sorry themselves," said the Governor, thoughtfully, trying to call to his mind the face of his son, Alexey Petrovitch.

"Sorry they'll surely be—that's certain. . . . Oh, how sorry they'll be! Bitter tears they'll shed!"

A ray of hope dawned.

"Then why do they want to kill me? . . . That's nonsense, old man!"

The workman gazed wide-eyed into space, with veiled pupils and a rigid attitude. For an instant he seemed petrified; the soft folds of his worn cotton shirt, the fuzzy hair, the grumpy hands, all seemed like caricatures brought about by a skillful artist who had wrapped the hard stone in soft downy raiment.

"Who can tell?" answered Jeger, without looking at him. "The people seem to wish it! . . . But don't trouble about it any more, your Excellency. You know as long as I have lived I have never seen anyone shot. And they'll take a long time, and talk; and then forget it themselves!"

The ray of hope vanished.

What Jeger had said was nothing new, nor especially clever; but his words had a singular ring of conviction, like those dreams that came to the Governor as he paced his long, lonely avenues. The one phrase "The people wish it," was a clear expression of what Peter Hljitch had felt: it was convincing, irrefutable! But perhaps this strange conviction lay not so much in the words and Jeger as in his set look, his fuzzy hair, and his broad, earth-stained hands! And the sun still shone.

"Well, good-by, Jeger."

"Good health to you, Peter Hljitch!"

The Governor shrugged his shoulders, buttoned his coat, and pulled a ruble from his pocket. "Here, take that, old man! Buy yourself something with it!"

With a nod of thanks Jeger held out his old fat hand, where the silver balance was on a red.

"What singular things they are!" mused the Governor, as he strode down the walk in the flickering shade, his own figure checked by sun and shadow as he went.

"They wear no wedding rings, and you can never tell whether they are married or not. . . . However, no! They wear rings, but they are silver. . . . or tin maybe! How odd! Tin rings! . . . These fellows get married and cannot even afford tin rings for their wives! . . . I don't know, but I don't like it! These fellows in the store-room probably had tin rings on too. Yes, now I recollect: tin rings with a very thin band!"

Lower and lower in ever-narrowing circles swung his fancy: like a hoarse, shivering over a fire, and snowing down to pick up one small grain! . . . A wood-pecker hammered, a shrilled bell fell and fluted away; and he himself floated off in a painful, troubled daydream. . . . A workman—his face is young and handsome, but in all the wrinkles black grime of his work is settled into blinks that have eaten into the skin, and worn the hair prematurely. His broad mouth is hideously wide open . . . he seizes!

He is calling something. His shirt is torn over his chest, and he stands at it yet . . . more and more, like salt paper, baring his breast. His chest and half his throat are white; but above the line he is dark—as though his figure were like all other men's, but they had put another sort of head upon it. . . . Why do you tear your shirt? . . . It is better to see my naked body! . . . But the bare white breast is thrust wildly toward him.

"Here, take it! Here it is! . . . But give us justice! . . . We want justice! . . . But where shall I find justice? How singular you are!"

A woman speaks.
"The children are all dead! The children are all dead! The children . . . the children . . . the children have all died!"

"That is why it is so lonely down your lane!"

"The children! The children! The children are all dead! The children!"

"But it is impossible that a child should die of hunger! A child . . . a little creature who cannot even reach the cup-board over itself! You do not love your children! If my child were hungry I should give it food! But you even wear tin rings!"

"Ah! We wear iron rings! Our bodies are bound, our souls are bound—we wear iron rings!"

On the back-steps in the stable a maid was washing Maria Fitzsimmons's skirt. The kitchen windows stood open; one could see the cook in his spotless jacket. It smelled of refuse . . . it was dirty. "What have I come to!" said the Governor in amazement . . .

"Why. It's the kitchen. What was I thinking of? Ah, yes! I wanted to see the lanes! How men will fool themselves! It's early yet . . . ten o'clock . . . But it seems to dawn that to have me here . . . I must go!" And he turned into his accustomed path, and wandered up and down, thinking steadily.

And the manner of his thought was one who feels a great and unknown river. Now the river reaches to his knees . . . he grows out! But finally sinks from sight; only to struggle up later, breathless and pale! . . . He thought of his son Alexey Petrovitch—sired to think of his office and his affairs; but after over he led his fancies they always harked back unexpectedly to the catastrophe, and hovered there as in an inextinguishable mine. It seemed strange that nothing impinged before that event had the power to hold his attention . . . the past all seemed so trivial, so unimportant!

It was in the second year of his Governorship, some five years ago, that he had ordered the arrest for the peasants of Novosibirsk. On that occasion also he had received an "honorable mention" from the Ministry; and from that event dated the rapid and glittering career of Alexey Petrovitch, who was regarded with some attention as the son of an energetic and far-sighted man. He dimly remembered (it was no long ago) that the peasants had taken some grain from the proprietors by force, and he had come with a detachment of soldiers and police to restore it to the owners of the estates. The affair was nothing terrible, nothing threatening in itself, but rather farcical!

The soldiers dragged away the sacks of grain, and the peasants lay down on them and were dragged too, amid the laughter and jeers of the force, to whom the whole thing was a huge lark! But the fellows began to shriek and fight; striking out and running round against the fences—the walls—the soldiers! . . . One of them, torn from his sack of grain, fumbled solemnly in the

The bare white breast is thrust wildly toward him: "here, take it! here it is! . . . but give us justice!"

Illustration by G. W. F. Peters

It was autumn. Wind-swept clouds hung over the bare stubble fields, and they all marched off to the city . . . to the light! But the village behind them still lay as before; under its depressing sky, in the midst of its dark, sodden, lumpy fields with their short, sparse stubble . . .

"The children are all dead! The children are all dead! . . . The children! The children!"

The young woman for luncheon. Its clear penetrating tones rang cheerily through the park. Alas! the Governor faced about and glanced sharply at his watch. "Ten minutes to twelve!" He put the watch back and stood still. "Disgraceful!" he cried in a rage, his mouth trembling with emotion. "This disgraceful! I'm almost afraid I'm a coward!"

After luncheon he went to his study to look through the mail from town. Glimming and wood-gathering and thinking through his gloves, he sorted the envelopes; laying some aside and cutting others carefully, to skim through their contents. Presently he came upon a note in a narrow envelope of cheap thin paper pasted over with yellow stamps of one kopek. He opened it as carefully as he had the others. When he had the envelope in one side he unfolded the thin, ink-splattered sheet, and read—

"Whiter and whiter grew his face, and his dilated pupils stared through the thick convex glasses at the words—

"Butcher of our children!"
The letters were large, rounded and pointed, and terribly black; they staggered unevenly across the rough coarse paper and read—

"Butcher of our children!"
To be Continued.

SCIENCE

By Henry Jerome Stockard

HE leads the sun through hills of Durian,
And brings the east and west to every door.
With silent influence drawing nigh and near,
He close binds the heads of tribes of men.
He holds the trail of Pain to his secret den;
The dust process of being dures explore,
Spits slowly out on mountains, rock, and shore

The syllables of God to mortal ken,
She yet easy and from vague, cloud-bathed pierce,
And lay along the darkness and the wind
A cable vast which world to world shall bend
Breathless may catch the deep, slow speech of Mars.
Now, hark, passing on from outer spheres
The grave, tremendous message of the stars.

THE SEASON'S PLAYS

ALLA NAZIMOVA, ELLEN TERRY,
AND A NEW "JEANNE D'ARC"

By "I"

IT is not to be gainsaid that Madame Alla Nazimova is the dramatic sensation of this season in New York. Her interpretation of two of Ibsen's most subtly and diversely conceived characters, *Hedda Gabler* and *Nora Helmer*, involves not only a rare gift of simulation, but, in the rôle of *Nora*, remarkable appreciation of the dramatist's intent. Add to this the lesser, but more surprising, fact that a year ago this actress spoke no English, yet now plays both parts in that tongue, and her achievement is amazing. In her native Russian, Madame Nazimova was a great

actress, and such was her power of dramatic delineation that hundreds of persons went to see her last year during her appearance with a company of her fellow countrymen when they could not understand a word of what was being spoken upon the stage. And the success which came to her then may, we hope, have been her incentive to learn English. New York, so often disappointed, yet so ready with appreciation, should certainly accept it as a reward.

It would seem like stooping to very small things to criticize Madame Nazimova's English, but it is scarcely more than fair to this gifted woman to say that there are times when the English she has learned runs quite away with the English she thoroughly understands. This, at times, renders her delivery of many lines, particularly in letter, impassioned scenes, almost unintelligible. As *Hedda*, her subdued voice and the comparative deliberateness of her diction during the greater part of the play enable her to suggest a singular command of the new language, but as *Nora*, the capricious with which she takes many of the scenes, and the pitch to which her tones often rise, blur the words with unfortunate completeness. This, however, is a fault which is only of to-day; to-morrow will surely find it to have vanished.

Madame Nazimova's presentation of *Hedda* does arouse in at least one of its elements the question of faithfulness to Ibsen's intent. This is in her outward and visible sign of the Norwegian dramatist's morbid heroine. The Russian actress, with undoubted daring, seems to have flown directly in the face of the author's lines. Where our actors refer to her by the other characters as looking so well, as "blooming," one sees as the subject of this generous praise a woman of almost death-like pallor, one who is the very antithesis of "blooming." But this, too, is a "mannerism" of sorts, and quite negligible in marking the powerful delineation of the character.

For all its grimness and gloom, the Russian's portrayal is grotesquely fascinating. One cannot escape its influence. Madame Nazimova makes *Hedda* a veritable black panther; lithe, alert, self-poised. As *Nora* she comes tripping upon the stage as merry as a grig, a carelessly happy little body who would have gone into a panic of terror at mere mention of a black panther. The change in character, in expression, in every feminine detail, is astounding. Throughout the performance of "A Doll's House," even in its powerful closing scene, Madame Nazimova gives no suggestion of her *Hedda*. When the tragedy of her life, the discovery of *Hedda's* purely sexual attachment for her, overcomes her, the art of her performance is unparalleled. Her awakening down in her face in such a way that the spoken lines are unnecessary. Now does she present still another woman, a young woman borne down with the sudden burden of years she has never realized, and staggering up with her burden to bear it away alone.

It is Madame Nazimova's command of expression—her eyes, perhaps—which contributes so much to her characterizations. Her face is as variable as the sky. As *Hedda* it is all cloudiness, threatening, and sinister, with never a ray of sunlight. As *Nora* she is as radiant as an April day and as severely measuring of the clouds which swing up in startled flight across the sky. The line in *Hedda* is the playfulness of the kitten in *Nora*, and one cannot find a more real, more appealing bit of acting than that of Madame Nazimova's *Nora* in her gambols upon the floor with her children.

Miss Julia Marlowe and Mr. E. H. Sothern, following their week's trial of Nisemann's oppressor "John the Baptist" at the Lyric Theatre, made an experiment in the poetic drama, choosing for their purpose the "Jeanne D'Arc" of Mr. Percy Mackaye, an American playwright and poet. Mr. Mackaye has cast the story of the Maid of Orleans in the form of a five-act play, ample in opportunities of spectacle and pageant. It is full of the clang of armor, the whirl of momentous doings; and it is, on the whole, a smoothly contrived vehicle. The first act shows us Jeanne in the fields near Domremy, in Lorraine, where she hears voices and is made aware of holy presences. She is appalled that she must take the field to act as a savior for the French cause. Act II shows us the interior of the castle of Chinburg III, at Chinburg—here Jeanne discovers the Dauphin, asks for soldiers, and makes the acquaintance of the Duke D'Alençon (Mr. Sothern), an admirable and valiant gentleman, who supplies the play with what is called, I believe, "heart interest." Act III, takes us to an open place outside the walls of Orleans during the attack on the Trenches. After a

Alla Nazimova as Ibsen's "Nora"

momentary repulse, the French arms prevail, under the heroic leadership of the "Maid of God." The two next acts hasten us toward the tragic climax, after we have observed the triumphant coronation of King Charles at Rheims.

Mr. Mackaye's play viewed as a whole lacks dramatic intensity; its movement is sluggish, and the joints creak somewhat. But it is dignified in conception, and the part of *Jennae*, in particular, is poetically imagined. Miss Marlowe's impersonation of the *Maid* is as fine a thing as she has done in years—deeper tender and noble, heroically exalted, continually beautiful in external aspect.

It was with the manifestation of the most genuine affection that New York welcomed the return of Miss Ellen Terry to the Empire Theatre. When she arrived in this country she was quick to assure her interviewers that this was not by any means to be her "farewell tour," adding that she intended to come back just as often as she could, and just as long as she felt that the American people wished to see her. Perhaps this and the warmth of the greeting may induce her not to permit again the lapse of so many years between her visits, because she had not been in this country since the autumn of 1902. Miss Terry's opening play of the three she will present here was G. Bernard Shaw's "Captain Brassbound's Conversion," in which she made such a success in London. The play itself—it was written for Miss Terry—furnishes a one-character production, and one wonders, with some misgiving, how much of a success it would prove in the hands of a woman even slightly less skilled than Miss Terry. The story of the play concerns itself with the entrance of a gentlewoman into the life of a precocious rogue of a pirate and smuggler, and her achievement of ascendancy over him and his entire rascally band by her gentleness, courage, and quick resourcefulness. It provided Miss Terry with a rôle which required, apparently, little more than the quality expressed in the parental admonition to a little girl bound for a party: "Now, just be your own sweet self." In the first and third acts Mr. Shaw delights himself with a number of long dialogues which are tolerated from him, but which would undoubtedly be cut from the manuscript of another playwright. Aside from these moments the action of the play is brisk and delightfully amusing. A peculiarity of it is the fact that it has only one woman character, so there is an added reason for Miss Terry's dominion in her rôle.

ENGLAND'S VIEW OF A POSSIBLE AMERICAN WAR WITH JAPAN

By SYDNEY BROOKS

London, January 29, 1907.

ENGLAND has spasms of worrying about America. At one time it is the negro problem that disturbs her; at another, the corruption of American politics; sometimes it is the trusts, and then again it is Tammany Hall or a labor dispute hard to distinguish from a sort of civil war. Just now it is the American Constitution that haunts the minds of America's friends and well-wishers in England. Englishmen have palpably outgrown their old conceit for that instrument. It did not seem enough in its day, they think, but it is now plainly inadequate to grapple with twentieth-century conditions. It puzzles Englishmen to conceive how Americans can continue to live under it. They are coming round to the opinion that its restraints and delicate balances and nice equipoises will soon prove such an intolerable obstacle to progress that the American people will insist upon its modification. And for the facts and arguments to buttress this conviction they have only to look at certain problems that confront the United States at this moment, and they have only to read over again President Roosevelt's message of December 4.

When Mr. Roosevelt wrote that message he probably did not think that it would be interpreted in Europe as an open confession of the failure of the American Constitution. Yet that was the construction which Englishmen, at any rate, at once and unanimously put upon it. In the message the President wishes to regulate the trusts by legislation analogous to the English Company laws, but without an amendment to the Constitution he doubts whether such legislation is possible. He advocates a national mortgage law; the Constitution forbids such a law. He urges Congress to pass an eight-hour bill; the Constitution limits its application to those engaged in interstate commerce—that is, to the railway employees. He points out the necessity of developing technical instruction in industries and agriculture along broad and uniform lines, but he has to confess that the Constitution hinders such matters wholly to the whims of individual States. He pleads for an inquiry into the conditions of child and female labor throughout the country; but, thanks to the Constitution, the Federal government, while it may inquire, is debarred from going farther, with appropriate legislation, than imposing a tax on incomes, but he admits that such a tax has been declared unconstitutional once and may be again. Here, then, are half a dozen issues with which the Constitution in its present form is unable to cope. It is the only instrument which imperatively demands solution if the country is to be saved from confusion little short of chaos. They are issues, too, which cannot be satisfactorily solved except by the Federal government. But the Federal government does not at present possess the power of dealing with them.

But by far the most important item in the President's bill of complaints against the Constitution is that, besides failing socially, industrially, and politically, it also fails internationally. Englishmen received with amazement his admission that, as things are, it is impossible for the Federal government to "protect allies in the rights secured to them under solemn treaties which are the law of the land." They have deduced from this admission that in one most vital branch of its foreign relations the United States government is little more than a phantom government. They take the President to imply that if any State or the American Union makes up its mind to defy or ignore a treaty to which the United States has put its seal, the Federal government is helpless to compel obedience. They infer that while the Federal government may enter into treaties it cannot enforce them; that its authority waxes at any moment and with entire impunity be set at naught by any town or State in the commonwealth; and that outside the District of Columbia its writ does not run. Moreover, Englishmen conclude from all this that before treaties run he made the supreme law of the land. In the ordinary, the European sense of the words, the American Constitution will have to be unimaginably remodelled. At present they find themselves driven to accept it as a fact that a treaty has no more than the validity of an act of Congress, and its provisions may be declared unconstitutional and therefore null and void by the Supreme Court, and that quite apart from the question of enforcing it, its very validity, its right to be a treaty at all, may at any moment be challenged and denied. If this is so, Englishmen have no opinion but to decide that the American scheme of government, for as treaties are concerned is little more than an organization.

I have ventured on this review of English opinion because some misapprehension as to its general trend seems to exist in America. In the difficulty that has arisen between the United States and Japan England has foundered mainly on a misunderstanding of the aspect of the case. That is to say, England regards it at present as far more a struggle between nationalism and particularism, between the Federal government and State rights, between Mr. Roosevelt and California, than between the United States and Japan. I do not mean to say that there are little more to the other issues involved in it. The current opinion, as one gathers it from newspapers and from conversation with Englishmen who really know America, seems to be that the trouble over the schools in San Francisco is the first gun in an organized campaign against the free immigration of our old and really loyal American people.

There is, however, another aspect of the difficulty on which it is the more necessary that a word should be said inasmuch as Amer-

ican opinion in regard to it is clearly misinformed. I refer, of course, to the Anglo-Japanese alliance and its bearing on a possible struggle between the United States and Japan. The American papers seem to have overlooked completely over this point, both unnecessarily and irrationally. The English papers have not discussed it, not because it is too awkward to be discussed, but because there is nothing in it to be discussed. When you are told by a London correspondent that "although, by common consent, British newspapers are silent on the subject, the silence is committed by Lord Lansdowne in not providing that the Anglo-Japanese alliance should be inoperative as against the United States is keenly regretted in English government circles"; when you are also told that "the Japanese government has already been quietly informed that under no circumstances would Great Britain contemplate any such unforeseen development of the obligations imposed on the signatories of the treaty of 1905"; when you hear all this, I beg of you to dismiss it from your minds as absolute nonsense. It amazes me that so distinguished a publicist as Mr. M. W. Hainley should have thought it worth while to write, and the *York American Review* to publish, an article based upon such flimsy foundations. I do not hesitate to say that that article is full of misstatements. Mr. Hainley, for instance, declares that the suspension of American exports of food staples "would mean starvation for the millions of toilers in British factories and mines." He goes on to talk of the United States as "the principal source of British food supplies." He asserts that "under no circumstances would England consent to be drawn into a war with her chief food supply." Now I willingly agree that the United States and the United States would be looked upon with horror and detestation as an infamous fratricidal strife—but for reasons that have nothing to do with wheat and flour. Mr. Hainley is many years behind the times. He seems to think that Great Britain still draws her food supplies mainly from the United States. She used to, of course. There was a time when she derived sixty-two per cent. of her total annual imports of wheat and flour from America. But that time is not only past, but will never return. At present, as Mr. Hainley could easily have learned, Great Britain draws her main supplies from four countries, widely different parts of the world—namely, British India (which sends twenty-one per cent. of the total imports of wheat and flour), Russia (which sends nineteen per cent.), the Argentine (which sends sixteen per cent.), and the United States (which sends sixteen per cent.).

I expose this misstatement because a writer who can make so grave an error on a simple matter of fact and who proceeds to build an elaborate argument upon it, must expect to have all his assertions strictly examined before they can be accepted. My impression is that Mr. Hainley has been as negligent in looking into the terms of the Anglo-Japanese alliance as in his inquiries into the sources of Great Britain's food supplies. If he had quickly read over before sitting down to write about them I am confident he would never have ventured on this colossal statement. "We deem it, then, inadvisable that the Anglo-Japanese treaty of 1905 would have required Great Britain to place her fleets and armies at the disposal of the Japanese, had the latter made war on the United States in consequence of the San Francisco incident." There is really no excuse for such a blunder as this. The objects of the Anglo-Japanese agreement are clearly stated in the preamble. First, there is "the consolidation and maintenance of the general peace in the regions of Eastern Asia and of India." Secondly, there is "the preservation of the common interests of all powers in China." Thirdly, there is "the maintenance of the territorial rights of the high contracting parties in the regions of Eastern Asia and India, and the defence of their special interests in the said regions." Whenever these rights and interests are in jeopardy, the governments undertake to consult and to act in common, and frankly. Whenever either of them is involved in war in defence of its above-mentioned rights or interests "by reason of an unprovoked attack or aggression, wherever arising, on the part of any other power or powers," the other contracting party "will at once come to the assistance of its ally, and will conduct the war in common, and make peace in mutual agreement with it." That is all that is essential in the treaty. By what possible interpretation can it be said to have the remotest bearing on the present trouble between the United States and Japan? If the United States were to make an "unprovoked attack or aggression" on the "territorial rights" or "special interests" of Great Britain or Japan "in the regions of Eastern Asia and of India," then no doubt the alliance would come into play. Is anything of the kind possible outside the scope of the Anglo-Japanese treaty? Its development can flow from a question of regulating Japanese immigration into America or of settling the conditions under which Japanese children in California are to receive their education? Obviously the present difficulty between the two governments stands altogether outside the scope of the Anglo-Japanese treaty, and has no more to do with it than with the Triple Alliance, or with the Anglo-French entente. If England has not discussed the point it is simply because it has not occurred to her that there could possibly be a misunderstanding connected with it. If such misunderstanding really exists among respectable American people, it can easily dissipate it by studying the precise terms of the alliance itself.

Sinking Land

A STRIP of land beginning about eight miles east of Lake Michigan, at the termination of the watershed and the northern limits of a region of low swamp land, which has already cost three railroad companies hundreds of thousands of dollars, has begun to drop more than ever. The depression is over 1000 feet wide, and runs north and south through Lake County, Indiana.

The latest downward movement of this mysterious sink hole was observed only a few days ago by employees of the Erie Railroad at the point where that line crosses the strip. Hundreds of thousands of tons of dirt and gravel have been dumped into the crevice, which runs a distance of twenty feet on either side of the track, but the depression is now lower than ever and still continues to grow deeper, a fact which utterly baffles the engineering department of the road.

The Panhandle and Indiana Harbor railroads have also suffered from this bottomless pit, the influence of which apparently runs about fifteen miles north and south. It is stated by an engineer of the Indiana Harbor road that since they have erected a fifteen-foot embankment across the strip the trucks have not sunk, although depressions have been noticed in the low land surrounding for a distance of 1000 feet.

The sinking of the earth at this point seems to be an annual event, and has occurred about this time of year since the first railroad line pierced the territory nearly twenty-five years ago. It is the general belief by engineers that some subterranean cataclysm takes place in December which weakens the crust and causes it to sink under the weight of the heavy traffic passing over it. So serious is the condition of the place at the time that trains are compelled greatly to reduce their speed in traversing this mysterious strip of land.

A Troubled Father

In a mountain town in Kentucky, the feeling began to grow that the "grocery saloon," where liquor was sold as commonly as vinegar and horseradish mustard, and where the customer came into the store to procure the pretense liquor he was sometimes called upon to make an excuse or apology. There were some interesting excuses offered, and one in particular is told of a mountaineer who went into a store and, laying down his bag on the counter, said:

"Squire, I want a gallon of your best stuff; the baby is sick."

An Auto Professorship in Spain

OCCASION to the great popularity of the automobile, there is to be instituted at the School of Arts and Crafts, in Madrid, a chair of automobilism, under the patronage of the King of Spain, who is one of the world's most enthusiastic motorists.

The professor who will be appointed to conduct the course of study will instruct his pupils not only in the art of driving every class of motor-car, but also in all the details of the mechanism connected with the construction and repair of automobiles. The pupils will also be taught to read geographical charts, and become versed in the laws regulating automobile traffic in all the countries.

Football Rules Changed

THE AMERICAN Intercollegiate football rules committee at its recent meeting made three highly important additions to the regulations governing the game, though all the old regulations remain practically unchanged. In future the halves shall be of thirty-five minutes instead of thirty.

Instead of a penalty of the loss of ball on an illegal forward pass, there will be a penalty of fifteen yards on the first and second downs, but the ball is retained. When a foul is committed it counts as a

down. The proposed substitution for the present forward-pass rule is as follows:

"If a forward pass before reaching the ground, or a kicked ball either before or after reaching the ground, goes out of bounds, the ball shall belong to the opponents at the point where it crosses the side line."

There is also created a new official, to be known as the field umpire, who will to upon the field in the defending territory. A new section of rule 5 states that a player shall be considered as having opportunity to make a fair catch if he is in such position that it would be possible for him to reach the ball before it touches the ground, and there was also added to the rule the following:

"In case a signal for a fair catch is made by any player who has an opportunity for a fair catch, and another player of his side who has not signaled for a fair catch catches the ball, no run shall be made, and a fair catch shall not be allowed, but the ball shall be given to the catcher's side for a down, at the point where the catch was made."

The question as to whether a line-man, except the end, had a right to run from behind the line or from his place in the line, which was raised before the Michigan-Pennsylvania game last fall, is answered by the following rule:

A line-man is permitted to carry the ball provided he does not leave his position in the line until after the ball is put in play."

All the new rules will come before the joint rules committee for formal adoption probably in March.

On the Job

A BALTIMORE man, who was recently a passenger on a Cunarder, tells of an incident of his trip that led him to the conclusion that your average seaman is not apt to waste much thought on his personal troubles.

This sailor had sent with an accident the second day out, the result of which was a bad cut on the head. The Baltimorean was most solicitous in his inquiries as to the seaman's welfare when he next saw the captain, and would undoubtedly have continued his sympathy had not a rough sea called to mind his own sufferings.

Several days later, when he emerged, white and weak, from his stateroom, he suddenly remembered the poor sailor. In the course of the day the Baltimorean saw the man, with a strip of plaster on his forehead.

"How is your head?" he asked, sympathetically.

"Went by south, sir," was the reply.

The Unquiet Stairs

IN A recent suit in a Cincinnati court a lawyer was cross-examining a German, the point under inquiry being the relative position of the doors, windows, and so forth, in a house in which a certain transaction was alleged to have occurred.

"And now, my good man," the lawyer said, "will you be good enough to tell the court how the stairs run in your house?"

The German looked dazed for a moment. "How do they run?" he repeated.

"Yes; how do the stairs run?"

"Veil," continued the witness, "van I am oop-stairs dey run down, and ven I am down-stairs dey run oop."

Electric Power for the Rand Mines

A GROUP of German and British capitalists have begun the gigantic undertaking of supplying the Rand mines with electric power generated by the Victoria Falls, and which will be conveyed a distance of six hundred miles.

The idea of utilizing the Victoria Falls was under consideration during the past

year, but it was not until the present month that definite action was taken. The erection of a power station on the Rand of approximately twenty thousand-horse-power has been begun and will be completed in from eighteen months to two years time. The station is being constructed in the middle of the Rand.

It is the intention of the company which has undertaken the enterprise to supply power for any and every purpose; to furnish electricity for lighting the township within a radius of twenty-five miles; for the electrification of some of the South-African railways; to furnish electric power for the Rand railways, and the railways in the neighborhood of the Falls of Rhodesia.

When the new enterprise is in operation, it is contemplated that the mine-owners will stop their engines and use electric power. The new company will be in position to supply power at a much cheaper rate than it is now produced by the mine operators. It is the intention of the projectors to begin by supplying power at a rate of about what it is now costing from the Rand Steam Station.

At the present time there are only two electric stations on the Rand which are selling power, and their combined capacity is not more than eight thousand-horse power. The economic conditions of the Transvaal are such that there is great need of cheap power, and the introduction of the power from the Victoria Falls will meet all the demands.

Not for Him

WILSON LACKEY, the player, tells of a farmer in Indiana who went to see "Hamlet" for the first time, quite unimpressed by any knowledge of either tragedy or author.

After the star, who, of course, enacted the part of the Melancholy Prince, had made his first exit, the tiller of the soil turned to the man seated on his right and asked:

"Does that young man in black come on again?"

"Why, certainly!" exclaimed the man.

"You've seen a great deal of him?"

"That so?" queried the farmer, disappointedly.

"Then I'm off."

"Then I'm off."

"Then I'm off."

"Then I'm off."

"Then I'm off."

"Then I'm off."

"Then I'm off."

MUSIC AND THE OPERA

MUSIC BY MR. CONVERSE

By LAWRENCE GILMAN

MR. WALTER DAMBROSCH placed upon the programme of the seventh New York Symphony concert last week a work by an American composer, Mr. Frederick S. Converse, which had not before been heard in New York.

"The Festival of Pae," which is numbered opus 2 in the list of Mr. Converse's works, is, by this token, a comparatively early work, for what one understands to be his latest performance—an opera, "The Pipe of Desire"—stands in the list as opus 21. "The Festival of Pae" has been played in Boston, Worcester, Cambridge, Chicago, Cincinnati, London, and Warsaw. It was, therefore, high time that New York should have been permitted an opportunity to form an estimate of its quality, and Mr. Dambrusch is to be applauded for presenting it—incidentally, it may be recorded here and now that, under him, it had an admirable performance.

Miss Marie Mattfeld
OF THE METROPOLITAN OPERA
COMPANY, AS "MAERSEL"

Mr. Converse, though he is still under forty, has had a career of extraordinary success. He was graduated from Harvard in 1903 with, we are told, "the highest honors in music." Five years later he matriculated at the Royal School of Music in Munich with honors in composition. Since then he has lived in or near Boston, teaching and composing; he is now an assistant professor in the music department at Harvard. He has composed with a free and unhesitant hand in the more ambitious forms. His opus 1 was a sonata for violin and piano; his opus 2 a string quartet; his opus 3 a concert overture, "Youth"; his opus 4 a Symphony (performed in Munich, Boston, and Worcester). Since then have appeared (not to name works of smaller scope) these works for orchestra: "Festival of Pae"; "Endymion's Narrative"; two "Fancies," "Night" and "Day," after Walt Whitman (piano and orchestra); a "Ballade" (for baritone and orchestra), "La Belle Dame Sans Merci," after the poem by Keats; an overture, "Euphrosyne"; a "Fantasy," "The Mystic Trumpeter," after Whitman's poem. His opera, "The Pipe of Desire," was performed and applauded in Boston last year.

Mr. Converse, as has been observed, may look back upon a past of singular prosperity. It would scarcely be extravagant to say that he has achieved a larger measure of success, so far as the relation between his art and the public is concerned, than any composer of serious aim in the not very lengthy history of American music. To find a parallel for it, one must turn to the vast and glittering world of "popular" music: one must allow, for comparison, the fabulous Mr. Rosen, the indefatigable and unimpaired Mr. De Koven. Of all the works which have been particularly, none of which makes the slightest concession to any facile kind of appreciation, there is not one which has had to languish, unknown and unheard, in Mr. Converse's portfolio. He has escaped the heart-breaking experience of Richard Wagner, who, in his own pathetic phrase, had for years to "keep one silent score upon another." Mr. Converse's scores have not been silent: they have been performed, one judges, almost as soon as completed; and they have erected for their author a very considerable reputation. He is, indeed, not infrequently acclaimed as the foremost of the younger American composers.

We have heard in New York three of Mr. Converse's more important works: "The Mystic Trumpeter" (performed here for the first time last April by the New Music Society of America); "La Belle Dame Sans Merci," sung last winter by Mr. David Bispham with the Boston Symphony Orchestra; and, now, "The Festival of Pae." This is, it may be assumed, a fair showing of Mr. Converse's talents as a music-maker, an adequate representation upon which to venture some sort of appraisal of the character of his art. Of the three works which have just been named, "The Mystic Trumpeter" is the most deeply impressive. But the score, as a whole, is uneven. At times it is not remotely, but frankly, Wagnerian; and there are other moments when one feels that "brawl" is the only appropriate epithet for what one is hearing. Its most notable possession is a certain largeness and fervor of imagination lying back of the specific musical ideas of the work, a vitalizing and propulsive ardor, which, as one listens almost compensates for deficiencies which, in retrospect, obscure themselves upon the mind. The artistry of the music—its structure, as apart from its substance—is worthy of all praise; for Mr. Converse is an expert craftsman, an admirable master of the technique of composition; it is his inspiration, rather than his art, that we may conceive to be the point of interest. The two earlier works which have offered themselves for consideration—the ballade for baritone and orchestra and "The Festival of Pae"—one is tempted to characterize as, briefly, ineffectual. As with all of Mr. Converse's work that one knows, they are symmetrical and consistent in *facture*—the product, indubitably, of one who knows intimately his trade; but they do not, in the mad old phrase, "convince"; they lack personality, distinctness—in a word, original inspiration. For oneself, it is difficult to detect in his music an individual accent, a unique profile. It has imaginative impulse, colorful variety, largeness and fervor of feeling; but in essence it seems, as yet, unadorned, undistilled. We are not conscious that it is Mr. Converse himself who speaks to us—we hear other voices, or, rather, echoes of voices that have long been stilled; or we miss entirely a voice, and are aware only of rich and gleaming vestments, out of which, somehow, the beautiful body that should be within has vanished, or has, alas, never entered into the excellent garment that has been so dutifully prepared to receive it. Where is the essential Converse? One can only continue to wonder, and to wait.

Miss Olga Samoroff, Pianist
WHO WILL APPEAR HERE AS A SOLOIST WITH THE BOSTON
SYMPHONY ORCHESTRA

When the Mikado Meets an Earthquake

Amused of the recent news from Jamaica, as well as of the stolidity and inappreciativeness of the Japanese character, Professor Milne, the earthquake "specialist," tells a story which has to do with Nintashito himself, it might be called "The Emperor and the Amateur Earthquake." The professor was, at the time, in Japan, studying those infant earth tremors which are of almost daily occurrence in parts of the islands, and his observations, as recorded on his seismograph, had greatly interested certain native scientists, who carried to their monarch's word of what this Englishman was doing. Then Nintashito asked to see the seismograph actually in action.

No Dr. Milne rented a large piece of waste ground, erected on it houses and towers, mined the whole with dynamite, and there, at a safe distance, set up his seismograph and a pavilion from which the Mikado might start the show and see it. He appeared, prompt to the moment, calm and imperturbable. Calmly he pressed the button which exploded the charges, and with unmoved calm gazed out upon the wreckage which filled the air. No expression of surprise was there; no least sign of excitement.

Then the professor showed the emperor the seismograph, pointed out how the needle had varied through the action of the explosion, and explained the principle upon which it worked. After all of which the Son of Heaven at last volunteered to speak,—"a laconic, passive 'Really!'"

Fortunate

A WASHINGTONIAN was talking to the proprietor of a hotel in that city with reference to the stormy career of a certain well-known young fellow of distinguished parentage who has succeeded in dissipating very nearly the entire sum left him a year or so ago by an extremely wealthy uncle.

"I am awfully sorry to hear of this," said the Washingtonian. "He must be in a bad way now."

"Yes, his affairs are in a wretched shape," said the hotel man, "but just think how much poorer he would be if the old man had left him more!"

Music-making under Difficulties

A YOUNG musician in Philadelphia who, as a "side line," plays accompaniments for the performers at private fashionable entertainments, tells of an amusing experience that befell him recently.

"Here, you see," said an amateur first-player, indicating to the accompanist a passage in the opening solo, "I have no chance to take a breath for ten bars. There are a number of such places in my solo. If you'll hurry the time a bit whenever you come to them, it will be a great favor to me as well as a relief to my wife, for all of our family are subject to apoplexy, and I've already had one slight attack."

These Husling Americans

At a recent gathering in Baltimore two men from different sections of the country were discussing the capabilities of nervous, restless Americans "for being most slow and deliberate. The Marylander claimed the palm for slowness for the inhabitants of the Eastern Shore of his State.

"It is a saying hereabouts," said he, "that if oysters had been created with legs, the people of the Eastern Shore would all have starved to death."

"The folks around Mount Mansfield have a saying that leads yours," remarked a Vermont man. "Of one man up there it used to be observed that if you were to give Hiram Higgins forty yards start, stock-still would catch him!"

My People of the Plains

By ETHELBERG TALBOT, D.D., LL.D.

A volume, largely anecdotal, telling of the various experiences of the author's twelve years' service as the first missionary bishop of the diocese of Wyoming and Idaho. The kindly hospitality and informality of the miners, cow-punchers, and other pioneers of the West who made up this diversified diocese frequently led to most amusing incidents, which Bishop Talbot has related with a simple, rich humor.

THE INCREASED COST of ORATORY

BY JOHN KENDRICK BANGS

DECORATION BY
LARA JAYNE
CHESBROUGH

The United States Senators have voted to increase their own salaries from \$5000 to \$7500 per annum.—*Daily Paper.*

Sound the trumpets, beat the drums,
Till the welkin broad succumbs—
Till it cracks and mercy cries
For the tumult in the skies!
Fly the banner to the breeze—
They have raised their salaries!

Aldrich, lately elad in wool,
Shoddy-made, and overfull
As to patches at the rear,
Full of pride duck now appear
In a spick six-dollar suit,
For his tatters substitute!

Mr. Teller from the West—
How much better is he dressed
Now that he receives a wage
Worthy of so wise a sage!
Bad is he of elegance,
No more fringes on his pants;
No more darts upon his socks,
Now that he's sufficient nooks
In his weekly envelope
To inspire his soul with hope!

Murray Crane from Boston fair,
Poor Dupont of Delaware,
Ragged Hale from the Penob,

Telling young Wisconsin Bob,
Matt and Chumsey M. Depew,
Billy Clark and Dryden, too,
Morgan, Hulkeley, Gallinger,
Working for so little per—
How it warms the cockles of
All their hearts, so full of love,
After years of penury,
Suffering, and poverty,
Outlook dark and drear and bleak,
Getting sixty more per week!

Prestor now can keep a nag;
Elkins sport a carpet bag;
Tillman buy a beaver now
For to make his speeches through;
Rayner, Blay Izador,
Kick the vulpine from his door,
Clark can build a woodshed on
To his New York parliament;
Allison from Iowa
Now can eat three meals a day—
Best of all, Matt and Depew
Now can pay the postage due
On that long-expected line
Telling how they'll both resign.

Surely they were mighty wise
Raising thus their salaries!

Fortress Monroe to be Great Army Post

FORTRESS Monroe, Virginia, is to be one of the largest and most important army posts in the United States. The Secretary of War has approved the recommendations of Brigadier-General Arthur Murray, chief of artillery, for the transfer of the school of submarine defense from Fort Totten, New York, to Fortress Monroe, where it will be consolidated with the artillery school already there. Soon there will be \$128,427 available for the construction of new buildings and officers' quarters at the Fort, which, it is proposed, will be used jointly by the artillery school and the school of submarine defense. There will be a new school-building for the artillery school and the submarine defense school, which will cost \$200,000; a library building costing \$10,000; and the present school-building and workshops will be remodelled at a cost of \$30,000. Six double sets of married captains' quarters will be constructed at a cost of \$128,802; four single sets of married captains' quarters for instructors in the schools will be built at a cost of \$54,140; one eight-set of bachelors' quarters, to cost \$24,060; and three double sets of non-commissioned officers' quarters, to cost \$20,425.

Although it will probably be nearly three years before it will be possible to move the school of submarine defense to Fortress Monroe and to complete the new buildings which are proposed for that post, speculation is already rife at the War Department as to the officer who will be selected to be the first commandant of the foremost army post in the country.

As soon as possible an immense fortification is to be built on an artificial island midway between Cape Henry and Cape Charles, and this also will be under the command of the officer in charge at Fortress Monroe. This officer, in fact, will have charge of the defenses of Washington and Baltimore.

All He Wanted

A New York business man with interests in the South declares that the operation of railway trains in certain parts of that section frequently exhibits an amusingly obliging disposition on the part of employees that is fully appreciated by the residents along the line. And they do not hesitate to take advantage of it.

On one occasion the New-Yorker was a passenger on a train passing through the northern part of Georgia. The engineer had from a distance observed an old man waving his arms at a sliding where the train was not timed to stop. On bringing the train to a standstill, the engineer inquired whether the old gentleman wished to get aboard.

"No," said the old fellow, "I ain't travelin'; but I'd take it as a great kindness if you'd ask them passengers of any one can oblig me with change for a ten-dollar bill."

Steel Cross-ties for Railroads

THE growing scarcity of good timber from which satisfactory cross-ties can be made is causing railroad officials to cast about for a suitable substitute. The Pennsylvania railroad, on the Pittsburgh division, and just east of Lockport, is installing three thousand ties of a steel casting filled with a mixture of asphalt and rock. This new tie has a steel facing which extends only around three sides, the asphalt being exposed on the under side which rests on the stone ballast. The size and shape are the same as those of the wooden tie, though the weight is about seven hundred pounds, or three times the weight of the ordinary wooden tie. It is contended that this great weight, with the asphalt surface resting on the ballast, will reduce "creeping" to a minimum.

If the experiment with this new cross-tie demonstrates its practical utility, it is the intention of the officials of the Pennsylvania system to replace the wooden ties with it on all their lines as it becomes necessary to put in new ties.

Making the Government's Stamped Envelopes

SINCE 1868, except for a short interruption during the first administration of President Cleveland, one man has made the dies from which all stamped envelopes were made. The interruption in this long service came about by efforts to revolutionize the methods of the Bureau of Printing and Engraving. During those efforts a new engraver was employed to engrave the stamps on the envelopes which were issued by the millions, but the experiment proved a failure, and the veteran engraver was again recalled to the service.

The man who has had the distinction of making the dies for this important and responsible work for nearly forty years is Henry Mitchell, of Boston, Massachusetts. In speaking of his unique work he recently stated that the art of making the dies depended on the making of the matrix properly. The matrix is born of a small steel block subdivided into two parts—as under block topped by a disk about one inch thick. All the engraving is done on the upper structure, and it is done downward, hence enters the great difficulty of the task; the greatest difficulty of engraving is to cut downward, that is, to make an intaglio instead of a relief.

When the matrix, as Mr. Mitchell is pleased to call it, the mother die, is complete, a soft bath, but slightly less in diameter, is thrust into it and kept there until a relief design of the figure is obtained. Then the die is complete, and from these two parts—the intaglio and the relief, the two parent dies—many thousands of embossed stamps can be made.

All the stamped envelopes sold by the government are made and stamped at Hartford, Connecticut, under contract, more than one set of dies being required. But every die used is obtained from the original matrix. New bulbs are sent with the mother; they in turn create new matrices, and the process of propagation is kept up until there is evidence of wear on the original dies, usually discernible when the finer lines begin to lose their absolute resemblance to the original engraving.

Gem engraving is much more difficult than intaglio engraving for the post office department. It requires the study of practically a lifetime to know how to do it properly. In comparison with rubies, emeralds, and diamonds, in particular, steel is a soft material. More than that, the engraving on such stones is most delicate and minute labor. Every line is infinitesimal and fine. It is admittedly true that diamond engraving is one of the rarest arts in the world, and Mr. Mitchell says that he has been laboring for years to learn the secret by which it is done, and that there is an ample fortune awaiting the person who does learn it.

Different

A PHILADELPHIA settlement worker tells of two fresh-air-fund children who passed in some wonder at a number of little children running about the place in the country to which the youngsters were taken.

"Haven't you ever seen any children before?" asked the kind woman in charge of the expedition. "Oh, yes, ma'am," answered the eldest child, knowingly, "we has seen lots of 'em; only it was after they was peeped."

The Uses of Adversity

A POLITICIAN who was once making a canvass of a county of Arkansas stopped at a certain farm-house for a drink of water. Said he to the woman who answered his knock:

"I observe that there is a good deal of adversity in this country. A great drawback. It must wait a man for work entirely."

"Gieneryly I do," said the woman. "Still, when my man Tom has a right hard fit of the shakes, we fasten the chura-shura to him, and he brings the better side out of fifteen minutes."

American Diplomacy

ITS SPIRIT AND ACHIEVEMENTS

by

JOHN BASSETT MOORE

Author of

"Extensive and Intensive Relations," "History and Digest of International Arbitration," Etc.

For years Professor Moore has been regarded as being the highest living authority concerning the history of American diplomacy. This series of papers on American diplomacy has commanded wide attention, not only in this country, but in all the capitals of Europe as well, and places many historical facts before the reading public for the first time. It shows how from the very first the American policy has been to negotiate treaties and carry on international business fairly, squarely, and aboveboard; and it unfolds and expounds in a clear and connected form the distinctive principles and policies the maintenance of which has caused American diplomacy to be acknowledged as one of the great formative forces in modern history.

COMMENT

No War with Japan

THE two nations continue to agree to make light of the school incident as it has been created by the San Francisco School Board, and to deny that it can possibly cause war; in truth, war on such an issue would be a sad commentary on the civilization of the United States and Japan. In the mean time some of the Californians themselves have announced their lack of sympathy with the attitude of the San Francisco authorities. The Los Angeles Chamber of Commerce, speaking especially for the people of southern California, has passed a resolution, a copy of which was telegraphed to the President, asserting that "the general trend of public opinion in southern California is decidedly adverse to any discrimination against the Japanese as a people in matters of school privileges." The opinion of the people of the State, the board further alleges, is, however, absolutely hostile to the mingling of "adolescents of whatever race or nationality with the younger children."

Mr. Olney's Interpretation

But the question recurs as to what the trouble is about; and now the mystery becomes the more baffling by the entrance of RICHARD OLNEY, who, as Secretary of State, negotiated the treaty of 1894 with Japan, under which the demand is made of the right of Japanese children in California to admittance to the public schools on equal terms with the children of all other races. Mr. OLNEY doubts the powers of the United States to enforce a treaty which, as this has been assumed to be, is contrary to the police powers of the State. The WEEKLY has taken the opposite view of this constitutional question, and on that point has the support of most of the eminent lawyers who have expressed themselves on the subject; but the question is now before the courts, and will soon be settled authoritatively one way or the other. The most interesting part of Mr. OLNEY's opinion, which is contained in a letter written to Congressman McALL, is his authoritative—*for he helped to draw the treaty*, he it remembered—his authoritative denial that under the treaty Japan and her children in California have any such right as has been claimed. The first article of the treaty, which has often been quoted during this controversy, Mr. OLNEY says might possibly raise the question, but the issue even then, he thinks, would be doubtful. But by the last paragraph of Article II, which is not quoted, it is agreed that the treaty is in no way to affect the laws, ordinances, and regulations with regard to "police and public security which are in force or which may hereafter be enacted in either of the two countries." In a word, as Mr. OLNEY points out, the treaty does not give to Japan any rights that are contrary to any law of nation or of State, like the school law, which is or may be enacted under the general police power

either of nation or of State. The claims of Japan are therefore wholly without foundation. They are, indeed, denied by the second article of the treaty. The WEEKLY has consistently maintained the view which is now strengthened by the support of the man who, as Secretary of State, helped to negotiate the treaty. The question which has been asked most pointedly in *The North American Review* comes back: Why was the political power so quick to admit the soundness of the Japanese demand—a demand the validity of which there is such good ground to dispute?

Federal Child-Labor Bill Squelched

The Judiciary Committee of the House of Representatives has asserted itself with a vigorous and convincing unanimous report—Republicans and Democrats joining in it—denying the constitutionality of Senator Beveridge's child-labor bill. It is refreshing and stimulating to read such clear and irrefutable arguments as are those of the House committee, especially when they come from a quarter where of late acquiescence has been more noticeable than independent thinking. The report asserts that "Congress cannot exercise any jurisdiction or authority over women and children employed in the manufacture of products for interstate commerce shipment," and, it adds with a significant glance at the bill regulating the powers of labor on railroads, "it will not be claimed by the foremost advocates of a centralized government that Congress can exercise jurisdiction or authority over women and children engaged in the manufacture of products for interstate shipment." Speaking of Mr. Beveridge's attempted legislation, the Judiciary Committee asserts: "It is not extreme or ridiculous to say that it would be just as logical and correct to argue that Congress can regulate the age, color, sex, manner of dress, height, and also of employees, and fix their hours as to contend that Congress can exercise jurisdiction over the subject of woman and child labor." It is further stated that the power to regulate child labor "certainly falls under the police power of the State, and not under the commercial power of Congress." The question, in the opinion of the committee, is "not debatable"; to legislate as Mr. Beveridge desires, it says, "would be a reflection on the intelligence of Congress, and it would also be casting an unwelcome burden upon the Supreme Court." The report is an admirable dissertation, so far as it can go, on the necessity of observing the law of the Constitution, and of keeping the rights of the nation distinct from those of the State. It is also a dignified protest against a prevailing tendency of "drifting in thought from our constitutional moorings," and of thus confusing the average mind as to the power of Congress and the power of the State." The following extract from the report is worthy of wide circulation:

"The national government is too weak to undertake the exercise of the police power of the States. In a short time this great action would be worse than a ship in midocean in a great storm without a rudder or compass. The division of power was wise and beneficial. Time, study, and experience approve it, and we should not attempt in an unconstitutional way the destruction of the substructure of our government. If, then, these two great powers of police and commerce are separate and independent, the power of the States sovereign, where is the authority for saying that Congress can invade and impair that power entire and independent in the States? The right and power of both the States and nation must be respected and upheld."

Mr. Lodge and Tariff Revision

Governor GUAN desires the President to undertake the revision of the tariff with a view to lowering rates on duty, and in this the Legislature of the State of Massachusetts concurs. So far as is known, some of the State Congressmen delegation do not, although the people of the State have, shown at the polls a strong desire for reciprocity with Canada, at least. So certain are the political forecasters of this popular sentiment and of its strength that Senator LODGE assumes that he is in favor of revision, and that all who have declared him to be opposed to it are guilty of doing him a gross injustice. This may be so, but there is some excuse for the indifference. Mr. LODGE once rebuked Massachusetts people for urging free trade in some things when the DIXON tariff law was discussed, because it was the duty of Massachusetts to sacrifice her own interests to those of other parts of the country—those of Pennsylvania and of West Virginia, for example. He helped very efficiently to kill off McKinley's reciprocity treaties and the Hay-Bunau treaty. He has al-

ways been counted by those who knew him best to be in favor of a stand-pat policy, and for Gloucester as against Massachusetts. They will be pleased, if they are not themselves stand-patters, to know from his own lips that Mr. LOUGHEE has been wronged. Nevertheless, while Mr. LOUGHEE's declaration shows that he realizes what is good politics in Massachusetts, it does not follow that he is thoroughly convinced that tariff revision will be good politics at Washington. It will be wise on the part of Governor GRILEY and the Massachusetts legislators to wait for official action in that direction before determining that an attempt at tariff revision before 1900 is at all on the books.

Dryden is Beaten

The country knows why Senator DRYDEN withdrew from the contest for the New Jersey Senatorship precisely as well as if he had taken it frankly and fully into his confidence. A sufficient number of State legislators were elected by people who were opposed to corrupt politics, and who believed that corruption had compassed Mr. DRYDEN's first election to the Senate, to make his reelection impossible. Senator COLBY is a persistent and dominating leader, and with leaders of that character virtue is a strong force in the political community. The virtuous Republicans, however, did not wholly triumph. Their victory was only passive. The new Senator, F. O. BROWN, will hold the seat which DRYDEN failed to retain until the machine, which he will obey, tries again. It will probably require the whole Democratic party instead of a Republican fraction to win a complete victory over DRYDEN politics in New Jersey.

Mr. Reid to Mr. Bryce

Ambassador REID addressed some, very pertinent observations to the coming British ambassador, Mr. BAYCE, at the London dinner of the Pilgrims. He spoke for peace, general peace, and he noted that in President ROOSEVELT and Edmund VII., the two nations enjoyed in the persons of their Chief Magistrates "two statesmen with unimpaired records as peace-makers." There is a good deal of certainty in the statement that it would be more difficult now to excite the people of the two countries against each other than ever before in the history of our relations. Perhaps the same is also true of our attitude towards any other people, and of these towards us. We are more enlightened than we used to be, more civilized, and much larger-minded, and so is the rest of the world. Proneness to international wrath, like quickness to individual rage, is a sure sign of a petty spirit, of a vanity that is quickly wounded, or of a jealousy that is induly aroused. There are a good many people like Sir ALEXANDER SWETENHAM on both sides of the ocean, but even they know that mutual concessions are better for the two nations than mutual blows. It is to be regretted, however, that one of the London newspapers regards Mr. REID as condescending, and that this misapprehension leads it to say that our ambassador warned Mr. BAYCE to mind his own business when he remarked, "He [Mr. BAYCE] knows perfectly—none better—that he is sent, first, to look scrupulously after the interests of his own country." Mr. REID, as all fair-minded men will recognize, meant nothing of the kind. He meant, on the contrary, that Mr. BAYCE would lose nothing of the friendship of this country by striving for what England thinks it ought to have, even at our expense. As the ambassador said, it is Mr. BAYCE's business to make as good a trade for England as possible. Another suggestion has lately been made. It is guessed that, as Mr. BAYCE knows so thoroughly the form and practice of our government, he will cultivate the members of the Senate Foreign Affairs Committee, not counting so much upon the friendship of the executive department as do, for instance, the German and French ambassadors. Probably Mr. BAYCE is too wise to sit continuously on one of two stools, or to fall between them.

Threatening the House of Lords

It seems now as though the destruction of the education bill by the House of Lords had so incensed the Liberals that the Upper Chamber, its modification or its destruction, is to be made an issue in English politics, and that the time has actually come for trying on CAMERON'S threat of long ago. A short time ago, after his appointment to the American ambassadorship, Mr. BAYCE, in a speech to his

constituents, spoke of the House of Lords as a "grotesque anomaly." Mr. BAYCE has charged the Lords with acting solely as a committee of the Tory party in defeating the popular desire to give the control of education wholly to the state, while the Attorney-General, Sir JOHN WALTON, threatens that the result of the present attitude of the Lords will result in two or three dissolutions, and then a revolution. It is clear, if the present temper of the nation continues, that some radical change is bound to come, and that the Lords have hastened it by their action on the education bill; and it is also certain that our "kiss across the water" will never do without a second chamber in some form; they have too much political sense.

Mr. Rockefeller's Gift

The wonderful gift which Mr. JOHN D. ROCKEFELLER has made for the promotion of higher education in this country is likely for a long time to remain the most magnificent single material contribution that has ever been made to the cause of learning in this country. Other men have given of their substance as much, or more, in proportion to their means. There are apparently no objects to which money is given, apart from those which are directly religious, which so prolifically breed the spirit of giving as do our institutions of learning. The man who begins to give to universities and colleges seems compelled to keep on giving. There are exceptions, it is true, but nearly all the colleges which are receiving gifts at all, and some that do not, have the confidence that when they are in need, certain men, or a certain man at least, will come to their relief. The splendid gift of Mr. ROCKEFELLER, besides the impressiveness of the figures themselves, recalls this honorable fact about the universities and colleges of the United States. Mr. ROCKEFELLER is required to have given out one time or another the vast sum of \$800,000,000 to education, and it is estimated that it is his purpose, before he is through, to give something like \$200,000,000 to that cause. Mr. CARMAN'S gifts are also so great as to be bewildering by their amount. But both together do not equal the enormous sums which have been given to education in this country by generous and noble-minded men, following the first inspiring gift of a few hundred pounds, but his all, of JOHN HARVARD—a gift which stimulated the passing of the first public-school act in Massachusetts—and the country—"to the end that learning may not be barred in the graves of our forefathers, in church and commonwealth, the Lord assisting our endeavors." The streams of money flowing to the preservation of learning have gathered volume during the two hundred and sixty years which have passed since this act of 1647, one purpose of which was declared to be to establish schools in which "boys might be fitted for entering Harvard College."

Needs of Eastern Colleges

There are many colleges throughout the country which will receive from this gift the means of life. This is well, for all these small colleges, of some of which we have never heard, at most of which a few men (mostly the uneducated) of the universities are disposed to smile—of these small colleges, or mostly all, do some good. It is also true that while the B.A. degree of some of the smaller of them means much less than the like degree of the larger and older colleges, in not many years after graduation the two degrees mean much the same; while it is also true that many of the most brilliant, and of the most laborious, scholars of our Eastern graduate schools are from the small colleges of the middle West, the far West, and of Canada and the Provinces. But if the higher education of the country is to be promoted as it should be, the stream of giving must grow still wider and deeper. The future of the State universities seems to be assured. State legislatures are becoming more and more generous to them; but the Eastern universities and colleges are still dependent upon private gifts, and their needs grow more and more pressing. The ROCKEFELLER gifts are not likely to meet this particular need, but it is the truth—a truth which is causing anxiety in many great institutions of learning—that salaries are still insufficient, and relatively less sufficient than were the smaller salaries of a generation ago. What is needed is more pay for teaching, that scholars may not be tempted to deny themselves the pleasure of teaching because of the cares, the worries, the hardships attending pay that is just large

enough to live upon, counting nothing to be left for the widow and the orphans who must remain behind. This is the need of the great universities as of the smaller colleges.

A Machine for Distributing Money

MR. ROCKEFELLER was a very interesting business man, and was admitted to be at least efficient. A contemporary (the *Times*) says: "It has long been conceded that his was the most practical and competent mind in the United States devoted purely to business problems in the last quarter of the nineteenth century." His mind undoubtedly is of very remarkable quality and power. He is getting to be a very interesting giver, and the working of his mind in the field of beneficence promises to be as well worth following as in the field of acquisition. In his essays in the latter field he contrived the most remarkable money-getting machine of modern times, selecting the men to run it with admirable judgment of their capacity to do what they were set to do. In his new field he seems to be following much the same general plan. He has apparently put his mind on the difficult problem of distributing money so that it will do the most possible good. The general object that most appeals to him is education, and he has assembled a human machine to make a business of promoting education. That is what the General Education Board is for—to promote education in the United States without distinction of race, sex, or creed, and especially to promote, systematize, and make effective various forms of educational beneficence. It is an extraordinarily competent board for the purpose. Among its sixteen members are ex-President GILMAN of Johns Hopkins, ROBERT C. ODNEY, Dr. ALDERMAN of the University of Virginia, WALTER H. PAIR of North Carolina and New York, E. BENJAMIN ANDREWS of the University of Nebraska, Dr. JIMSON of the University of Chicago, H. B. FARNELL of the Hampton Institute, MORRIS K. JESSUP of the New York Chamber of Commerce, GEORGE FORTY PEARSON of New York, a Democrat with radical leanings, is treasurer; Dr. FREDERICK T. GATES, the president, is a clergyman, drafted by Mr. ROCKEFELLER for this work; and Dr. BUTTRICK, the secretary, is also a clergyman. Here we have many men of many minds but with unanimity of purpose; men representative of all parts of the country, and those parts especially in which education most needs nursing. Some of them are men of such opinions in politics and political economy that their presence in the Board is somewhat surprising. Yet there they are, and there they belong, for the Board was made to direct, without prejudice, a very broad work. Dr. GATES says that the Board's next effort will be to help the women's colleges which are "unable to house and care for the multitudes of young women who are knocking at their doors." Their need he considers the most immediate and imperative educational need to-day in the New England and Middle States.

We Understand One Another

Telling about the arrival of Mayor SCHMITZ, of San Francisco, and his companions in Washington and their first interview with the President, the *Sun's* correspondent says:

"There was a frank and free interchange of views. The Californians found that the President and Secretary *Roosevelt* had a pretty clear conception of their grounds for grievance."

No doubt they found it so. There has been much protestation from "the Coast" that the East did not understand about the Japanese in California, just as there is, or used to be, such frequent protestation that the North does not understand about the negroes in the South. There is reason to believe, or at least to hope, that all protestations of this sort are getting out of date, because it has ceased to be possible for the influential thinkers and writers in any section of the country long to misunderstand the circumstances or the sentiments of the people of any other section. The schoolmaster is very much abroad, the newspaper and the telegraph are sleepless, and there has arisen a large class of publications of national circulation which find their most congenial work in telling Maine interesting things about California and divulging to Minnesota the complexities of life and politics in Mississippi. If there is anything important anywhere, especially anything concerning the political or social relations of men with one another or with corporations, that is not understood or is misapprehended, these periodicals pounce upon it as a valuable find, and proceed to do their best to make un-

derstand whatever in it has been obscure. The pursuit of facts is too eager, and the distribution of expert knowledge too general, to leave sectional misapprehensions much chance to survive.

A Suitable Job for Mr. Harriman

MR. HARRIMAN seems to have emerged from illness and forced retirement in particularly good spirits. The newspapers have quoted him as saying:

"I must work, and soon perhaps I may be looking for a new job. My recommendations are many years of experience on many railroads in many railroad fields, and if they will raise the salary a bit, I may apply for a job on the Interstate Commerce Commission. If the commission is to run all the roads, I think they ought to want me."

MR. HARRIMAN is the kind of man that the people need to have on the Interstate Commerce Commission. At least he has the kind of knowledge that the commission needs and abilities proper for its labors. If he will take out a new conception and agree to reinvest his savings so that he can give disinterested attention to railroad rates, we shall be glad to support his application for a place on the commission. And we will back Mr. JAMES J. HILL for another place if he will take it.

The Banks Have Made Money

MR. FIRST-VICE-PRESIDENT BROWN of the New York Central wonders how any prudent man of ordinary intelligence can invest in railroads, and discloses that all of his investment funds are in farms, banking stock, and manufacturing enterprises, which pay him better than any railroad can. Industries, we all know, pay bigger dividends than railroads do. Farms seem more dubious, but have shown good profits lately, especially on Long Island. Banks last year were gold-mines. The *Wall Street Journal* reports that the profits of the trust companies of New York State in 1906 were forty per cent. of their capital, as against thirty-four per cent. in 1905; that the profits of the banks in the city of New York in 1906 were twenty-eight per cent. of their capital, and that the net earnings of the national banks of the United States for the year ending March 1, 1906, were nine and a half per cent. of their combined capital and surplus and will be larger for the year that ends with the present month. So we can credit Mr. BROWN with discretion as an investor without being committed to his depressing opinion about railroad stocks.

Against Tipping

The House Committee on the District of Columbia has reported favorably a bill abolishing "tips" from the hotels and restaurants of the District. It forbids the giving or receiving of tips in the eating and drinking places of the District, which Congress governs, and provides a fine of from \$5 to \$500 for each offense. If the bill becomes a law and is enforced, its effect will be watched with a good deal of interest throughout the country. Tips to waiters and others who render personal services are objected to because of the expense to the tippees and a supposed detrimental effect on the characters of the tippees. The former objection is one that carries the most weight. But the most interesting consideration that is connected with the practice is that wherever the custom of tipping employees is established the wages of the tippees are adjusted to it, so that the payment of the employees is shifted from the employer to his patrons. Nevertheless, we guess tipping is here to stay. Individual discrimination can keep it within reasonable bounds, and that is the best that seems practicable. As a rule, people who can spare the money like the system on the ground that they get what they pay for.

Some Trials

What with "Salome" and the THAW trial, these have been distressful times for proper people. If we had to have it so that a man had to go out behind the barn to read the paper, it would have been more convenient and commodious to have it come in a warmer season. In Canada, where it has been colder than here and correspondingly less convenient to read out-of-doors what one does not like to bring into the house, the attention of the Postmaster-General was called to the deplorable condition of the newspapers resulting from communication from New York. In London and Paris, it seems, our news has had a tremendous vogue.

Secretary Root on the Need of Acquaintance with International Law

WHEN the second, and notably democratic, Reform Bill was passed by the British Parliament in 1832, Mr. ROBERT LOWE (afterwards Lord SALISBURY) exclaimed, "Now let us educate our masters." In like manner, seeing that, of late, American public opinion has undertaken, after successfully, to dictate the nation's foreign policy, it has occurred to Secretary Root that the sooner the "masters" of that opinion become conversant with the principles and precedents of international law, the better. To that end he has evidently encouraged the furnishing of a new quarterly review entitled the *American Journal of International Law*, and has permitted it to publish in a supplement accurate transcripts of recent important treaties, official copies of which are lodged in the archives of our State Department. How indispensable such exact transcripts are to intelligent public discussion of international relations we shall point out presently. Meanwhile, we would direct attention to what Mr. Root has to say about the agency of the public want which the new quarterly is intended to meet, and also to the measure of efficiency with which the first number of it carries out this purpose. There is no doubt about the fact which the Secretary of State makes the text of an introductory article, the fact, namely, that during the last half-century, not only in the United States, but in Great Britain, France, Italy, and we might add, Germany, public opinion has exercised an increasing control over international conduct. For that reason it has plainly become more and more important that the great body of the people in any country possessing representative institutions should have a just conception of their international rights and duties. As things are, no such just conception is widely diffused, and consequently it is not uncommon, while two governments are striving to settle peaceably a matter in dispute, to see a large part of the people in both countries maintain an uncompromising attitude and insist upon an extreme view of their own rights, which, if officially adopted, would render any peaceable settlement impossible. It needs no argument, indeed, to demonstrate the importance of enabling a people, when negotiators represent, to consider the subject of controversy and judge the action of their representative in an instructed and reasonable way. There is but one means, however, of bringing about this desirable condition, and that is by increasing the general knowledge of international rights and duties and promoting a popular habit of reading and thinking about international affairs. No fair-minded person will deny the soundness of Mr. Root's argument that the more clearly and widely the people of a given country recognize their own international obligations, the less likely will they be to resent the just demands of other countries that those obligations be observed. No man unacquainted with the more familiar the people of a given country become with the rules and customs of self-restraint and courtesy which experience has shown to be indispensable for preserving the peace of the world, the greater will be the tendency to refrain from discussing publicly controversy with other countries in such a way as to hinder peaceful settlement by wounding sensibilities or arousing prejudice and anger. Of course the Secretary does not expect that the whole body of any people will systematically study international law, but he believes that a considerable number can readily become sufficiently familiar with it to form and guide public opinion upon all important international questions. It is with a view of furthering such acquaintance with the subject that he commends the new American Society of International Law and its quarterly to the support of thoughtful men and women who wish to advance the cause of international justice and peace.

Among the interesting topics discussed in the initial number of this quarterly are the Dutton doctrine, which our government has promised to bring before the next peace congress at The Hague; the aim and outcome of Mr. Root's mission to the South-American republics; the Newfoundland fisheries and the existing *modus vivendi* concerning them, arranged between Great Britain and the United States; the nature of the present provisional government in Cuba from the view-points of American and of Cuban law; and, finally, the Japanese school question, as affected by the treaty of 1854 between the United States and Japan, a treaty which receives in the review before us a different construction from that which is given to it by ex-Secretary OLNEY, who negotiated it on our behalf. Curiously enough, the Rt. Hon. JAMES BRYCE, lately appointed British ambassador to the United States, expressed, the other day, at a dinner offered him by the Pilgrims' Society, a view of an ambassador's function identical with that propounded by Mr. Root on July 22, 1898, at Pernambuco, Brazil—the view, namely, that the principal duty of an ambassador from one country to another is to interpret to the people to whom he goes the people from whom he comes. That the message of amity and fraternity of which Mr. Root was the bearer was received in South America in the spirit in which it

was conveyed is evident from the address delivered by the Mayor of Lima, who welcomed Mr. Root as an ambassador of peace, a messenger of good-will, and a herald of doctrines which sustain South America's autonomy and strengthen its faith in its future welfare.

With regard to the Newfoundland fisheries, it is well known that the United States on the one hand, and the self-governing colony of Newfoundland on the other, are not agreed as to the method in which their respective rights should be determined. The United States, on their part, hold that American rights of fishing in Newfoundland waters can only be controlled, regulated, and modified by means of diplomatic negotiations between the United States and Great Britain. The colony of Newfoundland, on the contrary, has consistently maintained that the right of fishing "in common" is subject to local regulation alone, and by local legislation has attempted to discriminate against American competition. To suspend the operation of local legislation, deemed oppressive, Mr. Root negotiated on October 8, 1896, the *modus vivendi*, printed in the supplement to the quarterly, which, it is hoped, will prevent the occurrence of untoward incidents during the present season and until a permanent agreement may be reached whereby the rights of American and British may be clearly defined and thoroughly safeguarded for the future.

Concerning the nature of the present government in Cuba, there is undoubtedly much misconception current. The truth is that, although called "provisional," the government headed by Mr. CHAMBER E. MAGONON is every whit as constitutional as the preceding government over which Mr. PALMA presided, for it is in strict accordance with the letter and spirit of the Cuban Constitution, promulgated May 20, 1902, which, by Annex III, gave the United States a right to intervene in Cuban affairs under certain well-defined conditions, the occurrence of which, after President PALMA's resignation, is not disputed. Not only, moreover, in the present "provisional" government constitutional according to the Cuban Constitution, but it is lawful according to the laws of the United States, because the act of our Congress, commonly known as the PLATT amendment, recognizes the right of the United States to intervene in the exact language of Annex III, of the Cuban Constitution. Moreover, in the treaty between the United States and Cuba, which was concluded more than two years later, the exact language of the preceding act of Congress and of Annex III, of the Cuban Constitution reappears, so that the lawfulness of the intervention is threefold attested,—once by the Cuban Constitution; secondly, by an act of our Congress; and, thirdly, by a treaty. Under the circumstances, President ROOSEVELT, unless he broke his oath to obey treaties and the laws, could not avoid interesting in Cuba.

As to the Japanese school question, the quarterly's comments do not seem fully to recognize the significance of Article II, of the treaty concluded in 1854 between the United States and Japan. By this article, an ex-Secretary OLNEY has pointed out, Japan expressly agreed that the stipulations contained in the treaty with reference to the rights of its subjects in the United States "do not in any way affect the laws, ordinances, and regulations with regard to trade, to the immigration of laborers, or to the police and public security which are in force, or which may hereafter be enacted, in either of the two countries." As there seems to be no doubt that the regulation of a State's public schools belongs to its police functions, Japan would seem to have no cause of complaint under the terms of the treaty.

It is a pity that the precise terms of the Anglo-Japanese alliance, signed on August 12, 1902—now literally reproduced from the State Department archives in the supplement to the new quarterly—were not previously made accessible. According to the version hitherto current, Article II, of the treaty ran as follows: "Should either of the High Contracting parties be involved in war in defense of its territorial rights or special interests, the other party will at once come to the assistance of its ally." Now the preamble of the treaty defines its objects, but, according to a well-known rule of interpretation, a preamble cannot narrow the significance of a subsequent declaration, if the latter be unqualified. In the verbiage of the treaty *hitherto* circulated, the words "special interests" were unqualified, and hence the inference that the phrase might be held by Japan to cover a dispute with the United States concerning the exclusion of its subjects from certain Siam-French schools. Now it appears that certain decisive words were omitted, as will appear from the following exact reproduction of Article II.: "The Italian are ours: 'If, by reason of unprovoked attack or aggressive action, wherever arising, on the part of any other power or powers, either contracting party should be involved in war in defense of its territorial rights or special interests mentioned in the preamble of this agreement, the other contracting party will at once come to the assistance of its ally.' It is patent that the words italicized limit the operation of the treaty to the subjects defined in the preamble and, therefore, would justify Great Britain in remaining neutral should the Japanese school question lead to war between Japan and the United States—an event which, un-

der the circumstances now revealed, is most improbable. The first number of the new quarterly, commended by Secretary Root, has amply justified its existence by its publication of the true text of the Anglo-Japanese alliance, which, by the way, was obtained from another source and printed in the last number of the WEEKLY.

Lent

THERE must once have been a time in the world when sadness was a less dangerous matter than it is to-day, or the great teachers would hardly have dared inculcate it as a necessary practice. St. ROXANVENTURA, in his *Golden Ladder of Virtues*, admonishes men climbing toward perfection to afflict themselves profoundly over the sufferings of their friends, over the sufferings of their enemies, over the outrages offered to the glory of God; to suffer with those who in health undergo affliction, and those who in malady undergo affliction, and those who, being dead, still undergo affliction; to suffer with those who suffer from their own weakness and with those who, being brave, are yet killed upon the high mountains, and with those who do not even know what things make for their peace; to suffer over all corporal ills, all spiritual ills, all spiritual weaknesses, all temporal and transient pains, all prolonged pains, and all eternal pains, and then, as if that were not enough, higher up on the ladder of the virtues he begins again warning us to repent and to afflict ourselves over all mortal sins, all grave venial sins, all slight venial sins, for all sins of act, of word, of deed; all sins of evil committed, of good omitted; all sins of baseness, enmity, and bitterness; for personal sins, for sins one has occasioned, knowingly, and sins one has unknowingly caused others to commit, to regret; and bitterly, manifest sins, hidden sins, and the very sin of being human and unjustified in the light of supreme perfection; the wrongs one has done to oneself, the wrongs one has done the community, the wrongs one has done to God; and then he adds, reveal the pain of the soul by the arousal of the lips, by tears in the eyes, and by the mortification of the flesh. Indeed, when one reaches the last rung of the ladder but one, one still needs fifteen miles of pain to be borne before one reaches the highest rung of virtue and can afford to be joyful.

Even the most strenuous of exhorters to-day would hardly dare lead the sheep through so dark a valley. It is all too easy to realize the sadness and the imperfection of life, the impossibility of wholly adapting oneself to environment, of wholly meeting the demands of other people. Life, in a world where conditions are ever changing, where no relation is permanent, where struggle for individual satisfaction is fruitless and defeat recurrent, where love of beauty and of goodness merely lays us open to quicker and deeper wounds, and where even pursuit of knowledge itself is baffling and thwarting, since the more we learn the wider becomes the field of the unknown, offers enough lamentary sadness.

But there are two points to note in the ladder of St. ROXANVENTURA: one is that he bids men deplore not the inevitable imperfections of circumstance, which is the fundamental note of the modern pessimist, but their own shortcomings; and second, that a care-free and joyous existence can only be granted to those who have scaled the highest rung of the ladder of virtue.

It is not the feeling that one has a share in the world's imperfection which generates despair, for with oneself one can always do something. If one allows oneself to believe that the tragedy of existence is inherent in life, and that life is not malleable, that do what we will, strain every nerve, and put forth every effort, life is still not plastic to endeavor, that it will no more respond to our calls than the stars did to the hallowing of Will of the Mill and the fat young man, then we have a sadness which is dangerous. But affliction over our own shortcomings, and a complete list of them to refer to, make for the sadness which lies at the root of effort. Character, after all, is never founded upon cushions; it is built upon rock-hard renunciations and difficulties; "the sharpened life commands its course"; such character learns to bear not only inevitable ills, but finally, from time to time, to give itself a little gratuitous suffering or some one else's account.

True happiness, what little we know of it, is not of the nature of merriment or gaiety or ease—these give nothing better than pleasure—but true happiness is the outgrowth of peace, and peace has a firmer foundation than these can give. Peace is the result of reflection, grief, and acceptance, and one begins to understand, once realizing it, how the great ROXANVENTURA dared so to emphasize sorrow to his people. To face one's own imperfections with a zeal to create order in one's little corner of the universe is to indulge in those wholesome tears that cleanse the vision; to believe that life and the world are radically at fault, and that we are helpless, is to invite the most destructive philosophies. And it is for that former wholesome sorrow that the season of Lent is set apart.

Secular as we may become, little inclined as the age makes us to deal in the supernatural or the miraculous, yet there remains ever the curious phenomenon that there has been but one wholly triumphant life upon earth. Look where you will for examples

and for help, one comes back to it ever. Only once has it been authoritatively stated, "I have overcome the world," and from the same lips came the command to take up the cross and follow after. This, then, is the purpose of this season for reflection and solemn thinking, not that we shall grieve over life as it is, or become impatient for the crowning of the days, but that we should have a season set apart from light-hearted and careless acceptance of the days to seriously front our own part in life, even to the extent of the list of the three hundred and sixty-four forms of offense enumerated by St. ROXANVENTURA, and by taking thought and to our spiritual salvation. And though no man reaches his ideal, or, looking back, feels that he has done all that was possible, yet every effort in a right direction tends to make for peacefulness and repose. Wherever, by meditation and by pause, we have learned how to fight a wrong or to bear silently an irreparable evil, we have thrown a pebble upon the rain that marks the grave of the world's grief.

Personal and Pertinent

WITHOUT intention of disrespect to any one, the conviction may be recorded that Mayor SCHMIDT, with the President before and the Pacific behind, was between the devil and the deep sea.

The New York Times gave some very good advice, the other day, to enlisted men about going to saloons. A negro sergeant testifying before the Senate committee complained that the black soldiers at Brownsville were compelled to go into the saloons there by the back doors, and the Times kindly suggested that the soldiers could beat the saloons very easily by staying away from them altogether. This advice was another argument, of course, in favor of the restoration of the ration. The soldier is a good deal like other men, and he wants his club where he can enjoy the comradeship of his fellows. If he can't have the canteen he goes outside to the saloon; at the canteen he cannot get drunk, but in the saloon he can, and he often does simply for the reason that others present are engaged in the deleterious and dangerous practice. The officers have, or used to have, more privileges at their mess. They can, or used to be able to, procure bar liquor for the promotion of deterioration. There is an admirable story, told for private circulation, by an artist who was visiting a far-western post, a large enough post to be commanded by a colonel even in the days before the Spanish war. The colonel was walking up and down the Irish walk in front of his quarters, smoking. To him the artist said:

"Good-morning, colonel; how are you?"

"Never better; fit as a fiddle; but I'm going over to the mess in a minute to get a drink, and after that I'll feel like the devil all day."

What the colonel was going to the mess for was really a chat with his juniors; but he knew that he'd be asked to drink, and that he would accept. The enlisted man is pretty sure, too, to go to the saloon, unless that he is going to St. himself for a headache and, perhaps, the guard-house; but the difference is that the colonel will get enough devil in him by a little drinking, while the enlisted man is in danger of throwing for an ocean of Satans.

Mr. GEORGE FOSTER PEABODY, the treasurer of Mr. ROCKEFELLER'S General Education Board, is a noteworthy figure in charitable and educational work. Doubtless he is a rich man; at least he is rich enough to retire from his lucrative banking business to engage in work for human elevation. He has now, among many other interests, the care of \$43,000,000, given by Mr. JOHN D. ROCKEFELLER for the advancement of education—\$49,000,000 a little over a year ago, and now \$52,000,000 more. Mr. PEABODY is a railroad Democrat. He serves in government ownership of railroads. He was the president of the treasury of the same railroad; but he is more radical than that title was. He was born in Georgia, and came to this city when he was thirteen years old. Since then he has accumulated his fortune, and what is better, a large amount of love of learning, of music, and of the human kind. His politics are worth speaking about, because of their bearing upon the question of tainted money, for when that microbe was busy the largest hospitality shown it was by minds that thought very much like Mr. PEABODY on political subjects. Apparently, Mr. PEABODY is not thinking, officially, about how Mr. ROCKEFELLER gained his money. Possibly, judging from his general principles, he has ideas about that of which Mr. ROCKEFELLER might not approve. But it is clear that Mr. PEABODY does not believe in preventing the employment of any money for righteousness, nor would he probably regard himself as a faithful trustee if he declined aid for his trust and its beneficiaries coming from one whose property, under the law, and so far as he was aware, belonged to the giver. At any rate, Mr. PEABODY is administering this great fund for the benefit of higher education. He has also given much money himself to that and other causes. He is one of the Southerners, like Mr. Mr. Mr., who are doing more effective, because intelligent, work than any Northern man is likely to do for the real lifting up of the negro. He is one of the most appreciative and helpful friends of BOOKER WASHINGTON.

Correspondence

LOCAL VERSUS FEDERAL GOVERNMENT

BROOKLYN, N. Y., February 2, 1907.

To the Editor of Harper's Weekly:

SIR.—Since I began to understand the customs and politics of this my adopted country, the democracy of your columns has been my fountain. I have thought—perhaps only a thought—that you lacked seriousness to crises and great elections, still, after fifteen years' acquaintance, HARPER'S WEEKLY is the one companion, more and more.

My present complaint is your rising ire against President Roosevelt. Now what is our President doing but trying to give the weak and helpless part of the people protective laws. How can you condemn with severity Secretary of State Root's recent plea, or rather threat, of more Federal government and less State powers, with nothing in view from your violence but justification for his words. I detest government in the making of which I have no say, but if my neighbors and my State fail to furnish faithful advocates, and nothing but quality laws, why should I spare the shield of equality offered by a central power?

As a basis for Mr. Root, I will illustrate—not an isolation: There is a certain corporation on the shores of Greater New York, entirely private in character. Since its organization six or seven years ago it has received, or taken, from the city and State, without compensation or taxes, hundreds of public lands and rights, with facilities to develop same, amounting to over \$5,000,000. Records in city and State and national legislatures, with recurrence in that time, will show laws passed in each place for its special benefit, while the petitions and protests, spoken and written, of hundreds of weak property-owners and citizens, irreparably injured by the confiscation, remain ignored. Everything went, until Federal officers—army engineers—stepped in. They were ordered from Washington to report on the needs for the legislation there (the inhibitory bill had then been passed). The report was a disesteemed exposure that killed the scheme. The gift in this case was to be anywhere from \$400,000 to \$2,500,000, and was to remedy infractions in the improvements erected, almost wholly, on the free land previously acquired from the city and State, and to add more. Immediately after this halt was called by Federal officers, the "interests" turned again to Albany. Within four months another bill was passed there—last winter—this time enabling the city to take by purchase, from the shareholders of the corporation, what the national government refused to mend or subsidize. No doubt the city will pay more millions for its own land, too. How many instances of this kind did Mr. Root have in mind when he made his inspired speech?

Again, let a weak litigant try to take a powerful antagonist into a State or Federal court, which is the shorter and safer place to which to get his day and his say? If fair play and equality come in greater measure, or come alone, from a centralized government, how are you to turn against it the people, mostly all of whom are still the helpless masses? Can it be denied that this is what President Roosevelt is striving to reach them with? The constitution of most men is what they fear in the name of law. It is respectfully suggested that HARPER'S WEEKLY look into its own house.

I AM, SIR,

MICHAEL O'SULLIVAN.

Our correspondent puts his case well. It is true that a central government, using autocratic power, can accomplish benefits more quickly and efficiently in many cases than can be done by democratic local means. But the power to do good is also in different hands the power to do evil. Our fathers thought to safeguard liberty by giving to the central government only as much power as was necessary for the performance of indispensable national duties. All the rest the local governments reserved. If citizenship in this country is so far decayed that we have lost capacity for local self-government, then it will be as Mr. Root says: the central government will assume powers that local hands had grown too feeble to wield, and the republic will become a species of empire ruled from Washington. It is arguable that that is now necessary. THE WEEKLY. It is true that the system of government may be preserved, and it is in affectionate desire of the republican principle that it fights against what seem dangerous encroachments on the local powers.—EDITOR.

GENERAL BRECKENRIDGE ON H. G. WELLS

No. 5 PRINCE STREET, LONDON, ENGLAND.

To the Editor of Harper's Weekly:

Care of Mark Twain, New York:

SIR.—Page 33 *Daily Mail* Year Book states the United States comes first, with only 14.3 per cent. of females employed: Germany, 25 per cent.; England, 27 per cent.; Italy, 40 per cent.; Austria, 47 per cent. Yet your Mr. H. G. Wells seems to deride in *The Future of America* "her theory as if it 'disregards women'."

As to children, perhaps a similar showing might be approximately attempted. Does any other nation choose its Chief Magistrate from the low path (like Garfield), or from its salubrious like Lincoln, giving every man a fair fighting chance? The ideal we would wish may be greatly better than this best known among white nations for either sex; for even our "sovereign people" are not all Presidents, nor our women every one a Senatrix. The simple and perfect character of Washington may be incomprehensible as his unsurpassed and stately obelisk; but will not Mr. Wells con-

descendingly permit his conceited fellow countrymen to continue to admire both without calling names?

I AM, SIR,

J. C. BRECKENRIDGE.

AS TO JAMES WILSON

SWANSMORE, PA., January 26, 1907

To the Editor of Harper's Weekly:

SIR.—In your issue of January 26 a correspondent graciously offers to open a school for the study of the fathers of the nation. In your editorial office: also gravely states that "Hamilton was a primary in the science of government," compared with Wilson. As secretary of the Wilson memorial committee, I have had it drawn to my attention that some of these "historical" and propagandist effusions were mistakenly thought in a few quarters to be the voice of the committee. As secretary of the committee, I wish to distinctly state that the committee are in no degree responsible for such vagaries.

I AM, SIR,

BYRON ALVA KOSKIE.

INADQUACY OF FEDERAL CHILD-LABOR LEGISLATION

Edgar Gardner Murphy, in the *Montgomery (Alabama) Advertiser*

The adequate protection of our children in industry is not a matter of an isolated solitary "law" about an age limit. Child protection is not "a law" but a system, a system of laws mutually supporting and reinforcing one another. Such a system the Federal government under our present national Constitution can never supply. Such a system is possible only under the slower but freer processes of local State legislation. At infinite cost of thought and labor it is being gradually brought into existence. Much remains to be done, chiefly in the South, but also in the North. But it is confessedly both practicable and possible to do it. We are now asked, however, to follow the stated path of the impossible, to seek one isolated feature of such a system at the hands of the Federal power, turning much of our energy from those local methods, which hold every promise of a comprehensive system, into wholly new channels, in order to secure a law which is in itself of doubtful constitutionality, and which, under the plain mandate of the Constitution, can never be surrounded and reinforced by any adequate general system of protection. We are being asked to follow down a blind alley.

But, it is argued, "this is an effort for uniformity." Granting for the moment, that other phases of protection could be added, no real uniformity can be secured by the external process of a uniform law. Conditions are themselves against it. The whole environment of labor and of life, the factors of personal and social habit, climate, food, clothing, food, etc., are so different in an old manufacturing State from those which obtain in the new manufacturing States that no mere uniformity of law can produce uniformity of conditions. But it is obvious that the Federal authority can provide no general system of protection, no effective group of laws, mutually reinforcing one another, in the name of the child worker. A mere age limit, therefore, unsupported by other provisions, would thus represent all the more conspicuously a uniformity without meaning. Indeed, in the States where other phases of protection are lacking, it would represent no uniformity at all: for if the employer in a man of short-sightedness and greed he can and will make up to longer hours, in night work, in false affidavit from the parents as to the ages of their children (the law provides on penalty for the lying parent), all that the Federalist might gain by a fixed uniformity of age.

The friends of these Federal bills are assuming a great responsibility. If it can be found that they are weakening the movements for State legislation when they are able to offer no little as a substitute, if the Federal authorities cannot do more it ought to do nothing.

"HARPER'S WEEKLY" A QUINQUAGENARIAN

From the Church Standard.

HARPER'S WEEKLY appropriately celebrates its fiftieth anniversary by giving many details of its long and meritorious career. The WEEKLY has been a valuable exponent of public opinion, and in several critical periods it has done invaluable service in guiding the public judgment. It has made mistakes, of course. No journal, however wisely or prudently conducted, can hope to be always right, or always to say the right thing in an ideally right way, and the more thoroughly assured its managers are of their integrity or purpose, the more probable it is that they will sometimes err in the form, if not in the matter, of the views which they present. This is not to say that a great journal like HARPER'S WEEKLY has been a frequent blunderer; far from that; the men by whom it has been conducted have been recognized, not only as men of integrity and ability, but as capable and competent journalists, skilled in the art of self-control which keeps the journalist from saying wrong things, and also from saying right things in the wrong way or the wrong time. There have been occasions when the publishers of HARPER'S WEEKLY have feared heavy loss as the cost of firm adherence to the principles in which they believed; and at all times throughout these last fifty years the WEEKLY has been read with as much attention and interest as one who differed from its opinions as by those who agreed with them.

THE COST OF CRIME IN THE UNITED STATES.

By REV. JOHN J. MUNRO

Chaplain to the Prison Evangelistic Society of New York

THE cost of crime in the United States is a subject of such vast importance that it does, in almost every detail of human life, that it is remarkable that, as a field of economic investigation, it is comparatively new. Few sociologists and economists having given it much serious consideration. There is a marked absence of readily available data upon the subject, even the Census Bureau lacking in information. But the those of such fascinating interest that the more it is examined the more interesting it becomes, not only to the student of criminology but to the taxpayer. It is a pity that the national government, with the vast resources at its disposal and its opportunity to set about independent investigations throughout the country, does not undertake the work of compilation and prepare a thoroughly reliable and scientific statement covering the entire subject. Most statisticians who have dealt with this question in the past have only more or less correctly estimated the cost of crime in a given locality or for a given department, and then have arrived at conclusions relative to other localities or departments by processes of multiplication.

The figures representing the expense of crime are so startling that we ask ourselves how long our national and State governments can possibly continue to pay such enormous sums for the maintenance of courts of justice, police, and other institutions without taking serious cognizance thereof. One thing, however, is certain, unless our Federal and State authorities do something to stem some of the floodgates of crime as provided in our legislation, there is no telling what the end may be. Our rulers should endeavor to make it easy to do right and difficult to do wrong, so as to reduce the cost of crime to a minimum, or make our jails and prisons self-supporting.

Many persons have under the delusion that the only expense incurred in the correction and repression of crime is in the maintenance of police, jails, courts of justice, and public prosecutors. But this is a serious mistake. It means this and a vast deal more. As the cost of crime enters into every department of our very existence, which we have thought we have said all that could be said on the subject, we have left a great deal still unenumerated.

In this present discussion of the subject I have tried to follow new lines so as to reach correct conclusions. I shall endeavor to present only facts obtained after the most careful inquiry on the subject.

I have made a careful study of the cost of crime in Greater New York during the past few years, and find that the amount of money appropriated by the civil authorities, according to the figures of the Board of Estimate and Apportionment, since the consolidation in 1898 is not only on the increase, but starting as well.

The Cost of Crime in Greater New York

It is very doubtful if there are many more criminals in our jails today than there were ten years ago. Felonies have not largely increased. Crime, however, seems to have increased among young people of both sexes. But the principal reason for the large increase in expenditures in that all the department commissioners feel the effect of crime either directly or indirectly. Everything in the way of machinery and labor is paid for at the highest price. And among other things, it may be said that there has been a steady increase in the expenditure for salaries and raw materials used in our prisons. I have spoken to several of our city officers-holders who have had a wide experience in criminal matters, and they agree substantially with the results of my own investigations along these lines.

At the present moment nearly twenty-five per cent. of the \$120,000,000 and more raised by taxation for the running expenses of the city of Greater New York in the present year is to be spent in the repression and correction of crime, as the figures will show.

In the following tabulated statement it will be seen that all the moneys appropriated for the various departments and institutions are spent on the repression of crime alone.

The following departments devote their entire appropriations to the correction and repression of crime for the year. The figures given below are what each department has asked for in the budget:

Department of Police	\$15,697,681 00
" Correction	1,000,000 00
District Attorney of New York	237,640 00
" Kings	80,200 00
" Queens	25,800 00
" Richmond	8,000 00
City Magistrates, Manhattan and the Bronx	215,800 00
" Brooklyn, Queens, and Richmond	199,800 00
Special Sessions, New York and Brooklyn	165,800 00
General Sessions, New York	310,300 00
The Juvenile Asylum	44,000 00
Roman Catholic Protection	328,500 00
Society for the Protection of Children	50,000 00
Grand Jury Stenographer, Kings County	4,000 00
One Judge for Kings, Queens, and Richmond	17,500 00
Office expenses connected with the courts	6,000 00
Court Rents in Brooklyn	38,400 00
Parole Board	2,000 00

Grand Total.....\$18,310,722 38

When we come to deal with the various departments of the city government, which are only indirectly connected with crime, we find it more difficult to arrive at correct conclusions. Take for example the Sheriff's office. This official's work is both civil and criminal. He has charge of the county jail and pays for the support of the inmates. He takes full charge of prisoners indicted for felonies while they are in the Tombs, and after they are sentenced, sees that they are safely landed in State Prison or Penitentiary. After making careful allowance, we set aside three-fourths of the entire appropriation for crime.

In the following departments, only a percentage of the appropriation is used for the repression of crime:

The sheriffs of New York, Kings, Queens, and Richmond (seventy-five per cent. of the appropriation allowed for crime), \$108,092 75. Department of Health and Charities (ten per cent. for crime), \$300,400. For the present year the Fire Department calls for \$7,929,778. I have made careful inquiry and find that one-half of all the fires are the result either of wilful acts or criminal carelessness, so that half the appropriation is given crime—\$3,964,889. Of the expenses of the Law Department, Supreme Court and Appellate Division, twenty-five per cent. may safely be allowed for crime, that is, \$206,000. Commissioner of Juries' office (fifty per cent. for crime), \$39,925. Coroner (fifty per cent. for crime), \$79,820. Criminal work in the courts of Kings, Queens, and Richmond (fifty per cent. for crime), \$207,575. Other institutions that require support for maintaining criminals are the Bellevue, Good Shepherd homes, etc., \$200,000, which make a total of \$5,282,411 75.

The cost of crime to business men and corporations is as follows: Private police, watchmen, and detective agencies, \$3,000,000 a year; property stolen and not recovered, \$2,500,000; fraudulent bank loans, \$2,000,000; direct loss to families of men in prison, \$2,500,000; which makes the total cost of crime in Greater New York, \$35,552,134 34.

What Crime Costs the New York State Government

There is only one department in the State government which deals entirely with crime, the office of the State Superintendent of Prisons and Prison Commission. The other offices are only remotely connected with the repression of crime.

The figures in the statement are furnished by the State authorities and are the most reliable that can be found on this subject. There are, however, very many other items of criminal expense which are so interwoven into the various departments of our State government that it is difficult to classify them in their proper place. In this statement I have said nothing of the value of the four large prison establishments and the two asylums for the criminal insane, all of which must be worth at least \$6,000,000. I simply mention the running expenses for an average year. That we are compelled to erect the best buildings and install the most modern as well as the most expensive machinery in all the prisons cannot be denied. And although the population of these prisons has remained about the same during the past few years, there is a steady increase in the cost of maintenance.

The three New York State prisons, situated at Sing Sing, Auburn, and Clinton, cost yearly \$458,120 87. The women's reformatory, Hudson, Albion, and Bedford, cost \$150,000, and the reformatory for men at Elmira and Naposch, \$269,941 71. The Women's Prison at Auburn requires an expenditure of \$20,319 82, and the House of Refuge at New York and Rochester, \$127,530. Repairs and losses to these institutions amount to \$637,774 40. I have not mentioned the large amount of money which the State pays for raw material for manufacturing purposes, but this, when the goods are sold, is simply balance in most cases. The cost of other expenses in connection with the work of managing our prisons, those spent by the executive on criminal matters, pardon-er's office, expense of attorneys-general's office on criminal matters, etc., \$300,000. This raises the total expended by the State government for crime in the sum of \$2,380,473 75. The expense of crime to the cities and municipalities of the State (exclusive of Greater New York), which includes moneys spent for police, prisons, judges, courts, prosecuting attorneys, magistrates, etc., amounts to \$28,000,000 a year.

The cost of crime is fifty-seven counties of the State (exclusive of New York, Kings, Queens, and Richmond counties), is \$10,000,000. This expense includes the cost of jails, sheriffs, prosecuting attorneys, judges, justices of the peace and constables, court officers, criminal insane, and expense incident to the maintenance of buildings.

Another item to be reckoned with is the loss in wages to men and women confined in our State prisons, county jails, penitentiaries, and reformatories. During 1900 (exclusive of Greater New York), the loss was approximately \$4,744,000. Robberies and defraudations during the year was \$5,500,000, so that the grand total of moneys paid by cities and counties for crime outside of Greater New York (not under the State government), was \$40,244,000.

Cost of Crime in the other States of the Union

The cost of city police departments in the other States is \$200,000,000 to which the expenditures for prisons, judges, courts, prosecuting attorneys, and all other incidentals and \$60,000,000.

THE DEMOLITION OF THE HISTORIC "LONG BRIDGE" OVER THE POTOMAC

By CHARLES A. SIDMAN

THE demolition of Long Bridge, across the Potomac at Washington, removes one of the oldest landmarks in that section of the country. Built in 1835, it has well withstood the march of time, and now, after seventy years of constant use, it is being torn down, to give way to the new highway bridge which was built and finished last autumn. The bridge served as an important connecting link between the national capital and Virginia for about one hundred years, and

station of Long Bridge, owing to the mishaps which it had already suffered, and some were of the opinion that the bridge site should be moved further up the river. In 1936 an attempt was made to secure the discontinuance of the bridge, but failed. In February, 1867, it was partly carried away by floating ice, rendering communication between the two sides of the river impossible, except by way of the Chain Bridge, which was far up the river, and this involved an ordinary day's journey. In 1870 the Baltimore and

The old "Long Bridge" which has so many Associations with American History

In its time, has rendered valuable service to the government and the public. At the outbreak of the Civil War the demoralized Union army entered Washington over it after its defeat at Bull Run. The bridge was in almost continuous use during the war in the transit of troops and supplies to and from the front in Virginia campaigns, and at the close of the war the veterans crossed it on the occasion of the famous review by President Johnson.

The first Long Bridge was built in 1808 and opened for traffic in May, 1810. It was a wooden structure, nearly a mile long, and cost \$100,000. The toll was twenty-five cents for a man and horse,

Potomac Railroad Company was authorized to take possession of and to extend its tracks across the bridge on the condition that the company maintain it in good condition for railway and ordinary travel. As the years passed, the bridge had to keep up with the changes of modern progress, and in time it was utilized by the electric car line as well as the steam road.

The bridge has been patched and mended so much that there is not a stick of the original bridge left. An officer of one of the New York regiments, whose company was one of the first to cross the bridge during the Civil War, recently wrote the contractor in

The new Highway Bridge from the Virginia Shore, with the Washington Monument in the Distance

and one dollar for a four-wheeled carriage and a pair of horses. This bridge furnished continuous communication between the two shores of the Potomac until February, 1861, when it was swept away, and traffic was interrupted for some time.

After several years' lapse, a new bridge was built on the site of the old one and opened for traffic in October, 1835. Congress had appropriated \$130,000 for its erection, but it was found that its cost was only about \$117,000, being one of the cases where the appropriation exceeded the actual cost of the bridge, by \$17,000.

In 1836 and again in 1840 freshets damaged it considerably. The latter disaster caused inquiry into the propriety of the loca-

charge of the work of demolition for one of the beams, desiring to have walking sticks for his friends made out of it. A beam was sent him, and he was notified that while it came from the historic bridge, still it wasn't an original beam, as there were none.

The new railroad and highway bridges, lying very close to the old one, lower high above it. The highway bridge is of steel, iron, and concrete, and is one of the finest bridges of its kind.

It will only be a matter of a few months before the old bridge shall have disappeared entirely. After seventy years of hard wear, storm, flood, and bloodshed, it is now being dismantled in accordance with law, and will soon be a thing of the past.

AN ARGUMENT WITH THE SQUIRE

DRAWN BY HAROLD MATTHEWS BRETT

SURPRISES OF THE NEVADA DESERT

By BARTON W. CURRIE

DRAWINGS BY F. STROTHMANN

Till time was when eggs cost \$1 each, and beefsteak \$1 an ounce in Nome and Dawson. A strong man could earn \$1 an hour wielding a pick and "rocking a cradle." That was in the frozen North. There is no place mising in southern Nevada. The only cradle rocked is of the domestic sort. They are very few. Eggs never were so precious on the desert as up among the glaciers. You can buy a very good porter-house out for \$5. A man with a steady hand and a sure eye can drift into any camp and earn \$1 an hour dealing fire or tending roulette. There is usually one gambling-house to every 150 of population.

Human endeavor has a mighty wide range in these sage-brush communities, whereas it is fearfully cramped in the placer countries. All along the scale the reward for every craft and service is large. It must be, as compensation for living in a dip of the world where whiskey is cheaper than drinkable water. The water you live in is so hard that shaving-oup will not turn a hair. Also, it is impregnated with arsenic. In the spring and summer months the blaze of the noonday sun would tan an elephant's hide. Dawn is bedtime, and 1 P.M. the breakfast hour. Only the barter shops keep regular hours.

Whatever you may have read or heard about this desert altitude, you will find many places of life that point it in an entirely different aspect from any picture your imagination had conceived.

One never associates soda-fountains with life among the gold-hunters. Therefore it is quite a shock to find a gem of this sort on the main street of a booming camp, sandwiched in between a gambling-hell and the Mining Exchange. There is little difference in the character of the two.

When you hear that the little miss who presides at the soda-fountain is almost as well paid as a San Francisco bricklayer you wonder how she does it without the aid of a union, until you are initiated into the mysteries of the inauspicious-looking establishment.

It was a delightfully fresh-looking place on that scorching September day of my first visit. Electric fans stirred a soft, cool breeze. The iron things set on the counters and tables looked prodigiously tempting. Then the little drawer at the fountain:

Not turned sixteen, the skirt of the clean starched frock was still at her shoulders. Her cheeks were full and round and bright with the tint of the early pippin. Her chestnut hair was still in braids, dangling below the great bow of a broad blue sash. Altogether she was the most refreshing little person to gaze upon I had seen in one thousand miles. I had just come into camp on the Tonopah fire—an alkali-coated touring car of 50 horse-power that devours thirty-five miles of desert trail in a less number of minutes. The dismal little train wheezes over the same distance in two hours.

Five of the party I had joined sat down at the counter of varnished redwood. A dreamy-eyed youth, who once won attention in San Francisco by writing weird sonnets, but who is now more famous as a mine-corer and a little friend of a gas-fighter, ordered an ice cream soda. His business partner, a corpulent giant with a bald head and great flapping red whiskers, astonished me by asking the little maid at the counter for a whiskey sour. Another requested a golden fizz, and a fourth an egg pineapple. I utterly forgot my burning thirst while I watched her nimble hands prepare the ill-assorted array of drinks. Remember, we were in a candy-bazaar. Children pattered about buying gum-drops, lemon-sticks, and taffy-balls, gaudy with cochineal stripes.

A huge man, resplendent in a pink silk shirt in which blazed with fascinating glare a diamond of at least eight carat weight, seemed immensely amused at my amusement. The fat on his great body shook ponderously, and he emitted a stupendous guffaw that reverberated through the entire building and rolled out into the street.

"Why, sir," he boomed, "you can get anything you want in here, sir, from pineapple rump, sir, to a Kentucky breakfast, sir."

"A Kentucky breakfast?" I regarded him blankly.

"A Kentucky breakfast, sir," he explained, becoming purple, "is a breakfast, sir, a big drink of whiskey, sir, and a settler dog, sir."

"A settler-dog?" I stammered.

"The dog, sir, cuts the steak, sir." Once more he exploded and almost rolled from the bench, though he clung tenaciously to that portion of a Kentucky breakfast not subject to elimination.

The little flow of the soda-fountain denarily scinted a splish and playfully squirted a stream of Vichy on the big man's bald head, crying, in a shrill treble, "He just hangs round here all day to spring that gag on strangers."

I was told in a brief journey about the camp that many young women of unquestionable respectability obtain lucrative employment in that particular dip of the Nevada gold-hills. The concern of wilderness employs turnly stenographers at a wage of \$20 a week. Capable bookkeepers are scarce at \$200 a month, and several young men who write the lurid literature with which the boomers of legends claim, bait their victims, draw the same salary Uncle Sam pays Mr. Roosevelt's cabinet officers.

Recently a young Californian who has made some way in the literary world accepted an offer of this sort, and began writing circulars and prospectuses with a few flourish of language. His stipend was \$200 a week. He had a fine mahogany desk in work at. His office was one of an elaborately appointed suite in a stone building two stories high. Opening on the street was a counting-room thronged with secretaries, bookkeepers, and clerks. The place thrived with activity from 8 to 6. The atmosphere was

STROTHMANN

Once more he exploded and almost rolled from the bench

intensely urban when you consider that five miles away a man might lose himself on the desert and die of thirst before he could stumble within the range of human aid, and there are many little heaps of bones on that drift of the desert which bear evidence of such tragedies.

But the budding young genius of the West did not remain long on the job. His employer was a millionaire, but his millions were peculiarly tainted. His new prospectus-writer was made aware of other activities besides wildcatting; that aside in his fiery nature an overwhelming sense of disgust. The boss was much more than a wildcat. He had begun life as a tramp in Seattle. Blame, heeling from his sailor boarding-house was a matter of routine, and he acquired wealth in this way. He branched out. The police of Seattle know along what lines. So do the people in Alaskan and Nevada mining camps. He dealt in ramp "frederickson" the transported and set down in boom communities "red-light districts," ready-made and complete with scarlet appointments. Also he dealt in gambling-hells and their necessary equipment. His revenue from these sources was enormous. Therefore he was able to launch into the promotion and sale of mining stocks on a private scale.

When the native son, who had been half-back on a California university team, later football coach, teacher in the government schools on the island of Looe, reporter on the San Francisco newspaper, and writer of magazine stories, fully realized what manner of man his employer was, he boiled over. There was a heart-to-heart talk. Those who overheard the interview say he will never write half so vividly as he talked on that occasion. Several times the hand of this millionaire of singularly lurid career caressed the bulge over his hip, as the fist of the little writer waxed and shook before his forlorn face. But even in his almost unprovoked rage he didn't draw. He had to swallow it all until vocal exhaustion freed him from the back of the young Californian's tongue. Then he wobbled out of his fine offices to his big touring-car and roared down over the sage-brush trail. He did not return until after the evening train had carried his former employee well on his way back to San Francisco.

Early after my arrival in this bustling camp of curiously jumbled occupations and people I was greeted by a man who, when we last met, was a reporter on a big New York daily. He wore the leather garb of a chauffeur; his skin was tanned a walnut shade, except where his goggles protected him, making wide pink circles about his eyes. Just in from the trail, his entire uniform was coated gray with dust.

Naturally our greeting was cordial, meeting after a lapse of years in this no-man's-land.

"Oh, this isn't any come-down," he laughed. "Driving the benzine bus of the desert pays mighty well—\$10 a day, plus. The peripatetics roll into a tidy little fortune. In less than a year I've saved almost enough to buy a car of my own. When I do I can rent it for \$100 a day, and will soon be able to buy a good шин. I haven't had my eyes shut while coasting over these trails.

"Of course I'm dusty on the desert. At first the small ones your eyes until you are almost blind. But they harden. So do

"I'm the Sheriff of Columbia. I'll remit the line and keep the gun"

the semibones of your throat and nose after the arsenic has fairly permeated your system. Though it is hard work, it gives you tremendous endurance. Since midnight I covered 200 miles in a run to Rhyolite and back, switching off the trail now and then to look at new prospects.

"Breakdown? Yes. We do have them occasionally. They are not dangerous if you are on the trail. You run almost certain on another day coming along in no time at all."

"I drifted into this as a result of the San Francisco earthquake. I was doing a little press-agent work on the coast when the big shake came along and tossed things off their centre. I got out into the street in motley accoutrements—pajamas, trousers, and a high hat. An unemployed automobile stood at the curb across the street before the entrance of a French restaurant that was being cupped in precipitous panic. I drew from a half-stunned policeman that the driver had fed to the open area of Union Square, so I cranked up the car and drove off under three speeds in the train of a friend. After transporting him, his family, and their portable treasures to the ferry, I was impressed into service by one of General Funston's staff. For three days, sleeping only at brief snatches, with the steering-wheel as a pillow, I drove like a man in a nightmare through the hell of fire and smoke. Who and what I carried in the machine I have forgotten. I came to in a garage in the Western Addition.

"The automobile I had been running belonged to a dealer, who a few weeks later sent half a dozen cars to Tonopah. At the salary offered I willingly consented to leave stricken San Francisco for this arid altitude. After my experience of earthquake and fire I think I could have cheerfully piloted a car in flames.

"A man can save money up here," he said, as he went back to his car, "if he doesn't fall into the custom of breaking fast on champagne and shikerei."

Later in the day—or rather after day, with the suddenness of thunder, had resolved into night (the sun makes one purple dip and goes down and out behind the hills)—I met another young man, whom I had formerly known as an organist in a Harlem church. He saluted me good-nighly, drawing off a pair of pearl-colored gloves and revealing "big white" hands. The long, tapering fingers were sprinkled with diamonds. I remembered him as a blushing modest little chap, who had been a rare favorite in the little church where he played. He was an excellent musician, the observing flock of worshippers he delighted were agreed that he possessed the true artistic temperament. Yet here he was in a country where every man is a law unto himself.

"I came to Goldfield to take care of the burial of a relative," he explained, quite lightly. "Somehow I liked the difference in things. I was offered a position as salesman in a jewelry store at as much a week as I made a month at my trade. I took it. That was three years ago. I saved my money, as I don't gamble or drink. My employer did both, and in two years I bought him out. Since then I have designed many little trinkets that seem to have caught on. I have thrived beautifully. I quite like it. The people are so different from those our nerves in the prosaic circles of the

So I cranked up and drove off under three speeds to the rescue

THE PERPLEXITIES AND HUMORS OF SELECTING A JURY

By FREDERICK B. HOUSE.

City Magistrate, New York.

THERE is really no justification for hair-splitting examinations of talemans of the kind with which the criminal courts of to-day are familiar. The selection of a jury is, after all, a more matter of chance. Let it be understood that the man summoned is a talemán who is in an accepted by counsel for both sides as a juror. The late James T. Brady, who in his day was deemed by many the greatest trial lawyer at the Bar, believed in taking the first twelve men called, provided they were intelligent and had no particular knowledge or opinion of the case to be tried, and provided they declared that they would be governed by the evidence and follow the instructions of the court as to matters of law. Mr. Brady claimed that a prolonged and minute examination made for the purpose of determining how each talemán sought be impressed with reference to the particular case on trial so taxed the vitality of the lawyer that he had not sufficient stamina left for the actual trial of the case. The late John R. Brady, who, as a Supreme Court justice, presided at many important criminal trials, was of the opinion that his brother's method of selecting a jury was the best.

Apart from the effect upon counsel, the practice of rigidly inspecting the motives and antecedents of talemans has another disadvantage: It is of vast expense to the community. I do not mean with reference to the matter of dollars and cents, but to the retarding of the great machinery of the law by cases that do not justify it—cases that engage public interest only through the great wealth or the high social position of the persons involved.

But that the minute scrutiny of talemans has at least one advantage, will be shown later.

The practice of devising wiles to the picking of a jury in important criminal trials is of recent origin. It was brought about through the enactment of the statute which permits a juror to sit in a trial although he may have formed or expressed an opinion thereon, provided he is willing to say that such opinion can be laid aside and that he will be governed entirely by the evidence. Prior to this statute a juror who admitted having formed or expressed an opinion was barred from the box. The statute referred to resulted from the *Girard* case, which was tried some thirty years ago, and which bankruptcy case of the late Judge Girard had been tried. I think, four times and eventually executed. It seems that the appeals were based on evidence discovered that the trial jurors had expressed opinions. Consequently, the Legislature enacted a law permitting a talemán who has formed or expressed an opinion to be a juror, provided he declare his ability to act independently of his views.

This statute is inoperative in that it greatly diminishes the hopefulness by means of which competent men used to shirk a disagreeable duty. On the other hand, counsel cannot exclude an undesirable man on grounds that formerly were sufficient. To escape now for such a reason a talemán must confess himself either blinded or stupid. Neither could a crafty lawyer prearrange that a talemán commit himself to an opinion which might subsequently be used as a basis for appeal.

The process of the minute examination of talemans is, then, an evolution which may be traced to the foregoing statute. The purpose of this process, however, is generally misunderstood. The public believe that it is used by counsel in order to estimate the exact fitness of talemans. This is true. But the situation requires some explanation. Counsel on both sides are accorded a certain number of peremptory challenges. If these they can exclude from service any man who, while he answers all questions satisfactorily, may yet offer some subtle, indefinable objection to the intuition alone. It follows, then, that a peremptory challenge is a rare privilege in an important case, and must needs be conserved. A lawyer will, therefore, use every possible means—even to the point of obscuring hypothetical questions—to exclude a juror before sacrificing one of his precious peremptory challenges.

The purpose of a hypothetical question are best explained by the name itself. For example, an expert is not permitted to state his opinion as to the sanity or insanity of the person on trial, but he may do so in reference to a person mentioned in a hypothetical question containing the facts and circumstances of the crime and the history of the accused. The effect of a long-drawn-out question of this nature, as applied to the selection of jurors, is difficult to determine. Some grasp it, others do not. In all probability, it receives very little attention as such. The fact ought to be established through it merely exists, however, from the testimony of the witnesses examined.

If such a thing as humor be possible in a capital case, it develops while talemans are struggling with hypothetical questions. Some of these, although carefully framed, are barely intelligible to the most astute expert in particular sciences to which they relate. It can readily be seen, then, how valuable an agent such a question is in excluding a talemán of only ordinary intelligence, and with absolutely no knowledge of the subject to which it relates.

However, the hypothetical question is a double-edged sword. If the district attorney may avail himself of it, counsel for the defense may do likewise. It is significant that in cases where a talemán's appearance and manner impress both sides favorably little investigation is made.

What, then, are the qualities most available in jurors? They are, obviously, intelligence, fairness, and courage. But each side naturally seeks for a talemán who seems inclined to favor its cause. This may not be just, but it is preeminently human. Now, a talemán may have an aversion to a virtuous cause, or may even (as experience so often shows) a fixed determination to find a verdict, regardless of evidence. If it were only possible to tell which way he would divide, all would be well, but counsel cannot take chances. It might be supposed that the juror of aversive cast would be determined to convict where the case involved sentimental relations between a man and a woman. On the other hand, the juror of virtuous tendencies might, on general principles, acquit any or every body. These may be reasonable, but they are dangerous assumptions, since the aversive might have so tender a conscience that he could not convict and the virtuous man, through a general scheme of revenge upon society, might want to convict everybody.

As a rule, such talemans are excluded through the agency of the system of elimination used by the Commissioner of Jurors in important capital cases; but when such persons do slip through and reach court, they are so well posted and answer questions so satisfactorily, that the peremptory challenge alone has them out.

It does not follow, of necessity, that a talemán who appears to be favorable to the prosecution is by virtue of that fact objectionable to the defense, since every able lawyer, whether he have a good or a bad case, wants intelligent and fearless men in the jury-box. But there are qualities which almost invariably operate to influence a juror's verdict. For instance, where a crime has been committed by a young man on account of a woman, the district attorney, as a rule, prefers middle-aged rather than young men, on the theory that the older man will not be so quickly swayed by sympathy as the younger one. In such cases he also prefers married to single men, believing the former to be more shield and settled more apt to hold to a rigid rule of morality and good conduct than the young and unmarried man. Particularly in cases of abduction and kindred crimes the question as to whether a juror is a father or a husband plays a very important part, and the district attorney usually endeavors to secure men of high social qualifications. In certain cases, lawyers believe the middle-aged men are more apt to take both sides of a case into consideration; while astute lawyers count, under certain conditions, upon the sympathy of young men for a favorable verdict.

In cases where sentiment plays an important part, and where the so-called "higher law" obviously is a misnomer, since no law can be above justice—may be invoked, counsel for the defense, mindful of the traditional chivalry of the South and the impulsive generosity of the Western man, would pick his jurors from these sections rather than from the conservative North and East. But this is a practice that is not always safe.

The fact that a juror has voted for conviction in a previous capital case by no means signifies that he would again vote that way, but counsel for the defense would be loath, under such circumstances, to accept him as a juror.

There is probably no way by which counsel can judge, by the appearance or manner of a juror, whether or not he will be susceptible to bribery. This can only be determined by the man's antecedents, the character of his business, and his standing in the community. In cases where the defendant's family is enormously rich, the prosecution must safeguard the interests of the people, first by selecting those whom they feel satisfied are above corruption, and then by removing these beyond the reach of temptation.

After all, counsel are obliged to depend upon their experience and acquaintance with human nature in selecting a jury, for after one has been carefully chosen through the minutest investigation, it frequently turns out that the verdict is based upon a theory entirely different from that advanced by opposing counsel. For instance, in the trial of an important criminal case in which I was engaged, the prosecution had one theory, the defense another—each side devoting its time and attention to destroying the theory of its opponent. Several weeks after the case had been decided, one of the jurors asked me why prosecution and defense had devoted their time to certain theories, remarking that the jury had decided upon a theory which had not been presented by either side.

My recollection touching the selection of a jury, based upon twenty-five years' experience, is against long-drawn-out and exhaustive examinations of talemans.

This process is, as a degree, advocated by the "special panel" system followed in this State. The Commissioner of Jurors selects, by careful examination from the talemans called to serve, those who are fairly eligible, and puts their names upon the special jury list—at the same time excluding the obviously undesirable ones. From such a panel it is possible to select a jury with much greater rapidity than under the old system, although it is not nearly so expeditious as under the system of a "struck jury." By this system, which is in use in New Jersey and in some other States, a certain number of talemans are summoned to court and a list of their names is drawn by lottery and to the counsel for the defense. The process of elimination is then begun, each side striking out names until there remain twelve jurors satisfactory to both.

THE INTRUDER

WASHINGTON'S BIRTHDAY AT THE WHITEHOUSE.

BY JOHN KENDRICK BANGS

"Twas a dark and dismal evening, and the White House lights were out,
But the Presidential Shadows flitted merrily about.
It was Father George's birthday, and the *quacks* had gathered there
For to celebrate th' occasion in a fashion fit and fair.

Washington was lying calmly on a bear-skin on the floor,
While T. Jefferson and Adams reminisced of days of yore,
Here the ghost of Millard Fillmore jollied up the shade of Polk,
And the spirit blithe of Tyler bubbled o'er with quip and joke.

James Buchanan and the pigment of the glorious Monroe
With the beggart of A. Johnson prowl'd to and fro;
While the wraith of Andy Jackson and the band-e-grim of Pierce
Were engaged in disputation that was getting pretty fierce;

When, without a word of warning, there appeared a shadow pale
That set every ghost a-trembling and made every spirit quail,
O its pallor it was awful! O its eyes were green and set!
And its texture like the smoke of some long vanished cigarette.

And it wrung his hands in anguish, and it shook with mad dismay,
And the tears it left behind it made you think of Babylon lay;
And the groans that it emitted, as it paced the festal hall,
Made the wailin' split above them and distinctly shook the wall.

Then up sprang our pollut Washington from off the bear-skin rug,
And with trembling voice he shouted: "Hut! intruder, hold and snug,
'Come! 'Enower! Tell who are you, Spectre horrible and rude!
Tell us on the instant why, sir, on our revels you intrude!"

And the vision raised his visor, which had hitherto concealed
His identity completely, and stood nakedly revealed:
O the groans that followed after! O the shudder of horrid fear,
When the revellers discovered who it was that now was here!

For it was the Constitution of these brand United States—
Him they'd always thought undying, come like them thro' Lethe's gates!
Battered, twisted, and wringed, shrank and cracked and deeply scored!
Conspicuously ejected from the councils of the Lord!

"Who hath wrought this awful havoc?" cried the Spirits with one breath,
"Quickly tell us, gentle Conny, who hath done you unto death!"
And the wraithlike Constitution bowed his cracked and weary head,
"The Step-Father of His Country—it was Theodore," he said.

Then the Spectres sighed them sadly, as they faded fast away,
And when questioned by me later they had nothing fur to say.
They are waiting, simply waiting in a silent group and grim
For that hour in the future when they get their hands on him!

DECORATION BY
DAN CANEY
BROGSBECK

His Excellency— the Governor

BY LEONID ANDREIEFF

ILLUSTRATED BY G W JETTERS

A STORY IN FOUR PARTS—PART III

ALREADY the city knew that the Governor was to be killed. They had heard it at dawn of the day after the shooting. None spoke of it openly, but all felt it; as though, while the living lay in their uneasy sleep, the dead were stretched out quietly in careful order . . . shoulders to shoulders, in the engine-room, a dark shape had floated over the city, shadowing it with its wings. And the people spoke of the assassination of the Governor as a foregone conclusion—an irrevocable fact. Some accepted it at once; others, more conservative, not till later. Some took it carelessly for granted as a thing that concerned them but slightly; like an eclipse, only visible in another hemisphere and hardly interesting the inhabitants of this one. Others, a small minority, rose and agitated the question whether the Governor deserved this fearful sentence. Whether the death of one single individual, no matter how dangerous, could have any effect while the general conditions of the living were unchanged. Opinions differed; but even the most heated arguments were impetuous, as though the question were not a possibility of the future, but already an accomplished fact which no discussion might alter.

Among the better educated the arguments took a broader theoretical stand, and the Governor's personality was forgotten, as though he were already dead. The debate proved that the Governor had more friends than enemies, and many even of these who believed ethically in political assassination found excuse for him. Had a vote been taken in the city, probably an overwhelming majority on various practical or theoretical grounds, would have cast their ballot against the death—or, as some called it, the "execution."

But the women, generally so merciful and timid at the sight of blood, shrank in this case a surprising grimace—a pitiless spite. Nearly all demanded his death . . . the most hideous death! Reasoning had no power over them; they held their opinions unshakably, with a certain brute force. A woman might be convinced by reasoning that the assassination was unnecessary, but next morning she would awake firm in her original conviction: as though she had slept off the effects of the argument overnight!

Bewildered and confusion reigned supreme. A disinterested listener, hearing their talk, could not have gathered whether the Governor should be killed or not, and might have asked in amazement: "But where did you get the idea that he must die? . . . And who is to kill him? . . . But there would be no answer. Soon, however, he would see, as all the others did, that the Governor must be killed—that his death was imperative! . . . Yet he would have known as little as all the rest from what source this knowledge came. Every one . . . friend or foe of the Governor—partisan or prosecutor—all gave themselves up to the one unswerving thought of his death. Ideas differed, and words differed, but the feeling was the same; a mighty, all-pervading conviction, strong and immutable as death itself!

Even in the dark, itself a part of the unfathomable darkness, it reigned triumphant and menacing . . . and all in vain men sought to illuminate it with the feeble light of their intelligence. As though the heavy willful law, "A death for a death," had waked from its torpid sleep, opened its glazed eyes, gazed on the slaughtered children, the men and the women, and had stretched its remorseless arm over the head of their slayer. And the people, thinking and unthinking, inclined themselves to this law, and remembered the alarm. He was at the mercy of any death that might come. And from all sides, from dark corners, from beds, woods, and hollows, they pressed about him; reeling, limping, dull, and alert—not even interested!

So it might have been in those far-distant times when still there were prophets among men. When thoughts and words were scarier, and this same heavy law that punished death with death was young. When the hosts made friends with men, and the

lightning was his brother! In those strange days of old the guilty must pay for death in kind. The bee stung him, the ox gored him, the overhanging stone awaited his coming to fall and crush his defenceless head; disease gnawed him as the jacked gnaws the cartion; arrows (turned in their flight, only to strike his black heart or his downcast eyes; and rivers changed their course only to wash the sands from beneath his feet—even the majestic ocean dashed its tattered waters on high and threatened him with its roar—till he fled to the desert. A thousand deaths—thousand graves! The desert buried him under her soft sands; she wept and smiled, and over him her winds blew whistling. And the sea itself—that life-giver—soured his dead brain with careless laugh and softly burned on the creatures that swarmed in the hollows of his miserable eyes. The heavy masses of the hills lay upon his breast, and in their eternal silence they buried the secret of his expiation! . . . But that was long ago, when this great law was young—a striping that punished death with death—and seldom in those days did his cold, keen eyes avenge in the performance of his duty!

Within the town discussion soon died out, poisoned by its own unpopularity. One must either accept the assassination as a sacred fact and shut all argument as the women did with the one incontrovertible phrase, "What right had he to murder children!" or else be reduced to hopeless contradictions, to vacillation, to shifting grounds—as a drunken group might gravely exchange their hats, yet get no further on their homeward way!

Speculation wearied them finally, so they stopped talking; and nothing on the surface remained one of that fatal day. But amid the silence and the calm grew a great cloud of grim suspense. All waited—those who were indifferent to the catastrophe and its consequences, those who looked eagerly forward to the execution, and those who were uneasy about it—all . . . all waited for the inevitable, with the same vast, breathless suspense! Had the Governor died of a fever in these days, or from an accident, none would have taken it for mere chance; but behind the given reason would have found a primary cause—invisible, unacknowledged.

Among the masses, as the foreboding grew, their thought turned often to the Kawinajala lane. The lane itself was still and calm, as was the city; and the swirling suspense peered vainly for any signs of new uprising or criminal attempts. There, as elsewhere, they heard rumors of the assassination of the Governor, but could never discover their source. All spoke of it, but in such an unvarnished, even foolish way, that one could find an key to their talk.

"Some mighty man . . . oh, a very mighty man, who could never possibly fall, would undoubtedly kill the Governor one of these days!" That was all one could make of it.

The secret agent Grigorjeff overheard some such gossip one day as he sat in a low glit-shop pretending to be drunk. Two workmen, who had already been drinking rather freely, sat at the next table, their heads together. Clumsily clinking their glasses, they talked in suppressed murmurs. "They'll kill him with a hammer!" said the first, evidently well informed.

"What! with a hammer?" said the other, amazed. "Certainly, with a hammer—what else?" reiterated the other. He puffed at his cigarette, blew the smoke in his companion's face, and added, sternly, "It will blow him to a thousand little bits!"

"They said it would be on the ninth day."

"No," said the other, with a frown which expressed the highest degree of scornful negation. "Why the ninth day? That's superstition . . . that idea of the ninth day! They'll simply kill him early in the morning—that's all!"

Nodding his face with his outstretched hand, he leaped suddenly forward and bowed into his companion's ear. "Next Sunday week!" Silently they stared into each other's grim, heavy eyes, both

swaying to and fro. Then the first lifted a threatening finger and said with impressive severity.

"Do you understand?"

"They'll never miss him . . . not they're not that kind."

"No," said the other, with lowering brows. "How could we miss? The pack is stacked . . . We hold four axes."

"A whole handful of tramps," added the other. "You understand, don't you?"

"Yes, of course I understand!"

"Then if you understand, we'll drink to it. Aren't you afraid of me now, Wajap?"

They whispered for some time, blinking and nodding, and upsetting the empty bottles in their eagerness. . . . That same night they were arrested, yet nothing suspicious was found upon them, and the preliminary examination showed that they did not know the slightest thing, and had only repeated vague rumors.

"But how did you happen to know the very day . . . that Sunday?" asked the angry officer who was conducting the examination.

"Can't say," said the man, somewhat coward—he had been three days without drinking or smoking—"I was drunk!"

"I'd like to send you all to—," turned the Lieutenant—but he did not finish his remark.

Even the ones who were sober were no better. They spoke freely of the Governor in the workshops and on the streets, raged at him, and scoffed at his approaching death. Yet never anything definite, and soon they stopped talking and waited patiently. Now and again passing laborers exchanged comments:

"He drove by again yesterday without any guard."

"He's walking into the trap himself!" And they went about their work. But next day a whisper ran through the shops.

"Yesterday he drove down the lane!"

"Let him drive."

They counted each day of his life. . . . their number seemed too great! Twice the rumor of his death was started. It spread suddenly in the Kawatanja lane, and immediately grew to certainty in the factories. It was impossible to say how it rose, but scattered in little groups they told each other the details of the murder: the street, the hour, the number of the murderers—the weapons! Some could have sworn they heard the explosion. And all stood there, pale, determined; outwardly neither glad nor sorry. Till at last word came that it was a false alarm. Then they separated, just as calmly, and without disappointment, as though it were not worth while to be excited over an affair that was postponed but for a few days at most . . . or perhaps a few hours—or even minutes!

Both in the city and in the Kawatanja lane the women were the hardest, most unrelenting judges. They produced no evidence, they gave no verdict—they simply hid their time! And on their waiting they laid the coils of their unshakable belief: the whole burden of their unhappy lives; and the bitterness of their deprivation, a nagging, smothered thought. They had in their daily lives one special adversary that the men did not know . . . the oven—the ever-hungry, open-mouthed oven; more awful than the glowing fire of hell! From morning till night, throughout their days, and every day, it held them in its sway, eating their souls, eating out from their brains all thought save that which concerned itself.

The men knew nothing of this. When the woman waked at dawn and saw the stove—the oven door half open, it worked on her fancy like a ghost, gave her a sickening sense of disgust and fear and dull brutish terror!

Robbed of her thoughts, she hardly knew what had robbed her; and in her confusion humbly offered

up her soul again each day before this altar, black, dully misery wrapping her as in a veil. And thus the women in the Kawatanja lane became so fierce and hard! They beat their children—beat them nearly to death—quarrelled amongst themselves and with their husbands, and their mouths streamed with abuse, complaints, and wailings.

In those three terrible weeks of famine, when for days no fires were made—then at last the women raved . . . that strange calm rest of the dying whose pains have ceased some moments before the end! Their thoughts, freed for an instant from those iron bands, fastened with all their passion and power to the vision of a new life . . . as though this strike were not about the monthly wages of the men, but about a full and glad release of their eternal bonds. And in those heavy days when they buried their little children . . . dead from exhaustion . . . and snubbed with pain, weariness, and hunger—battered thus with bloody tears, the women grew kind and gentle as never before! They were convinced that such horrors could not have been sent without a purpose—that some vast reward must follow their sufferings.

So when, on the 17th of August, the Governor stepped out before them into the Square shimmering in the sunlight, they took him for the dear Lord himself—with his gray beard . . . And he said:

"You must go back to your work! I cannot talk to you till you have gone back to your work."

Then: "I will see what I can do for you. Get to work and I shall write to Petersburg!"

Then: "Your employers are not robbers, but honorable men and I forbid you to speak so of them. And if you are not back at your work by to-morrow, I shall lock up the shops and send you all to the Workhouse!"

Then: "It is your own fault that the children died! Take up your work again!"

Then: "If you act like this and do not disperse I'll have you driven off!" . . .

Then followed a chaos of howls—babe crying—the whine of bullets—pushing—and a wild flight! They do not know themselves where they are fleeing to, they fall! Up again and on—children and home are lost! . . . then suddenly again in the twinkling of an eye—there sits the cursed oven! stupid—instantly—with its everlasting open mouth! And the same old round begins again from which they thought to have torn themselves forever; and to which they have returned . . . forever!

Perhaps the idea of the Governor's assassination emanated from the women's brains. The well-worn words they used to

had been used to clothe his hatred for man no longer sufficed them. Loathing! Contempt! Rage! It transcended all these . . . it was a feeling of calm, unqualified condemnation . . . if the axe in the hands of a man's hands could feel this emotion—that cool, sharp, shining, steady blade! The women waited quietly, without wavering and without doubts. And while they wait they take their fill of the good, fresh air—the same air that the Governor breathes! They are like children. If a door chances to slam, or some one runs rattling down the lane, they rush out—bare-headed and excited. . . . "Is he dead yet?"

"No—it was only Newjka running to the shop for vodka." And so it goes till another knock comes, or a sudden rush of feet to break the deadly silence of the street.

When the Governor drives by they peer at him eagerly from behind the curtains, and when he has passed go back to their ovens again. It did not surprise them that the Governor, who had always been followed by guards, suddenly appeared without an escort . . . the head-man's son, if it could feel,

Drawn by G. W. Pease

The secret agent Grigoroff overheard some such gossip one day as he sat in a low go-shop pretending to be drunk

would not be astonished at the sight of a bare throat! It was quite in the order of things that the throat should be bare.

They sat and spun their gruesome threads—these gray, dismal women with their gray dismal lives—and it was they who awakened that hoarse old law that punished death with death.

Their sorrow for their dead was suppressed and terpid; it was only a part of their great general pain, and they gulped it down as the great briny ocean would swallow one small briny tear. But on Friday of the third week, after the deluge of blood, Nas-tazja Nasanova, whose little girl (Tanya, only seven) had been killed, went, suddenly silent. For three weeks she had worked over her own like all the rest; had quarrelled with her neighbors, had beaten her other children; and all at once, without any warning, she went insane.

It began in the morning. Her hand trembled and she broke a cup; then it all came over her with a sickening shock, and she forgot what she was about, ran from one thing to another, and repeated foolishly, "Oh, God, what am I doing!" . . . Then, finally, she was quite silent. And dumb, with stony tread, she slid from corner to corner, taking things up and putting them down—moving them from place to place; and even in the beginning of her madness, hardly able to tear herself away from the stove. The children were in the garden tying their kites, and when little Petka ran in for a piece of bread he found his mother stealthily taking all sorts of things in the oven . . . a pair of shoes, an old coat, and his cap! At first the boy laughed, but when he caught sight of his mother's face he ran shrieking into the street. "A—n—n—n!" he screamed as he ran, and set the lane in wild alarm.

The women gathered and began to whisper over her like frightened dogs. But she only widened her circles, breaking through their restraining arms; gasped for air and numbed to herself. Piece by piece she jerked off her rags till, stripped to the waist, her lean and haggard body with its withered, dangling breasts showed yellow against the wall. Then with a long and hideous wail she repeated over and over: "I can't! Oh, my dear, I can't—I can't—I can't—I can't!" and ran into the street, the others following.

Then the whole lane was transformed for one instant into a single still life. It was impossible to tell who was crazy and who was not. The people subsided when the sea ran out from the shops, bound the maniac hand and foot, and poured a bucket of water over her. She lay there in a puddle by the roadside, her naked bones pressed to the earth, her fists and the blue-mottled arms stretched stiffly forward.

She had turned her face to the side, and her eyes were wild and glaring; her wet gray hair was pressed close to her head, making it seem pitifully small; her whole body was shaken with convulsive jerks. Out from the factory ran her husband in a fright. He had no money now, his dirty face, his shirt was shiny with oil and grime, and a burned finger on his left hand was tied up with a greasy rag.

"Nastja!" he called, leaping over her, stern and harsh. "What do you want? What is the matter with you?"

She turned her dumb glass stare at him and shuddered. He saw the purple blood shot arms that had so pitiously bouned; loosened the ropes and smoothed her naked yellow shoulder. . . . Then came the pebble! . . .

When the crowd dispersed two men among them neither went back to the factory nor stayed in the lane; but they went their way slowly to the city. They walked along, keeping step, silent and pondering. At the outlet of the Kowatskaja lane they parted.

"What a woe!" said one. "Are you going my way?"

"Not!" said the other, erect and stride along. He had a young tanned throat, and under his cap a shock of curly yellow hair.

VI

Sooner or later the news of the Governor's assassination had crept into the palace, but here they took it with an extraordinary indifference. As the close pressure of the strong man in his full powers hindered their knowledge of the fact that this death meant his death . . . they regarded it only as a temporary interruption. Toward the end of September the household was turned to town at the urgent request of "The Pike," who had convinced Maria Petrovna that the country was not safe. And there they took on its accustomed aspect . . . the routine of many years.

Kodloff, the side, who leathed the dirt and the banal decorations of the Governor's mansion, had personally supervised its refurbishing. He brought fresh hangings for the walls and re-upholstered rooms, had the ceilings retined, and ordered new furniture . . . green oak in the style of the Decembrist! He quite took upon himself the supervision of the house, to the delight of all—from the servants, who were infused with his energy, to Maria Petrovna, who hated all domestic cares. In spite of its roominess the palace was most inconveniently arranged. The bath-rooms were sent to the receiving rooms, and the lockers had to carry their dishes down a long cold corridor past the windows of the dining hall, where one could see them quarrelling and nudging each other as they went. All this Kodloff wished to change, but he had to postpone his plans till summer.

"He will be pleased," he said to himself, sneering the Governor, but, strangely enough, this house did not roll forth in his mind Peter Iljitch, but some other? Yet in his eager bustle of reform he was not at all conscious of this thought.

As usual, Peter Iljitch was the centre of his family, and the expression, "His Excellency ordered it," was heard everywhere. "His Excellency would be angry!" . . . were now, as ever, the household words; and yet had they set up a puppet in his place, dressed in the Governor's uniform, and let it speak

a few words, it would have made no difference . . . so much of the officer was but empty form!

If he fell into a rage and shouted at a man and that man trembled, it looked as though the rage and the trembling both were simulated, and that nothing of the sort had really taken place. Even had he committed a murder in these days, that very death would have seemed counterfeited. As far as concerned himself, he still lived; but to the others he had already died, and they handled the dead carelessly, and felt the cool and the gloom that emanated from him without quite understanding what it meant.

Thought can kill in time! Drawing its strength from the eternal sources, it is mightier than engines, weapons, or powder! It robs men of their will, and makes even the instinct of self-preservation blind. It clears a free space for its deadly stroke, as the forest undergrowth is cleared away first that must be felled! So this thought was killing the Governor! . . . As the child when the time of its fraction is complete struggles from its mother's womb, this imperious death-dealing thought—till now giving evidence of its being only by the muffled beating of its heart—score irresistibly toward the light, and began to lead an individual life. Imperiously it called up those from the dark who should do the deed; and hailed them as saviors!

Unconsciously the people held themselves aloof from the one dedicated to death, and coddled him of that invisible but mighty shield that the life of the mass forms for the life of the individual.

After the first anonymous letter calling the Governor a "Butcher" . . . a few days passed without any such insinuations. Then, if you went second, the next second, the next day, you found him, as though they had poured from a silt in the post-office, and each morning the stack of envelopes on his desk grew higher. In different quarters of the town, out of different post-boxes, these letters were segregated from the other mail by different people, gathered into a heap, and brought to their common destination—this one man! Formerly the Governor had received anonymous letters, sometimes with abuse and veiled threats, mostly denunciations and complaints, but he had never read them. Now, however, he felt himself impelled to read them; as he was forced, too, to think constantly of his own death. . . . And reading and reflection both required solitude! . . .

Nelson thought the day, but often towards evening, he sat at his disordered desk with a glass of tea untasted by his side, shrugged his broad shoulders, put on his strong, gold-rimmed spectacles, examining the envelopes of the letters as he opened them. He had learned to know them at a glance. For in spite of differences in writing, paper, and postmarks, they had something in common—like the dead in the engine-house! . . . and they were all alike, the lodgekeepers, who took in Peter Iljitch's private correspondence, recognized them instantly.

The Governor read each letter attentively—earnestly, from beginning to end; and if any words were illegible he gazed over them long as to their meaning. In interesting ones, or those that they were not, he thought aloud. He was a man who gave him friendly warnings of his coming assassination. All others he numbered and filed for some reason unknown to himself. In general, their contents were wearisomely monotonous. Friends warned, few threatened, and the matter dwindled into a series of isolated "yes" and "noes."

From constant repetition he was quite used to the words "murder" on the one hand, and "steadfast defender of order" on the other; and to a certain extent had accustomed himself to that other thought . . . that friend and foe alike believed in the inevitable approach of his death! . . . A cold shudder ran over him. He would gladly have warned himself, but there was nothing to warn him. . . . The tea was cold! . . . they always brought him cold tea lately, for some reason! . . . and even the high tiled stove was cold! . . . Long ago, soon after he had come here, he had intended to build a fireplace, but he had put it off, and the old Dutch oven gave very little heat so much coal you burned! . . . Is this a sign, he hugged the lukewarm tiles, then pored the floor up and down, saying in his deepest, regretful tones, "Fie grow!" . . . a perfect bottomless plant! . . . then he set down his letters again, looking for something important or decisive.

"You a Excellency!—You are a General, but Generals are mortal, too. Many Generals die, a natural death, so to speak by violence. You, your Excellency, will die a violent death!"

"I have the honor to subscribe myself
Your Excellency's Most Obedient Servant."

The Governor smiled—at that time he could still smile—and was about to tear the carefully written page, when he bethought himself, made a marginal note. . . . "No. 43, Sept. 22, 190—" and filed it.

"My Lord Governor!"

or to be more correct, "My Lord Turkish Pasha!"

"You are a thief and a hired assassin! . . . I'd swear to God you turned a pretty penny on that transaction when you murdered the workmen!" . . .

The Governor turned purple, crumpled the note in his fist, pulled off his spectacles and roared . . . with the roll of a big bass drum—

"Be expellent!"

Then he dug his hands into his pockets, stuck out his elbows, and began to pore the floor in a feverish rage . . . keeping time with the rhythm of "This-is-the-way-the-Govern-ors-walk!"

Drawn by G. W. Peck

"If you are not back at your work by to-morrow, I shall lock up the shops and send you all to the Workhouse!"

When he had quieted himself he smoothed out the letter, read it to the end, smothered it with an uneasy hand, and filed it carefully. "He must certainly see that," he said, thinking of his son.

That same evening fate sent him another letter. It was signed "A Laborer." Aside from the signature, however, nothing in the letter denoted the brawny craftsman—insolent and undecent—which was the Governor's conception of "Laborer."

"Here in the works, and in town, they say that you are to be killed soon. I don't know precisely who will do it, but I think it will not be the agents of any organization; but either a volunteer from among the citizens, who are roused by your brutal proceedings against the workmen on August 17. I frankly say that I and some of my party are against this resolution, not because we pity you—had you yourself any pity on the women and the children that day!—and I think that no one in the place has any pity for you . . . but simply because I am opposed in principle to any violent death. I am against war, capital punishment, political execution . . . and against murder in general."

"In the battle for our ideals—liberty, fraternity, and equality—we should make use only of such weapons as do not contradict these ideals. Death is a weapon of that evil, old-world order whose device is slavery, privilege, and enmity. Good can never come from evil, and in the battle where force is the weapon, the victor can never be 'the right,' but 'might'; that is, the one who is more pitiless, more inhuman . . . no respecter of persons, and not above using any weapon—in our word, a duellist!"

"If a scrupulous man were fitted to shoot he would certainly either shoot in the air or else commit some folly that would get him into trouble, because his soul would revolt at the work of his own hands. I hold that many of the well-known unsuccessful political assassinations have been wrecked on this point, because the victims have been regrettably capable of taking every advantage, while the instruments have been men of honor, who have perished for the cause. You may be sure, my Lord Governor, that if all the people who attempt the lives of your kind were rascals they would surely find such loopholes and methods as would not enter into an honest man's head, and you would all long since have been despatched."

"From my point of view, the remuneration can merely be a propaganda of ideas—in the sense in which the Christian martyrs were revolutionists. For even if the laborers did win a battle, the cause would only pretend to be beaten to gain time for new trickery, and to get back at their foe. We must conquer with our heads, not with our fists; for as regards the head, the rascals are rather weak! For this reason they even hide books from the poor man, condemning him to darkness of ignorance because they fear for their existence. Do you know why they won't allow the workmen the eight-hour laboring day? Do you think the gentlemen did not know themselves that in eight hours of intelligent work the production would be no less than in eleven now? But the thing is this—that with the eight-hour law the men would have

time to learn as much as their masters, and would take the work out of their hands. These people only think they are wise, because they have made all the others stupid—against it really never men they would not be worth a son!"

"I have gone so deeply into the discussion of these questions in order that you should not misunderstand my first words against your assassination, and consider me a traitor to the common cause of all other honorable men. I must, furthermore, add that I and my mates who share my convictions were not in the Square on the 17th, because we knew very well what the end would be, and did not care to stand there like the fools who believed that justice was to be had from one of your kind."

"Now, naturally, the others agree with us and say, 'If we go there again we won't ask, we'll strike!' According to my mind, that's equally foolish . . . because, as I say, why go there at all? You yourself will come to us soon enough with friendly words and hopes—and then we'll show you!"

"Honored sir: forgive my boldness, that I should have come to you with my working-man's talk—in I have learned by myself all I know out of books—but it seems strange to me that an educated man who is not such a rascal as all the rest could act so to the miserable working-men who trusted him . . . that he could order them about! . . . Maybe you will have a guard of Cossacks, a detachment of the Secret Service, or take a trip somewhere—and so save your life; and then my words may be of some use, and point out to you the right way to serve the true interests of the nation."

"They say here in the works that you were bought by capital! . . . but I don't believe that, for our employers aren't so stupid as to throw away their money . . . and besides that, I know you can't be bribed . . . and are no thief, either, like the others in the service, who need the money for their champagne and champagne and truffles. I might even say that in the main you are a man of honor!"

The Governor laid the letter carefully upon the table—triumphantly took his most spectacles from off his nose, polished them ceremoniously with the corner of his handkerchief, and said, with stately deference:

"I thank you, young man!"

Slowly he walked down the room and turned to the gold tile stove, saying, impressively: "You may take my life, it belongs to you . . . But my honor—" He did not end the phrase, but laid his head high and stalked back to the writing-table—a trifle absurd in his ponderous dignity.

"I might even say that in the main you are a man of honor . . . in the main a man of honor . . . you wouldn't hurt a chicken without cause!—but how could you—an honorable man—be responsible for such an order? That is the question, honored sir! The people are not chickens! The people are sacred! And if you could understand the masses and their sufferings you would

THE PASSING OF "49 BROADWAY"

The famous Platt Headquarters at 49 Broadway

IN THE EXTREME LEFT WINDOW ON THE SECOND FLOOR MAY BE SEEN THE GLASS SCREEN WHICH CONCEALED THE BOSS FROM INQUISITIVE EYES

The Home of the Author of America's National Anthem

ON M. (formerly Bridge) Street, Georgetown, D. C., is a house known as the Francis Scott Key Mansion. It is here that the author of the "Star-spangled Banner" is believed to have lived at the time when that famous song, which has been officially declared to be the American national air, was written. There has recently been organized a Francis Scott Key Memorial Association for the purpose of "promoting, establishing, and maintaining" in Washington a suitable and lasting memorial to the author. The association has purchased the Key Mansion in Georgetown, together with the household property and belongings of the author. Among the incorporators of the association are Admiral Derry, Rear-Admiral Winfield Scott Schley, Justice Ashley M. Gould, and others.

The genesis of Key's famous song is interesting to recall. During the attack of the British on Baltimore in 1814, Key, then district attorney of the District of Columbia, went on an errand to the British fleet, of course under a flag of truce. Detained while the bombardment of Fort Mifflin was going on, he watched anxiously during the night the progress of the engagement from the British ship. In the morning, upon seeing the Stars and Stripes still waving triumphantly, he composed the words of his song under the inspiration of the moment. The verses were printed soon after, and at once achieved wide popularity. The words were sung all over the country to the tune of "Anacreon in Heaven." "The Star-spangled Banner" was printed in a volume, with other verses by Key, in 1837, fourteen years after the author's death.

OPPOSITE the alley called Exchange Place, on Broadway, the number "49" hung for years over the doorway of an ancient brownstone building, somber and small in the region of so many skyscrapers. More prominent in political, financial, and social life have ceased to remember it. Office holders and members of the Legislature hurried there when summoned. Promoters considered themselves fortunate if they got inside the doors; judges, even, did not miss an opportunity to call. For this was the business office of one of the most important dictators in American politics—Senator Thomas C. Platt. Morning and afternoon, when Senator Platt was in, a little low bench in the ante-room outside the office door up-stairs held a long line of sitters, waiting, like so many hall-boys, the next call from the desk inside. That was when the rule of the "Easy Boss" was supreme, and when the summons to appear at 49 Broadway was a mark of distinction. No matter whether received by a leading lawyer at the bar or the postmaster of an isolated cross-roads store, the recipient of the favor put on his best suit of clothes and caught the first train for the metropolis. 49 Broadway was Tom Platt's headquarters before the stage-coaches ceased running, and it remained the scene of political activity through the periods of transit from those antiquated vehicles down to the days of the Subway express. The "Easy Boss" has patronized them all—stage-coach, horse-car, cable-car, trolley-car, electric car, automobile, and Subway in going from his home to his office. Senator Roscoe Conkling, when he came to New York, rode downtown in a horse-car to meet his lieutenant there. Benjamin B. Odell, Jr., began coming before the era of cable-cars. Collectors of the Port, postmasters of the city, industrial and corporation heads, knew the entrance and the well-worn stairs. Indeed, the wise ones say that the present occupant of the White House chair has been known to wait his turn on the little low bench in the hall. Senator Platt's office was two rooms in from the hallway. The flat-topped desk stood in the farther corner of the room, in front of a window facing Broadway, where the "Old Man" sat almost hidden in the embrace of a deep, cushioned, wide-armed chair. A glass screen in the window at his left effectually concealed him and any one with whom he might be talking from prying gaze. The rear part of the room was partitioned off in glass, and this enclosed sanctum had a private approach from the hall. Many a luncheon party has taken place here, and many a person prominent in the business and social world has been the Senator's resource. Old political reporters will remember the construction of this odd suite of office-rooms and the ceremonies attending an introduction to them. The very atmosphere was mysterious, and upon entering one was ever prompted to peep behind this partition or that to see who was hiding there. Senator Platt took great delight in the mazes of this entrance. One of the biggest "fakes" ever perpetrated by a sensational yellow journal in New York city was framed around a story of an alleged secret elevator by which Senator Platt's conference room and departed from 49 Broadway. Towards the end of the Senator's leadership he was really provoked into outbursts of temper, during which his high-pitched voice could be heard in the hall below. Reporters, especially, "riled" him, and his secretary and physician persistently opposed the entrance of the newspaper men; all to no avail, however, for until a comparatively short time ago the Senator insisted upon his daily interview, and was as full of fight as ever. But all these incidents are only associations now; 49 Broadway is going the path of other old landmarks in the neighborhood. It disappears from public view with the decline of the Senator's political star.

The House in Georgetown where Francis Scott Key lived at the time the "Star-spangled Banner" was written, and which it is proposed to preserve

The Ruins of the Roman Catholic Cathedral and the Gordon Hall School (at the Rear). Both of these Buildings—familiar to all Jamaica Tourists—were almost totally Destroyed

What the Shock did to the Statue of Queen Victoria at the King Street Entrance of Promenade Garden. The Figure was twisted on its Pedestal about one-quarter around

"Open House" after the Shock. The Buildings shown in the Photograph, at the Corner of Barrow and Duke Streets, felt the extreme Force of the Earthquake, whose Centre of Disturbance was at about this Point

MELANCHOLY SIGHTS IN THE KINGSTON OF TO-DAY

THE SEASON'S PLAYS

MURKY SYMBOLISM

By "11"

MISS JULIA MARLOWE and Mr. E. H. Sothern, having exploited the "Johannes" of Sudermann and the "Jeanne d'Arc" of Mr. Perry Mackay, offered last week the third production of their current season at the Lyric—Hauptmann's "Die Veronikere Glocke," given in the dexterous English version of Mr. Charles Henry Meltzer. In order that entire justice may be done by this account, the official play-bill shall be quoted concerning the external events of Mr. Sudermann's much-discussed play for the benefit of those who may not recall them. "Briefly," we are told, "the story illustrates the efforts of a bell-founder, an artist who has lived and worked with contentment in the valleys, and who is moved to attempt a modern piece which shall ring forth gloriously on the heights of life. His effort fails; the great bell he has cast, during the labor of raising it high above, where its tones will be heard far and wide, breaks away from those who are moving it up the mountainside and falls to the bottom of the lake. Crushed though the artist is by the catastrophe, he finds new health and strength in the love of a beautiful spirit of the mountains, for whom he forgets wife, children, and the lowly duties of the vale. He dreams of a splendid temple he will build on the heights, for a worship that shall free and not enslave man kine. But lacking the firm basis of duty, his art fails him, and when he seeks consolation in the love of the beautiful spirit that awakes him to the higher ideal, remorse (typified by the sound of the sunken bell, rung by the dead wife) overtakes and paralyzes him. The phantom forms of his two children appear to him tolling painfully up the mountainside, and, conscience-stricken, he casts off and flees from the 'alta crena ture.'" At the end, the programme omits to say, Heinrich (the bell-founder) awakes again toward the lovely lady of the dell and the mountains, and dies desiring her, while the "beautiful spirit" herself becomes the bride of the lustily Acheron man, an ancient fragile creature of the depths, and descends to his habitation at the bottom of a well.

What, precisely, one wonders, does it all mean? Symbolism is a fine and potent thing, a thing that has served the masses well; but one submits that symbolism in the drama must be coherent, and, above all, incapable. It cannot be too often or too positively said that when it requires elucidation it becomes confusing and intolerable—indeed, it ceases to be, in any deep sense, symbolism at all. For symbolism is not a deep-hidden kernel the artist needs be savily and laboriously delved for; it is an informing spirit, a vital radiance, that should shine through the structure which it inhabits. Now what is Mr. Sudermann driving at in his "Sunken Bell"? Those who are, in a sense, his spokesmen, tell us that Heinrich, the bell-founder, "is a symbol of humanity,

struggling painfully toward the realization of its dream of the ideal truth and joy and light and justice." The *Nymph, Rustendelin*, it appears, "stands for nature, or rather for the freedom and sincerity of nature, missing a reunion with which humanity can never hope to reach the supreme truth and the supreme bliss of which the sun is the emblem." So far, so good; those are highly unoriginal concepts, but they are at least sound and intelligible; but how are we to reconcile *Rustendelin* as "the beautiful spirit that awakes the bell-founder to the higher ideal," with *Rustendelin* as the beautiful seer who capitalizes his honor and wrecks his life? Does Mr. Sudermann, or do his spokesmen, wish us to understand that devotion to an ideal of free and untrammelled "nature"—or rather the freedom and sincerity of nature—involves necessarily an abrogation of "a firm basis of duty"? And what, pray, does the pathetic figure of *Joanna*, the devoted wife, signify in this singular philosophy? She it is who awakes him to a sense of his lost honor, his "duty," through "remorse—typified by the sound of the sunken bell, rung by the dead wife": yet the official

animator, in "a few notes suggesting the interpretation of the characters," briefly and rather charitably dismisses her merely as one who, "typifying Formalism at its best, wars against him (Heinrich)." When, in rising perplexity and increasing darkness, we look further to find the true significance of the lovely, the seductive *Rustendelin*, she who has caused him to forget "the firm basis of duty," we find her handsily denoted as "typifying the Freedom of the Soul," appearing to him "as a vision, and lending him strength for the conflict." As one of Sudermann's ablest exponents has declared of this play, "the author seems askew." They do indeed. The simple truth would seem to be that Sudermann in this play has nothing very vital or engrossing to say to us, and that he has said that little in a manner the reverse of persuasive. This, surely, is the kind of "symbolism" that has brought a noble æsthetic method into contempt and ill-repute among "the general"; for symbolism in its best estate is not thus incoherent, unenlightened, murky, and diffuse. The play, viewed merely as a play, is futile—"a complex, obscure, inscrutable medley of trite domestic detail, fairy pranks, and transcendental 'summary,'" to quote the somewhat impetuous comment of a contemporary observer. Undeniably, it has moments of poetry, of imaginative beauty, and one or two passages of extraordinary dramatic intensity. But as a whole, the drama stands or falls with its symbolism, in this case a weak and tottering prop.

The play is exceedingly well done at the Lyric. Miss Marlowe's *Rustendelin* is alluring and delectable beyond praise; Mr. Sothern is an admirable Heinrich; and the subsidiary parts are very capably managed. The mounting of the play is uncommonly effective.

Mr. Sothern as "Heinrich," the Bell-founder, in "The Sunken Bell"

A DRAMA WHICH HAS BEEN SEEN BY FOUR MILLION PEOPLE

"BEN-HUR," THE DRAMATIZATION OF LEW WALLACE'S FAMOUS STORY, RETURNED TO NEW YORK NEXT WEEK FOR A RUN AT THE ACADEMY OF MUSIC. THIS PLAY HAS HAD A REMARKABLE HISTORY. SENT ITS PRODUCTION AT THE BROADWAY THEATRE, NEW YORK, ON NOVEMBER 29, 1909, IT HAS BEEN PERFORMED ALMOST 2700 TIMES, AND HAS BEEN SEEN IN AMERICA AND ENGLAND BY MORE THAN FOUR MILLION PEOPLE.

MUSIC AND THE OPERA

MUSIC FROM RUSSIA

By LAWRENCE GILMAN

IT has been a favorite contention of the "Neo-Russian" school of composers that Tchaikowsky could not be regarded as a true representative of his country's music because, poor man, his art was "too cosmopolitan," too little "national"; and the world outside of Russia has been asked to set how store by the author of the "Pathetic" Symphony, and take to his breast such authentic representatives of their nation's musical art as Rimsky-Korsakoff, Mussorgsky, and other "Neo-

Miss Clara Clemens, Contralto

SUCCESSFUL CONCERT TOUR OF
THE PRINCIPAL EASTERN CITIES

public with the works of the Russian composers." The project met with such success that a second season was ventured upon in the following winter, this time in the more spacious and formidable surroundings of Carnegie Hall. The Society is now in its fourth consecutive season, still at Carnegie Hall, and still playing Russian music with undiminished zeal. Among a long list of Russian compositions, hitherto unknown in America, the Society has performed these works: a fantasy, "Night on the Bald Mountain," by Mussorgsky; a fairy tale, "The Sorcerer," the third act of "Mlada," two suites: "Saw Maiden" and "Christmas Eve," and an overture: "May Night," by Rimsky-Korsakoff; tone-poem: "Steak-Raisin," and a suite: "The Middle Ages," by Glazunoff; two suites and a villa concerto by Arensky; symphony in C-minor, and extracts from "Gosteyn," by Taneyeff; "Caucasian Sketches," Tchaikowsky; fantasy, "The Cliff," and a piano concerto by Rachmaninoff; symphony in G-minor by Kalinikoff; suite: "Child-Life," by Koyus; "Hebrew Rhapsody," by Zolotareff.

This is a goodly showing, and these works have been listened to with attention. Indeed, nothing could have demonstrated more effectively the essentially cosmopolitan quality of New York's musical civilization than the manner in which the Society's propaganda has been received. One can imagine, by way of contrast, Berlin or Paris welcoming four seasons of orchestral concerts devoted to the performance of Russian music! Yet this town has accepted graciously, serenely, even hospitably, this somewhat anomalous situation: and the fact speaks exceedingly well for the present state of our culture. But one must well avoid asking the question, What, thus far, has been the artistic result achieved? In this amiable and devoted endeavor discerned to its very masterpiece

of Russian music? Is the general orchestral repertoire likely to be greatly enriched by the inclusion of any work exploited at these concerts? With the best will in the world, it is impossible to avoid a nagging answer. Of all the new works performed by the Society during its four seasons of activity, only three conveyed an impression of valid artistic worth: Rachmaninoff's fantasy, "The Cliff"; Glazunoff's tone-poem, "Steak-Raisin," and the scenes from Rimsky-Korsakoff's "Mlada." These are admirable works. The Rachmaninoff piece is richly and passionately imaginative; "Steak-Raisin" is an intense drama in tone, sombre and impressive; "Mlada" is a phantasmagoria of gorgeous color and haunting picturesqueness; yet in sheer quality of thought, in value of inspiration, not one of these three scores compares at any point with Tchaikowsky at his most characteristic. One has only to hold in one's mind, for comparison, such an idea as the exquisite passage for muted strings in the middle portion of the "Romeo and Juliet" fantasy of that master, or its poignant and ecstatic love theme, to realize what a gulf it is which separates a work of genius from a work even of supernatural talent. One may not reasonably, of course, require that Russia should continue to produce Tchaikowskys; but that she should be, as appears from the result of the Society's researches, so barren of distinguished talent is disheartening to those who have looked for attainable things from this source. But an even more astonishing hiatus is the gap between what one's imagination had conceived as an almost constant possession of Russian music—its famous, its oft-acclaimed, national music—and the quality that it seems, from observation, actually to possess; for much of the music which we have heard is nothing more or less than that which is the ap-

propriate possession of the sales-fluent, facile, fatally superficial, its exterior has been anything but rude and rough; it has cooed gratingly, and with an amazing prettiness.

The official literature of the Society has reminded us that Mr. Modest Altschuler, its conductor, "instead of seeking to exploit his capabilities as a conductor by the performance of familiar works in the standard orchestral repertoire, has shown a noble self-effacement, devoting himself to the study and production of new and entirely unfamiliar works. Too often in the consideration of the work of the Russian Symphony Society the fact has been overlooked that the conductor and his associates were breaking new ground, and not travelling on other orchestral organizations in familiar musical pastures, with tradition and experience to make clear their way." The fact shall not be overlooked here. It may be granted that Mr. Altschuler, who has as industriously delved in the dubious treasure-house of his country's music, may yet come upon an authentic masterpiece; then shall his endeavors not have been in vain!

Miss Elsa Roegger
THE BRITISH "VELVET" WHO AP-
PEARED AS HURRAY LAST WEEK
WITH THE PHILHARMONIC SOCIETY

His Excellency the Governor

(Continued from page 271.)

go out into that same Square, bow yourself humbly to the earth, and beg for forgiveness.

"Think! From generation to generation—from kindred to kindred since that time of the first slaves who, at the bidding of their tyrannical masters, built the pyramids, we have led this existence! As there are among you hereditary nobles, that is, oppressors, so among us there are hereditary laborers, hereditary slaves. And consider, further, that in all these ages we have been only beaten and oppressed, and as far back into the past as I can trace my ancestry, I see nothing but tears, despair, ill-treatment. And all this is stamped upon the soul—and all this has been kept as the sole heritage, from father to son, from mother to daughter. Attempt to look into the soul of a simple peasant or laborer. . . a shuddering horror! While we are yet unborn we have suffered a thousand wrongs. When we finally crawl forth into life we stumble into a sort of cavern, where we are nourished on wrongs, and clothe ourselves in our wrongs!

"They tell me that somewhere, five years ago, you ordered the knout for the peasants—do you realize what you did then? You thought you had only saved the world. No; you stripped their souls, enslaved for ages. You flogged the dead, and the yet unborn! And though you may be a General and an Excellency—yet I make bold to say you are not fit to lay your life in atonement on one of those sacred peasant backs—much less to lay the lash!

"And when the workmen came to you, who was it, do you think, who came? Those were the slaves who built the pyramids—they rose and came, with their thousands of years of chafings and groans, to ask for kindness—for help—for counsel! Come to you, as to an enlightened and humane man of the twentieth century. And I have said you treat them—Ah!—You! . . . Your teacher perhaps was an oppressor over those same slaves, and beat them with whips— . . . and then bade you, 'You this terrible lot—be for the suffering classes!'"

"Hallowed sir! The Masses are awakened! At present they are only turning in their sleep, and already the pillars in your house are tottering—but wait till they are quite awake! These words of mine are new to you—think them over! Furthermore, I ask your pardon that I have troubled you so long, and in the name of the 'fraternal bond' I hope they may not kill you."

"They will kill me, though," thought the Governor, as he folded up the letter. For an instant the picture of old Jeger, with his steel-gray hair, rose in his mind, only to vanish in the boundless darkness of the void.

No feeling of thought was left in him, nothing either of contrition or of awe. He stood by the nearest door on the table the lamp glowed under its green silk shade; in another room his daughter was playing the piano—some one seemed to be teasing her Excellency's pug, for he began to bark viciously—and still the lamp burned. . . .

The lamp burned! . . .

(To be Continued.)

Surprises of the Nevada Desert

(Continued from page 267.)

East. I keep my shop open day and night, for you never can tell when a patron will strike a run of luck on the wheel or at Faro and want to invest his winnings in diamonds. There is so much impulse about everything that the really shrewd tradesman must have his net out all the while."

He dropped his voice to a whisper, and ran on: "I know all three kinds, and my fingers are distressingly in bad taste. But it is business. The glance of some reckless Nevada spender will fall on a ring and he will immediately want it. It often happens, when the one has run rich, or stood away out a sudden breeze—chry gambler like me on the Stock Board just by way of amuse-

ment—that I sell them all right off my hands. I have done so time and time again at the club. Being a jewelry-store about it, of course, vulgar, but I have become horribly practical—a creature of circumstance and environment. Then in another year I can sell stakes and go East a rich man. I have made every cent honestly. The remainder of my life I can enjoy myself according to my merits and their tastes."

One day after I had begun to get the proper form of things I met a little man at the railroad station (the day's train had just pulled in), who made a unique figure in his light duster, and white helmet, and pattern—once popular with tourists. He was fidgeting about like a decapitated fowl. He flew two crimson distress signals in his shallow cheeks, and the lachrymose life over his little watery-blue eyes blinked as if hinged on a perpetually palpitating nerve. I put in his way and asked solicitously if I could be of any service to him. He almost fell down at the sound of my voice. At last I persuaded him to sit on a trunk. He grew calm, and said, with a furtive movement of the head:

"I am travelling in hymn-books for an Eastern Bible house. Hearing that churches were to be established in the new country, I ventured into the desert. I mentioned my occupation to a man on the train. He had been very pleasant, though he was rough-looking and wore dressfully. As we rode along this camp he asked me very suddenly, 'Are you armed?'"

"Now I did have a pistol. I was advised to carry one when I left Omaha, and bought a very pretty little wrap-up in which I had it. It was very expensive. I admitted I had it. 'Let me see it,' this fellow demanded. I showed it to him.

"'Clever little shooter,' he said, 'but don't you know there is a State fine of \$200 for carrying such wicked machinery? I'm the Sheriff of Columbia, but I won't be hard on you. I'll remit the fine and keep the gun.' He made a peculiar noise in his throat, put my revolver in his pocket, and walked away to another car. Now what ever ran I do to recover my property?"

I suggested that we might look up the Sheriff of Trenchard and ask his advice. I had never met the gentleman, but understood that such ramp boasted of our such official. As Columbia was only a meagre little lump of scattered shacks and one hotel and gambling house the sheriff of the bigger camp would undoubtedly have higher authority. I comforted the little hymn-book man with this argument, and led him to the principal and only hotel that boasted an office and clerk. This clerk was the information bureau and oracle of the community.

"I am sorry, boys," said the clerk, biting his lip, "but there don't happen to be any short just now. He and two of his deputies were killed quite recently while endeavoring to arrest Sam Storm Jones." He became wonderfully eloquent in a minute description of the battle, and I thought the little hymn-book man's tongue and eyes would drop out as he clung to the desk and listened to the blood-curdling narrative.

When he had heard it all he staggered out into the street and immediately hailed a hack, drove to the station, and begged permission to spend the night in the Pullman that went out with the morning train.

The Vernacular

ACTUM. "Does he own an automobile?"
TELLUM. "No, but he can talk it."

Army Kicks

Sain an old Colonel up at West Point:

"Our Army is all out of joint,
When they make a B. G.
They never take me
But instead some young Captain appoint."
Nodd another one down at Nonreem:
"Do you think our dear Congressmen know
That our small Army pay
Is no bigger to-day
Than it was thirty-five years ago?"

Suiting the Route

This story is told of a major who was in command of troops who were in pursuit of some outlaws. In the chase he arrived at a village to discover that he was too late to intercept them, and finally ordered the horses unsaddled and fed.

Now the major's brother was a son of Ireland, ignorant of everything pertaining to the equestrian art, and coming in from the village in a state bordering on intoxication, he put the major's saddle on the horse facing to the rear. When the horses were brought up for a fresh start, the major, instantly discovering the mistake, demanded the reason for it.

"An shure," said Pat, a little terrified, "as shure, major, an' I didn't know which way you was going!"

An explosion followed—the major was satisfied—and Pat escaped punishment.

THE COST OF CRIME IN THE UNITED STATES

(Continued from page 262.)

The county judges, jails, penitentiaries, justices of the peace, constables, watchmen, etc., total an expense of \$70,000,000; while railroad police, corporations, watchmen, and other detective agencies expend \$15,000,000. Property of various kinds which is stolen and not recovered amounts to \$20,000,000; and bank and trust losses by fraud, \$10,000,000. Other criminal expenses reach a total of \$1,000,000. The cost of State penal institutions per year is, approximately, \$10,000,000, and the yearly loss in wages to 100,000 State prisoners, not including New York State, at the rate of 26 per work, \$26,000,000. Criminal losses by fires, an important item, are \$150,000,000. The loss in wages to 150,000 prisoners in cities and county jails is \$35,000,000; and the 200,000 ex-prisoners whose yearly deprivations and loss of wages may be rated at \$300 each, add \$60,000,000 to the amount, making a total of \$207,000,000.

What Crime Costs the National Government

The cost of crime to the government reaches the enormous sum of \$140,000,000. Of this sum \$60,000,000 are expended in a certain percentage of the maintenance of the Supreme and Federal courts, United States district attorneys, United States marshals, and the Secret Service Bureau; part of it is the cost of crime to the Treasury Department to prevent smuggling, the cost of crime to the army and the navy and to the post-office and to allied departments. The government losses by smuggling and postal frauds, etc., add the \$60,000,000 to make the aforesaid total. In the last statement, which is only an estimate of what the national government pays for crime, it should be remembered that there are no reliable figures on the subject. In estimating the government losses at sixty million dollars a year for smuggling, fraud, etc., the writer has endeavored to keep strictly under the mark. It is estimated that the government loses from seventy-five to one hundred million

dollars a year by smuggling alone; while the post-office frauds are believed to have cost the government something like forty millions a year.

The detailed cost of crime in the United States presents some astounding figures. In 1908 the cost of crime in Greater New York was \$35,502,123 24. The State, county, and city authorities outside of Greater New York spent for it \$42,005,472 78. In forty-five States (New York excluded) the expenditure was \$697,000,000. Criminal losses by fires totalled \$106,000,000. Its customs frauds the national government lost \$30,000,000. During this one year, the loss in wages of 100,000 State prisoners was \$26,000,000, while the loss in wages of 150,000 prisoners in city and county jails was \$35,000,000. The grand total, therefore, of the cost of crime in the United States reaches the stupendous figure of \$1,076,327,668 99.

The cost of religious work in the United States is enormous. The cost of foreign missions, comprising all denominations, is \$7,000,000; home missions expend the same sum. We spend for education, \$200,000,000; for church expenses and ministers' salaries, \$120,000,000. Hospitals and dispensaries for the sick poor cost us \$100,000,000; for sanitariums of all kinds we spend \$60,000,000. City missions and rescue work of all kinds demand and receive \$3,000,000; humanitarian work of every kind, \$15,000,000. Our Young Men's and Young Women's Christian Associations cost \$5,000,000; while all other moral and social work in the United States requires an expenditure of \$5,000,000. The total expenditure for humanitarian and religious work is, then, \$549,000,000. As against this, the total cost of crime in the United States for the year reached the incredible total of \$1,076,327,668 99. That is to say, we spend more than five hundred million dollars a year more on crime than we do on all spiritual, ecclesiastical, physical, humanitarian, educational, and healing agencies put together!

"NEIGHBOR ROOSEVELT'S" SHACK IN THE WOODS

By D. ALLEN WILLEY

IN the heart of the Virginia pines is a small frame house tucked off on one corner of a clearing, round about which are the scattered cabins of a simple country people. The next-door neighbor is a little and clear-eyed mountaineer, whose affairs have prospered until he owns a house that cost at least two thousand dollars. He is one of the most prosperous residents of the section, and he is proud of his two-thousand-dollar "mansions." But he does not look it over his neighbors in the small frame house in the clearing beyond. It is true that this other dwelling looks as if it had cost no more than a quarter as much as his. It is as unpretentious as a hundred other cabins round about. But Sam takes off his hat when he meets his neighbor, for the man in the clearing is the President of the United States, and when he seeks this refuge on "Pine Dealing Plantation" he is just one of the neighbors, in word and deed.

If you were riding that way, and chanced to see this refuge chosen by Theodore Roosevelt as a retreat, you would think it the clearing and the home of a settler carving out his humble niche in the wilderness. And if the owner is there, you may see him laying his axe into the butt of a pine which must give way to make room for his clearing. Just woods, and the smell of fir, and the mountain winds, and a roof for shelter, and a joyous solitude—these are what the President sought and found in his clearing, which is dignified among the mountaineers by the name of "Roosevelt's Rest."

This is not the kind of territory that any one would seek out as a refuge from care and work, unless his love of nature were genuine, unless he wished the "real things," and those only. The nearest trolley-line is fifteen miles across the hills, and Scottsville, the only town within driving distance, is an hour away.

When the mistress of the White House visits this country place of hers, she finds little more than a shelter in the heart of the ancient wood. There are four rooms and a kitchen. The roof of the porch in front is held up by the trunks of young pines with the bark on. A big chimney leans against one end of the house, with a fireplace for chilly autumn evenings. It is possible to tuck away one servant up under the eaves, but Mrs. Roosevelt is willing, if necessary, to take a hand in the cooking. If the lander is empty, Wilmer's alone can be reached in half an hour on horseback, at the "Corners." "Wilmer's" carries a limited stock of potted ham, pork, codfish, crackers, and ginger-snaps, but does its heaviest trade in axle-grease and cartridges. If the President's household wishes a more varied assortment, it is necessary to ride to Scottsville.

There are no markets, no cold-storage plants, no telephones to the butcher, the baker, the fishman. But everywhere is the higness of the outdoor world, mile after mile of walking and riding without sign of human handwork except the infrequent cable of the mountaineer. In this Piedmont region of Virginia, the President of the United States is "Neighbor Roosevelt" wherever he may wander around "Pine Dealing Plantation."

Showing the Location of Mr. Roosevelt's Virginia House in the Woods

A Rare View of Mr. Roosevelt's House, showing its Simplicity of Construction

Up Against It

How many platform speakers, at the close of an evening, have not had some fond parent tell them of little Jane, age six, or little Ralph, age seven—a real prodigy, who could recite, sing, or play dithyrambs? You who travel from course to course have escaped these future hopes of overzealous parents and friends. Opie Reed has met with his share.

At the close of one of Mr. Reed's evenings a proud father and mother introduced themselves to the novelist and asked if he could not hear their little prodigy Amy.

Of course Mr. Reed would be very glad to hear the future star, but was so sorry that he had to catch the early morning train.

The father. "But the train doesn't go until 11:30."

Mr. Reed. "Yes, I know, but I am compelled to take the early morning freight."

The father. "That is a fast freight and doesn't stop here."

Mr. Reed. "Well, it will stop for me. You see, I have to catch it to get my next date. The superintendent is a friend of mine. I wrote him, and received a reply that the train would stop and allow me to get aboard."

The father. "I don't see how that can be. I'm the agent and nobody has wired me."

Mr. Reed. "To tell the truth, I'm a liar. I brought the little girl around to the hotel at 9:30."

A Pertinent Question

A TRACHER in a Long Island City school was giving her class a lesson in hygiene.

"Never sleep on more than one pillow," she said; "in fact, it's better to use no pillow at all, because if you do it's likely to make you round-shouldered."

Little Roscoe Pisciotto waved his arm wildly.

"No!" said the teacher.

"N'poven you sleep on your stomach?" piped Roscoe.

The Irishman and the Mule

GENERAL PHIL SHERIDAN was once asked at what little incident did he laugh the most.

"Well," he said, "I do not know, but I always laugh when I think of the Irishman and the army mule. I was riding down the line one day when I saw an Irishman mounted on a mule which was kicking its legs rather freely. The mule finally got his head caught in the stirrup, when, in the excitement, the Irishman remarked:

"Well, begorra, if you're goin' to git on I'll git off."

Defined

"Dad," inquired Freddy, "what is a figure of speech?"

"Where's your mother?" asked "Dad," caustically.

"She's down-stairs," answered the boy.

"Well, then," began "Dad," "a figure of speech, my son, is a woman."

Righteous Indignation

A GERMAN down South who recently lost his wife, quite shocked and electrified the community by taking unto himself another partner within two weeks after the departure of number one.

His neighbors and acquaintances gathered in a body before his gate to express their sentiments, which they did in various ways both vigorous and alien to the rules of law and order.

Finally the German, feeling that he could stand the incessant racket no longer, came out and, holding up his hands in righteous indignation, gave vent to his outraged feelings by exclaiming:

"Vot das all dis business even, mih fraim, ven my poor wife has only been dead two weeks already!"

SIGNIFICANT CHANGES IN OUR ARMY AND NAVY

By FRANK N. BAUSKETT

THE House Committee on Naval Affairs has recommended a second 29,000-ton battle-ship to be constructed for the United States navy simultaneously with the big ship authorized a year ago.

The other nations of the world are now constructing vessels of this size, and had Congress not authorized a second battle-ship the strength of the navy in comparison with the other naval powers would have decreased rather than gone forward.

Germany, an instance, has been the advocate of the moderate or smaller displacements, but she has recently appeared to have been convinced that the larger ships only are fit to meet the heavy ships of modern type. She is spending large sums of money in lengthening ships now under construction, and proposes to expend \$36,000,000 on increasing the dimensions of the Kiel Canal, in order to make it available for the new and larger battle-ships.

Japan has launched the *Yamato*, 35,000 tons, and the *Aki*, a few hundred tons larger, will be ready for launching this year. The latter is to have turbine machinery and will probably attain a speed of twenty knots. Japan will probably begin this year a third large battle-ship of improved type. She is also building two armed cruisers, which include in their armament four 12-inch guns.

Russia is to begin this year the construction of four battle-ships of 20,000 tons displacement, to be equivalent to the English *Broadbow*, and Brazil, according to information received at the Navy Department, is about to place an order for the building of three 18,000-ton battle-ships in Great Britain.

"If we expect to maintain an efficient navy we must keep abreast with the construction of other great naval powers," says Commander Sims, who is regarded as one of the most efficient officers in the naval service. "The whole business," he says, "of the big ship and the little ship is the question of the tactics of the thing. It seems to me it is pretty much like saying that a man who weighs two pounds can lick three or four times his own weight in half-grown boys. In the first place, he can hit more hard blows, he can stand more punishment, and then, also, he can run faster, and so can refuse or give battle at will. If you take a line of ships of the class of the *Lions* that is five miles long, and

you give me three ships that have each a broadside fire of ten 12-inch guns, I can begin at the top of your fleet and chew it up in detail, right straight down the line. I do not care how many there are of them; it is concentration of force in a small space that counts."

The act of Congress known as the Artillery bill, which recently became a law by the signature of the President, will have more effect upon the organization of the army than any law which has been enacted for a good many years, and within a few days the complete reorganization of the United States army will begin.

Under the new law the field-artillery is constituted a separate and distinct arm of the military service. In the opinion of the Secretary of War, the field-artillery should never have been part of the so-called artillery corps, or allied in any way with the heavy or coast artillery. After July 1, 1908, the chief of artillery will cease to exercise any supervision over the field-artillery, and thereafter will be designated as the chief of coast-artillery. By the act the coast-artillery is increased 5000 men with the necessary number of officers to command. A regimental organization is given to the field-artillery, which is also increased over 1000 men.

Before permanent assignments of officers are made to the coast and field artillery it is the intention of the War Department to give every officer in the artillery corps a chance to express his individual preference as to whether it will be more agreeable for him to serve in the field or the coast artillery. First, however, there will be a large number of promotions made among artillery officers, and, in fact, when these promotions are made there will be no second lieutenants left in the artillery, all of the present officers in that rank now being entitled to promotion to the grade of first lieutenant. After all of the second lieutenants have been promoted to the grade of first there will still exist forty-two vacancies in the latter grade. Therefore, any of the candidates from the ranks of the army or from civil life recently examined at Fort Leavenworth, for commissions in the army, who qualified in the special examination for the artillery corps, will immediately be entitled to promotion to the grade of first lieutenant, an incident unusual in the annals of the service.

THE TWENTY-SECOND ANNUAL EXHIBITION OF THE ARCHITECTURAL LEAGUE OF NEW YORK

IN THE FINE ARCH EXHIBIT ON WEST FIFTY-FIFTH STREET, NEW YORK, MAY NOW BE SEEN RECORDS OF THE LATEST WORK OF MOST OF THE PROMINENT ARCHITECTS OF AMERICA. THE TWENTY-SECOND ANNUAL EXHIBITION OF THE LEAGUE, AS THIS YEAR, HAS CONTAINED MANY INTERESTING EXAMPLES OF BRILLIANT ARCHITECTURAL ACCOMPLISHMENTS. INCIDENTALLY, IT HAS DISPLAYED, FOR THE FIRST TIME IN NEW YORK, HOWARD PYLE'S NEW HISTORICAL PAINTING, "THE LANDING OF CARTERET IN NEW JERSEY," WHICH WAS RECENTLY REPRODUCED IN THE "WEEKLY." IN THE PHOTOGRAPH ON THIS PAGE MR. PYLE'S PAINTING MAY BE SEEN ON THE WALL AT THE END OF THE ROOM.

Speaker Cannon and the Lunatic

THE Hon. Joseph H. Cannon, Speaker of the House of Representatives, was riding in a street car in Washington, D. C., when an elderly man, with a nervous manner and rather wild look, entered the car and took the seat next to Mr. Cannon.

After a short time the man, turning suddenly on Mr. Cannon, demanded, "Do you know what I am going to do?"

"No," replied Mr. Cannon.

"I am going to hang the bones of my ancestors collected, mounted with silver, and hang on the walls of my room," said the man.

"I would not do that," said Mr. Cannon.

"Why?" demanded the man.

"Well," replied Mr. Cannon, "you cannot expect to live more than twenty years at the most, and when you die all the bones of your ancestors will be thrown out in the ash-barrel, and you would not like that."

"No," said the man; "I never thought of that. I'll have to think that over."

After a few moments the man again addressed Mr. Cannon in the same manner.

"Do you know what I am going to do?"

"No," replied Mr. Cannon.

"I am going to dig a hole in the earth one hundred miles deep and throw miles in circumference," said the man.

"I would not do that," replied Mr. Cannon.

"Why?" demanded the man.

"Because you cannot tell what you would find so far down in the earth," replied Mr. Cannon; "besides you would be worried to death by the laborers."

"I never thought of that," said the man.

"I'll have to think that over."

After a slightly longer period of silence the man once more addressed Mr. Cannon.

"Do you know what I am going to do?"

"No," replied Mr. Cannon.

"I am going out West and sink one hundred thousand arizonas wells all over the plains," said the man.

"I would not do that," replied Mr. Cannon.

"Why?" demanded the man.

"Because," replied Mr. Cannon, "I know you do not wish to injure any one, and as the water supply of many cities and towns."

"I never thought of that," said the man.

"I'll have to think that over."

They both left the car as it was nearing the Capitol, and the man remarked, "You said I don't seem to agree."

The other passengers had greatly enjoyed the conversation, and one of them remarked to his neighbor, "Which of those two old gentlemen was the crazier?"

But his neighbor gave it up.

Bringing Her Up

LEWIS WILKE, tired of play.

Pushed aside in the wild one day:

Held mother, as she drew the water.

"The difficult to raise a daughter."

An Ungallant Actor

A WELL-KNOWN American actor, who is old enough to be considered himself a matinee idol by any means, was somewhat surprised

and pleased in a St. Louis hotel a short time ago, when a pretty girl stopped him in the corridor and presented him with a rose, without saying a word. He was more surprised

and less pleased to receive a note the following day reminding him of the incident, and two weeks at the theatre in which he was playing, as a memento of the occasion.

"My dear young lady," the actor replied, "I was so much surprised that I did not even

know the object of the attention, and have now asked for, but, on consultation with the manager of the theatre, I have been informed

that the rose was all fastened down, and as I was opposed to having them sent away

to be returned with an autograph for return."

MODEL 67, VICTORIA PHAETON

POPE
Waverley
ELECTRICS

This carriage, our latest creation, is unquestionably the most distinct and distinguished of electric automobiles. It is the acme of style and luxuriousness. Throughout marked ingenuity and artistic taste has been shown by the designer—nothing is skimmed—broad, liberal, graceful lines, providing an exceptionally comfortable, convenient and spacious vehicle.

The Price is \$1,600.00

MY PEOPLE OF THE PLAINS, By ETHELBERG TALBOT, D.D., LL.D.

A volume, largely anecdotal, telling of the various experiences of the author, from a young woman's first voluntary trip to the shores of the Yellowstone and Snake. The book is a history and a collection of the most interesting and striking scenes of the West who make up this diversified scene frequently led to most unusual incidents, worth the trip.

Talbot has related with a simple, plain, but a very interesting story.

THE LONDON UNEMPLOYED

By SYDNEY BROOKS

EACH winter the cry of the London unemployed is raised earlier and lasts longer. I have only to stop writing to hear it. Outside my house half a dozen men, their hands deep in their pockets, their eyes turned expectantly towards me, are at this moment shuffling along the street as slowly as our own shufflers doing anything, singing. I cannot quite make out the words, but I seem to catch a sort of refrain, "What a life become of England!" The tune, at any rate, is lugubriously familiar. I heard it last year and the year before. Twelve months hence I shall probably be hearing it again. It is interminably dismal. All the unemployed in London seem to have seized on it, as they well might, as the only tune that will adequately convey their situation and their emotions. Not a day passes without its reaching my ears at least once. (There goes the clink of a coin on the pavement.) It is, I might, I suppose, to stop one's ears. One ought to remain scientific and stoical. One ought to ask whether these men are the unemployed or the unemployable, whether they are genuine "cases" or mere loafers, whether one is not really committing a crime against society by giving them money. But it is difficult to practise so much self-restraint, and not many people do practise it. They give, but to whom they know not. Nor do they know what becomes of their money, how it is spent, or what justification the singers in the street have for asking for it. They give, in short, with less idea of solving even an infinitesimal fraction of the unemployed problem than of satisfying their own instincts of sympathy and pity.

But private and indiscriminate charity is not only no remedy for the problem of the unemployed; it positively aggravates the disease. It blindly hopes to cure. This is now universally recognized, and in their laborious and blundering way Englishmen are seeking some more rational and scientific treatment.

It is fair to suppose that there are at this moment thousands of deserving and genuine unemployed in London whose case is a proper one for relief and help; but no sooner is their plight made known, no sooner does the public make a move towards their assistance, than they are on their backs ten thousand more who would not work if they could and perhaps could not if they would. To sift the unemployed from the unemployable, the would-be worker from the incurable loafer, is clearly the first step to be taken; but it is a step which the worst elements in the community violently oppose.

Mr. Balfour dealt with this point last winter in his speech to a deputation of unemployed. "It appears," he said, "to be a matter of deep complaint that the character of those desiring work provided out of public funds should be the subject of investigation by the public body that provides the work. Surely that is a doctrine which cannot be sustained from the point of view of the unemployed, from the point of view of the employer, or from the point of view of the local authority and the community. I take it that a large number of those whom I am addressing hold what are called socialist opinions. I do not quarrel with the word at all, but I do not believe that a socialist system in which the community was the solitary employer could last for a week. If there were not some evidence made to see that the wages paid by the community as a whole body only went to the deserving. For my part, I am not a socialist, and I do not believe socialism to be a practical system. But were I a socialist, I should make it a cardinal point of my doctrine that the severest examination as to character and ability should be at the root of every state aid endeavor, far without that other socialism or collectivism is not merely an impossibility, but the ideal of dreams." A statement of the case, I may add, in which all England concurs.

The attitude of Parliament and the state towards the unemployed problem is at present in a somewhat transitional stage. But I do not imagine that it will be so for long. During the past few years a very considerable advance has been made towards settled methods and a definite state policy. I date the beginnings of this advance from October, 1904, when Mr. Long, the then president of the Local Government Board, made an attempt to unify and bring into cooperation all the agencies of charitable relief in London. In each of the twenty-eight boroughs into which London is divided a joint committee was formed from the local borough Council and the local Board of Guardians to work in consultation and harmony with the parochial and charitable associations of the neighborhood. Thus a unity of aim and method was secured in each district. This next step was to apply the same principles of unification to all the districts. This was done by the creation of a central committee, which undertook a general work of direction, supervision, and allocation of the funds that were raised by voluntary subscriptions. The scheme worked, on the whole, fairly well. It was a great improvement on anything that had gone before, and its report of the actual result accomplished is the record of much sound and useful work. Something over £250,000 was placed at the disposal of the central committee by the pro-

cessity of the public. With this £7,690 people were temporarily assisted for an average period of eight weeks; 315 were emigrated; and 17 were settled in the country. The work provided for the men consisted of improvements in the London parks and the city markets, the building of an asylum near to London, their employment on a Salvation Army colony of a type familiar to Austria, work at Garden City, and work at Holbrook Bay colony—a farm of 1300 acres lent to the central committee by a philanthropist for three years at a peppercorn rent. In addition to this a central employment exchange for London was created, with branches in the various boroughs. "To increase the fluidity of labor, and to provide a new instrument by which wage-earners may be enabled to find the billets that they need and the employers the men they want."

This was excellent. Better still were the principles on which it was based. First, the offer of temporary relief work was accompanied by conditions, restrictions, and a system of discipline that made it less eligible than ordinary employment. In this way the men were kept from using their idleness as a sword. Second, the work provided was, so far as possible, continuous and not casual work. "The plan of giving doses of intermittent work," says the report, "was as rigorously eschewed as that of giving doses of money." Thirdly, all the applicants for work were classified, not only with reference to their moral character, but also with reference to their industrial status and standard of living. The establishment of these three principles marks what is nothing less than a revolution in English methods of dealing with the unemployed. "Towards the right handling of the problem of unemployment," says the report, "a considerable advance has been made during the past twelve months, and it may safely be asserted that never before has the expenditure of thought and care and sympathy upon this great problem been so widely spread as in London. The endeavor to bring the dictates of an enlightened and sympathetic judgment to bear upon it have more generally made." That, on the whole, is a claim that can be substantiated. Indeed, Mr. Long's scheme was perceived to be as great an improvement on everything that had preceded it that the government brought forward a bill with the purpose of making what was provisional and voluntary in the scheme permanent and statutory. By this act the local committees in Mr. Long's scheme are now permanent bodies, and the central committee likewise is a permanent body. The central committee has power to levy a rate of one halfpenny in the pound—rising by special permission of the Local Government Board to one penny—over the whole administrative area of London. But the money thus raised from the rates may not be devoted to paying wages to the unemployed. The purposes for which it may be applied are virtually three in number. It may be spent (1) on receiving, investigating, and recording applications from unemployed men and women, and on establishing local and central labor exchanges; (2) on assisting emigration and migration; and (3) on the purchase of land for farm colonies. With regard to this last item, however, the Local Government Board has laid down in its regulations that no scheme for establishing a farm colony will be approved of until the board is furnished with evidence that all expenses may reasonably be expected to be defrayed out of voluntary contributions.

In accordance with this act, twenty-eight "district" committees (one in each of the London boroughs), consisting of 620 persons, and a central committee of 2,500 persons, were organized in London. But they cannot apply the money raised from the rates to direct relief. Had they been allowed to do that, the act would have embraced the entirely novel principle that it is the duty of the community to provide work for the temporarily unemployed and needy. What the act has done is to legalize the expenditure of public money from the rates in setting up machinery for dealing with the unemployed problem. Having gone so far, it will be necessary to go still farther and sanction the application of the rates to the work of direct relief. And that involves some very difficult issues. These issues were very well stated last winter in the Westminster Gazette: "To give the local authorities indiscriminate power over the rates is impossible, and to make them the work-providing bodies is, in our opinion, very seriously to compromise their usefulness for other administrative purposes. There are obvious reasons why the question of relief for the unemployed should, as far as possible, be removed from the sphere of municipal decision-making. Yet to do anything towards the government is to cut us off from the local aid and interest which are so necessary in dealing with this problem. These two points of view run, however, be reconciled by empowering the local authorities to sift the cases, if at the end of the sifting process there are certain forms of need, a nationally managed fund, to which the localities will contribute according to the cases they submit." These principles will very probably govern the ultimate solution.

"Tantalum"—the New Metal

Nine comes Australia to the front with the find of what may very properly be called a new metal—tantalum. While tantalum has been found at Wodgina for a number of years, yet it was not until quite recently that its practical utility for any specific purpose was known.

This new metal possesses many of the same qualities as does platinum; it is not acted upon by acids, its ductility, it is much like iron—it can be worked as readily as iron, but is much heavier. Hammering renders it exceedingly hard, and in alloy with steel it develops startling metallurgical properties.

Experiments at the Krupp shipyards, in Essen, show that as an armor-piercing point for projectiles of great velocity, tantalum is destined to revolutionize modern marine warfare, and will equalize the attack to the defense, for the resistance of armor-plate heavily alloyed with it is increased twenty-five per cent.

Scientists who have examined tantalum under the direction of a German syndicate which is trying to control the output insist that it will replace the diamond for use as a drill. It is the only metal so far discovered, except platinum, which is too costly to have a place commercially among the metals, which can be used in place of the tungsten filament in the electric vacuum bulb.

An Irish Twister

PAT: "Mike, 'tis drunk, yez hee."

MIKE: "A hee, a hee, yez're speaking. Yez would not dare to speak thus if it was I."

PAT: "If you was *what* y'd have the common sense to know you'd drunk."

Safe

A Missouri graduate in law, says a politician of that State, wrote to a prominent lawyer in Arkansas to inquire what chance there is in that section for such a one as he described himself to be. He said: "I am a Republican in politics, and an honest young lawyer."

The reply that came seemed encouraging in its intimation: "If you are a Republican, the game laws here will protect you, and if you are an honest lawyer, you will have no competitors."

Just as Before

A town but worthy old couple in the north of Scotland had a rare stroke of luck recently, one relative having died and left them a sum of thirty pounds.

On the night of the arrival of the will, they sat up late discussing the future, and planning what they could do with such a princely bequest.

At length, giving the fire an extra poking, the old man said, with an air of indecision:

"Well, I suppose, Kinsey, this big fortune will make a difference. We'll just give him an' in, as usual, an' speak for the neighbor as before."

A Ghost That Could Not Walk

When going through the Western States, a traveler stepped one night at a lonely place.

At first he was a little nervous, but he was not at all superstitious in the least. He was just a man, making in the momentary darkness of the night, a few steps with him.

Then he passed a spot, and he said, "If that hand is out, I will be a ghost."

"Then I will be a ghost," he said, "if that hand is out there. True in his own hand, then, he was speaking from the bed, for he had not yet risen from his own foot."

YOU'RE SURE ITS PURE—THE GOVERNMENT GUARANTEES IT.

HAYNER WHISKY

BOTTLED IN BOND

The Stamp of the U. S. Gov't.

In our own Registered Distillery No. 2, Tenth District, Ohio, under the direct supervision of the U. S. Internal Revenue Department—and shipped

The Americanism of Washington

By Henry Van Dyke

This little volume not only makes clear what our national spirit really is, but it carries a patriotic and inspiring message to all whole-hearted and high-minded men and women. Dr. Van Dyke sets forth the ideals of Americanism as expressed by Washington, and answers those critics who have been disposed to deny Washington the title of "American."

COMMENT

California and Japan

It is said in Washington that the Japanese government is satisfied with the settlement of the controversy over the action of the San Francisco School Board. It is said, conversely, in despatches from London and Tokio, that the Japanese are dissatisfied. We shall know the truth in time; meanwhile we will prefer to accept as accurate the information which is said to be possessed by the State Department that Japan concurs. At the best, so far as the international and constitutional questions are involved, the so-called settlement is not a settlement. Apparently the California labor-unions have gained a point. It has been charged that Japanese coolies not possessing passports have gone to the Hawaiian Islands and have come thence to our continental Pacific coast. Incidentally this affords another illustration of the great value of our outlying dependencies. The settlement arrived at in Washington through the consultations between the President and Secretary Root with Mayor Schuyler includes an amendment to the immigration bill providing against this abuse of the Hawaiian Islands by giving to our customs officers the right to turn back all who come to our coast, whether from Japan or from our own islands, who have not passports. This provision is professedly in the interest of labor. In return, Mayor Schuyler's School Board say that they will admit young Japanese children to the primary schools and older ones to the higher schools on the same terms as those on which white children are admitted. "This seems like settling, or compromising, the suit involving the larger question out of court. As soon as it was evident that a settlement would probably be reached, Attorney-General Bonaparte directed a postponement of the court proceedings at San Francisco to decide whether or not the United States government can enforce a treaty against the action of State officers, as, more than once, it has enforced its treaties notwithstanding antagonistic State legislation.

Lessons of the Controversy

A contemplation of this controversy in all its aspects is very suggestive. It has impressed upon all observers that in making treaties we should guard against the possibility of a conflict between local interests and the nation's treaty obligations. Again, this is suggestive of the reason why the Senate should retain the power of ratifying treaties, and why it should guard and exercise it very jealously. A treaty is the supreme law of the land, and can be abolished or modified only by a later treaty or by a statute passed subsequently by both Houses of Congress. As the Supreme Court has held more than once that a treaty sets aside any conflicting provision of a State Constitution or a State statute, it is evident that the interests of each State should be carefully looked after. The Senators from the State, being members

of the ratifying power, are the natural persons to perform this duty. It will be seen from this that critics of the ratifying power are not wholly wise. The treaties of the United States, more than those of other nations, are laws affecting both individuals and States, and to Senators is properly given the power to guard the laws of their own States from repeal through the exercise of its treaty-making power by the Federal government. Would say Californians have favored the treaty of 1894 if he had fancied that it gave to Japanese children school rights which might be denied by the State law?

San Domingo Matters

The President has at last abandoned the old San Domingo treaty which, although unratified, has been practically in operation. There is still some question in certain minds as to the policy of our interference in the affairs of the rest- less republic, but it cannot be successfully denied that the controversy has resulted in some good to us, as well as to San Domingo. The affairs of the republic are on a better footing, and our own relation to them seems likely, at this writing, to have been made legal. The debt due from San Domingo has been scaled down and funded; bonds are to be issued; and while Americans are to collect the revenues they are simply to continue to do, under the law of a treaty, what they have been doing notwithstanding the refusal of the Senate to agree to a treaty.

Nicaragua and Honduras

The influence which the United States government is exerting upon South and Central American affairs has been illustrated by its commanding position in the effort to prevent war between Nicaragua and Honduras. Followed by a group of Latin-American governments, this country made an admirable effort for peace. It is a sign and a token of the great moral value of Mr. Root's visit to South America that the comradeship between these interfering powers should have been of so cheerful and friendly a character. Not so many months ago, we used to be informed, and that with much genuine feeling based on more or less evidence, that anything that the United States wanted in the southern countries was regarded with suspicion. We were unable then even to offer our good offices without inspiring repudiation—at least that was said of us. A frank, conciliatory, resourceful Secretary of State, who has gone about, is a very valuable asset to us, from which we have gained profit even if Honduras and Nicaragua come to blows in the end, notwithstanding the efforts of the United States and its friends to bring about the rule of righteousness.

The States and the Federal Power

Judging from the speeches that have recently been made by prominent Republicans on LINCOLN'S birthday and on other occasions, there are a good many of them who do not believe in the soundness of one of Mr. ROOSEVELT'S prominent thoughts. Congressman McCALL made some very interesting remarks about the tendency displayed at Washington to "regulate each and all of us." The burden of his speech, which was delivered at the dinner of the Republican Club in this city, was an answer to Mr. Root's warning to the States that they must attend to their duties, or the Federal government, by means of constructions of the Constitution, would itself attend to them. Mr. McCALL made a happy suggestion which the Federal constructionists may well take into account. He said that he fancied that "it would be just as sound for the States, provided they were strong enough to do so, to exercise the national functions in cases where they were not performed to the satisfaction of the sentiment who at the time were running the State government." The intrusion of the States into Federal affairs and their denial to the nation of its obvious rights were, in the earlier years of the republic, causes of much complaint, while the crooked action underlying them led eventually to war; but that notion, as Mr. McCALL intimated, was no more crooked than that which underlies the various theories contemplating an invasion of the rights of the States by the Federal government. In determining as to what "field of control" has been abandoned by the States, and ought therefore to be entered by the Federal government, it will always be the man—President or Secretary—who wants the control who will make the decision, precisely as in the

when time the issue of interference was to be decided by the State that complained that it was interfered with. The old attack upon the sovereign powers of the States were alike in this, that in each instance the final decision was to be made by the party most to be profited by the denial of sovereignty. Mr. JOURNAL H. CUNYAN again indulged, on LEXYON'S birthday, in an able defense of the government as it is—the dual sovereignty of nation and State. To add to the Republican anthology, the following from Senator KNUX's speech in the SLOCUM case makes excellent reading:

The perfection of human liberty under law will only be attained under the American Constitution when each of the dual sovereignties within its sphere exerts its powers to the utmost limits for the public weal; when the States and the artificial bodies they have created cease to drag and resist the rightful and full exercise of the national power over national affairs; when there are no attempts to encroach upon the undoubted reserved powers of the States for the aggrandizement of national power; when the people discriminate between the wise policies designed to meet the imperative needs of modern conditions and demagogic assaults upon the foundations of the republic for political and personal purposes; when the people shall not be vexed by unnecessary legislation about their daily affairs and normal conditions are undisturbed by needless regulations—regulations founded by ignorance and intolerance and misrepresenting those just and constitutional policies of the time which had a due beginning, have a reason for their existence and shall have a due ending when their work is accomplished.

Government Ownership of Special Lands

The President has raised a question in a special message which ought to be seriously considered, and which, of course, cannot be intelligently discussed in a short session of Congress. Ought the government to retain the ownership of its ore-lands, mineral-lands, and pasture-lands? This is a momentous question, and there is involved in it, in a minor degree perhaps, the larger question of government ownership. The President does not recommend government operation of these lands, but the leasing of them to private persons or corporations. The government, he thinks, by thus keeping control of the mines and the lands would prevent the illegal fencing of the public domain, and would see to it that coal were furnished in more abundant quantities, perhaps at lower prices. These are all most questions and cannot be decided off-hand. It has been the policy of the government to hold the public lands in trust for the people, and, incidentally, for the promotion of settlement. If this old policy, which has worked well with some attendant evils, is to be abandoned, the change should be made after due deliberation. It will not answer to make it because the President is satisfied that the new policy is better. It is the duty of Congress to be convinced after investigation and debate. For one thing, Secretary HITCHCOCK has shown that for many years the dealings of the government with public lands has been gravely corrupt, while this generation and the last have been made sadly familiar with the history of land grants for the promotion of railroads. These old stories help to accentuate the theory that the less government has to do with a mining business, as the mining of coal would be, the better for business and the better for government. So far as leases are concerned, the experience of neither of the parties to the lease of the seal-fisheries has been happy. The proposition is one to think over.

The House of Lords Question

The King's speech at the opening of Parliament gives not only to Englishmen, but to all who are interested in historic government, occasion to expect an important, perhaps a stormy session. Government promises to undertake two correlated subjects—the relations between the two Houses of Parliament and home rule for Ireland. It was many years ago when Mr. GLADSTONE angrily threatened the very existence of the House of Lords because it had thrown out his home-rule bill, but the storm passed quickly then, mainly because England was not with Mr. GLADSTONE in his Irish policy. Now once more the Liberal majority in the House of Commons finds the project which it has made its leading feature blocked by the House of Lords, which now, more than in Mr. GLADSTONE's time, is acting as a Tory party committee, opposing not only the Liberal majority of the United Kingdom, but the Liberal majority of England. The govern-

ment is evidently determined to test the opinion of the public, and is to ascertain whether Liberal England is any longer willing to tolerate a House of Lords which cannot be liberalized, even by the creation of new peers, and which will, therefore, always stand in the way of a progressive party. It is impossible to foretell, and it would be idle to attempt to conjecture, as to how this problem will be solved, although it may be taken for granted, as the WEEKLY has said, that there will always be a blemished Parliament. The power, however, of the Second Chamber to defeat the will of the people will eventually be taken away. Certainly a home-rule bill is the measure that will most effectively bring the contest between the Houses to a settlement.

Mr. Mallock's Lectures

The lectures of Mr. MALLOCK, in this city, on socialism, have been of great interest and importance. If they succeed, as they seem likely to do, in securing one socialist's idea of what socialism means, that alone will be an important contribution to knowledge, and besides, it will furnish the basis for forming a practical issue. At any rate the socialists have been awakened and are replying at a great rate. From what Mr. WILSHIRE says, in reply to Mr. MALLOCK's second lecture, it would seem that, to him, socialism means that while the man of genius or talent or enterprise ought to be rewarded abundantly for his achievements, the wealth which he thus accumulates, if it continues, in the hands of his heirs and successors, to be employed as capital, should not be rewarded; i. e., should not receive dividends. Concretely, unless we greatly misunderstand him, he would prevent rewards to mere capital by state ownership. If this be really the socialist policy, socialism is in a fair way to admit of intelligent discussion.

The Princeton Experiment

President WOODROW WILSON denies the report of the immediate acquisition of a very large endowment for Princeton University, but the report has recalled attention to the most important educational undertaking that has been made in this country for many years. Two or three years ago Dr. WILSON began his experiment at Princeton—an experiment which President ELIOT characterized as interesting but expensive. In brief, this experiment had for its object the improvement of scholarship in Princeton by the promotion of an intellectual comradeship between those who studied and those who taught. The plan involved the employment of a very large number of new instructors and a radical change in the methods of the old teaching force. Lectures were not to be discontinued, but they were to be minimized. The members of the faculty were to become preceptors. The students were to be divided into small groups for other purposes than lectures, and to each group was to be assigned a preceptor. This was the adoption of a modified Oxford method. The preceptor and his group were to dwell together at certain hours in order to talk over the studies and the reading of the students. The meetings are held in class-room and seminar-rooms, but chiefly in the rooms or at the house of the preceptor, who tries to make himself one of the group, his object being mainly to interest these young minds in the subject which he is teaching them. This teaching is intensive cultivation.

It Has Helped the University

As an experiment in teaching, Mr. WILSON's effort has been a distinct success, and educators throughout the country recognize the immense value that his administration has already been to Princeton. The university stands much higher among its kindred institutions than it has ever stood before, and as one of the more prominent of university men has well said, it is because WOODROW WILSON has shown himself to be on "educational statesman." The demonstration that the plan would work came quickly. The problem of all higher education in this country is to interest the students in intellectual things, and those who are familiar with Princeton of to-day and are able to compare its young men with their predecessors realize that the close companionship established between preceptors and students has done more for the arousing of this interest than any other plan that has been attempted in this country. For some time the only question has been one of money. The great expenses of the scheme

have been met by annual subscriptions, which Mr. Watson has hoped would be capitalized.

Mercy to Cancer Patients

The case is considered the most remarkable that the District Attorney's office has had to deal with, and its most remarkable feature is what the investigating authorities consider the absolute lack of motive.—*Daily paper, February 16.*

The case so charged with being remarkable is that of a New York woman charged with administering poison to her mother, who is said to have been in the last horrible stages of a lingering death by cancer. The accusation is denied and is probably baseless, though at present writing the daughter is being held on a charge of murder. A while ago there was some agitation for legislation in some of the States, making it lawful for physicians to put out of misery patients who were in the extremity of suffering from an illness which was bound to be fatal in a short time. Legislation on the subject seemed ill advised, but the proposal was widely discussed. Among other recent cases cited was that of an Italian gentleman whose wife was slowly dying of cancer and begged him to put an end to her sufferings. The doctor would not do anything, and the husband in desperation finally killed the poor wife with an axe, and was imprisoned for murder. Cancer cases are peculiar. After they have reached a certain stage the end is absolutely sure, and usually attended by the most distressful sufferings. Now it is bad enough to die by cancer without being tortured. Great latitude of treatment should be contemplated in these cases. A law permitting doctors to end their patients' lives under stated circumstances would probably do harm, but that cancer patient is fortunate whose doctor, when the point is reached where human nature can endure no more, finds it in the line of his duty to give the patient morphine enough to stop the disease.

A Schoolmaster Honored

On February 8, ALBERT GARDNER BOYDNEY, of Walpole, Massachusetts, was eighty years old, and his neighbors organized and carried out a formal celebration of his birthday. There was a meeting in the town-hall of Walpole, with band music and singing, and several addresses, setting forth the great value of Mr. Boydney's life's work in Walpole. A letter was read from President ROOSEVELT, commending the celebration of the birthday of so valuable a citizen as Mr. Boydney, and after the exercises a reception was given at the house of one of the neighbors for the octogenarian citizen whom everybody in Walpole delighted to honor. The significant point about these interesting proceedings was the kind of life and the sort of work that they aimed to encourage. Mr. Boydney has spent the whole of his active life as a teacher. At fourteen he chose that calling, and proceeded to prepare himself for it to the best of his ability. For more than sixty years he has been teaching school, and for forty-six years, as principal of the Bridgewater Normal School at Walpole, he has been teaching others to be teachers. That is a great life's work, done, as his neighbors and former pupils attest, with great ability, fidelity, and success. Such a celebration as this, which honors Walpole as well as its venerable teacher, recalls the earlier days, when schoolmasters and ministers loomed relatively bigger in our communities than they do in those times of increased wealth, when to most of us the money-getting vocations look most attractive and get, as compared with more modest pursuits, a larger share of public deference than is always their due.

Taking Nitrogen from the Air

In one of Mr. H. G. WELLS's wonder-stories about what may happen on this earth if we don't watch out, he told how, in the multiplication of improvements and inventions, the population of the world came to be fed for the most part by a universal food company, that used as the chief basis of its products nitrogen, which it abstracted from the air. In the course of time this immense absorption of atmospheric nitrogen began to tell on the atmosphere, which presently came to have so excessive a proportion of oxygen in it that it made the whole population of the world continuously tipsy. The next thing was that the world took fire and burned in the superoxygenated air until the atmosphere got back to its original proportions. But by that time there were only a handful of people left alive on a scorched and blackened planet.

Mr. WELLS's Munchausen story is recalled by the current assertion that Sir WILLIAM CROOKES has found a means by which nitrogen may be gathered from the atmosphere and made available for use as a fertilizer. Already the calculators are printing figures that forecast the effect of this rumored discovery on human life. Cheap nitrogen that would restore worn-out soils might double crops in the United States and enable western Europe to raise its own food. Professor CROOKES's discovery, by cheapening the cyanide process of treating ores, may add a hundred millions to the world's annual supply of gold. So the forecasters compute, but are any of them calculating what would be the effect of draining the atmosphere of its nitrogen at such a rate, and how long it would be before we would get into a scrape beside which the predicted exhaustion of the coal deposits would be a trifle? We call the attention of our vigilant President to this new danger. If the atmosphere of the United States is to need protection, the Federal government, we submit, must tackle the job. The States could hardly deal with it.

Lincoln's Birthday

New biographers of LINCOLN turn up as regularly as taxes. There are two or three new ones every year, and few of them can help making a readable book, so inconspicuously interesting in their subject. Those who are now intending to deal with him, but have not yet reached the point of publication, could do a great service if they could discover any reasonable ground for believing that their immortal subject was born on some other day than February 12. That day is now a holiday in the States of Colorado, Connecticut, Delaware, Illinois, Massachusetts, Minnesota, New Jersey, New York, North Dakota, Pennsylvania, Washington, and Wyoming. It is a very untimely holiday hereabouts, and comes much too near WASHINGTON's birthday, which gives us all the holiday we need in February. If we could have a day late in April to celebrate in honor of LINCOLN, instead of February 12, it would be very gratifying to the public advantage. A LINCOLN holiday there will be, but must it be his birthday? And if so, must his birthday continue to fall on February 12? The birthday of the present King of England falls on November 9, but that is Lord Mayor's day in London for which reason, and as we do not mix festivities, King EDWARD used to choose another and more convenient day to be kept as his.

Mimicking Boston

Writing in the *Fortnightly Review* about LONGFELLOW, Mr. FRANK GIBBLE lets fall some sentences that suggest that Mr. H. G. WELLS's recent record of his visit to Boston has left an impression on the British mind which ought in common justice to be modified. Mr. GIBBLE quotes Mr. WELLS as saying that the city has now departed from Boston, and observes that it had to go, because "literature, if it is to live, must follow life at no long distance, and Boston was in a locker, outside the general stream of tendency. Nothing except the pursuit of culture happened there, and literature cannot live upon culture alone." Mr. GIBBLE ought to look in on Boston. Really it is not so moribund a town as he imagines. "The Bostonians, suppose," he says, "that American literature was only to be the supplement of English literature, and that they were the custodians of the torch. But they reckoned without BRIT HATTE, and WALT WHITMAN, and MARK TWAIN, and G. W. CARLE, and UPRON SINGLARS—to name but a few disturbers of their peace. The prophets of life triumphed over the prophets of culture, and at Boston there was plenty of culture, but no life worth speaking of. So Boston gradually ceased to count." There is a flavor of verity in this, but even of literary activity. JUDY HATTE and UPRON SINGLARS and their fellows, as enumerated, have left Boston a more considerable share than Mr. GIBBLE suspects. And Boston is far livelier than he imagines. Its troubles, as far as it has them, are not absolute but relative. It is not that Boston has declined and fallen off, but that the rest of an enormous country has developed, and found voice, and got leave to print. Boston still counts, and counts a lot, even in literature. It counts crossly throughout the country as an educational influence, for it still manages somehow to keep its place as the foremost educational centre of the country. No community that does that has ceased to count.

Is the Japanese School Problem Solved?

It begins to look as if President ROOSEVELT had gone to the limit of propriety and of national self-respect in his effort to ally the susceptibilities of the Tokio government, aroused by the relegation of Japanese pupils in San Francisco to a particular school. Before marking the remedial measures taken at the instance of our Federal Executive, let us recall distinctly what the alleged grievance was. In pursuance of an act of the Californian Legislature the School Board of San Francisco passed an ordinance excluding Japanese pupils from all of the city's public primary schools with the exception of one institution known as the Oriental School, to which Chinese and Koreans were also relegated. Against this segregation the Tokio government protested on the ground that it was a violation of the treaty of 1894, by which the United States agreed to give the subjects of the Mikado the same treatment as that accorded to those of the "most favored nation." As a matter of fact, the children of British, German, French, Italian, and other resident aliens are not relegated to particular school buildings in San Francisco, but the face of things, then, the Tokio government may seem to have some basis for its complaint. Here, however, arise two questions: first, Does the treaty-making power lodged by our Federal organs lie in the President and Senate authorize an interference with the right of regulating public schools, which hitherto has been supposed to be reserved to the constituent States by the Tenth Amendment of the Constitution? As this question is at present *asked*, being raised in an action now pending in a United States Court, we refrain from any comment on it. The second question is, Does the treaty of 1894 itself authorize the Tokio government to assert that, by the act of the San Francisco School Board, its treaty rights have been violated? Touching this point, we may do well to note the view propounded by ex-Secretary of State OLNEY in a letter addressed to Representative McCALL. The treaty of 1894 was negotiated on the part of the United States by Secretary GRESHAM, but we should bear in mind that Mr. OLNEY was at the time Attorney-General, and undoubtedly was called upon for advice by the negotiator of the treaty, when he was desired shortly thereafter as head of the State Department. Mr. OLNEY points out that most of those persons who have discussed the treaty seem to have confined themselves exclusively to Article I, which undoubtedly conferred to Japan the privileges of the "most favored nation." He directs attention, however, to the fact that Article II, expressly qualifies the preceding article by declaring that nothing therein contained shall be deemed to affect any laws which either signatory may hitherto have enacted, or shall hereafter enact, concerning certain subjects, among which, first, "immigration" and then "police and public security" are specified. Mr. OLNEY maintains that the regulation of public schools clearly falls under the police power, whether that power be held to be heretofore exercised by the Federal government or by a constituent State, or partly by the former and partly by the latter. The *scope* of the police power, however exercised, is explicitly excluded by Article II, from the operation of the treaty. If, then, Mr. OLNEY's assertion is well founded—as yet no contradiction has come from any authoritative source—the Tokio government is outwitted by the very treaty of which it is a signatory, from objecting to that exercise of police power which is exemplified in an ordinance of the San Francisco School Board, itself an outcome of State legislation.

There are times, nevertheless, when our Executive, in dealing with a friendly nation, may deem it expedient not to stand upon the letter of its treaty rights, but, out of comity, to make concessions not exacted by a rigorous construction of international law. This is what President ROOSEVELT has undertaken to do by persuading the San Francisco School Board to rescind the obnoxious ordinance and to permit hereafter Japanese pupils not over fourteen years of age to attend all public primary schools, while at the same time throwing open all schools of a higher grade to Japanese pupils more than fourteen years of age. The *scope* of the San Francisco School Board, however, to such an act of comity has been by no means gratuitous, but has had to be purchased by an agreement to add to the Immigration Bill now pending in a committee of conference an amendment authorizing the President at his discretion to exclude from the United States any and all prospective immigrants from foreign parts not provided with passports, whether these come directly from their native countries or from outlying American possessions like Hawaii, the Philippines, or Porto Rico. It will be observed that the Japanese are not named in this amendment; no discrimination against them is overtly authorized. The power of excluding immigrants not provided with passports may, so far as the amendment goes, be exercised by the President against natives of the British Isles, as well as against natives of the Japanese archipelago. On the face of the proposed law, therefore, the Japanese government has nothing to complain of; yet we are informed by a telegram to the London Times, dated Tokio, February 15, that Japan has not agreed to any solution of the San Francisco problem depending on the restriction of the admission of Japanese immigrants to the United States. It is evident that the author of that telegram cannot have

read the treaty of 1894, otherwise he would know that a relaxation of Japan's agreement would be superfluous in the premises. Yet, as Mr. OLNEY has shown, the second article of that treaty expressly excepts from the operation thereof any past or future legislation of either signatory with reference to "immigration." As a matter of fact, under that treaty we are at liberty to enact any law we please regarding the restriction of immigrants, and the Tokio government has expressly renounced by treaty the right of protesting against such legislation.

The Senators who have proposed to insert in the immigration bill the amendment authorizing the President, at his option, to exclude intending immigrants unprovided with passports have been solicited by means of comity alone, bearing in mind the professed unwillingness of the Tokio government to authorize by means of passports its subjects to emigrate to the United States, though it has habitually given passports to those ostensibly intending to settle in Hawaii or the Philippines. If that professed unwillingness be a fact the Tokio government cannot wish to object to an act of Congress empowering the President to exclude from the American mainland foreigners whose passports only authorize them to settle in our outlying insular possessions.

We are informed, however, that, not content with prevailing on the Senate and California and the San Francisco School Board to pronounce in favor of Japan their asserted right of regulating their public schools, President ROOSEVELT intends to go still farther in the way of propitiating Japan by refraining from standing exclusively on the right to restrict immigration conceded by the second article of the treaty of 1894. On the contrary, he is said to have announced that as soon as the irritation caused in Tokio by the segregation of Japanese pupils in San Francisco public schools shall have died away he will essay to negotiate with Japan a new treaty, whereby each of the signatories shall agree to exclude from its territories immigrant laborers who are citizens or subjects of the other party to the compact. Why, a self-respecting American is naturally impelled to ask, should any international treaty on the subject be needed? Already, under the second article of the treaty of 1894, the United States and Japan, being left in absolute control of legislation respecting immigration, are each at liberty to pass such laws for the exclusion of immigrant laborers as they may see fit. What can Japan want, or have the face to ask for, beyond the execution of that treaty in the letter and in the spirit? We are aware that strict justice is one thing, while comity is another, but we submit that there are limits beyond which comity may not be stretched without incurring the risk of bearing in the eyes of onlookers a less admirable name. Of course, we desire the Tokio government, and every other government, to know that we mean to treat them not only justly, but generously. They should all be made to understand no less distinctly, however, that we fear none of them, and that there is a boundary fixed by national dignity beyond which concessions will not go. The time, in a word, seems to have come for Americans to ask themselves, What will the Japanese think of us when they contrast our glancing treatment of them with our high-handed treatment of the Chinese? The Chinese had a treaty which not only did not exclude from the operation thereof legislation concerning immigration, but expressly granted all classes of the people of each signatory permission to migrate to and settle in the territory of the other. Nevertheless, in defiance of that treaty, we have excluded Chinese laborers by act of Congress. Was the course that we pursued toward China dictated by the knowledge that we were dealing with a feeble power? And is the very different course that Mr. ROOSEVELT is now pursuing the outcome of a conviction that in dealing with a strong and sensitive nation discretion is the better part of valor?

Longfellow

A HUNDRED is, above all other times, a season for looking criticism and offering congratulations. A century is in itself a sign that humanity may make itself a little courtesy of gratulation, for only a worthy member would be living in the hearts of his fellow men a hundred years after his birth. LONGFELLOW has many years yet to live in our hearts, as much for the charm of what he was not as for what he was and what he accomplished.

When he died, twenty-five years ago, he reigned supreme in the hearts of a great mass of simple, unobstinate people, and his appeal to children, while it was neither conscious nor direct, was yet very strong. The little girl who, playing on the floor with her paper dolls, first heard of his death, burst into a passion of weeping, and twenty-five years later remembered the event as introducing her to the first real pangs of personal loss. "The white Mr. LONGFELLOW," a certain Norwegian friend called him, setting his guiltless and gentle disposition.

He belonged, however, to a generation which may be said to have carried rather inoperable literary baggage. It requires, indeed, a good deal of history to make a very little art, and America in these days was quite distinctly differentiated from England. It looked across the Atlantic with too great a yearning

for traditions and romances, while the old countries were looking to us for fresh adventure and the raw material of legend, both overlooking the fact that the kingdom of romance, like the kingdom of heaven, is within.

Mr. JAMES says of LONGFELLOW that his volumes of verse-books were "a sort of monument to an anguished fortune." Even so, one may con. over LONGFELLOW'S poems, so passionately annotated and underscored at the age of twelve, to find them striking our mature sense as a monument to an anguished mind, for nothing in them is more noticeable than the slightness, the fragility, of the emotions, the lachrymable serenity of his reflected spirit. His was a nature trained entirely by polite literature. A very limited experience and a delicate habit of mind, a taste for refraining and a fastidious habit of passing through life with his eyes half closed, a gift for writing about writers and diluting ideas with those he wished the public to know; the popularity of one who never offended the public by mentioning unpopular subjects and ideas. Not only had he this natural advantage, but he dealt in the simplest, most conventional and acceptable of forms. He was a fortunate poet in having no startling innovations to make, no new ideas to hurl at his contemporaries, no convictions varying from those of the vast average. He said in graceful and facile rhyme what has been the commonplace sentiment of the world since ever rhymes existed—namely, that "life is not an empty dream"; that "behind the clouds the sun's still shining"; that if we "are woe and hard best" the woods and hills are the proper places for solace; that who does his duty well shall go "to his long resting-place without a tear"; that "we can make our lives sublime"; and though "all depressed and lonely," all our fears are laid aside if we but remember only "such as these have lived and died,"—these being the worthy soldiers in the battle of life who have preceded us.

It is easy to see that where LONGFELLOW fails to meet our requirements as grown men, grappling with the problems of growth, it is due to the spirit in which he met his own life, a spirit of fastidious choice, an avoidance of that order and fuller initiation into life and emotion which stimulates the higher imaginative faculties and endows with the more strenuous amenities of thought. His very life, as one reads it, is the life of a gentle, kindly, domestic man, but not the life of a poet. "Their life," one biographer says, describing the ways of LONGFELLOW and his wife in Cambridge, "seems a round of innocent pleasures—visits to receive and pay, friends to meet, drives and walks, plays and concerts and balls for the evening, or more commonly reading aloud by the fireside." Twice in his life he seems to have been blessed with a perfectly congenial, cultivated, and soothing, if not stimulating, helpmate, and it would have been odd indeed if, turning from so gentle and considerate a destiny, Esplanade had insisted upon glibly flights or anguished solitudes—

"Contention is the vital force
Whence pluck they brain, the prize of gifts."

Mr. LONGFELLOW was so unfortunate as to have been to fortunate throughout his life, and so it is that his work now seems to be almost exclusively addressed to children. Even in his own day his overrating brought down a certain amount of impatient rudeness from such readers as MARGARET FULLER, who carefully pointed out that his grace and facility were not enough to make him a great poet, and who unnecessarily added that he looked like a "dandified PYTHAGORAS." When "Hesperia" was published STOW wrote of it, "It is in many respects excellent, graceful, and simple, but diffuse and lacking in power."

True, then, and kindest, a rather delicate turn of mind, a tolerant and pleasant feeling for foreign places and people, and a gift for flowing narrative, a somewhat sentimental taste and great facility, were LONGFELLOW'S poetic endowment. In the poems of his old age there is much pathetic acquiescence in life and the course of human things, and if he live in no other way, at least, so long as his fame endures, he shall wear the crust and prevailing honor of a fair name and be beloved as the guide for the young to the wells of poetry. If he cannot claim to have gained Olympia heights he may, at any rate, have inspired many who shall surpass him.

"Perhaps there lives some dreary boy untaught
In schools, some graduate of the field or street,
Who shall become a master of the art,
An admiral sailing the high seas of thought,
Fearless and first, and steering with his fleet
For lands not yet laid down in any chart."

The Man Who Ate Babies

THE President thinks that the papers that give "the full, disgusting particulars of the THAW case" ought not to be admitted to the mails. Perhaps not. Perhaps the country at large does not need all the particulars, but in our judgment New York does need

most of them, and it would be not a gain, but an injury, to morals if the newspapers were restrained from printing them.

We will try to explain.

Once there was a man who had the incomparable misfortune to be afflicted with a mania for eating babies. He was an extraordinary man, of astonishing vigor, of remarkable talents, of many engaging qualities, and of prodigious industry. He had education and social position; he could earn plenty of money; and the diligent exercise of his intellectual gifts made him valuable to society. There was nothing within reasonable reach of a man of his profession which he could not have, but over what should have been a splendid career hung always the shadow of his remarkable propensity. The precise dimensions and particulars of it were not definitely known to many persons. A few men who had a snail's pace like his doubtless knew absolutely; a good many other men knew well enough; and there was practically a public property in the knowledge that he had, and gratified, cannibalistic inclinations of much greater intensity and more curious scope than those that commonly obtained among careless men. There was an honest prejudice against him. Persons of considerable indulgence to eccentricities of deportment disliked to be in the same room with him. Sensitive stomachs instinctively rose against him. Yet he was tolerated, for, after all, nobody had ever seen him eat a baby.

One day another man—quite a worthless person—knocked him on the head, and let his pitiable spirit escape from his body. It made a great stir, for the man who was killed was very well-known, and his assailant was also notorious. There followed a protracted discussion of the dead man's character, qualities, and achievements. His record was assailed, but it was also warmly extenuated. When it was ascertained that he was an ogre, the retort was that he was not a materially worse ogre than a lot of other men, and that we must take men as we find them, and make special allowances for men of talent. When it was whispered that he ate babies the answer was that that was absurd; that whatever his failings, he was the helpful, best-natured man in the world, and particularly fond of children and good to them; and that if he ever did eat babies he was always careful where he got them, avoiding the nurseries of his acquaintances, and selecting common babies of ordinary stock, who were born to be eaten, anyway, and would never be missed, and who, besides, were in many cases not so young as they made out.

So the discussion went on, and waxed and waned as the months passed. But one day there was set up a great white screen, big enough for all the world to see, and over against it was placed a lantern that threw a light of wonderful intensity, and there came a person named Nemesis, with something under her arm, and took charge of the lantern. And then there fluttered leath all day on the great screen the moving picture of the poor monomaniac and a baby—how he found her, catled her, cupled her, and finally took her to his lair, prepared her for the table, and ate her up.

Well; it was said that the picture was shocking, and that the public ought not to have been allowed to see it. Oh yes, it was shocking; never picture more so. But it was terribly well adapted to make it unpopular to eat babies.

Personal and Pertinent

Not so many years ago the Bishop of London was more than contented with his plutocratic lot; now he is complaining that his pay of \$50,000 a year is not sufficient to keep him and the palaces which are thrust upon him. The present bishop is a bachelor, and has no pleasure in the rows upon rows of rooms that he has to keep in order, but an unsophisticated one would think that \$50,000 a year would easily do it. He is not alone, however, in his complaining. The Archbishop of Canterbury is with him, and moreover because \$75,000 a year will not sustain him. The Bishop of Winchester has \$30,000 a year, and cannot keep his own big palace on it. All this complaining is based on the intimation that Parliament intends cutting down the pay of bishops—a reform being threatened akin to that which was helped along by ASQUITH TATELOR'S clerical rates. When the Bishop of Winchester, for instance, was able to buy from the revenues of his see, without feeling the loss, the necessary miles of fresh carpets every year or so, he had an income of something more than \$200,000; and now what has he got? Nothing but a pittance \$28,000. The late Mr. HARGREY, himself the son of a dean, was wont to talk about bishops in a way that indicated that their old-time wealth did them no spiritual good. His conversations on this subject might have pleased JOHN MURRAY, but HARGREY had to be discreetly silent in the presence of GLAUCON. The bishops themselves had another point of view. One day the Bishop of London, not this one, was driving in the suburbs. In his splendid carriage, when to him, from an adjacent cottage, approached an old woman, who exclaimed: "Oh, me ind, me ind, what would St. PAUL say if he saw you now?"

"Why, my dear woman, he'd say, 'What a blessed change!'"

JAPAN'S PREFERENCE FOR PEACE WITH AMERICA

REGRET RATHER THAN ANGER IS WHAT THE MIKADO'S PEOPLE FEEL OVER THE SAN FRANCISCO INCIDENT, AND THEIR FRIENDSHIP FOR THE UNITED STATES IS HEAVIER IN THE SCALE THAN THEIR PRIDE OVER THE ALLIANCE WITH GREAT BRITAIN

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

Tokyo, January 10, 1905.

IT would be presumptuous for an American stranger, who has been but a few weeks in Japan, to declare with positiveness that the peace will not be disturbed between this empire and the United States, no matter what may be the outcome of the San Francisco school trouble. Yet all the facts I have been able to discover by most diligent search point to the conclusion that the Japanese are today as unwilling to fight as we are unwilling to fight them. What the ultimate intention of this government may be lies hidden in the minds of the Emperor and the Elder Statesmen, that silent and mysterious have to whose devices the people of Japan render spontaneous and joyful obedience.

As for any official prediction of what the future relations of the two nations are to be, we can elicit nothing but the most courtly smiles and polite phrases. Much more encouraging to the lover of peace is the fact that each nation lays so much stress and sets so much to the other that a war between them any time in the next ten years would be a piece of suicidal extravagance—especially for Japan. Almost as strong as this commercial bond is the grateful friendship the Japanese people feel toward us—and they are much surprised by sentiment—because we first of all the world aided them along the path of their present development.

The most serious feature in the present situation is the affront offered to the Japanese people by the School Board of San Francisco in not only excluding Japanese pupils from the common schools, but in contemptuously segregating them in special schools together with "Chinese, Koreans, and other Mongolians." There is the blow that shocked and stung these proud people; and the wound that it caused still aches, and will rankle for many a day to come. The Japanese are very sensitive. They have just taken their place, by force, among the chief nations of the world, and they are as touchy and irritable about their new dignity as a sophomore with his first silk hat. They want every one to notice it and talk about it and be deeply impressed by it, but sue unto him who finds in the society any occasion for just or disrespectful comment.

Moreover, the Japanese have always looked down upon the Chinese and Koreans as inferior races. To say that these, in turn, have long looked down upon the Japanese does not lessen the resentment of the Japanese at being herded with them. Also the Japanese strenuously object to being classed as Mongolians. They decline to be reckoned as mere latter day Asiatics, and they claim descent from ancient Aryan stock. Whether or not this claim can be substantiated is a question for ethnologists, and need not be gone into here. The important fact is that no Americans to remember, in inquiring into their state of mind, is that an executive board, upheld by the State of California, has aroused the wrath of these people by not only putting their children out of certain schools, but by calling them Mongolians and herding them with Mongolians.

Not one of the Japanese with whom I have talked has denied the expediency of excluding youths of sixteen years and upward from schools in which little girls are taught. They agree with the Californians and all thinking Americans that a primary or grammar school is no place for a full-grown American—let alone for a full-grown American, or any other sort of man.

But the contemptuous treatment of their countrymen as Mongolians has been and still is a very hard thing to endure. Of course they are not expressing their resentment in loud talk. An ancient Japanese proverb says, "Only a postgraduate is he who, when he opens his mouth, displays the contents of his heart." And considering that proverb, we may well remember that because the Japanese are silent and smiling now we are not justified in assuming that they have forgiven or forgotten the slight. For giving an injury is not even suggested in any part of Bushido, the code of ethics, formulated ages ago by the wisest of the samurai, or fighting-men, which is now the chief rule of conduct throughout Japan. *He shon-ni means literally*, "military knight says"—"the conduct which knights should follow." It was, as Professor Inoue Nitobe, of the Imperial University of Kyoto, points out, as organic growth of centuries of military career, and yet:

"In manifold ways has Bushido filtered down from the social class where it originated, and acted as leaven among the masses, furnishing a moral standard for the whole people. The Precepts of Knighthood, begun at first as the glory of the elite, became in time an aspiration and inspiration to the nation at large. . . . Untranslated, Bushido was and still is the animating spirit, the motor force of our country."

It is impossible to gauge the feelings of the Japanese people on any question affecting national or racial pride without constantly keeping in mind the code of Bushido, which dominates their every act and thought. And this can be done without imitating those who have been inspired by their creed to a degree of disgusting egotism, or the other class of critics who, because of their shortcomings in commercial morality, denounce the Japanese as a race of tricky, unscrupulous sharpers. The truth appears to be that these people are neither angels nor devils, but very human beings like ourselves, working their way to a definite code of their own ethical code, and especially proud and abominably irritable now because they have just stepped up among the chief nations of the world.

Recent interruption the Japanese have from the beginning of their history until now revered and obeyed their Mikado. Although for hundreds of years powerful and wily Shoguns kept the

Mikado secluded and compelled the people to serve them, yet they commanded obedience only as the representatives of the throne. And neither the most fearful nor least scrupulous Shoguns ever dared to rebel against the Emperor, until, in 1868, he asserted his temporal power. The warriors were then sworn of their control is a belief but here they saw the Mikado assumed direct government of the people, and the unswerving loyalty which for ages had been offered to the unseen ruler took on a new impulse. And during all the centuries the relation of Emperor and people has been that of father and children—plus something more.

That something more is hard to define within these brief limits. It involves in the Emperor a solicitude for the welfare of the nation so great and so keen that he will make any sacrifice necessary to avenge a wrong done to the smallest of his people in any part of the world, and it has developed in the Japanese men and women a zeal for the Emperor as overwhelming that they regard it a high honor and pleasure to lay down their lives for him. Each Japanese from the highest to the lowest, feels that in time of strife the spirits of his ancestors and

AS A FATHER TO HIS CHILDREN

The Text of an Imperial Rescript by the Mikado which is Displayed in every School in Japan

Our Imperial Ancestors, long ago, laid the foundation of this Country. Their virtues were deeply impressed upon the hearts of their Subjects, who faithfully adhered to the one principle of loyalty and filiality. This was the beautiful feature throughout the generations, and is the characteristic of our country. Education has its source in this principle.

Yes, my Subjects, I command to be loyal to the Royal Family; to be filial to your parents, loyal to your brothers, faithful to your husbands and wives, and to be true to your friends.

As to yourselves, be frugal, humble, and charitable toward all.

By knowing and arts improve your intellect and complete your moral nature. Moreover, widen the public road and develop the resources of the Country.

Always obey the Constitution and the laws of the Country, and should the occasion arise, be loyal and brave for the right cause and protect the Royal Throne, which is as lasting as the Universe. In doing this you will not only be my good and loyal Subjects, but you can show forth the virtues of your Ancestors.

This is indeed the teaching of my Imperial Ancestors, and both their offspring and Subjects must obey it.

There is no error in this teaching though it were applied to all men and Nations. Therefore, I, your son, the Mikado, shall continuously perceive this teaching, and I hope that the standard of virtue which I have set will be common to Sovereigns and Subjects.

My Office President Adams Mr. Boyle Mr. Walsh Mayor Schmitt Superintendent Boardman Assistant City Attorney Williams

Mayor Schmitt and the School Board of San Francisco which conferred with President Roosevelt on the Japanese Public School Question

of the Emperor's ancestors are observing his every act. This belief is as vivid and wide-spread to-day as it was five hundred years ago. It is fostered in every possible way, as witness the libelous by His Imperial Majesty Matsuhito, which is displayed in every school in Japan to-day, and which is here, I believe, published to the outside world for the first time.

Approach this receipt, here is an instance that happened this winter. Certain of the richest men in Japan tried to evade paying their full share of taxes. Here is what happened: (1) the proper officials brought suit in court and compelled them to pay in full; and (2) by imperial order, issued to the principal of every school in the land, all pupils are to be taught hereafter that to evade taxation is treason, and that it is as loyal to pay taxes as it is to fight for the Emperor.

By detaching the army and navy of Russia the Japanese took rank among the foremost nations in the world. But there is one thing of which they appear to be prouder still, and that is their alliance with Great Britain. Beating the Russians gave the Japanese wider opportunities of colonization and prosperity in Korea, Manchuria, and Saghalien; but the alliance with Great Britain brought something they value much more—the privilege of standing side by side, as an acknowledged equal, with the strongest empire in the world.

Imagine, then, the feeling of these people when they learned of the action of the San Francisco Board of Education. Objectable Japanese adults and adolescents had been for years excluded from certain public schools in the Hawaiian Islands by the adoption of an age limit, and there was and is no objection; but the San Francisco order of exclusion was regarded as a deliberate, premeditated affront. There was in all Japan no tumult, no rioting such as marked the popular indignation over the failure of the nation to obtain money indemnity from Russia at the peace conference of Portsmouth, but instant and universal indignation blazed up throughout the empire. All the newspapers were full of it.

The yellow journals—Japan has not escaped certain grave defects of modern civilization—shrieked for immediate redress and possible revenge. There are very few illiterate persons in Japan. You will see longshoremen or jinrikisha coolies holding over little fires reading the latest editions of newspapers while waiting for employment. Reading and writing come to them, as Dogberry observes, almost by nature. Within two days the manner of the exclusion of the Japanese from the San Francisco public schools, and the order that they must go to school with Chinese, Koreans, and other Mongolians or not at all, was known from one end of the country to the other.

Here is an example of what the fiercest Japanese journals were saying, taken from the *Meishichi Shinbun*, a newspaper of Tokio: "It was only fifty years ago that the excluded Japanese opened their doors to the evil voice of the American commodore sent by President Fillmore. At that time Americans preached to us of universal brotherhood; but think of it, fellow countrymen, the Americans, in their diabolical cruelty, have insulted our com-

patriots, and have turned out Japanese boys and girls from their schools. Must our Emperor play the rôle of President Fillmore and send a Commodore Perry to tell the American barbarians of the inhumanity of exclusion, or, rather, shall we not prepare ourselves for giving the Americans a lesson in war?"

That would be rather a large order, of course, and it is greatly to the credit of the Japanese people that they did not for a moment pay serious attention to such wild talk of reprisals. Nevertheless, there can be no doubt that they were shocked by the affront, and were surprised by it as much as they were hurt. The Japanese yellow journals did all they could to fan the fire of resentment into devouring flame. They were disappointed. There was no indignation meeting, no demonstration of any kind. I think the best description of the feeling of the people and the government was that given to me by Mr. Tugutomi, the editor of the *Kokumin Shinbun*, of Tokio, a most conservative daily, which stands high in the confidence of the populace and their rulers.

"The order of the San Francisco Board of Education," said Mr. Tugutomi, "came to us like a thunderclap from a blue sky. We knew there was discontent in California over the race-labor question, but we were utterly unprepared for such a proclamation as that. Think of how you would feel if your best friend should suddenly turn upon you, and without a word of warning strike you in the face!"

"What made the blow hurt most was the fact that we had always looked upon Americans as our friends. It was the United States that opened for us the door of Western civilization. I assure you that the people of Japan were stunned by the attack. Then the yellow newspapers, eager to make as much profit as they could by pandering to the worst emotions, tried to stir the people into tumult by printing the most outrageous comments upon the situation. But they could not inflame the public mind. Our people were sad rather than angry. After a few days the sensation-baiters found that their efforts fell flat, and they ceased their agitation."

"Then came President Roosevelt's message to Congress, saying that the Federal government would use every means in its power to enforce respect in the Japanese under the terms of our treaty with the United States, and from that moment we knew that our rights were in safe hands. There will not be any more trouble. The school question will be settled amicably. It cannot be otherwise. We have taken Great Britain as our ally, but the United States we have always regarded as our brother."

Many persons at home have expressed the belief that the Japanese have a cumulative grudge against us, first, for their failure to collect a war indemnity from Russia at the Portsmouth peace conference called by President Roosevelt; secondly, because our patrol killed Japanese seal purchasers on the Pribilof Islands last spring; and thirdly, on account of the badly mobbed San Francisco school business. But this belief appears to be not well founded. The people were indignant at the terms of the peace treaty, but their wrath, in spite of the efforts of sensationalists,

was directed against their own representative, Baron Komura, rather than against President Roosevelt, who raised the warring actions to a settlement. There was a momentary indignation meeting in Hibiya Park, called by politicians trying to make capital out of the disaster. The chief of the metropolitan police was foolish enough to order the crowd—nearly all mere curiosity-seekers—to disperse. The good-natured throng at once became an angry mob, ran to the residences of the Home Minister and by, and burned some of its small outbuildings. Then began rioting, which ran along sporadically for a few days, during which a few men were killed.

Presently an order was issued at the imperial palace, and the rioting ceased. The Father of his Country felt that sufficient indignation had been shown, and he quiesced what was left. The people still felt so resentful that when Baron Komura, Japan's chief representative, returned from Portsmouth, he was not allowed to take the risk of landing at Yokohama in the usual way, but was smuggled up the bay in a launch from the ship's side in a quiet wharf in Tokyo. The outcry against the peace treaty continued to be so vehement that the Katsura ministry felt compelled to resign, but the Saionji ministry, who succeeded them, have carried out their programme to the letter. Baron Komura was rewarded for his services by being appointed ambassador to the court of St. James's, and by this time all Japan knows that the terms of the peace made at Portsmouth were the best possible for Japan, whose cash and credit were exhausted by the war, and who needed peace even more than the beaten but still financially powerful Russians. So that up to this time the Japanese sentiment toward the United States regarding the settlement of the Russian war may be described as a sort of gratitude, tempered by resignation.

As for the killing of the Japanese sail-poachers on *Phylloxera*, everybody knows that they were mere pirates, and that when they went ashore to steal seals they took their lives in their hands.

The first effect of the San Francisco school affair has already been told. The popular belief at this moment, so far as can be discovered by reading the representative newspapers and talking with all sorts and conditions of men, is that the matter is in the hands of the Supreme Court of the United States and President Roosevelt, and that whatever the decision may be as to the rights of Japanese children in our schools justice will be maintained. Incidentally, it may be mentioned that the Japanese are beginning to recognize that the American national government may perhaps not have the power to enforce a treaty which grants to Japanese citizens rights never conceded by the State of California. On this point the *Japan Chronicle* says:

"It must be remembered that the American government is an anomaly among governments, in that its Federal government does

not confer power on its component States, but that these component, sovereign States confer power on the Federal government, which possesses only the powers specified by the grant made by the Constitution. Once this view is understood, it becomes difficult to dissociate, as Japan is apparently seeking to do, the Federal from the State authority in an American treaty. As American treaty, under this view, is nothing more than a compact made with a foreign government by the American Federal government acting as agent of the States combined; the Constitution is the power-of-attorney under which this agent acts for its principals; and this power-of-attorney, being a public document, has been availed on by the nations, which know the limitations it imposes on the agent's right of action. Japan, it will be argued, had this notion when she made the treaty in question, and, therefore, legally she must be held to have been a consenting party to its terms in so far as they affect that treaty. In other words, the treaty must be construed in connection with, and in the light of, the Constitution. If, for instance, an authoritative interpretation of the Constitution rules that the Federal government is not authorized to guarantee in any treaty with a foreign power any right which interferes with a State right, then the Constitution may be held to veto this Japanese claim, inasmuch as it trenches upon the control of California schools, which is a right specifically reserved by the Constitution for all the States, including, of course, California. Constructively, therefore, Japan recognized this California right when she made the treaty with the Federal government."

In conclusion, let us turn to this array of stubborn facts, all on the side of peace:

1. War is a business proposition, which cannot be carried on without money. Assume that if war were declared to-day, Japan would at once capture the Philippine and Hawaiian Islands. She would have to put them up as collateral to raise a war loan. Where would she get the money? Neither France, Germany, nor England would lend money to be used in a war against the United States, because they are all too deeply interested with us financially.

2. War would ruin Japan's commerce. We take all her crop of tea and two-thirds of her most valuable output—the silk crop. She gets from us nine-tenths of all the kerosene oil she uses, and all the cotton she requires of the standard staple. Two-thirds of the flour used in Japan come from America. War, of course, would cut off all these things.

The Japanese people are now disposed to look upon the California incident, and as an invasion of treaty rights, but rather as a breach of international comity. No matter how the United States Supreme Court defines the status of the Japanese school-children, they will accept the decision fearfully, if only we treat them with common courtesy.

"DISARMAMENT" AT THE HAGUE CONFERENCE

HOW GERMANY BLOCKS THE WAY

By W. G. FITZ-GERALD

TO the man on the street no time seems more important than the present for the formal discussion of disarmament, or the relief of all nations from the serious burden of colossal navies and armaments and their upkeep.

Our seas in all lands a feverish desire to lay down dreadnoughts at \$10,000,000 each; with racing cruisers, destroyers, submarines, and the rest. And every government offers tempting prizes and many honors to inventors of new man-killing engines more diabolical and wholesale in destruction than any likely to be opposed to them.

And yet disarmament is the main plank in the forthcoming Hague conference. Every nation wants peace, and yet seems to think that the only way to secure it is to prepare for war!—a vicious circle that must nullify all mere academic talk on the subject.

Take the Japanese. According to blats from Tokyo the country lately lavishly the immense naval and military drain upon its finances. And the government seriously contemplates curtailing their expenses in both during the coming year.

The rubinet, but are in favor of the disarmament question being submitted to the Hague conference. They argue that even if an practical result comes the discussion will at least bring the subject pretty thoroughly and attract the world's attention to it. But at this moment the attitude of some of the great powers in this matter is still uncertain. There is, however, a majority in favor of discussion at least, though some will give the least pledge to be bound by any decision or resolution arrived at.

Thus Great Britain, Japan, and the United States have all expressed their willingness to discuss the matter. As to France, her attitude depends on that of Germany; and her premier points out somewhat caustically that the effects of disarmament are by no means so military as optimists would have us imagine. "If war had been forbidden in the nineteenth century," he says, "Italy would still be an Austrian province; Germany would never have been unified; while the Balkan States would still be subject to the cruel rule of Turkey."

The position of the powers with regard to the question of disarmament at the coming conference is roughly as follows:

For Discussion.—Great Britain, Japan, United States, France (in theory, but hesitating in view of Germany's attitude)."

Against Discussion.—Germany, Austria (probably out of respect for her two sisters in the Triple Alliance)."

Doubtful.—Russia (she would probably yield to a majority), Italy.

Practically all the smaller nations are favorable to the discussion; but against the whole thing, from territory to end, imperial Germany has set her face. It may be remembered that the representatives sent by the Kaiser to the last conference were definitely instructed to veto any scheme of disarmament; and so long as one great power holds out—and that by far the most formidably armed in the whole world—other states cannot reasonably be expected to weaken their defenses or expose themselves to attack. And that the danger is no visionary one was proved only a couple of years ago, when Germany menaced France with instant war over the Moroccan question, and insisted on the "breaking" of the *Tangier* Decree, the strongest Foreign Minister the Republic ever had.

The attitude of the German government, with regard to the forthcoming conference, has been stated in the German semi-official press as one of direct hostility to any scheme that may be promulgated of a kind likely to limit the expansion of the German army, and especially that of the Kaiser's new navy.

The British nation, which supports a colossal navy, would really favor any rational plan by which armaments throughout the world could be reduced. But even here a very great British's very existence she could never consent to its reduction without a corresponding reduction in the navies of other countries. At the moment no possible *modus vivendi* appears on the horizon, but in high politics one has dropped from the sky before now.

"Last century saw great conflicts for territory," declared Secretary Shatt of the Treasury to the Harvard students; "and the present century will witness a latter and gigantic international trade war between Great Britain, France, Germany, and the United States for the markets of the world. And great that it will be resolved, but it will be just as intense and as hostile as any that has gone before."

THE NEW YORK POLICE

WHY LEGISLATION IS NEEDED

By THEODORE A. BINGHAM

Police Commissioner of the City of New York

THE Police Department of the city of New York is, and will continue to be, just as good or just as bad as the citizens of New York make it. When I first took up the duties of Police Commissioner, more than a year ago, it seemed best not to make any public speeches. That rule was broken for the first time at the City Club dinner last month, in order to tell the men of standing and influence there why the defects in the department were their fault, since the representatives they send to the Legislature make laws whereby it is possible to fasten the police "system" upon the community. In the last analysis the cause and the cure for the evils in the Police Department lie with the voter. What better proof of this contention is necessary than was afforded in the speech of Henry de Forest Baldwin, on the occasion above referred to, when he said that we got our Detective Bureau, as at present constituted, through a clause inserted by "Abe" Grover in a legislative enactment which raised the members of the detective force, then sergeants merely in name, to the actual rank of sergeant, and, by virtue of that rank, subject to removal only upon proper charges.

As said in a report to the Mayor, the so-called police problem is not so difficult of solution as the solution is difficult of attainment. To quote from that document: "In my judgment two things are vitally necessary to enable the Police Commissioner to give to the citizens of New York what they need and what they are supposed to pay for:

"First.—The Police Commissioner must have wider powers for promoting and reducing inspectors of police, through whom he must command the police force, so that the inspectors will fear him and not the politicians. I recommend that the office of inspector of police be made a detail at the will of the Police Commissioner, from among the police captains, present before being taken to safeguard the rights of the men to pay and pension.

"Second.—The detective work must be entirely reorganized; the present dead-work gotten rid of, and the organization methods be brought up to date. I recommend that the present Detective Bureau be abolished and the inspectors be detailed to it by returned to duty in the unimpaired force, the rights of the men as to pay and pension being properly safeguarded. I recommend the establishment of a new Detective Bureau, recruited from two sources, namely:—

"(a) The uniformed police force by detail.

"(b) Civil life, by taking the best men to be found anywhere in the world, regardless of any conditions but efficiency.

"(c) Recruits from the police force to be detailed or recommended at will by the Police Commissioner, who should be authorized to give increased pay to a certain number, say 200, for and only during efficient work.

"(d) Recruits from civil life to be engaged or discharged on the basis of efficiency only, at the will of the Police Commissioner—the number not over, say, ninety, and to be graded into two classes as to pay."

It was pointed out in that report that the Detective Bureau, reorganized on these lines, would give New York the best detective service in the English-speaking world; that the above two propositions were vital to the successful conduct of the Police Department of the city of New York; and that, subordinate to the two vital points, was the necessity for a Fourth Deputy Police Commissioner. Two other points of the report, upon which no recommendation was made, not perhaps of first importance, but still necessary to enable the Police Commissioner to do his duty of, firstly, and free from extraneous pressure, are the extension of his tenure of office, and his non-liability to removal except on publication of reasons, although the power of removal should remain both with the Mayor and the Governor.

The Page-Frontville bill in the State Legislature, which embodies the changes I have recommended, have had the complete endorsement of the Chamber of Commerce; the entire metropolitan press, a number of influential business associations, the Citizens' Police Committee of Fifty, headed by E. Fulton Cutting, and the approval of Mayor McWilliams and District Attorney Jerome, although the latter has gone on record as believing that the inspectors are too weakly and powerful to be brought under control. Think of that!

The idea that this legislation will work hardship to the men on the force is nonsense. On the contrary, as the Citizens' Committee pointed out in an address to the members of the force, it gives the great body of policemen a better opportunity for advancement than has ever been afforded them. To captains, sergeants, and patrolmen, in particular, it offers immediate and substantial reward for diligent and efficient service, and each individual promotion, of course, furthers the interests of every member of the working force, with the exception of the inefficient and the laggards. Consider what it means to a captain of police to have an

inspectorship open to him so soon as he proves his capacity, or to a patrolman at \$600 per year to see the opportunity to step immediately into a \$2000 position by the display of natural adaptability for detective work?

Exaggeration aside, the police of New York are a fine lot of men, and fully sixty or seventy per cent. of them are honest—just as honest as the average man, if not more so. Among the others there are also some very efficient men. Taking them throughout, I find that some of them are honest and incompetent, and that others are thoroughly competent but dishonest. There is, however, a large body of reasonably honest and reasonably competent men on the force, and it is with these that I am going to do—that I am doing now—my best work. It should be borne in mind, however, that in the Police Department, as elsewhere, the higher the rank the greater the power, and the greater the power, the greater the temptation to dishonesty, as the rewards are richer.

To begin with the proposed changes in the Detective Bureau. Up to 1901 service in the bureau was a detail from another department; but, under a legislative enactment that year, all the men who happened to be having an detectives on April 1 (about 170) were made detective-sergeants, provision being also made that they should retain that rank. In anticipation of a change in the municipal administration on the following January the bureau was packed, 111 more men being appointed. The bureau has remained packed ever since, for, though many of the men unit for detective work have been put back on the streets or where, they still draw their higher pay, and they still hold their places in the Detective Bureau. The way to promotion from the ranks is blocked.

Under the present conditions any patrolman or roundsmen, on salaries ranging from \$400 to \$1400 per year, will be immediately eligible to the much higher paid detective position, and all that is essential for the ambitious man is to do his duty, demonstrate his capability, and take advantage of his opportunities. He will realize that at any moment his chance may come to distinguish himself in such manner as to obtain the nomination to the Detective Bureau. He will not be compelled to wait for a vacancy until a man dies, or is retired for old age. There will be a vacancy just as soon as he proves himself more capable than the least capable man on the detective force, because that man will be required to resign and he will be put in his place. There are some very able men in the bureau to-day, and there are other able men on the regular force; and when these latter are discovered and put to work with the former we shall have a body of detectives that will be a credit to the city instead of a disgrace to it.

Almost any citizen of New York who has done business with the Detective Bureau will realize the necessity for its reform. I know perfectly well of the large and small grafting that is continually going on, but under present conditions it cannot be stopped. As things are to-day the rich man has a better chance of recovering his stolen watch than the poor man of getting back his stolen clothes, because there is a tip for the detective in the one case, and nothing for him in the other.

There is a "system" from the bottom to the top of the police force. The patrolman often is an intimate friend of the select-keeper; the sergeant with the small politician; the captain with the gamblers and the bigger politicians, and the inspector with the political leaders and their moneyed associates. And this brings us to the climax of the police situation—the inspectors. To my mind Jerome's warning to keep hands off the inspectors, because they cannot be whipped, should be a clarion call to battle. If nineteen men, under present conditions, are able to dominate the rest of the population of New York city the first duty of the citizen is to change them.

There is no doubt as to the great power of the inspector of police. He has personally seen service in every grade of the working force, and knows its possibilities, its temptations, its strength and its weaknesses. The inspector is the rock against which all police investigations have come. The Leaven and the Magdalen investigations demonstrated that the corruption they uncovered could not have existed without the knowledge of the inspectors. Indeed, it is impossible to perceive how dishonesty, except in sporadic instances, can go on in the force without the connivance of the inspectors. I have reasons for knowing which one of the present inspectors are honest and which ones are not. Some of them who have been dishonest in the past are running straight to-day; but that does not lead me to believe that they will always run straight. However, the inspectors under the old law are practically irremovable, and if not irremovable as much time is required as to ruin discipline. Of the numerous officers holding this rank who have been tried on charges, not one of those dis-

(Continued on page 115.)

THE LONGFELLOW CENTENARY

"Sealworth and stately in form was the man of seventy winters;
Hearty and hale was he, an oak that is covered with snowflakes;"

—*Evangelist*.

By CAROLINE TICKNOR

"THE Old World has its cathedrals, but America has faces like that," exclaimed the author of the *Simple Life*, as he stood before Lincoln's portrait in Philadelphia. And such an exclamation may well rise spontaneously to the lips of any visitor from across the sea who gains for the first time upon the face of Henry Wadsworth Longfellow.

It is "faces like that" which are the nation's hope and pride; an inspiration to its youth, a solace to its old age, and when the clouds gather and the prophets of ill omen point to the dark side of the national picture it is the memory of "faces like that" which banishes fear and foreboding.

It is a hundred years since the birth of Longfellow, and a quarter of a century since his passing, and yet the place which knew him so well knows him even better to-day than it did twenty-five years ago, so absolutely has he become a part of the life and thought of his community.

The Longfellow centenary is the third of a memorable trio, and in its celebration Cambridge has followed the example of Concord and Salem in paying enthusiastic tribute to one who was for years beloved and honored as her foremost citizen. Although not born in Cambridge, Longfellow was more continuously and permanently identified with the place than either of her native-born poets—Humes or Lowell—and his restful and beautiful home was assuredly the "hath" around which all that was best in Cambridge revolved.

The Emerson centenary, which took place at Concord, May 25, 1861, was the first of this notable trio, and in voicing the attitude of the dwellers in Concord towards their revered "philosopher and guide," Mr. Thoreau very perfectly expressed the sentiment which Cambridge to-day cherishes for its favorite poet.

"Wherever the English language is spoken throughout the world his fame is established and secure. . . . But we, his neighbors and townsmen, feel that he was ours. He chose our village as the place where his lifelong work was to be done. It was to our fields and orchards that his preserver gave such value; it was our streets in which the children looked up to him with love, and the elders with reverence. He was our ornament and pride."

Delightfully in keeping with this sentiment has been the entire management of the Longfellow celebration, which has brought to the shrine of this poet friendly and loving tributes from afar—from those fellow realists whose sympathetic companionship he craved so ardently, from his devoted neighbors and townsmen who claimed him for their own, and from the children whose poet he was present mostly.

The Hawthorne centenary, which brought to historic Concord so many pilgrims in 1904, was also thoroughly characteristic of the author of *The Scarlet Letter*. The exercises on this occasion took place at "The Wayside," in the pine grove and on the terraces. A large audience sat facing Hawthorne's favorite path, where had been placed, between two pines, a granite boulder, rough-hewn and massive, as it came from Concord's soil. The bronze tablet fastened in this boulder, which was unveiled by Hawthorne's granddaughter, bore the inscription:

"This tablet, placed at the centennial exercises, July 4, 1904, commemorates Nathaniel Hawthorne. He trod daily this path to the hill to form his tale, as he passed to and from its summit, his marvelously resources."

In this spot, where Hawthorne had spent so many so-called years, and also in the little hillside chapel, which

was the home of the famous "Concord School of Philosophy," many thoughtful and appreciative words were spoken of this writer, who was ever in his personal relations "a man apart," shrouded in mystery. It was as if the admirers of this "shy and lonely man" had sought him out in his own powerful seclusion and had suddenly overwhelmed him with that appreciation of his genius which during his lifetime was bestowed so grudgingly.

It was the happy lot of Longfellow to carry a direct appeal to the hearts of his wide-scattered audience, and the response was instantaneous; he came into his own at once, and his reward was both immediate and generous.

Who can doubt that Hawthorne, whose destiny it was "to stand and wait" for that which came so quickly to his friend, had many dependent hours of which the other never dreamed? And yet the soul that was more lonely and aloof could never have endured with patience the wholesale adulation which was the other's portion. To be bored and annoyed with ease and grace is a heaven-given quality, and one which was preeminently Longfellow's. As was affirmed long since by his friend and eulogist, Professor Norton, "his long-suffering patience was a wonder to his friends; it was, in truth, his secret charity. Boreds of all nations, especially our own, persecuted him. No man was ever before so kind to these moral mediocrities. One day I ventured to remonstrate with him on his endurance of the persecutions of one of the worst of this class, a wretched creature, and when I had done he looked at me with a pleasant, repoving, humorous glance, and said, 'Charles, who would be kind to him if I were not?'

Landed, kindness and consideration towards those not near or dear to him was one of Longfellow's ruling characteristics, and in the observance of his centenary celebration the members of his family and the committee in charge endeavored conscientiously to infuse into their plans the poet's own spirit. It was aimed to make everything laudable rather than exclusive; the literary exercises in Naudy's Theatre were free to all that might be accommodated, only a small number of seats being reserved for special guests and for the members of the Cambridge Historical Society, under whose auspices the celebration took place, and

Craigie House was thrown open to the inspection of its floors, who recently passed through these rooms and halls freighted with precious memories.

This famous old colonial mansion, where Washington made his headquarters for nine months after the battle of Bunker Hill, became the temporary home of Longfellow in 1857, and his permanent dwelling-place in 1863. Here he spent more than forty years of his active and useful life, and here quietly breathed his last in 1882. This house, which has witnessed extraordinary changes in its 150 years of existence, and whose fascinating history has been of late so thoroughly exploited, will continue to be, as it has been, the Mecca towards which are journeying constantly a stream of interested visitors. Here Miss Alice Longfellow has dwelt since her father's death, and here the many privileges things associated with him remain, but little changed since his departure. The study is as it was when he lived and worked there. The old clock as the stairs still ascends "Never, forever," the inkstand that was Coleridge's, and that which belonged to Tom Moore, are still among the treasures in the study, as are the portraits and two finest chairs—that spoken of in the "Children's Book"—and that made from a portion of the "Village Blacksmith's"

Henry Wadsworth Longfellow

"chess-tree." The latter chair, the gift of the children of Cambridge, was presented to the poet in 1873, when, despite Longfellow's protest, the "spreading chess-tree" was sacrificed in order that Brattle Street might be widened. This gift was a keen source of joy to Longfellow, but a sore gradually within his home, as the poet gave orders that no child who wished to see the chair should be rebuffed, and for many months the tramp of countless dirty little feet wrought havoc in the household. Only two truly were those lines materialized which were inscribed around the seat of this carved chair:

"And the children coming home from school
Look in at the open door."

The little folks not only "looked in," but walked in, as well, and Longfellow never said them nay. His beautiful relationship with the world of childhood is unique in the history of poets. No other poet ever had so many lovers and friends among the "little people," and his poems, regardless of his love and tenderness for children, are among his most exquisite productions.

In recognition of this fact the children of Cambridge were allowed to play a prominent part in their poet's centenary celebration. "Longfellow day" was observed with appropriate exercises in all the schools of Cambridge, and every child was asked to write some little sketch or essay about the poet. Then came the "Children's Hour," held in the new lecture-hall on Kirkland Street on the afternoon of February 27, at four o'clock. This

Longfellow's Birthplace in Portland, Maine
HERE THE POET MEAN BEGINS ON FEBRUARY 27, 1807

meeting, thronged with children of the grammar grades of the public schools, was a beautiful and most impressive tribute. Bishop Lawrence presided over this gathering; there were appropriate music accompanying Longfellow's words, and readings from his works by Professor Copeland, of Harvard.

It was from the children of Cambridge that Longfellow received a thrilling ovation on the occasion of his last public appearance. This was in Sander's Theatre on December 28, 1893, at the celebration of the 25th anniversary of the founding of Cambridge; there he and his brother poet Holmes stood up to receive a storm of applause from a thousand school children in the audience. Against his unspoken custom, Longfellow responded with a speech to the children, thanking them again for their gift to him. At the close of the exercises the children pressed about their dear friend in crowds, begging for his signature. His patience was inexhaustible, and when the dinner hour came he told all who had not received an autograph to come to his house for one. And so his final public word was to the children as he stood for the last time on the same platform in Sander's Theatre where, on February 27, so notable a company of his compatriots assembled to do him honor.

It was an evening of inspiration to all who were privileged to be present at this gathering, so characteristic of the one in whose name it was assembled. There were the few remaining old friends who had belonged to that beloved intimate circle, there were those younger writers, gathered from far and near, to whose budding careers he had been such an inspiration; there were his school children; and filling a large part of the auditorium was his faithful, adoring public.

It was an especial satisfaction to listen to the appreciative words of the chairman, Professor Charles Elliot Norton (Longfellow's close friend for forty years), who had for this occasion published a charming memoir of the poet coupled with anti-biographical poems intended for the use of school children. The eloquent address of Mr. William Dean Howells was admirably supplemented by Mr. Thomas Bailey Aldrich's poem, and by the notable tributes offered by President Eliot and Colonel Thomas Wentworth Higginson. An interesting feature of the evening's entertainment was the production of a cantata, "The Village Blacksmith," adapted from Longfellow's poem, which was effectively rendered by a chorus selected from the public school of Cambridge.

Among the various accessories, the Longfellow exhibition at the Cambridge public library is worthy of particular mention, as is also the commemorative bronze medal designed by Mr. Bela L. Pratt, of whose work as a sculptor Boston is justly proud. Two hundred copies of the medal have been issued for sale, though a few will be reserved to be given later as prizes in the schools for essays upon the poet's life and works.

The Longfellow exhibition at the Cambridge library contains portraits, early and rare editions, MSS., and other memorabilia of the poet. Among the many interesting things exhibited is a bound volume of letters from three English admirers who wrote after the death of Longfellow to urge that a bust of him be placed in their own "Poet's Corner." This book containing the American poet's credentials to a niche in Westminster Abbey, is well worth more than a passing glance, for it brings home to all a realization of the marvellous popularity of the "American Laureate" in England, where he is said to be far more widely read than their own Tennyson.

One little pencilled note, which has turned up among the numerous memorials and reminders of the poet, is worth quoting as emphasizing the writer's love regard that he had never seen the beautiful Arcadian country which he had painted so truthfully and vividly. It reads:

"MY DEAR SIR,—I have had the pleasure of receiving from Mr. Mummell the two canes which you were kind enough to send me as

CAMBRIDGE, 1873.

a souvenir of Arcadia, and hasten to thank you for this mark of your regard. It has never been my good fortune to see the beautiful country which you pass through daily, and I fear I shall never see it, save in imagination. All the more shall I prize the branch of apple tree from Grandpère, and the white ash cane from the top of Blenheim.

"I beg you to accept my cordial thanks for your kindness in sending them, and believe me,

Yours very truly,

HENRY WADSWORTH LONGFELLOW."

It has been many times recorded that the plot of "Evangeline" was first the property of Hawthorne, to whom it did not especially appeal. The tale recounted at the poet's dinner-table impressed him lastingly with its poetic possibilities, and he gladly availed himself of the touching Arcadian picture to which Hawthorne so willingly waived claim. This was but one of the many links which bound together these two warm friends, so different in their genius and their personalities. Longfellow was one of the first to perceive the value of the other's inimitable work, and probably did more than any other fellow craftsman to elicit public appreciation of Hawthorne's writings.

The literary pilgrim seeks for the memorials of Longfellow not only in Cambridge, but also in his birthplace, Portland, Maine, where many travellers annually journey to the quaint old structure where the poet first saw the light. It is a high three-story wooden dwelling, exhibiting a cleaner and more respectable exterior than do the majority of its neighbors, and a placard at one corner proclaims it the birthplace of the poet. Much more presentable and interesting to the visitor is the Longfellow mansion on Congress Street, in this same city, where the three-story brick house, shaded by some fine old elms, speaks the importance of its old-time associations. Another memorial of the poet in his native town is the bronze statue in State Street, where four rods meet. He sits here with placid dignity, his cloak drawn about him, and the visitor who explores the picturesque city of his birth soon comes to the conclusion that all roads lead to Longfellow in Portland.

At the centennial exercises for Emerson, and also when the throngs gathered to do homage to the memory of Hawthorne, Colonel Thomas Wentworth Higginson paid loving tribute to the departed, as he did again upon the evening of the 27th, when, at the opening of his address, he offered the following brief characterization of one loved as his teacher, his friend, neighbor, and fellow author. He said:

"We have met this evening to pay tribute to one who had, among all American authors of his time, the most attractive cast."

IMPERIALISM AND ITS FOES IN GERMANY

NEW YORK'S ARCHITECTURAL NEEDS FOR BEAUTY AND CONVENIENCE

By WHITNEY WARREN

Fill one reason or another, the problem of bettering the condition of the city of New York architecturally—by architecturally meaning the making of it a more lifable and more agreeable city, a city where life is easy, communication and circulation convenient and ample, amusement and recreation inexpensive and in evidence—this problem seems to have been looked upon and fought against as one of a more or less impossible nature. As a matter of fact, when we think of the modern transformation of Rome, a city about three thousand years old, with traditions attached to every inch of it, and which in later years has been absolutely transformed; Paris, which at the beginning of the last century, was a mass of teeming narrow streets, indescribably filthy; London, which at the present moment is undergoing vast modifications—when we think of what these cities are doing successfully, the problem of New York, an unfinished and, in many parts, an uncommenced city, a city in a state of transition, anything about, seems possible.

There is a great deal to be said in favor of its layout, which is not as bad as many would have us suppose. After all, with the exception of the lack of one or two diagonal streets in opposition to Broadway, and a few centres of distribution, nothing could be more simple or more direct than its actual plan. At the same time, the esthetic evils with which we have to live at the present moment will undoubtedly disappear, such as the elevated railroad, for instance, which will be done away with and supplanted by subways when the value of property along its lines points to the wisdom of such a step.

The monumental side of the city is typified by the terrific development of public and private enterprise. There is no city in the world where such monuments are being continually erected as they are with us. Its unfortunate feature of the public edifices, which in most instances are really magnificent buildings, is that, from a false economical sense on the part of the "City Fathers," they are too often relegated to side streets, instead of being placed in conspicuous places, where their beauty might lead to a more general effect of the city. From the nature of their construction these monuments, civic and private, are everlasting, and in the future the stranger will visit our city wondering at the daring of the man of the sixteenth and twentieth centuries, who invented the skyscraper, about which so much harm has been said, when necessity presented itself. At that moment the veneer of time will have left its patina, buildings will harmonize, and the ensemble will be of a picturesqueness comparable to that of medieval Florence, as it is now in decay. Undoubtedly it will never have the feeling of the monotonous majesty of Paris, but it will have an individuality that no other city will possess, and there is no reason why certain portions of it should not affect an aspect quite indicative of their purpose, namely, residential, manufacturing, or business.

At the present moment the most important feature in the development of the city is the proper connecting of the different boroughs. Certainly, as far as the boroughs themselves are concerned, this is vital. Brooklyn must have a dignified and monumental arrival, indicated, it would seem to be, where the present Brooklyn and Manhattan bridges meet—something such as is proposed by the City Improvement Commission in its report just presented to Mayor McEllan.

In architecture, the aerial effect of a proper entrance to a house is tremendous. First impressions are lasting. Even in this age of elevators one's impression of the people who live in a house is greatly influenced by the dignity of the entrance and the departure of the staircases to it. How much more so is the impression of a city conveyed to the stranger upon arriving in it through a proper and dignified entrance.

The Bridge Plaza, as presented by the City Improvement Commission, provides for an arrival into Brooklyn which may equal in magnificence, in beauty and in simplicity, the place of St. Peter's in Rome, or that of La Concorde in Paris. This is proposed in a district inexpensive to acquire at the present moment, and part of which happens already to be condemned for a park. Surely no approach should be more magnificent than that of Brooklyn from off great bridges. One should have a feeling of awe upon approaching them, so great are these monuments; and yet, as they now stand, they are so severely hidden that even when one is beneath them one scarcely realizes their existence.

From this plaza it is proposed to cut three great avenues, one connecting with Flatbush Avenue, another approaching the City Hall of Brooklyn, and a third the Navy-Yard, thus making this the distributing centre of Brooklyn.

Another most important problem of the present moment is the

approach of the new Blackwell Island Bridge. It is impossible to exaggerate the importance of the approach to this monument from the New York side. The very existence of the Borough of Queens depends upon it. No makeshifts, such as have been proposed, should be tolerated. There is but one solution—the condemnation of the blocks between Fifty-ninth and Sixty-sixth streets, at least between Third Avenue, where the bridge starts, and Fifth Avenue, and preferably continuing as far as the North River, thus making a great transversal avenue connecting the rest of the city with Long Island City, and in the future, by a bridge across the Hudson, with New Jersey.

At the outset this seems unpardonably extravagant, but when one thinks that the avenue opened would be one of the finest in the world—it might, for the sake of comparison, be likened to the Champs Elysees of Paris—with, at each end, the greatest monument existing, a bridge, the increase of value in property on each side of this avenue would be such as to more than make up for the improvement.

Here it is wise to state that bridges of the future should be destined and designed only to take such traffic as most needs to be taken care of in the open air, all trolley and railroad movement being disposed of in tunnels.

Two notable examples of where this should be practised will present themselves shortly, namely, the bridge referred to above, which must be constructed across the Hudson, and which should take care of the pedestrian and wagon traffic, and also in the case of the proposed reconstruction of the present Brooklyn Bridge. This bridge is in good condition, doing an immense work, and should be aided by being paralleled by a tunnel extending from Canal Street on the North River to the proposed Bridge Plaza in Brooklyn, thus greatly relieving the street. New York terminal by tapping traffic at all points west of the Second Avenue Elevated. Any other attempt to increase its efficiency will only increase the confusion and disorder already existing.

The subway, moreover, should do something not only towards helping to protect and welcome those who come to it from its outskirts. It should also recognize and aid the efforts which our great railroads are now engaged in, by improving the circulation about the commodious and monumental stations these great enterprises are building. Think what the impression of a stranger must be on arriving, at the present moment, under the elevated railway at the Grand Central Station, or at the Pennsylvania Station at the foot of West Twenty-third Street! The city should undoubtedly, before it is too late, condemn certain properties about these great terminal which are now in the course of construction, this for dignity's sake and in order to provide proper circulation for its inhabitants and its visitors. The city has acknowledged this need in one instance, that of the "Urban Improvement," where in future all transatlantic passengers will land, through Commissioner Russell of the Dock Department, is to be provided a dignified and imposing landing place.

The project to relieve the congestion at Forty-second Street and Fifth Avenue is too simple and too important to require comment, as is also the one for increasing the width of the roadway and sidewalks of Fifth Avenue by the suppression of the useless area here.

The suggestion which Mayor McEllan made some time ago to appoint a city architect is an excellent one. The power of this architect should be absolutely administrative, and should be a check for all problems relating to the life of the city. The plan of the city should be under his supervision, and all traffic problems, as well as building problems, should be submitted to him, for it is the business of the architect and his training to know and study the movements of the population. These problems are too often given to engineers to work out, and it should be remembered that the engineers' province is to provide the means of execution, not the planning. Had this been done in the case of present bridges they would never have been placed where they now are, and the congestion now shown would never have existed.

The Commission, in making its report, has occupied itself only with the big problems of the future of the city. In many instances the amount of money necessary to be expended would be large, but the Commission has realized in its recommendations only such improvements as will be future increase of taxable values, very much more than pay the city for money expended.

This is the spirit of all cities in which the spirit of civic pride has been such as to encourage the authorities to endeavor by improving and beautifying their dwelling-places to increase its moral and elevating influence upon the country of which it happens to be the metropolis.

THE PROPOSED WIDENING AND RECONSTRUCTION OF EAST FIFTY-NINTH STREET, NEW YORK

THE PLANS OF THE NEW YORK CITY RAPID TRANSIT COMMISSION CONTRAVENE THE ARRIVAL OF THE BLOCK BETWEEN FIFTY-NINTH AND SIXTY-THIRD STREETS AND THE EAST BOUND FOR THE EVACUATION OF A DISTRICT OF THE MANHATTAN ISLAND SCHOOL. THE NEW YORK CITY RAPID TRANSIT COMMISSION.

A STORY IN FOUR PARTS—PART IV.—(Conclusion)

IN the next few days no letters came. The seedlings stopped abruptly, as by preconcerted action, and the silence that followed held something sinister and unusual. The sudden cessation gave the feeling that the end was not yet come, that somewhere in the void something was taking its course, that a new phase had entered into the thought and was shaping things in secret. And time sped by, with a sweep of its mighty plumes—each upward swing a day, each downward sweep a night!

Twice "the Pike" had interviewed her Excellency at a most unusual hour. He scolded the man in the afternoon who helped him off with his coat, rowing him in energetic whispers as though he were one of his own policemen or a cabby. And when the coal was off and he was drawing on his fresh white gloves he bent his sleek head condescendingly to the fellow's side-whiskers, gnashed his musty, tobacco-stained teeth, and held his half-gloved hands with fingers dangling limp, close over his nose (he always did this at the slightest contact with a lackey); then assuming the manner of a man of the world, he counted the stairs.

Formerly he would never have dared to scold the Governor's servants, but now things were come to such a pass that he not only did, but must! Last night a highly suspicious character had been arrested by one of the secret agents close to the entrance of the palace. At a distance he had followed the Governor on his accustomed morning stroll; then had hung about the place all day, peering in at the basement windows, hiding behind the trees, and conducting himself in a most suspicious manner. On his arrest they found neither weapons, papers, nor any other treasurable articles about him; and they recognized him as the suburbanite Ipatkoff—furrer by trade. His statements were vague and shifty. He asserted that he had only passed the house once, and seemed to be hiding something. On searching his quarters they found but a few rotten skins, a boy's fur coat, unfinished, and other appearances of his trade. Household goods there were none; no weapons, no papers. The case seemed in the highest degree mysterious. Some of the Governor's household—the lodgekeeper nor any one else—had observed him, though he had passed the main entrance at least a dozen times.

In the night a spy tried the door to test the matter, and finding it unlocked, walked into the porter's lodge, scratched his name on the wall as a proof of his presence, and then walked out again unmolested. The gatekeeper plotted forgiveness as his excuse for not looking up. . . . But at such a time, when such an attempt was to be expected, that sort of carelessness was unpardonable!

"I'm in an awful fix, your Excellency," complained "the Pike" to the Governor's lady, laying his white-gloved hand on his aching breast. "His Excellency won't listen to the idea of a body-guard! The Secret Service men are dog-tired (excuse the expression) with their everlasting trotting after him . . . and to tell you the truth, it's all nonsense, anyway, because the first scandal that comes along could catch him around the corner, or tell his Excellency with a stone over the wall. . . . If anything should happen—which God forbid!—people will say, 'The chief of police is to blame! The chief of police did not watch out!' What can I do against his Excellency's damned stithbones? Excuse the expression, your Excellency . . . but fancy the position I'm in! It really is too . . . I'll bid you good day, your Excellency!"

It developed that "the Pike" had prepared a programme. The Governor was to rest a few months; he would travel for his health—any one of the foreign baths would do. Things were quiet in the city now, and he was in high favor at St. Petersburg—there would be no trouble on that score.

"Otherwise I can guarantee nothing, your Excellency!" continued the chief, with feeling. "Human powers, your Excellency, and I tell you frankly I cannot answer for anything! . . . After two or three months I will all happily be

forgotten, and then—welcome home, your Excellency. It will be just the season of the Italian opera—we'll give a gala performance!—and then his Excellency can take his walks abroad to his heart's content!"

"What nonsense about the opera!" said the Governor's lady; yet she approved of the proposition, as she herself was most uneasy.

On his way out, the chief of police stopped at the lodge to bully the porter again.

"I'll teach you! . . . I'll make your chin-whiskers stand up! You fat-faced fool! . . . The grown chin-whiskers like. Lord Chancellor—the son of a gun!—and thinks he doesn't have to look the door! I'll make you dance! You!" . . .

That evening Maria Petrovna begged her husband to take her abroad with the children.

"Oh, please, please—won't you!" she said, in her tired voice, her eyes drooping under their long, dark lashes. Her face was thickly powdered, and her yellow, fatty cheeks dangled like a pointer's as she shook her head. "You know I've not been at all well lately, and, really, I must go to Carlsbad."

"And you and the children go without me?"

"Ah, but no, please! What makes you talk like that! I'd be so worried if you were not there, please!"

She did not say what would worry her—her object was clear without that. To her great surprise, Peter Ilyich readily agreed to the plan, though under ordinary circumstances her mere mention of a wish called forth his opposition. . . . at least that used to be their way!

"They certainly can't lay that to coarseness," thought the Governor. "It isn't any plan at mine—and maybe she really does need a cure. She looks as yellow as a lemon. Besides, there's always plenty of time for them to kill me! . . . and if they don't attempt anything it will prove that I am right and they are wrong. . . . Then I'll resign—and then I shall hold the finest kind of a conservatory."

Even while these thoughts were passing he was convinced that he would neither have the trip nor the conservatory. That was why he had given such prompt assent. And after he had consented he forgot the circumstances immediately, as though they did not concern him in the least. He hesitated for a long time about the arrangements for his far-agoed, set the date, changed it, and then forgot the thing completely till ten days after the time he had appointed. Then again he named a day. . . . but again he forgot it deliberately. Moreover, his wife, whose mind was completely set at rest at the mere idea of their departure, did not urge him to hurry—she had her fall wardrobe to finish, and tailors and dressmakers took all her time. . . . Besides, Clara was not nearly ready.

In the lonely silence surrounding the Governor since the sudden stopping of the letters, he felt something incomplete—like the echo of a soft voice in the distance; as if he sat in an empty room, with some one speaking behind the wall, the vibrations of whose voice could be felt but not heard. And when another letter came—a final belated letter—he went forward to take it as though he had long been expecting it, and was much surprised to see that it was in a slender, delicately tinted envelope, with a forget-me-not stamped on the back. But it did not come in the morning, like all the other letters which had been posted the night before, but with the evening mail, showing that it had been written the same day. The note-paper was of the same pale shade, and was also stamped with the blue forget-me-not. The writing was painstaking and distinct; the lines slanted heavily, as though the writer were not quite sure of her syllables, and rather than divide the words, ran them down the page in a small, cramped hand. At first she seemed to write down-hill long before the end of the line, in tiny little letters, in the evident fear that she would not have time for the rest of the sentence. And the words

all seemed to be coasting down the snowy page—the smallest ones in front on their little sleds.

The letter was signed, "A School girl!"

"Last night I dreamed about your funeral, and I am going to write you about it—even if it isn't right, and if it does harm the poor workman and the little girls that you killed! But you're a poor old man yourself, and so I'm writing you this letter."

I dreamed that you were not buried in a black coffin, as all other people are, but in a white one, like the ones for little girls—and it was policemen that went down Moscovia Street, carrying your coffin, and they didn't carry it with their hands, but on their heads. And a great crowd of policemen walked behind. But none of your friends were there, and none of the people in the city. And all the doors and windows were barred when you were carried by—so they are at night!

"I was so frightened that I waked up, and began to think about it—and that is what I am going to write you about. . . . I thought maybe there is no one at all who will cry for you when you are dead. The people in your house are all hard and selfish, and only care about themselves; and perhaps when you die they'll be glad, because they think then they can be Governor! I do not know your wife, but I don't believe there can be very many gentle and kind ladies in those circles of pleasure and pride."

"No respectable people would ever go to your funeral, of course, for they are all angry at the way you treated the workmen. . . . and one man even said they wanted to put you out of the club, but they were afraid of the government! . . . Masses won't do any good, because you know yourself our Bishop would just as soon say a Mass for a dead dog if he got money enough for it. . . . And when I think that you probably know all this without any telling you, then I feel very sorry for you—as if you were really a friend of mine! I've only seen you twice: once on Moscovia Street—but that was long ago; and the last time at our school exhibition, when you drove up with the Bishop. . . . but of course you wouldn't remember me then! . . . and I promise you faithfully that I'll pray for you, and that I'll cry over you as though I really had been your daughter, because I am very, very sorry for you!"

"If, R.—Please burn this letter! But I am so awfully sorry for you!"

He loved that little schoolgirl!

Late that night, just before going to bed, he stepped out on to the balcony—that same balcony brass which he had given the signal with his white handkerchief! The cold fall rains had already set in, and the night was black and dismal. In this heavy autumnal darkness one felt how far away the sun was, how long it had been gone, and how late the dawn would be. Far to the left in the driveway, burned two bright lanterns with reflectors, and their white light penetrated the darkness, yet did not banish it—there it still lay, quiet, close, ponderous.

The city doubtless slept already, for not a lighted window was to be seen, and no wheels rumbled in the dim-lit streets. Under one of the lanterns something gleamed vaguely—probably a puddle.

School has closed for the day, and she no doubt has long since done her lessons, and now sleeps quietly somewhere in this dark, silent space, where they send their letters with their threats, whence his death is about to come! But there she, lives this little child who sleeps just now, but who will weep for him when his time comes.

How quiet it is, how dark, how silent!

VIII

Two weeks before the Governor's death a linen-covered package was handed in to the Government House—its value declared at three rubles. It proved to be an infernal machine—a bomb intended to explode on being opened, but it was badly made by the unskilled hands of one who had only read of such things—so it missed fire. Yet in the very hour-made simplicity of the outfit there was

something sinister and terrifying, as if killed death had stretched forth his hand and was fumbling clumsily about in the dark.

The police sensed the alarm, and Maria Petrovna insisted upon her husband's writing to Petersburg that very day to ask for sick leave. She herself drove first to the tailor's, and then wrote her son a long letter full of horrors—all in French.

A strange and radical change had come over the Governor. In place of the man they used to know appeared an entirely new figure. No one knew precisely when the change came about, and he the man he seemed the same; but upon his face had dawned such an expression of righteousness it seemed a new countenance. He smiled where formerly he would have been grave, and frowned where he had been wont to smile; he was bored and indifferent where he used to be attentive and anxious. He was horribly caustic in the expression of his feelings. When he chose he was silent; left the room when he felt inclined, and turned his back when people bowed him.

Those who had counted for years on his liking and friendship, who knew all his thoughts and moods, felt themselves suddenly neglected—quite shored aside—and could no longer understand his feelings and favors. All the bows and smiles and cordial greetings had suddenly disappeared—the little ceremonious forms of politeness—"If you will be so good, my dear fellow!" "I am vastly obliged to you, my dear sir!"—which had seemed like second nature to him, he dropped completely; and people were taken aback at the remarkable, even alarming, originality of his new manner. So animals, accustomed to looking on a man's apparel as the person himself, might be taken aback at the sight of a make-up figure.

He had simply ceased to be polite—and directly the bond was broken which had held him throughout many years to his wife, his children, his associates, as though it had only been made of smiles and compliments, and had vanished together with the reverence-kissing of the hand. He did not love them, he did not hate them; found nothing new or repulsive in them—they simply fell out of his soul, as decayed teeth crumble in the mouth, as the hair falls out, as a dead skin is sloughed off—painlessly, quietly, without an effort. When the will of emotion and politeness fell from him he stood there forsaken and aloof; yet he did not even feel it, as though loneliness had been his natural state throughout his long, eventful life.

He forgot his morning greetings, he forgot to say good-night; and when his wife held out her hand, or his daughter Clara bowed her smooth forehead to his lips, he was not quite sure what to do with the hand or the forehead. When guests came to luncheon—the Vice-Governor and his wife, or Kodoff—he did not rise or bow or smile, but went hastily on with his meal, and when he had finished he did not ask to be excused, but simply rose and left the room.

"Where are you going, Elena? Please stay with us; we are so lonely. They'll bring the coffee soon!"

He answered calmly, "No! I'd rather go to my study. I don't want any coffee," and the rudeness of the answer was not lost in its candor and simplicity.

He cared nothing about Clara's new clothes, did not greet the guests of the house, let her Excellency invent excuses for his absence, had nothing to do with society, and refused to accept statements without an explanation of motives. Twelve a week he received petitioners, and listened to each attentively, with an interest that seemed even a trifle rude, as he inspected the petitioner from head to foot. "Are you convinced that it will be better so?" he asked, after he had listened patiently; and when the astonished man had given an affirmative answer, he promised immediately to grant his request. In these days he never considered the possibility of overstepping the limits of his powers, or else he had an exaggerated impression of them; at all events, he often decided matters which were quite out of his province. The new

"I'll teach you . . . I'll make your chin-whiskers stand up!"

Governor, in consequence, had many difficulties with the entanglements that resulted—all the more so as some of the questions were of the most complex and illegal character.

In order to dispel her husband's gloom, Maria Petrovna often came to his study, felt of his forehead to see if he were feverish, and began to talk about their trip. But he held her off with blunt directness.

"Yes, very well; run along now! I would rather be alone. You have your own room, and I don't bother you there!"

"Ah, how you have changed, Pierni!"

"Noneuse! Noneuse!" he said, in his gruffest tones, leaning his back up against the cold stove. "To go and make that pug of yours shut up. You can't hear a thing in the whole house for his barking!"

If all his former habits, card-playing was the only one which he still enjoyed. Twice a week he had his whist, and he played for small stakes with keen and evident pleasure. He was a thoughtful, clever player, and if his partner revoked he called him down in proper shape. "What are you thinking of, my dear sir! I led diamonds!" flashed out his cool, clear voice, hard and cutting as the diamond itself; and Maria Petrovna, in the next room, hearing her husband's voice, would smile her tired smile and shake her head sadly. Her yellow cheeks hung flabby as a painter's, the powder stood out on her face, and her heavy, bulging brows, like lead, and fell like rain shutters in a shop window. At this moment it seemed to her, as it did to all the others, utterly impossible that a person who could play cards like that could be assassinated.

Through the two long weeks before his death he simply waited. Doubtless he had other feelings besides—thoughts of the daily routine, his surroundings, his past; the stale, old thoughts of a man whose body and mind are long since fossilized. Probably he thought of the workmen and that red, awful day when all these reflections were vague and superficial, and vanished as they came, like the light wind's ripple on the river; and again, as before, the still, dark waters of his faithless soul stood calm in silent waiting. It was as though poisonous and habit only had united him to his mental work, and when his ceremony and custom vanished his ideas died too. He was as isolated in his brain as he was in his family.

As usual, he rose at seven, had his cold shower, drank his milk, and at eight o'clock took his accustomed stroll. Each time he crossed the threshold of his palace he felt that he should never return—that the two hours' walk would pend him into an eternal wandering through the unknown. With his red-lined general's cloak, tall, broad-shouldered, his gray head high with soldierly bearing, he marched through the city for two long hours like a stately ghost. Past wooden houses dark with moss, past countless gates and empty squares, past shops whose clerks, shivering in the bleak morning air, bowed slavishly. Whether the pale October sun shone out, or the fire, cold rain trickled down, unfaithfully he rustled and fumbled his way, and in the summer of the town, seeking death at the head of his column. Forward he marched through mud and puddle, the scarlet lining of his overcoat reflected in the mud; forward through the streets, not noticing policemen's salutes or horses—and a bird's-eye view of his daily march suggested to his mind, as an extraordinary travesty of sheet, straight lines, crossing and recrossing in a hopeless tangle. He seldom glanced to right or left, and never looked behind. Yet scarcely even saw what was before him, so sunk was he in the depths of his dark forebodings. He rarely acknowledged greetings, and many a startled eye encountered his passing glance—direct, unseeing, and yet so penetrating.

Long after he was dead and buried, and the new Governor, a smiling young man surrounded by Cossack guards, drove rapidly through the city in his equipage of state, many recalled these last two long weeks of his pilgrimage—the gray-haired ghost in the general's uniform, marching through the mire with upright carriage, the scarlet lining of his cloak glancing in the puddles, and followed by the heavy old law, "A life for a life!"

The crush and the jostling curiosity of the main streets worried him, and he preferred to lose himself in the silent, squalid alleys with their tiny three-room cottages, their broken fences, and slippery wooden sidewalks. Throughout these days he had but one desire—to go the length and breadth of Kawathaya Lane. But he could not bring himself to gratify this wish; it seemed too horrible, too painful, more painful than death itself, and a thrill of wonder came over him as he thought that earlier in September he had driven down the lane quiet fearlessly, and had even wished that he might meet some one of the people to speak to them in passing.

But one spot he never neglected. This was the street that led to the seminary, where each morning, just at nine, it swarmed with little schoolgirls. Forgetting his usual haste, he strode along here like some good-natured, whimsical old general, out for his morning walk. He nodded to them as they came, the big girls short, stately, tall, and dignified; then the little ones, with their short brown skirts and their huge knapsacks—and they shyly answered his greeting. His near-sighted eyes could not distinguish their faces. Large and small, in groups they came, and they seemed to him like a cluster of red poppies. As the last one passed he smiled his quietest smile, a shy twinkle in his eye meanwhile, and then at the next corner he was transformed again into the silent, stately ghost, seeking death at the head of his column.

At first two spies, at their chief's command, trailed him at a distance; but he did not observe them, as he never looked back. For some days they conscientiously followed his devious path, but soon tired of it—it seemed so foolish to run after a man who was hanging about the most dangerous spots in such an idiotic way—

so they stopped now and again at some friendly shop to gossip with a policeman, dropped in at an ale-house, and often lost sight of their charge for hours at a time. "It's all the same—there's nothing to do, anyway!" said one of them, apologetically. He had the smug, slattern face of a priest, and seemed a peevy old fool. He was gulping down a hot *pot*, and although he had not quite swallowed the first, he was already reaching for the second.

"When a man is in danger, and runs into the trap himself, what are you going to do with him?" said the other, smiling tell me.

"Oh, it's only for the state's sake," said the barkeeper.

"And how about the 'Pike'?" asked the second spy, a gloomy man, who had seen better days, but was given to drink, and had been caught cheating at cards. Growling like a dog over his bone, he drank everything in such a drinking vodka steadily and steadily while; and though he was never drunk, yet he never stopped drinking.

"What about the 'Pike'?" He knows well enough that we aren't angels in this house, he knows well enough that we aren't angels in this house."

He acts like a horse in a fire—take him out of his stall, and he rears and plunges. He'll sooner turn up than leave the stable!" said the barkeeper.

"No, he knows we aren't angels," repeated the first, with a sigh.

And, in fact, they had very little in common with angels, these two poor devils—and it was quite beyond their feeble power to arrest the course of events.

Home gone over the familiar threshold, even then the Governor felt as if he were on the brink of one more day of his life. He took things as they came, and forgot the scenes of his past wanderings in the awakening dread of what the day would yet bring. And the empty, idle days passed by with frightful haste—yet time stood still, as if for the moment that turned up night he were dead, and he was not to see the day again. On the same old day came round again. Even the calendar on his desk, that he used to turn—usually at night, as though he were calling up the advancing day—even this stood pointing to the long past date; and when occasionally he looked at that back he would bring to his breast his head, and a feeling of sickness came to him as he turned his eyes away.

"Noneuse!" he exclaimed, angrily. Nowadays, when he was alone, he broke often into short ejaculations, indefinite and disconnected. He was especially apt to say "Noneuse" or "Disgrace!"

He did not fear death in the least, and viewed it quite impersonally. They would shoot at him, he would fall. . . . And then would come the funeral, with the bands, and his friends carried behind the coffin, etc. He'd go heavily forward to meet it. He did not even think of a life beyond the grave, for him it all ended here. And he ate with his usual appetite, and slept soundly and dreamlessly.

Yet once in the night—and it was three days before his execution—he had a heavy dream, for he awoke with the sound of his own hoarse, stifled groans, and he recognized this strange, dull voice of his, and his eyes encountered the darkness, he felt the shadow as a weakness of death. He bunched the clothes up over his head, drew up his long knees, bunched himself into a bundle and, without waking, and without his whole power, from infancy to age—be began to sob bitterly and softly: and whispering to the damp, white, silent pillow: "Have pity on me! Help me, some one, whoever it is! Have mercy! Oh, oh!"

But no one was there to pity him; and soon he was conscious, through his tears, of his great shaken frame, in a strange, cramped attitude, and his rough, hoarse voice, and he mastered himself and lay still. And long he lay there silent, in the same tense pose, staring up, wide-eyed, into the dark. And in the morning he started out again in his military cloak. For two days more its scarlet lining was reflected in the puddles by the way, and the tall, stately ghost stalked through the streets, seeking his grave at the head of his column.

The affair came about very simply and quickly—like a picture in a dream.

At the crossing of two streets was a dingy hay-market, open on Fridays; and here a hesitating voice arrested the Governor.

"Your Excellency!"

"Yes?"

From behind a lonely hedge across the street two men came hastily striding through the mud; one in high boots, the other in gaiters without overboots, his trousers rolled up. These two feet must make him very cold, for his face in greenish pale, and his thick, blond hair stands out very stiff from his head. In his left hand he holds a folded paper, and the right is thrust deep into his pocket.

And directly all is clear: the victim knew that death had come, and they knew that he had seen it.

"If you please," said the man, and a convulsive tremor passed over his face.

"A petition? What is it about?" the Governor asked, superfluously, too. But strangely impelled to play the scene out. Yet he did not resist for the petition he held out his left hand, with the bit of paper that would have delivered him, and without handing it to the Governor he fumbled with his right hand for the revolver, knifing his brows in his endeavor to free it from the lining of his pocket.

The two men spoke again, one spoke glare about. The squalid marketplace, the mud littered with straw, the lonely hedge. Ah! but it was too late! He gave one short, deep, gasping sigh and straightened up—without terror, and quite without defiance. Yet still there lay somewhere, perhaps in the deep-set wrinkles about his

Drawn by G. W. Peters

In his left hand he holds a folded paper, and the right is thrust deep into his pocket

heavy now, a quiet, almost imperceptible, pleading for mercy—just a trace of remorse. But he himself was unconscious of this, and neither of the men observed it.

His death came in three quick shots, scending together in rapid succession like a single loud report. Three minutes later a policeman hurried up, followed by the secret-service men, and then the people, as though they had all been hanging about the neighborhood, behind the corner, awaiting the end.

And the corpse was covered over.

Some ten minutes later the ambulance drove slowly through the streets with its red cross—and throughout the city questions and answers flew like stones:

"Is he dead?" "On the spot." "Who was it? Did they arrest him?" "No, they got away. No one knows who it was. There were three men!"

And all day long they spoke only of the assassination, some with censure, some with joyful approbation. But through all their talk, whatever its character, one felt the shiver of a mighty terror. Something powerful and annihilating swept like a cyclone over their daily lives, and from behind their drapery counters, their awnings, their beds and wheaten cakes, peered forth through the dimness of the commonplace the threatening figure of that hoary old law of revenge.

And the little schoolgirl wept!

THE SCARCITY OF TORPEDOES FOR THE NAVY

By FRANK N. BAUSKETT

THE seriousness of the situation due to the lack of torpedoes by the United States Navy is made known by the Navy Department. It is estimated that \$1,250,000 will eventually be needed for the construction of a torpedo plant and for the manufacture of torpedoes, and Secretary of the Navy Metcalf has recommended that Congress appropriate \$550,000 at the present session for the purpose. In speaking of the situation, he says:

"The torpedoes on hand are insufficient to supply the torpedo-boats, and are old and worn. Torpedoes are becoming unserviceable through loss and breaking up, and unless measures are taken at once to remedy the existing shortage in a year we shall be able to supply torpedoes to no more than half our torpedo-boats. To indicate our relative lack of preparedness, it is only necessary to consider that Great Britain has on hand 8000 torpedoes, and that one of the belligerents in the late Russo-Japanese war expended more torpedoes in a week than we have effective now on hand.

"That something should be done is, in the opinion of the Department, not a debatable question; the only question is how to relieve the present situation. There is only one firm in the United States that builds torpedoes, and while they are now behind in contracts for torpedoes for the new vessels, it is, of course, possible for this firm to increase its facilities and its subsequent output. The Department believes, however, that the best interests of the government would be served by the establishment of a torpedo factory.

"In the manufacture of torpedoes in the United States a monopoly exists closer than any combination of separate firms. When it is considered that to meet the needs of the navy it will be necessary to build at least 2000 torpedoes in the next ten years, at an expenditure of between \$7,000,000 and \$8,000,000, it would surely seem wise to have the government, in a matter involving such a sum, helplessly subject to the dictation of a monopoly which has not in the past shown any evidence of disinterestedness.

"That the situation is such as to justify the creation of a torpedo factory, it is only necessary to consider our present pitiable condition as compared with other first-class naval powers, the inadequacy and unreliability of our present source of supply, and the fact that to supply the needs of the service and to provide for a proper reserve we should manufacture 1000 torpedoes at a cost of, approximately, \$6,500,000. Four hundred of these torpedoes have been contracted for, and the facilities of the only source of supply will be taxed to the utmost to complete them before July 1, 1909. Such a factory would prevent a repetition of the present situation. Since the necessary torpedoes to arm our ships are not available and cannot be obtained in the United States without great delay, the Department sees no way to relieve the serious situation then to purchase them abroad."

Secretary Metcalf thinks this course would be justifiable, and has asked Congress for permission to make the purchase ahead of 100 high-powered torpedoes. That serious objection will be raised against such a course there is little doubt, but in view of the fact that the only beneficiaries of the opposite course would be a monopoly who, besides not being able to supply the government's demands, have in the past unobtainingly taken advantage of the government that protects it, it is hardly probable that such objection would be sustained.

The New York Police

(Continued from page 39.)

missed has been kept off the force, and of the present nineteen inspectors three have been thus dismissed.

The Page-Prentice bills abolish the grade of inspector and reduce the present inspectors to the grade of captain, but with their present salaries. The bill provides that inspectors be detailed from the rank of captain and hold that position only as long as their work is satisfactory to the Commissioner, being paid at the rate of \$3,000 per year while doing inspector's work, and at the rate of \$2,500 while doing that of a captain; by this plan not only will the man to do his best to retain the position with its higher rate of pay, but the captains will be alert to qualify for promotion.

The inspectorship reform is the most important of all. When the district attorney sends a gambler word that he wants him to close up, that man closes up, and the Police Commissioner could do the same if he had a Deringer law, with the power of subpoena. In default of that give him the club over the heads of the inspectors that the Page-Prentice laws will furnish, and he will keep the places closed that ought to be closed. When an unlawful or disorderly place is opened in an inspector's district he becomes aware of it within a week at the outside, if he is competent to hold the position, and if the place remains open, the fact is demonstrated that the inspector is either incompetent or corrupt.

The possibility of quick and drastic action by the Commissioner only will put the inspectors on their nuptial. The strengthening of the term of office of the Police Commissioner is also, I believe, an essential to his obtaining the very best results from the department. Not only does he grow wiser with experience, but his control of the men under him is greater when they know that he is to continue at his head. If they look upon his position as merely a temporary one they will not render as loyal service as to a permanent one. There is a point, however, on which, for obvious reasons, I may not enlarge.

The necessity for a Fourth Deputy Commissioner is set forth in my report to the Mayor, but that is a matter of secondary importance. Give me control of the inspectors and the opportunity to reorganize the Detective Bureau and there will be trouble in the force if I do not give New York the best police administration she has ever had.

The Longfellow Centenary

(Continued from page 39.)

ination of qualities. He was at once genial and guarded; shy in fact, yet free and cordial, but with an impassable boundary line of reserve; dwelling in a charmed circle of thought, yet absolutely self-protecting; essentially a poetic mind, but never out of touch with the common heart; not so much a creator as a composer; and viewing his subjects, as a very acute observer has said of him, "in their relations, rather than in their essence." He was one to whom a poem might occur, as did "The Arrow and the Song," while he stood before the fire waiting for his children to go to church with him; and he was equally able to spend patient years in hearing and weighing "dewy and withal devout," as he says, the criticism of other Italian scholars on his version of Dante. He was abstemious, yet wrote joyous drinking songs; for his friends did not call himself an abstemious, yet pronounced the day of the execution of John Brown, of Ossawatimie, to be "the date of a new revolution, quite as much needed as the old one." When worn with overwork he could sit down to write a hundred autographs for a fair in Chautauque; or, perhaps, go out and walk miles to secure kindness for a friend troubled with chronic and insupportable pneumonia. He was choler in his invited guests, yet drove his housemaids to despair by insisting on the admittance of the poorest children in Cambridge, to tramp through

his study daily and to sit triumphantly in the chair which their school subscriptions had bought for him. This was the man whom we meet to commemorate; this was Henry Wadsworth Longfellow.

Longfellow's love of seclusion, failing health, and earlier passing, made him last years a memory more vague than vital even to his closest friends; Emerson's final years were darkened by that cloud which settled more and more heavily upon his brilliant mentality, until he could not, "Strange the kind heavens should keep us upon earth after they have destroyed our connection with things!" But Longfellow's old age was as beautiful and serene as a fair winter sun.

The rare graces of Hawthorne drew vast appreciative crowds to Salem and to Concord, Emerson's marvellous intellectual endowment and noble philosophy brought eager thousands to pay sincere tribute to his memory. But Longfellow's beautiful spirit and his tender human understanding of simple human needs made his memorial celebration, on February 27, an epoch in the hearts of the thousands and tens of thousands whose love he had inspired.

"The sweetness and gentleness, the grace and purity of his verse, were the image of his own soul. The man was more and letter than the poet."

Juvenile Economy

"Tomorrow," said the food merchant, "don't it rather an extravagance to eat both butter and jam on your bread at the same time?"

"No, no, no, it's economy," the boy answered. "The same piece of bread does for both."

The Editor Regrets

"When I was city editor of the *Virginia City Enterprise*," remarked Mark Twain at a dinner in New York, "a fine turkey was one 'day left at the office.'"

"Turkeys were rare in that high altitude, and we all hankered after this bird. The proprietor, though, claimed it for his own. He took it home and had it cooked for dinner."

"The next day, as he was expatiating on the turkey's richness and tenderness, a letter was handed to him. He opened it and read:

"MR. EDITOR: I sent you a turkey which has been the cause of much dispute among us. To settle a bet, will you kindly ask your agricultural editor to state in tomorrow's issue what it died of."

A Slur on a Great State

It is told of the Right Reverend Daniel R. Tuttle, D.D., D.D., who had been attending an important conference at Lambeth Palace, London, that during a very formal function he and his wife were loosely assailed as "The Bishop of Misery and Mrs. Tuttle."

On Good Authority

A CERTAIN Boston man doesn't go to church often, but a week or so ago he was persuaded by his wife, and they attended services together. Upon their return home he regarded her with a teasing look and asked:

"Now look here, my dear; which is worse, not to go to church at all, or to go and pay absolutely no attention to the service?"

"If you mean that for me I think you are horrid," she replied.

"Well, you didn't; you were looking at all those diamonds the woman in front of you had on all the time."

For an instant she blushed, for she is an honest little woman, but quickly recovered her poise.

"Oh, well, suppose I was," she retorted; "didn't you ever hear of sermons in stones?"

Pro and Con

"This play is dreadfully incoherent," remarked Mrs. Kritique. "The second act takes place five years after the first, and the heroine is wearing the same gown."

"I think it's all very consistent," said Mr. Kritique. "You'll notice that the heroine's husband wears the same hat."

A Lesser Evil

THE SEASON'S PLAYS

ELLEN TERRY IN TWO PLAYS

By "I"

IN the last week of her three weeks' visit to New York at the Empire Theatre, Miss Ellen Terry appeared in "The Good Hope," Heijermans' four-act play of the Dutch fisherfolk, and that most delightful of one-act comedies, "Nance Oldfield."

Her first week was given up to the Shaw play, "Captain Brassbound's Conversion," and it had been her intention to present it only during that week, following it, for the succeeding performances of her engagement, with the Dutch play and the English playmate. But, by some lucky chance, "Brassbound" was permitted to live one week longer. As for the Heijermans play, it did not live at all in spite of its week's presentation. It is said that Miss Terry is very fond of this play, particularly of her own part in it, but this fondness must remain emotional to all who read so affectionately, so admiringly, so hopefully to see her in it. From first to last it is unconvincing, at least as Miss Terry and her company presented it. The theme of the play, the might and cruelty of the sea, and its sinister shadow over upon the lives of the fisherman and their families, is one of undeniable impressiveness. It is a dramatization of the ceaseless forebodings and the recurring tragedies in the lives of these Dutch fisherfolk and the awful price they pay the sea for the fish they take from it. The constant waiting, with resigned expectancy, for news of disaster in the key-note of it, a note which should be as the tolling of

a deep-mouthed, ominous bell. But never once does this bell ring out. Miss Terry and her fellow players come upon the stage, recite their lines, and go off; the curtain rises and falls—and so for four acts. There are Dutch costumes and wooden shoes and a Dutch kitchen with a broad window looking toward the sea—and there is an end. One does not sense the heart-crushing burden of dread upon these poor people, nor the tragedies they relate, nor even the sea which they hear thundering in the rage of storms just without the kitchen window. The bell—there is no bell; they are not Dutch fisherfolk, there is no storm, nor sea, nor tragedy, only words, and the show rise and fall of a tired curtain.

It is a great pity, all of it, but Miss Terry is an unconvincing as the finest known member of her company. She is *Kaierje*, a fisherman's widow, one who has already dearly paid the sea, but she does not for one brief instant suggest the sorrow-ridden fisherman's widow; she appears to be only acting the part. That the resulting impersonation is greatly attractive it is scarcely necessary to say, but it is the attractiveness which belongs to Ellen Terry, and not to *Kaierje*, the Dutch fisherman's widow, because we gravely doubt the unending grieffulness of these heavy, hardy, kindly old souls, in their wooden shoes, whereas there can be no doubt of Miss Terry's grace. She is delighted, but she is not Dutch. She is just a very sweet old lady who has for a time left her own comfortable surroundings, her arm-chair, her fire-place, and her cat, and is masquerading in Dutch clothes and trying to be Dutch on the principle of "when you are in Holland, do as the Hollanders." She succeeds very well in doing as the Hollanders about her do, because they are not Dutch.

The story of Heijermans' play deals with the foundering of a rotten fishing-smack, *The Good Hope*, which has been sent to sea by her owner, *Olmeida Bos*, who knows her to be rotten and who seeks only the insurance which will be paid upon her loss, caring nothing for the lives of those who have put out in her. *Bos* is played in fairly acceptable fashion by Rudge Harding. Two of *Kaierje's* sons—*Geert* and *Barred*—are on the smack, and are, of course, lost in her. *Geert* is played by James Carew, who, in one or two scenes, gave the only real life, the only really sincere touches, to the entire play. He is a youth with socialist tendencies who has been discharged from the navy, and it is in his denunciation, first of the conventions which bind him, and afterward of *Bos* for his grudging injustice toward the fisherfolk, that he rises momentarily above the unfortunately monotonous level of the play. *Barred* is in her own way as lost at the issue of going aboard *The Good Hope*, having learned she is rotten and sent out in order that she may be wrecked, and, as portrayed by David Powell, a character which should have made powerful appeal is rendered one of grotesque, almost ludicrous exaggeration. *Kaierje*, according to the boy's assertions of the unworthiness of the smack and unwilling in let his comrades be known, forces him to go to sea, even delivers him into the hands of the harbor police who have come for him on the eve of sailing. Here is a scene between mother and son, which should clutch hard at the heart of every one in the audience, but which simply and entirely fails. It is a moment of the highest tension and dramatic to a thrilling degree, but it does not arouse one ray of sympathy for either mother or son. *Kaierje* is naturally supposed, by reason of her lot in life and the lives of those about her, to be hardened against fears, even against the tragedies which come so constantly upon the village folk, but in Miss Terry's rendition one cannot but feel that her real reason for forcing *Barred* to go to sea, in the face of his quaking fear, is because the play demands it. The action does not seem to arise from the stern yet tender disclamation of the mother to recognize the coward in her son. The boy has what is to him ample reason for his fears, and they are indeed realized. The news of the unworthiness of *The Good Hope* comes from a drunken carpenter, so there is good reason for his rejection by the other villagers. But the boy's terror is so hopelessly overacted that one feels he stands far more in need of a good trouncing than of rebuke from his mother.

Of the women in Miss Terry's company Miss Suzanne Sheldon, as *Joe*, the niece of *Kaierje*, and Miss Edith Craig, Miss Terry's daughter and stage manager, as *Gerret*, a fisherman's widow, were the only ones who succeeded with their parts. On the night of the storm which sends *The Good Hope* to the bottom several of the women of the village are in *Kaierje's* kitchen, and they fall to recounting the evil days upon the sea which have robbed them of

Drawn by F. J. M. G. S. S. S.

Ellen Terry as "Kaierje" in "The Good Hope"
"WE HAVE TO PAY DEAR FOR THE FISH"

fathers, brothers, or husbands. *Joe* is in love with *Geert*, and in his affianced wife, and for this reason and for an even better—or worse—one is distraught with fear of his peril. When she can no longer bear to hear the tales of tragedy she dashes from the group and out of the room in a frenzy of horror and despair. Miss Craig has very little to do, but she is the only really Dutch-looking figure in the play.

There is so much of force in the play that it is inconceivable how, practically, every bit of it should come in the course of this presentation of it. There is ample opportunity for a most effective scene during the melancholy meeting of the women in *Kaerle's* kitchen, when the audience might be made to feel the hopelessness of the lives of these fisherfolk who were at the mercy not only of the sea but of the land sharks who engage their meekfolk for service in the fishing-boats. But there is nothing of prominence in the talk of the women, even the whistling of the wind-machine seems a little more false than usual.

After the storm comes the news of the loss of *The Good Hope* and a melodramatic sort of scene in *Boa's* office in which *Kaerle's* comes to make inquiry for her boys and receives tidings of their death and a few charitable promises of work from *Boa's* wife. This act is worse than the others.

There is nothing of real sorrow in the demeanor of any of the villagers who come to see the wrecked smack. There is much shrieking and tears, but they are far from real. One moment which might have been most effective, that in which *Boa*, the drunken ship's carpenter, and *Boa's* daughter are face to face, the carpenter with renewed accusation that the owner of *The Good Hope* will know of the rottenness of the craft and the adroit statement that *Boa's* daughter also knew these facts. *Boa* commands an untruth from his daughter, and she supplies it, but she gives no convincing tokens of the struggle which must have filled her breast at this sacrifice.

OH "Nance Oldfield" there is little to be said save that no more delightful performance of it could be given. It is Miss Ellen Terry in all her youthfulness, all her wisdomness. It flatly contradicts the published announcements that Miss Terry has been more than fifty years upon the English stage. When she first appears and flings herself, with mock heroics, into a chair and rolls from it to the floor it is, to say the least, somewhat startling. It is a question how many much younger women could have so successfully performed this truly acrobatic feat. Then, too, Miss Terry goes skipping about the stage with the alertness of a third of her years. *Nance Oldfield* is clear proof that "age cannot wither her, nor custom stale her infinite variety."

The success of Miss Terry's visit to this country must surely have assured her of the affectionate place she occupies in the hearts of Americans, but it is to be regretted that with two or three exceptions she did not provide herself with a company more adequately suited to her support. At least Miss Terry is to be thanked for having permitted us the opportunity of seeing Bernard Shaw's entertaining and occasionally brilliant play. "Captain Brassbound's Conversion." It is not a first rate example of the ingenuity of that always surprising play-maker; yet it had moments of delightful

Drawn by Paolo Colonna Smith

Ellen Terry as "Nance Oldfield"

"THEY SAY 'NANCE OLDFIELD,' TRAGEDIAN, CAN'T PLAY COMEDY—CAN'T SHE!"

exuberance and penetrating comedy, and Miss Terry, as the dominant figure in its representation, added another to the long list of delightful impersonations, the memory of which is treasured by American playgoers.

It is more than regrettable that Miss Terry's season in New York has not been more protracted, and that she has had so limited an opportunity to display herself in a more ample and varied repertoire.

Miller HIGH-LIFE

The Champagne of Bottle BEER

Miller "High-Life" Beer has that *etch, purr* and pleasing *taata* called the "MILLER TASTE" gained by perfection in brewing.

Cleanliness and Purity are our strong points and are very essential in beer making.

We spend large sums annually in this direction, our experience being of sixty years' standing.

Our Malt and Hops are the very best money can buy and the best obtainable on the world's markets and are selected by expert brew-masters.

We filter all our beer and sterilize every bottle before it leaves our brewery.

The reason Miller Beer is so much better than other beer is in the way it's brewed.

MILWAUKEE

MUSIC AND THE OPERA

A NEW "ISOLDE"

By LAWRENCE GILMAN

THE most extravagantly beautiful music that has ever found its way onto the written page had a heated and long-dreaded hearing at the Metropolitan Opera House on the 15th of February, when Wagner's "Tristan und Isolde" was performed for the first time this season. From the spectacular standpoint the occasion was chiefly notable as serving to restore Mme. Johanna Gadski to the stage of the Metropolitan after an absence of several years, and in a rôle which she had never before covered; but for many there was a finer and more abiding significance in the event: its demonstration of the astonishing vitality of the inspiration that is embodied in this wonderful score—surely, one may say without exaggeration, the most sustained and overwhelming demonstration of genius in the records of musical art—music which, far more truly than the great poetry that evoked the phrase, is so "a singing and soaring flame." One knows that music and music-makers come and go with the inevitable procession of the years, and that, as they and their works contemporaneously emerge, we call them "modern." We observe new forms, new adventures in the technique of expression; we are justifiably fascinated and engrossed by that which is of rare and novel color, of curious and subtle workmanship. Yet one day we turn again, it may be casually, to the great work that came from the hand of Wagner half a century ago, and we behold a miracle: for then even that all of what we so confidently and so blithely called "new" and "modern" is in the musical art of our time is contained, in essence, in the gorgeous and exquisite pages of that masterpiece which increasingly seems, in a wholly literal sense, immortal. It is not alone the living and potent grains of the work which survives and perdures, but its amazing freshness, its accent of today—in a word, its modernity. It has been held that the modernity of an art is an absolute quality, a positive flavor, which it loses inevitably, in a sense more subtle and important than is implied by the mere effect of the passage of the years. Yet this tangle and definite quality of modernity is precisely the quality in the possession of which this incomparable score of Wagner is so surprising and unique. For no matter how sincerely we may acclaim the masterpieces of other centuries, it is impossible sincerely to discover in them an accent which addresses us as the accent of today. That is the wonder of "Tristan." One wants to apply to it Mr. Kipling's praise of that cadence of art which, "breathed upon by some man in his agony, or in his exultation . . . generations ago, can still . . . open to us the doors of three worlds, or stir us so intensely that we scarcely abide to look at our own souls." There is no music like the music of "Tristan." It evokes comparison, as it breaks no rival; for there is distilled within it the essence of all that the art had hitherto achieved, as it contains the root and substance of that which has followed after it. Not only does it stand alone in continuity of inspiration, but it is the very flower of the musical art of the world.

It is this lesson which was endorsed the other night at the Metropolitan. Yet it was endorsed rather in spite of than because of the performance. There was no lack of effort on the part of those concerned in the exposition of the work: there was, indeed, an abundance of effort—rather, in certain quarters, an excess of it; but it was not precisely the right kind of effort. Let us consider, first—through, of necessity, briefly—the *Isolde* of Mme. Gadski. There are all kinds of *Isolde*s, as the operatic public of two continents knows very well. The tra-

ditional *Isolde*—she of the well-lost days of that kind of singing which need justify to be stigmatized as "Wagnerian"—was merely an innumerate whiff; as we have before observed, this was no *Isolde* displaying austere proportions and the disposition of a virgin—a heroic demigoddess, a kind of Celtic Bronzë. This was the *Isolde* whose, with various modifications of dress, we were asked to accept until the late winter of 1900, when the wonderful and revealing impersonation of Milka Ternina was for the first time exhibited to the New York public. Ternina, while she did not permit us to forget the outraged princess of the first act, kept constantly before our minds the indubitable fact that *Isolde* was altogether feminine; that the fascinating woman of Wagner's text and music is of much closer kin to his *Brünnhilde* than to his *Freischütz*; that, after all, as Mr. George Moore has observed, "*Isolde* has to be a woman a man could be in love with, and that is not the impact and the shriek of a gale from the southwest." We forgot the *Isolde* of Rosa Schrier—a sort of *Isolde*, as Mr. Moore very aptly recalls; and we became aware, in his vivid phrase, "the woman who, pressed to our flesh and dress, breaks upon our life like the spring."

The *Isolde* of Mme. Gadski has this positive excellence: like the incomparable impersonation of Ternina, it impresses definitely upon one's mind the absolute femininity of Wagner's most seducing heroine—this is altogether an *Isolde* "a man could be in love with." Let the achievement be gladly entered to the lasting credit of Mme. Gadski. Yet, singular as it may seem, she has already been taken to task because she is not sufficiently animated by passion that "urge and emotion that storm," because, in brief, she does not sufficiently "rage." One does not forget, of course, the tempestuous music that Wagner has put into his first act; but it is evidence of a singular changelessness to fail to realize that the passions which swirl through the music of this first act are not essentially heroic in quality; that they are subtle, but none the less fundamentally, different from the passions which animate *Brünnhilde* in, let us say, the second act of "*Die Götterdämmerung*." That Mme. Gadski appreciates this fact, and that she is able to make it evident in her acting, is highly gratifying. If her *Isolde* were as rich in suggestion and poetic quality as it is in femininity it would be an extraordinary achievement. At present her *Isolde* is an admirable and, so far as it goes, a true presentation, without being greatly eloquent.

Of Mr. Karl Barria's *Tristan* it is less to speak briefly. That Mr. Barria is a superb actor in a certain kind of part we know from his marvellous firm part in Strauss' *Salome*—one of the best or the supreme impersonations on the operatic stage of today. But Mr. Barria, brilliant actor that he is, is not of the stuff of which great *Tristan* is made. In action unadvisedly and in voice unadvisedly, in stature insignificant, in voice inadequate and disturbing, the frame of the other night was an embarrassment which one would like to forget.

When it is said that in his reading of the orchestral score Mr. Hertz, who has so often shown himself to be one of the very best of living conductors of Wagner, chose upon this occasion to discover many of the subtle beauties that guard many of the quieter surfaces of the hidden alone of "*Tristan*," that he was the music of "*Tristan*," that he was often insouciant and ruthless in tempo, meriting by apparent carelessness many things which he has hitherto made intelligent—it will have been a performance which might not be treasured very affectionately in the memory.

Motor Cars for 1907

Mark XLIX

ARE constructed throughout in a manner that for uniformity of excellence is unequalled in any other motor cars, and they also contain certain exclusive features which alone so add to their worth as to make them preferable to all others.

One point of exclusiveness is found in the quality of steel used for the sawed-out crankshaft, sliding gear transmission, bearings, axles and other vital parts.

Another exclusive feature is the multiple jet carburetor which affords the proper mixture of gas to run the car to the greatest advantage at whatever speed you wish to go. This carburetor combines two carburetors in one, the two devices working together so as to require no more adjustment, attention or care, than a single carburetor of any of the older patterns.

Further exclusiveness is seen in the elegance of the design, finish and appointments of our touring car and limousine bodies.

Mark XLIX, 40-45 H. P. Touring Car, \$4500
Limousine, \$5500

Mark XLVIII, 24-28 H. P. TOURING CAR, \$3000
Limousine, \$4200

Our catalogue of Columbia Gasoline Cars for 1907 is, both in text and in illustration, the most artistic book of its kind ever issued. \$1.00 each copy is guaranteed a larger "30-37" or whole size artistic reproduction of our Mark XLVIII Touring Car, which is the most remarkable picture of an automobile ever produced. Mailed free upon request. Also separate catalogue of Columbia Electric Carriages.

The English Channel Question

Swim, Dive, or Burrew?

How to cross the English Channel without suffering the customary embarrassing disadvantages is a problem which has given rise to many ingenious suggestions. To M. Mathieu, a Frenchman, credit must be given for the first idea of the negotiation of this passage otherwise than by boat. His notion was to dig a tunnel through the Channel bed, a sort of subterranean railway road, which he proposed to ventilate by shafts rising above the level of the sea. These, had they even been built, would have prevented the appearance of a chain of light-houses extending from the coast of France to that of Britain. War, however, breaking out at the time between the countries concerned, all thought of the plan had to be abandoned. But the idea itself, now brought to attention, was not allowed to drop.

In 1848 a bridge was first suggested for the purpose, and in 1860 the model of a second and improved bridge was placed on view at the Paris Exhibition. That nothing came of this last scheme—for the first was never got beyond the paper stage—is scarcely to be wondered at, as, in addition to some serious drawbacks that it threatened in the working, its cost was estimated at the modest sum of more than \$170,000,000. Next there was the proposition to lay on the sea-bed a tube which it was meant to build out ring by ring from a derrick-bell. The structure to be held in position by screws. Through the cylinder thus made trains were to be driven by means of compressed air.

Alas! to this was yet another tubular idea for laying down in the same way, but parallel to each other, two iron tubes connected at intervals by transverse tubes. An attractive feature, too, in this last plan was a station which it was proposed to erect in mid-Channel, where travellers might alight and stretch their legs a bit and let their lungs with fresh sea-air.

Most homelier, though, of any scheme was that of a huge elevator for boats. In this idea the intention was to build up to within fifty feet of the surface of the sea a bridge or arch as guide and mainstay, with steel supports rising to a trolley platform, which, standing high out of the water, was to have accommodation on it for boat trains almost. This viewed from a floating would have looked much like a floating house-trap with miniature trains on top of it. Finally, there was the submarine-tube scheme, in which the boat was to run on rails laid on the Channel bed. Its inventor promised that it would be completely unaffected by the worst of storms raging above water.

In comparing up the various suggestions in the times the only one which promises in practice to be safe at all. Yet English people, none of them, think that it is best to let the thing alone, and red contrast with the security bestowed by nature on the island. Moreover, even where the British fleet professes to regard as harmless such a pathway to his fair, the noble animal, if called upon, might find it a great bore to have to swim and watch it.

Trip for the "Constitution"

There is little doubt that the *Constitution* is "old friends," the most famous ship of the American navy, and with the possible exception of the British *Victoria*, the oldest ship in the world's history. Now nearly 60 years of age, she is nevertheless not undergoing at the Boston Navy-yard such repairs as are necessary to preserve her, will be lowered down the coast and re-fitted at the *Hampton* celebration. The old frigate will launch a most striking and great with the great battleships which she will be anchored.

It will be almost unnecessary to say the *Constitution* can be moved, for while our structural repairs are being made, it is in fact being hauled upon her all of the old equipment which can be gathered, and which is scattered in various places, in order to be scattered to the old frigate, as nearly as possible, her original appearance.

Greatest American Eagle

The big American eagle, measuring ten feet high and twelve feet across the wings, which for many years has made its home at the Boston Navy-yard, is soon to be shipped to the Jamestown Exposition to be placed on exhibition by orders from the Navy Department. It has been reserved in a wooden cage, and so large is the bird it will require a special car to transport it. For many years this great bird has been the monument of thousands of visitors from all parts of the world to the navy-yard at Boston.

This massive figurehead was originally designed for the bow of Commodore Perry's ship, the *Vesport*, where it stood when the American squadron went to Japan in 1853. No other wooden ship of the American navy has ever had a more artistic or massive figurehead than this. To make it fit the ship's bow, it was found necessary to remove a part of the bird's back, but this has been replaced and the whole has been painted an appropriate color. The much-prized relic will be returned to the Boston Navy-yard after the close of the exposition at Jamestown, where it will be closely guarded in order to keep off souvenir-hunters or any one who may have a desire to deface or destroy it.

Some English as She is Wrote

A New York newspaper has received the following letter from the proprietors of a recently opened hotel in the suburbs: "We note in to-day's issue of your paper an article in reference to the penurious condition of the water-supply in our hotel. While we wish to thank you for your kind attention in our behalf, we are obliged to protest in our own behalf, and to inform you in full, that the notions made by you in full, allow the liberty to inform you of the correct condition of our position, and also permit us to ask of you for the writing up of a revised statement of the following explanation. It is understood at large by those who have watched the construction of our house that we have here all necessaries in both building and equipping the same, inasmuch as all of its completion was executed in less than seventy working days. Two or three days at the utmost will complete the plumbing of our system. We are surprised in reading your article, and we now ask if you will please issue a few words exonerating the feeling which might prevail resulting from the already said. We thank you in anticipation, and are confident that future reports from you will be in words of praise in our direction."

Not Room for a Third

SEVERAL TALK WAS ON our session, in consultation with Senator Farnsworth of Pennsylvania. The Secretary is gigantic, and the Senator is tall and weighs more than any member of the Senate.

While these two statements were in earnest discussion, an aggressive politician entered the room, and a secret policy was introduced. "What are they doing in there?" asked the politician, fagotively.

This important question nettled the secretary, and he answered, tersely: "Holding a mass meeting, I presume."

He Got a Raise

WHENEVER the penurious manager of the large store wanted to sharpen his pencil, he would start the shipping department and borrow a knife from one of the boys. Sometimes the boys did not have their knives with them, but there was one lad, Tommy Ross, who always could be depended upon.

"How is it, Tommy?" asked the manager one day as he whittled his pencil. "What you other boys haven't?"

Tommy hesitated for a moment, then blushing courage, said:

"The wages I get aren't enough for me to afford more than one pair of pants."

CHRISTIAN SCIENCE
By Mark Twain

20th CENTURY LIMITED— 18 HOUR TRAIN TO CHICAGO. NEW YORK
CENTRAL AND LAKE SHORE ROUTE.

Christian Science

By

MARK TWAIN

IN this great work Mark Twain devotes himself seriously and logically to a serious theme; the result is an earnest, painstaking, and impartial study of Christian Science in all the details of its growth and church organization.

MARK TWAIN

This book is the result of years of careful investigation of Mrs. Eddy's cult and writings, and of the church which she has founded. It is an honest effort to answer seriously those questions which the public generally has been asking about Christian Science.

The reader will like the way Mark Twain goes vigorously into details, writes plain English, and gets to the bottom of things. He is equally frank with praise or censure, as the case demands. And while his book must be ranked as the most serious and extended criticism of the subject that has yet been made, it is not without repeated tinges of humor which make it, while instructive, also deeply entertaining.

"This is your Time"

You are strong and well now, and business is good, and you don't really see why you should bother about Life Insurance just yet.

But others see. The little mother in black, with her three children, the family of a man you once knew, would find it very convenient, just now, to have a few thousands of insurance money to tide her over until she can learn how to earn her living. He, your friend, before he left, said more than once that he would take out insurance—"some other time." But he couldn't control the time. Nor can you.

Better write now for facts about the policy you would like. Write The Prudential to-day. It has every good kind.

Rambler

A medium weight, high class touring car with more new and practically valuable features than ever before embodied in any one car.

The new balanced clutch and the most convenient and efficient sliding gear transmission alone entitle this model to your careful investigation.

These and many other valuable features shown in our 1907 catalog now at your service.

Write for it today. You will find it both interesting and instructive.

Main Office and Factory, Kenosha, Wis.

COMMENT

The Approach of Sanity

THANK has come a moment in our fevered activity when the voice of reason seems to be striving to get a hearing. If the moment continues and the voice is heard, there is no doubt that the decision of the people will be about right, for such decisions have characterized the American people. We have had, and are continuing to have, some very vigorous assaults in this country upon property rights above a certain magnitude. We have heard a good deal about the iniquities of corporations. We have been convinced that many of the accusations are true, and we realize as we have never realized before that the rights of the people have been abused, even taken away, by means of a corrupt combination between the unscrupulous employees of wealth and unscrupulous politicians. There has been a quickening of the public conscience such as terrified the predatory classes. In their excitement some of the aroused people have gone to sad extremes. This is all the more to be regretted, since if those unduly stimulated people had, years ago, only sufficiently attended to their civic duties, we would not have had nearly so many public evils, and public men, to be ashamed of as are now daily forced upon our attention. This excitement has in many cases put thought and reflection in the background, so that we often hear that the remedies for the ills which we regret, and of which there ought to be an end, are so radical that they must be ineffective. For example: we are told that the great corporations created by the States must be taken, through crooked and, therefore, immoral constructions of the Constitution, under the control of the central power; that great fortunes must be abolished; and that government ownership must take the place of individual ownership. It is against such extreme and destructive views as these that reason is appealing for a hearing.

The Voice of Reason

On Washington's birthday Mr. HENRY TAYLOR, speaking at the Johns Hopkins University, a foundation primarily due to the wish of an American citizen to accumulate a great fortune, warned the South against the republic's peril from such fortunes. A short time ago he would not have been the solitary monitor. Almost all who spoke on the theme—certainly the theme of the day, the birthday of the richest American of his time—would have been affected by the superheated mental atmosphere which has for so long a time damaged reflection. But on this day other voices were heard, as other thoughts have recently more than once come to be heard. President SCHURMAN called attention to the fact that there are other remedies than destruction, and, growing more direct, he as-

serted what on reflection we must all recognize to be true, that government ownership of railroads in this country would result in a bureaucracy, which in itself would be a greater evil than any of which we have had cause to complain. "No government in the world," he said, "is qualified to go into the railroad business, and least of all the government of the United States, which draws its life from party politics." On the same day Governor HORTON, at Ann Arbor, spoke a cool word of reason in criticism of passionate dealing with the rights of individuals, of which rights of property and the power of accumulation are part. What we want of capital and of capitalists in this country, as of all individuals, including those who fill the highest posts in the country, is obedience to the law, and if the republic cannot secure such obedience without interfering with individual liberty, it cannot be a strong or efficient government. But that it is strong enough to be thus efficient those who are speaking the word of reason seem to be assured. It was appropriate to the man's memory that the calm word was uttered so many times on Washington's birthday.

State Rights and National Rights

In speaking on so important a subject as State rights and national corporations, the President may well define his position. The issue is a grave one, for it concerns the character of the government. Those who are now contending for the maintenance of the proper power of the States are not at all like those who, in the early years of the government, denied to the nation its legitimate powers. The President, in saying, as he did at Harvark, that the advocates of the continuance of the legitimate powers of the States are like those who asserted the power of the States to destroy the nation—the Federal government—is guilty of a misconception, or of doing something to plant a misconception in the popular mind. One of the most distinguished men of the country spoke the thought of many when he said that in MASONRY's time he would have been a Federalist in order to help establish the nation; now he is a modern State-rights man because he desires to see the just powers of the States defended from destruction. Those who, to-day, are protesting against Federal encroachments upon the States are in favor of maintaining the Federal government, the dual sovereignty. They hold the place to-day that was once held by the early Federalists and that was afterwards held by the Union men. Those men wanted to protect the Federal power against encroachment; they want to protect the State power from illegal diminution, whether the assault be made by constructions of the Constitution or by flat rebellion. In the early days State-rights men were hostile to the Federal power; in these days men who talk and not like the President are its enemies.

Politics and Plutocracy

The President ascribes bad motives to those who differ with him as to the relative powers of the nation and the States. This is unjust and unfair. He boldly says that the doctrine, which has been settled in numerous decisions of the Supreme Court, has been "revived"—one if it had ever faded—by men who know that the States cannot control corporations and who do not wish control. Therefore they are opposed to Federal control. He accuses men like Mr. CHASE, Mr. HENRY STODOL, President SCHURMAN, Governor HORTON, Senator SPOONER, and many others of like character of invoking "the doctrine of State rights to protect State corporate creations in predatory activities." He adds, "The States have shown that they have not the ability to curb the power of syndicated wealth, and, therefore, in the interest of the people, it must be done by nationalization." Mr. ROOSEVELT does not fully explain to us the kind of corporations at which he aims, nor the methods which he would adopt; but it is open to us to surmise as to both, basing our deductions upon his many utterances and on some of his efforts. It may be said of much of Mr. ROOSEVELT's policy that it is unconstitutional, and yet he would carry it out without amendment, and that it is also paternal.

Some Virtues of the States

But, be that as it may, he has no warrant for the assertion which we just quoted. It is sadly true that the corrupting power of syndicated wealth over government has been demonstrated, and that he and many other honest men

have done the country great service by the boldness of their attacks upon the sinister partnership between politics and plutocracy; but it is not true that national politics has been any freer from the evil influences of "syndicated wealth" than the State politics. It must be recalled, too, that the same men control both national and State politics, and make the nominations for the great offices of both nation and State, and that they have been even more eager for the partnership than the plutocrats have been. It must further be recalled that the people have in their awakening reformed State governments officers than they have been able to reform the national government, and that States have punished more political rascals than the nation has punished. It will naturally be recalled that the nation has had its great scandals, as the States have had theirs, and as recently. Furthermore, it will be recalled that when the national government seemed bent on inflation, and, later still, on free and unlimited coinage of silver, the money legislation of some of the States, so far as such legislation was possible, was, as the nation itself subsequently decided, for the general welfare. It will be reflected, too, that in the subsidy bill the administration itself has been in favor of a closer union with "syndicated wealth," and it is by means of the national tariff law that politicians have made their most profitable and lasting partnership with "syndicated wealth." Here are some considerations to be thought upon and discussed before the Federal government is destroyed or even materially modified by the enemies of the States. It is politics which needs reforming, both national and State; it is the public conscience which needs to be kept awake; there is no evidence yet that our Federal government ought to be abolished to be replaced by a strong centralized power.

The President and the Tariff

The President's reply to the Massachusetts request that he exert his influence to secure a revision of the tariff is non-committal. A good many people, including some newspaper editors, take it to mean that Mr. ROOSEVELT has no intention to urge tariff revision during his term of office. They say that he does not think that there is a strong popular sentiment behind the movement. And yet Massachusetts does not stand alone. The two Republican factions of Wisconsin seem to be vying with one another for the purpose of being the first revisionists to arrive. Nebraska and Kansas and other voices are heard. The truth is that Mr. ROOSEVELT has not awakened to the moral element in the tariff issue; but that eventually, when he thinks that the time has come, he will favor the reduction of duties can be questioned by no one who is informed as to his views. The trouble is that his perspective on this question seems to be wrong, and in the mean time, and notwithstanding Governor GRILL's dark hints to the contrary, he is in danger of continuing to be regarded as a "stand-patter." It must be borne in mind that the protection vote has been a very valuable asset to the Republican party. It has been mainly Republican; but there has been in addition a sufficient Democratic vote to help out in doubtful districts and doubtful States.

The Church and France

When the questions touching the leases by the state to the Church came down to such details as repairs and who shall make them, landlord or tenant, the world will be inclined to think that the landlord ought to be generous.

Democrats of the House

The country would have betrayed a greater interest in the contention among the Democrats of the House of Representatives over the selection of a minority leader if the party possessed a really inspiring leader to whom it would be properly subordinate. The matter is of more or less importance, all depending upon the chance that the minority has of becoming a majority in the near future. Then the question becomes not only, "Who shall lead the opposition?" but also, "Whom shall we designate as our choice for Speaker?" The Democrats have a great deal to do for the country, whether they are in opposition or in control, but in order to do anything effectively they must not only oppose the Republican party, but oppose it intelligently, consistently, and untidily. They must be a real opposition to the policies of the Republican party, especially of the Republican administration, if they

would command the confidence of that large part of the country upon which its success depends. A heterogeneous company whose highest ambition is to "get in" will not make an impressive opposition nor a useful and valuable majority. The Democratic party needs a real leader and a commanding issue. Such an issue is being presented to it with astonishing pertinacity every day, and when the leader appears and the party gets behind him with a distinguishable purpose, the country will feel and express the deepest concern on the subject of the minority leader and the possible Speaker of a coming majority.

A Deficiency Expected

Mr. TAWNEY warns his party that its \$1,000,000,000 appropriations for the session just ended will probably produce a \$100,000,000 deficiency. But the country is not yet in the mood to vote against a party that has overtaxed it. Such an issue is only available in bad years, and a bad year is not now in sight to the average citizen who is still prosperous. Long-headed men, intimately informed men, including some politicians, have forebodings, but the man who will be pinched most sharply by a panic does not yet believe the prophets of ill. Even when he is convinced that they have been right, it will not be so much the big taxes that will hurt him most—although they will play their part—but it will be drastic conditions, the results of certain political conduct, affecting his own credit, his own financial health, that will chiefly move him. When that time comes, he will want some one to turn to if he is to be led back to the ways of prosperity.

Mr. Alexander E. Orr and the New York Life

If the holders of policies in the New York Life Insurance Company fail to be gratified by the annual report just issued by President ALEXANDER E. ORR, they must be hard to please indeed. Surely the statement cannot be gainsaid that the year 1906 was "a period of severe trial" because of agitation, misleading assertions, and particularly of the heavy shrinkage in market values of high-grade bonds. Nevertheless the management is enabled to point to an increase in assets of nearly \$39,000,000 and to an excess in assets over liabilities gained during the year of nearly \$10,000,000. It is only fitting to direct attention to the fact that such results, achieved in such a period, are the outcome, not of chance or conditions, but of close attention and application of strict economy in the conduct of business. Of yet greater significance to those interested is Mr. Orr's further statement to this effect:

My connection with the company as president has extended a little over a year. If my wishes are observed, and I think they will be, my connection with the company is any official capacity will be short. I have therefore no selfish purpose to serve; indeed, my only object in taking the presidency of the company at all was that I might be of some benefit to the policyholders in a period of stress. I think I have come to know the purposes, plans, and the efficiency of the men who do the work day by day in the home office of the company and in a general way in its principal outside offices. I do not hesitate to say to you that the company's officers and corps of employees are thoroughly efficient, entirely devoted to their work, admirably trained, and fully to be trusted with the administration of your interests under the direction of the board of trustees.

Mr. Orr's final injunction to policyholders not to forfeit their insurance, and to place reliance upon the "absolute integrity of purpose" of the management which has been under his personal scrutiny during the past year, deserves to be heeded doubly because of its source. ALEXANDER E. ORR was for many years one of our great worthwhens of the old school. As such he became rich, and but for an apparently irresistible tendency to indefatigability he would have retired long ago; but he continued to take an active interest in public affairs, serving as president of the Chamber of Commerce, the Produce Exchange, and the Rapid Transit Commission, and finally, when trouble befell the great insurance company with which he had been connected as trustee, he did not hesitate, at the ripe age of seventy-five, to take upon his own shoulders the full burden of personal responsibility as a single matter of public duty. The result is, as we have said, gratifying to the policyholders, but it is no less satisfying to the entire community as indicating that we still have men of peculiar sagacity and scrupulous integrity, who stand ready when occasion requires to devote both their abilities and their character unselfishly to public service.

Harvard Football is Safe

Perhaps the President beat the air a little in his expression of solicitude for the preservation of football and intercollegiate athletics in his Harvard Union speech. President Eliot, on his return to Cambridge from Ottawa, said that for a long time no one had proposed to stop intercollegiate athletics at Harvard. As to football, he said that last year some people wanted either to stop it or to change it, and it was changed, and so far as he could see, would go on as usual at Harvard next fall. The newspapers and the undergraduates were mistaken, he said, in supposing that the future of football is in a very unsettled condition. What President Roosevelt said in general to the Harvard youths about the uses and limitations of athletic sports was sound and sensible, and gave great satisfaction to his audience. He is great as a moralist and as a stimulator of moral aspirations in the young. If he has a defect in this line, it is in the urgency of his desire to have everybody hit the line hard. Everybody is not built to do that, and a good many persons prefer to express themselves in some other way. DANIEL WEBSTER—a very thoughtful man—loved to fish. OLIVER CLEVELAND loves to fish. THEODORE ROOSEVELT can hit the line a pretty good lick, but we don't believe he could fish if he tried ever so hard, though he might cut bait.

After All, the Doctors Agreed

On February 25 our neighbor the *Evening Post* expended more than a column of its editorial space and energy in demonstrating that President Roosevelt and President Eliot differed "radically" about college athletics, and that President Eliot's view was right, and that President Roosevelt was indelicate—not to say indiscreet—in expounding his opposed views in a public and ostentatious manner in President Eliot's diocese. Home comes Dr. Eliot from Canada, and reads Dr. Roosevelt's expositions, and the *Post* quotes him on February 26 as saying that he thinks it will be found that his position and Dr. Roosevelt's "with reference to sports, or rough sports, are not essentially different." We are sorry for the *Post*. The truth is that men of ordinary good sense and experience cannot well differ very much about sports. They differ in fervor and in the temperature of their discourse about it; the temperature of Dr. Eliot's sporting observations is usually below 70°, while Dr. Roosevelt's is between 98° and 100°. But they both talk very much the same sort of sense. The whole subject is so easy that it is easier for thoughtful, grown men to be right about it than to be wrong.

Army Engineers for the Canal

The Panama Canal pipe has been set up anew in another alley. The OLIVER bid has been rejected, Mr. STEVENS has resigned and his resignation has been accepted, and three army engineers—Major CRITCHFIELD, Major GALLARD, and Major SURGE—have been ordered to Panama to go on with the work. The work may still be done, or partly done, in convenient pieces by contractors, but it now appears that no one contractor will be invited to undertake the whole job. The extraordinary succession of attempts to have the great work prosecuted by civilian engineers and managers having all failed so far, the army is to get the job which nobody that is wanted seems to want. The army Engineer Corps has a splendid reputation for professional ability, integrity, and devotion to duty. Its officers will be free from several embarrasments that have affected their predecessors. They will not have to consider whether they are getting the market value of their work, or whether the climatic objections are insuperable. They can, indeed, resign, but they are not likely to. The work can hardly disappoint them, for they will go to it looking for neither profit nor pleasure, but for hard work and meagre pay.

A Freshet of Testimony

On the whole, Mr. HARRISMAN as a witness made a wonderful competition for public attention with the chief witness of the THAW trial. Courts and commissions did their full duty, and more, last month by the newspapers. The amount of testimony that was read in the month of February in the United States must beat all the records, and in this city the travellers on the various interborough lines and suburban trains have all progressed far towards being experts in the

rules of evidence. Both Mr. HARRISMAN's examination and the THAW trial are still in progress at this writing. Mr. HARRISMAN has told how the Alton Railroad was made enormously profitable to the syndicate that bought it, and has voluntarily assented Mr. STUYVESANT FISCH's action as president of the Illinois Central. What was done in the case of the Alton was no secret, but Mr. HARRISMAN's views of Mr. FISCH have value as news, as will have Mr. FISCH's reply, which at this writing is still to come.

As Mr. Hill Sees It

Mr. JAMES J. HILL is quoted as expressing the opinion that a business reaction has already set in, and that the year 1908 may see a good many people out of employment. Whether Mr. HARRISMAN is likely to be one of them he does not say. The pace, Mr. Hill thinks, has been too fast, and only good can come of reaction. The fact that a great recession has already taken place will serve to prevent a sudden decline in business. Mr. HILL's despondency, therefore, figures as a basis for new hopes.

A Poet of Localities

LONGFELLOW did for New England a work not unlike what SCOTT did for Scotland in making localities interesting. Not HAWTHORNE, COOPER, nor WASHINGTON IRVING did so much in this direction as he. A writer in *Pittman's Magazine* enumerates some of the places that are associated in thousands of minds with some tale or poem of LONGFELLOW's, and are sought out summer after summer by hundreds of visitors because of that association. We need very much in this country local associations with notable occurrences of history or romance. The appetite for them is strong, but it does not get much to feed on. Mr. WELLES lately expounded Charleston to us in a novel which has probably done the innkeepers of that interesting town a service of material value, though, amusing to tell, the most conspicuous indirect commercial effect of his story has been to make a market for a cake.

Union Enthusiasm at Methodist Meetings

It was given out last week that pickets of the union printers, who have beretted the Methodist Book Concern, were to be present at the Methodist revival meetings in Chicago, in the hope of so influencing the direction of the chants of grace which might visit the meetings as to promote such a softening of hearts as would induce the brethren to make their printing establishment a closed union shop. The *Northwestern Christian Advocate*, the Methodist paper in Chicago, approves this intention, in the hope that the meetings will have more effect on the pickets than the pickets on the meeting. It looks to the conversion of the pickets and to their acquisition of a new conception of Christian brotherhood which will make clear to them its inconsistency with "the selfishly exclusive spirit which is the greatest element of danger to trades-unionism and the objects for which it stands when at its best." The Book Concern has already adopted the eight-hour day, but it adheres to the "open-shop" policy as "the only one which a Christian church seeking to help all classes of men can consistently pursue."

Too Many People Killed

During the first eight weeks of the present year about 175 people were killed in railroad accidents and about 425 were injured. We Americans are very callous about our annual list of the dead and wounded travellers and railroad employees. The minor casualties make little impression on the public mind, though they count up in the annual total. The big accidents are more effective in jolting our sensibilities, and of those there have been so many of late that travellers' nerves are unusually sensitive. In seven disasters on five roads since New Year's, 123 persons were killed and 313 were injured. The railroads have the strongest possible motives for avoiding accidents. Shifts that result in dead passengers and wrecked machinery save neither time nor money. How our railroad mortality is to be reduced is a question for our railroad experts to solve. And it must be solved. Not only in the case of the railroads but in a hundred other fields of our activities we Americans are disreputably careless and wasteful of human life. It is not compatible with our claim to be a highly civilized people that we should put up with so much industrial killing as we do.

Church and State in France

To comprehend the present conflict between the Church and the civil power in France, it is needful to recall the changes which have taken place in their relations since the overthrow of the *ancien régime*. After the States-General, which met in 1789, had been transformed by the fusion of the three Orders into the National Assembly, the property of the Catholic Church in France—computed by TALLEYRAND, who spoke as an expert, having been Agent-General of the clergy, at 2,100,000,000 francs, the franc, of course, having then a much greater purchasing power than it has to-day—was taken possession of by the state on the distinct understanding that it would assume the support of the bishops and priests, the maintenance of church buildings, and the relief of the poor. This promise the Revolutionary government kept only in the case of the comparatively few bishops and priests who consented to subscribe to the "civil constitution" of the clergy. After NAPOLEON became First Consul, he considered it expedient to reestablish definite relations between the state and the Catholic Church, and, accordingly, entered into the Concordat of 1802, whereby he recognized the binding force of the promise made by the National Assembly, and agreed that thenceforth the stipends of Catholic bishops and priests in France should be paid by the government, and that buildings formerly used for religious purposes should be restored to the ecclesiastical authorities. The Vatican holds that the Concordat was a bilateral contract, which could only be modified or modified by the consent of both parties. The majority of the French Parliament, on the other hand, contends that the Concordat was of the nature of a concession by the civil power, and is, therefore, voidable at its option. Acting upon this conception of the state's right, the Parliament passed in 1905 the Separation Act, which abolished the Concordat, and announced that, while some provision would be made for the existing episcopate and priesthood, all bishops thereafter consecrated, and all priests thereafter ordained, would have to rely for their support on voluntary contributions. Church buildings and other ecclesiastical property were declared by the new law to belong to the state, which, however, would transfer them, at any time within a year, to so-called *associations cultuelles*, the form of which was prescribed by the statute. Pope PIUS X., however, declined to sanction such associations, and consequently, when the year expired, in December, 1906, all church buildings were declared to be the property either of the government, or, as in the case of cathedrals, or of the commune, as in the case of parish churches. The taking of official inventories of church property, which followed in pursuance of the law, encountered resistance in some places, but, on the whole, was performed in a peaceful and orderly way.

Were faithful Catholics, then, to be cut off from using church buildings for religious purposes, because, owing to the failure to form *associations cultuelles*, these buildings had become the property of the state or of communes? Most religious services heretofore held in private dwellings, or, as in the case of the primitive Christians, in catacombs, in caves, and in the open air! That may have been the secret purpose of some notorious enemies of the Christian religion, like ex-Premier COMBES, but it is far from having been the intention of M. BRIAND, who, as Minister of Education, has charge of the matter. Not only has he not permitted church buildings to be used for any but religious purposes, but he has suggested one expedient after another, to the end that Catholics might be enabled to use them without violating the civil law. He hoped at one time that the Vatican might be induced to renounce the so-called *associations cultuelles*, which embodied an attempt to reconcile the statutory requirements with the canon law. When the Vatican declined to sanction this kind of association, M. BRIAND announced that in every parish the church would be kept by the government at the disposal of the parish priest, provided the latter would give the notice of an intention to hold a public meeting which is prescribed by a statute of 1804. The parish priests, however, were forbidden by their ecclesiastical superiors to avail themselves of this suggestion. Then M. BRIAND undertook to have the law of 1804 amended so that no notice of a meeting for religious purposes need be given, provided the parish priest, or curé, would lease the church building for a period of eighteen years from the Mayor of the commune, agreeing in the lease that all necessary repairs should be made by him, which, practically, would mean by his parishioners. A bill to that effect has been passed by the Chamber of Deputies, and although temporarily held up in the Senate, will, no doubt, be accepted ultimately by the latter body. Two provisions of the proposed lease, however, have already been pronounced inadmissible by the Vatican, the provisions, namely, which impose the cost of repairs on the parish priest, and which forbid the Mayors of communes from leasing churches to priests who are either *foreigners* or were formerly members of religious orders not tolerated in France. It is conceivable that a compromise might have been reached with reference to the former provision, but the latter appears to present an insurmountable objection. Meanwhile, religious services continue to be held in the churches, but, of course, M. BRIAND has the power to prohibit them, in the event of his attempts at conciliation being all definitely rejected.

We see, then, that, with reference to the relations of Church and state in France, there are three parties: first, the Catholics, who hold that the Concordat was a bilateral contract, which the civil power had no right to declare void without the assent of the Papacy; secondly, the avowed enemies of Christianity who desire the extirpation of the Catholic religion in France, and who are made up of the Socialists led by Mr. JARRES, and of the extreme Radicals, headed by ex-Premier COMBES; thirdly, the great mass of conservative and liberal Catholics, who, while not professing faith in Christianity, recognize that a large proportion of their fellow citizens are believers in the Catholic religion, and who desire to facilitate for them the performance of religious services by any means not incompatible with the divorce of Church from state. That this third party is incomparably the strongest in the Chamber of Deputies seems at first sight to have been proved by the overwhelming majority with which a vote of confidence was given to the CLEMENTAUX cabinet. We should bear in mind, however, that, on that occasion, the cabinet appeared as a unit, though it is no secret that Premier CLEMENTAUX is much less disposed to compromise than is M. BRIAND. The current impression is, nevertheless, among well-informed onlookers, that if the cabinet should be broken up owing to the unattainability of an agreement between Premier CLEMENTAUX and M. BRIAND, the latter would triumph and become the head of the next ministry. Of course, no concessions that M. BRIAND could make will be deemed satisfactory by zealous Catholics who regard the abolition of the Concordat as an injury, and who look upon the government's assertion of ownership of church property as nothing short of robbery. These uncompromising Catholics, however, who occupy the Right of the Chamber of Deputies, are so weak numerically as are the Socialists who sit on the Left. The fact is undoubtedly known to PIUS X., and his advisers, who, consequently, are expected in the end to accept some modification of the programme of M. BRIAND as being, on the whole, the least of two evils. When one reflects, indeed, that the relations of the Papacy to the Italian monarchy are extremely delicate and difficult, and recalls, also, that a revival of the Frank laws in any form is unacceptable in France, one cannot but deem it probable that the Vatican will decide to make the best of the present situation, and wait for better times. To bend, rather than to risk a fracture, is the traditional policy of the Vatican, which has been followed with astonishing success for some sixteen hundred years.

Nothing would be more misleading than to compare the present relations of Church and state in France with those of the Catholic religion to the civil power in the United States. Our civil constitution does not investigate the existence of the Roman Catholic Church, or of any other religious body. The several States, however, in their separate capacities, take cognizance of the Roman Catholic organization, as they do of the Protestant-Episcopal, the Baptist, or the Methodist organizations. All sects are placed on the same footing: are allowed to own property, and to manage their own affairs. Religious congregations, like lay associations, are subject to the police power of the State in which they exist. In France, on the other hand, which is a centralized and unified republic, wherein, indeed, unification is carried to such a pitch that the prefects of provinces, corresponding to our State Governors, are not elected, but appointed by the central government, the claim to regulate religions as well as all other kinds of associations is asserted and made good by the central civil power. So long as the Concordat lasted, the Catholic Church in France enjoyed a considerable amount of independence and self-government. It is the wish of Socialists like M. JARRES, and of such extreme Radicals as ex-Premier COMBES to extirpate Catholicism from France, but moderate men, like Minister BRIAND, are willing to concede to the Roman Catholic Church in the French Republic a considerable instalment of autonomy. With such a disposition on the part of the Minister of Education, it seems probable that, eventually, a *modus vivendi* will be reached between Church and state.

College Education for Women

Despite the many beautiful and prosperous colleges for women all over this country, it is still a question in many parental minds whether or not a college education is a woman's best preparation for life. There is a fairly prevalent idea that college women too often develop the intellect at the expense of the sympathies, that they set mental standards which are higher than their husbands have leisure to reach, or, worse, that, wanting better bread than can be made out of wheat, they refrain from marriage altogether. The higher education too often leads them to choose a life of self-exploitation, and to pursue callings which ultimately may, and very likely will, play them false, and leave them lonely and embittered in a world where the fullest happiness is to be found in benevolent human relations.

While all this is, on the face of it, possible, there is a great deal to be said on the other side. It is true that a thorough education disciplines the emotions. If it discipline them away altogether it

does an irreparable injury. If, however, it merely controls the sentimentality of youth by training judgment, it is an effective force for good. Life will bring out the sympathies of those who have them sooner or later, and to be delivered from the sentimental conditions of girlhood is not so appalling a matter after all.

The real hazard of a college education for women is simply that a little learning is a dangerous thing. If the uneducated woman read whatever she happens to like and ferre justified by her haphazard taste in giving a verdict, the college-bred woman is too apt to imagine that grammar and rhetoric make literature. If the uneducated woman thinks that the function of letters is to relieve her from boredom, the college-bred woman is too apt to fancy that it is to exploit craftsmanship. The uneducated are apt to drop to the level of *Mamma Cossette*, and the college-bred to confine themselves to Mr. HENRY JAMES and Mr. GEORGE MEREDITH, and neither course leads to a complete view of life or letters. For the half-educated and the college-educated the danger is the same, that of seeing too narrow a field and of interpreting life upon too slight premises.

The object of education from the kindergarten to the doctor's degree is to bring forth and strengthen the forces of the human being, so that she may cope victoriously with life and not be conquered by circumstances. The task of education is to train the human being to behavior, as Dr. JAMES says, "to every possible sort of fit reaction to the circumstances into which he may find himself by the vicissitudes of life."

There seems to be no doubt that the chief weakness of the feminine mind, as differentiated from the masculine, is to see life personally. A woman, more than a man, is encumbered by herself and ledged by limitations. She cannot, by the inherent nature of things, take so many risks or lead so experimental a life as a man, and her education is, therefore, a matter not of less but of greater moment. She must have thoroughgoing knowledge, because, less than a man, can she afford a wrong reaction. Her interests must be widened, even more carefully than a man's, because she is less likely to be broadened by life.

An account of a ladies' Shakespeare's Club was recently given by an amused college-bred member who said the ladies were interpreting the plays one by one in the light of a purely personal and patetically limited experience, and added the jesting critic, "their indecent self-revelations are limited only by lack of time." (Othello's conduct had to be compared with the amputated conduct under like provocation of the members' husbands. This *reductio ad absurdum* is what may result where there is no trained historic sense, no general knowledge nor wide experience. To read the universe in terms of private and personal feeling is to reduce the world to a petty and pitiful dwelling-place, and to miss all the stimulation of the vision of the great, tumultuous, changing, growing world of human relations.)

College if it does nothing else should lay the foundation for more abstract intellect and intelligent judgments. If it hardens the sympathies it cannot be because it is too high or too thorough, but because it is too slight and too superficial. Any education that puffs a person up about his own attainments is a poor education. Any education that allows a person to think he can really gain by another's loss, or aggrandize himself by another's fall, or in any way separate his interests from the general interests of the race, is a superficial and inadequate education, whether it be gotten at a finishing school or at a college. If colleges turn out women of defective sympathies and selfish instincts it is not their pursuit of learning that effects this. Intellectual training in and for itself cannot be other than beneficial. The freedom, the independence, the fact of being thrown upon her own resources at a critical age should all prepare a girl for wise government of her own household and intelligent civic helpfulness.

It is difficult to believe that higher education admits a woman for household management or motherhood, since to these two functions the most highly trained faculties are necessary, especially in these days when social conditions are changing rapidly, and when the domestic problem is in a state of uncomfortable upheaval. It is not less intelligence and training, but more and wiser, that is needed to meet the new conditions.

It is, therefore, a cause for rejoicing rather than doubt, that the women's colleges of this country are to be multiplied and more heavily endowed.

Personal and Pertinent

WHEN General WEAVER retires in a few weeks the War Department will issue an order doing away with the short-lived divisions of which General CHAFFEE was the inventor. This will restore the supremacy of the departments as they were before the divisions were created. General GRANT is now in command of this Eastern Department, and apparently is doubtful about his future, because Lieutenant-General McARTHUR may come from the Provisional such is his rank—if he thinks that the prophasy to his quarters of unshaken, and exceedingly active, New York is better for him than

nearness to reconstructing San Francisco. Why General CHAFFEE created the divisions is a question easily answered. At the time there were so many general officers that he felt himself compelled to make jobs enough for them. At present, as the authorities seem to think, there are enough of the old departments to go around. The division headquarters here are on Governors Island, where also are the department headquarters, the latter, it is asserted, doing all the necessary work. Perhaps it has been different at other division quarters, but an old soldier who has once or twice served General WEAVER has been heard to allege that the division was useless, "for," said he, "me and Jim hadn't really nuthin' to do." Perhaps it is because General GRANT also finds this hanging heavily on his hands that he has entered into the Japanese-San Francisco controversy.

The other day a now aged man, not yet old enough, however, to have gone out of office in the Province of Quebec, was visiting New York. It would not do him any good to mention his name, nor would many of the readers of the WEEKLY know about him, and yet he is a journalist, a poet, and a publicist—in Quebec. Years ago he journeyed through the province with the COMTE DE PARIS, who made a royal progress especially through the convents, where the nuns sang the *doxos* tight while they and the children sang of the glories of the House of France. It was all early seventeenth century; the lilies were brought out and secretly kissed; and all was as it might have been when the English really cured. The old gentleman who came to New York made a little book on this "progress"—a little book that has long since been forgotten, even in New France. Nothing is so ancient in the States as this old man; nothing is more typical of disappearing New France. In Quebec it used to be the custom, perhaps it still is, for the parish priest to receive the twenty-fifth of all produce for his tithe; so this old man's father, the boy being his twenty-fifth child, took him to the priest and said: "I have always given to you the twenty-fifth of everything; now, lo, here is my twenty-fifth child, take him and raise him." And the priest took the boy, greatly to the boy's advantage. Now, in the twentieth century, this old man speaks seventeenth-century French and thinks seventeenth-century thoughts, and there are many Canadians in Quebec who are like him. Nothing has so greatly stirred him for many years as the troubles of his Church at home, and, about them, he uttered this suggestive sentiment: "Ah! those people over the crater are not the true French; they are republicans and infidels. We, we of Quebec, are the true French; we are legitimists and Catholics."

LORD CHARLES BRESKIN is a good deal of a politician, and this side of him must be reckoned with when we read despairfully about his declination to command the Channel fleet. Some of his American admirers say that he resembles our Admiral ROBERT EYKINS; and some of EYKINS's English admirers say that he resembles BRESKIN. But there is this difference between them: EYKINS is only an officer of the navy, and Lord CHARLES is a man who is first of all a politician who, not long ago, thought that he would like to be the party's leader in the English House of Commons. He made an uncommonly clever attempt to break in upon BALFOUR's domination in the latter part of the year 1909, but he had only one subject. This was China, and his plan was to force Great Britain to the front as the controlling power at Peking. In urging this policy in the House of Commons, by a single speech of great merit, he seemed almost to be the successor of Lord ROBERTS and CURIELL, and to be intent at least on trying a new Fourth Party. He was also seeking to forestall Mr. CHAMBERLAIN, who was then fortifying the African policy which was bound to result in the Boer war. BRESKIN had little sympathy with CHAMBERLAIN, perhaps not much use for him, and while the son of the Birmingham magnate played his father's game in the pleasant rooms of the Devonshire club, Lord CHARLES was having pleasant parties of real, but discontented, conversation down at Hans House of Sunday afternoon. One speech was all that time permitted to the China question, and CHAMBERLAIN rushed on to the war which did not make him Premier, and to other issues which also failed. Lord CHARLES tried to speak from the back benches of the Conservatives to a disaffected government and to its upbraiding opponents. Now the opponents have come back to power, and have reduced the fighting-ships in commission. Lord CHARLES is asked to command the Channel fleet, the fleet for home defence, and his political acumen leads him to refuse the duty because of the inadequacy of the fleet. Under like conditions, EYKINS would have taken the command without questioning the naval policy of the party in power; and, in truth, if English and American officers of the past had always refused commands because they did not like the then naval policy of the politicians they would have spent most of their lives on shore. But Lord CHARLES would not thus have answered an offer of command in time of war. He dearly loves to put the other party "in a lark"—in time of peace. It ought to be added that he didn't even refuse command in time of peace in the abrupt way first indicated, but he put his objection quietly to the Admiralty, and when the news came the point as to the command had been gained by Lord CHARLES, while the political point had merely to be saved from shipwreck.

Correspondence

SOME AWFUL ACCUSATIONS

COLUMBUS, OHIO, February 13, 1907

To the Editor of *Harper's Weekly*:

SIR:—In the publication of the letters of Messrs. Green and Terry, criticizing your editorial policy, the stock of the WEEKLY has gone up several points in my estimation. This act demonstrates that the WEEKLY has breadth. It shows that it is willing to publish something besides "sales."

I have been taking the WEEKLY for about ten years, along with a dozen other general and special journals. I like to see the volumes grow, year by year, along my library shelves. Hoping to live to threescore and ten, I have seen in my mind's eye a stately row of 120 volumes of HARPER'S WEEKLY—a magnificent illustrated history of civilization. It has, therefore, been with great regret that I have lately felt the necessity of changing the course of my dream.

You state you have "not a grain of personal malice" in your "criticism of the President." I believe your readers will be willing to take your word for that.

The charge I would bring against you is much more serious. It is that you hold a brief for the plutocracy, and that from this point of view you exaggerate, distort, and present the facts as a piece of special pleading. You seem to construe of the Constitution as a piece of paper cast to the winds only by looking at it or by having a piece thrust on you. The view expressed by Justice Holmes at the time he took his seat, as I remember it, was that the Constitution must be interpreted in accordance with the spirit of the age. A President, backed by public opinion, also has this function of interpreting the Constitution. It has therefore been a delicate one. It is, nevertheless, an essential one to a nation that has a written, rather than an unwritten, Constitution. From this point of view the settlement of the anthracite-coal strike, which seemed to be sort of a "red rag" to you, has a place in our system—it was backed by public opinion.

For several years you have been pleading for the special privileges of wealth with the clamor of a railroad Senatorial attorney, the climax being reached in your issue of December 29 and January 5, when you make a mountain out of a molehill in the "State rights" matter. That on its fiftieth anniversary HARPER'S WEEKLY should definitely throw aside the cause of the people for that of the plutocracy is an event in contemporary history worthy of note. Having shown a willingness that both sides of this matter may be considered, I have now felt obliged to having your readers' attention called to the editorials in the *Outlook*, January 19, page 109, and particularly January 26, page 100, which concludes: "The peril of American institutions is not political corruption; it is unscrupulous and unscrupulous plutocracy. The hope of American institutions is not in the maintenance of State sovereignty and a jealous dread of Federal sovereignty; it is centralized democracy, strong enough to give protection to lawful and honest wealth, and generous and disinterested wealth." Even Jupiter sometimes mumbled, and the President seems to play into the hands of the plutocracy in this matter of the subsidies. I am glad you do not approve of this; to approve of everything of this kind might overdo the part.

Mr. Green suggests that you ask in Ohio what they think of Foraker. As near as I can make out, the people outside of the organization regard him as a plutocratic Senatorial attorney. Of course I may be mistaken in this, and what I regard as the people may be no more than the three tailors of Trolley Street—consisting of me, my wife, and ex-Governor Herrick. In an interview, reported in the *Columbus Dispatch* of this date, ex-Governor Herrick states that Mr. Foraker is as dead as he is, and will soon be dead—or words to that effect.

In conclusion, Mr. Editor, let me express the hope you will give your patrons more photographs of what the world is doing, for it is the illustrations that give the WEEKLY its distinctive place on the library table.

I am, sir,

L. C. PRINCE.

AS TO CRITICISMS OF THE PRESIDENT

MILWAUKEE, WIS., February 13, 1907

To the Editor of *Harper's Weekly*:

SIR:—I have just read with amusement your criticisms on President Roosevelt. You accuse him of bringing about to his each of office in saying that if a resolution should be passed in both Houses of Congress, "over his veto" he would not obey it. Is such a resolution a law, or only an interpretation of law? Would not such a resolution by Congress be a usurpation of judicial functions, which the President ought to resent and resist? It is admitted that eminent lawyers differ as to the President's power to discharge soldiers "without honor," who have not been condemned by court martial. Until the Supreme Court has decided, in one case properly against the President of overstepping his authority.

If my dailies reported his remarks correctly concerning the San Francisco school trouble, he distinctly said that he would use the troops, etc., as far as the Constitution and the laws permit. It is very fashionable for his critics to omit that saving clause.

Is the Nobel prize the gift of "any foreign state"? It is from a private citizen. The Stirling determines to whom this private gift shall go, but is the Stirling the state? In awarding that prize, is it passing any law, or exercising any functions under the Constitution of Norway? Was the Kink's signature necessary to send that money to the President Roosevelt? I ask for information.

In regard to the President "calling on the Vice-President to

assume the duties of his office *ad interim*," does any law require him so to call upon the Vice-President? Certainly the Constitution does not. So far as the country knows, he did discharge the duties of his office when at Panama.

Did he appoint the anthracite-coal strike commission as President of the United States? Did he act as a private citizen and request these men to serve? Were these men officers of the government in any sense whatever? Could they, as officers of the government, have collected any compensation for their services? Were the parties in that controversy under any legal obligation to obey the findings of that commission?

I am sure that the vast majority of American citizens heartily approve the course of the President in each of these particulars, and that his critics will be obliged to find more serious charges against him than they have yet conjured up to make him less popular than he shall leave the White House when he was entering it.

I am, sir,

HENRY COLEMAN.

NO WAR WITH JAPAN

HORTONSVILLE, N. Y., February 14, 1907

To the Editor of *Harper's Weekly*:

SIR:—I am a "yellow journal" thank you from the bottom of my heart for your interesting Comments on pages 220 and 223. There has been far too much yellow journalism lately of anticipated war with Japan. Very bad policy for a journal, daily or otherwise, to counsel war for the mere sake of increased circulation; too much considering the sensationalism HARPER'S WEEKLY has gone up in my estimation one hundred per cent. on account of matter referred to above. In the cause of peace.

I am, sir,

EDWARD P. WOLFFERTAN.

MUST NOT CRITICISE THE PRESIDENT

FRANKLIN, OHIO

To the Editor of *Harper's Weekly*:

SIR:—Having always read your editorials with a lively interest and with a certain amount of approbation, I am much surprised and pained to see your virulent attacks upon our Chief Executive. It seems to me that you had better leave such work as this to the yellow journals. If you are against corruption in business and in politics, if you are on the side of the people in their fight against corporate greed and lawlessness, then cease this unwarranted denunciation of one who is the acknowledged leader of the forces of reform. The vital question before the country to-day is the friends of the people, and President Roosevelt is the leader of the people. Your sympathies will be inferred from your published expressions of opinion in HARPER'S WEEKLY, and many will doubtless be wondering how much of a consolation was needed to make the periodicals of which you are editor, "task right."

The interpretation which you place upon Mr. Root's speech is entirely unwarranted. That there are many subjects, heretofore falling within the province of the State governments, upon which the national government must legislate in the future is clear to every rational mind. Mr. Root was only calling attention to a tendency which has been going on for years and years. The States cannot cope with the great corporations doing interstate business. It is imperative, for the preservation of family life, that divorce shall be uniform throughout the country. These things must be regulated by the central government, and I cannot see that the right of local self-government is at all impertinently thereby. After a careful perusal of Secretary Root's speech, I can find no ground for your charge that the administration intends packing the Supreme Court. To speak frankly, I think the charge was made merely for political effect. At any rate, the possibility of it is so remote as to make the expression of such a sentiment an utter calamity.

When you land Mr. Foraker, or even mention him as a President, possibly you are treading upon dangerous ground. Come out to Ohio and ask the first dozen people you meet, irrespective of party, what they think of him, and you will be forced to the conclusion that, however much the Senator may spend himself in Washington, he is about the most unpopular man in his native State.

For these reasons, Mr. Editor, there are many of us who think that you would do a great service to your country by leaving the President alone until he actually does do something dangerous, and that you would elevate the character of your paper by keeping it out of the mud-slinging business.

I am, sir,

F. W. DICKET.

AGREES WITH GREEN AND TERRY

WABINGTON, ME., February 15, 1907

To the Editor of *Harper's Weekly*:

SIR:—I like HARPER'S WEEKLY very much indeed, although it does occasionally exaggerate me. I agree pretty well with your correspondents, H. S. Green and F. T. Terry, whose letters you published in your issue of February 10, and say from knowledge that there are a good many "people" out of the Hudson who agree with the sentiments of these correspondents.

I am, sir,

STEPHEN C. FABLE.

THE WHITE HOUSE, DOWNING STREET, AND
THE RECALL OF SIR MORTIMER DURAND

By ANGLO-AMERICAN

Loomer, F. August 9, 1907.

THE manifestations of disappointment among Englishmen at the appointment of Mr. James Bryce as Ambassador to the United States have been largely due to the feeling on the part of Sir Mortimer Durand's friends, especially since the latter's return to England, that he has been badly treated both by Downing Street and in Washington, and their views are stated succinctly in the following language:

we are asked suddenly in the following paragraph to consider the situation from the other side of the Atlantic. It is a good time to take stock of the Anglo-American situation. It seems to be viewed somewhat differently on the two sides of the Atlantic. Although Americans may be scarcely conscious that anything in the nature of an Anglo-American situation exists, we Englishmen are fully aware of it. The first step towards any resignation started here is perfect tarant of apprehensive attention. The London press began lamenting that the British Embassy at Washington no longer enjoys its old social and political primacy. Baron von Sternberg became suddenly the hopey man of the hour, and the Embassy was suddenly the centre of a life-and-death peril. The Government was suddenly asked to send the best possible man to Washington, someone who would revive British prestige, who could outwalk, outsize, outtalk, outstare the President, and who would make a distinctive appeal to the imagination of the American people. The best possible man was offered, and accepted, to the five Mr. Grey.

One could have thought that this would have allayed the tumult. If a hundred Americans had been asked to name the man they would most have preferred to see installed on Connecticut Avenue, more than ninety of them would probably have voted for Mr. Bryce. But the fact that he was a Briton, and his intellectual standing and influence that Mr. Bryce commands in America, was more intimately known there and more highly thought of, perhaps than any other Briton. All thinking Americans feel that Mr. Bryce is a man of the highest character and of great worth, not only explains their Constitution and system of government to Americans, but laid the foundation of a whole school of political inquiry, and called Mr. Bryce's name to a pinnacle of esteem for which it has been hard to dislodge him. It is well known that Mr. Bryce accepted the offer of the ambassadorship, and when the news was received in America with the liveliest interest and anticipation. Englishmen might reasonably have concluded that they had no further occasion for un-

Secretary, who, after all, matters of fact, they do not seem to him to do so. They would appear to be still somewhat disquieted. It is worth while inquiring why. There are probably several reasons to account for this prolonged attack of nerves, but one of the most potent of them all is the circumstance of Sir Mortimer Dunsand's retirement. It is not to think that he will have any part in this matter. Sir Mortimer's retirement is a thing of the past, and the fact is unaccounted, in fact, to a recall. Much of the gossip that has appeared in the American papers on the subject has been mere guesswork, but some of it is true; and its truth is beginning to percolate through England. As one who may claim to be in fairly close touch with the White House, I can say that Sir Mortimer Dunsand's departure was the result of an intrigue in which President Roosevelt was an accomplice. The President found Sir Mortimer rather more pertinacious in upholding British interests and rather less suppliant to the White House than he would have been. The President's policy of isolation arose between them. One of Mr. Root's first acts after his acceptance of the Secretaryship of State was to address to Sir Mortimer, on information furnished him by Senator Lodge, a somewhat abrupt letter dealing with certain alleged offenses against American law committed on the coast of Newfoundland. The President's action turned out to be entirely in line with the policy of its inactivity nettled the President. He was still further irritated by England's refusal to put pressure upon her Japanese ally at the time of the Portsmouth Peace Conference. Standing in the way of Mr. Roosevelt's getting what he wanted—this beyond question—was Sir Mortimer Dunsand. The President's policy of isolation forced him once more into an attitude of opposition to the President. There are certain money claims owing by America to British subjects. President after President has admitted their validity, but they are not paid because Senator Lodge holds the purse strings. The President's policy of isolation is a business which does not place the United States in any too favorable a light. It would too nearly resemble juggling to be acceptable to Americans if they once took the matter into consideration. Sir Mortimer Dunsand, acting, of course, on orders from Downing Street, was not averse to a settlement of these claims, and Mr. Roosevelt did not like it.

"To these grounds of political disagreement there was added a want of personal sympathy between the two men. Sir Mortimer probably distrusted the President; Mr. Roosevelt probably thought the British Ambassador very British. At any rate the President determined, if possible, to get rid of him. He has many friends

and correspondents in London. They were made aware that a change in the British embassy at Washington would be acceptable to the President. The social influence of the American colony in the British capital is very considerable, and it was adroitly brought to bear against Sir Mortimer. It has been often said in London that Mr. Mortimer wrote more than once on the subject to a member of the British Embassy in Paris, a French ally. Petticoat diplomacy was called in to his assistance. All ambassadors have trouble at some time or another with their attachés and secretaries, and especially with their attachés' and secretaries' wives. Sir Mortimer had not been exempt from the common ill of the diplomat. He had a quarrel with one of his secretaries, and his grievance against him lay open to one second only to Leonard St. Edward Grey. The end was thoroughly characteristic. It was characteristic of the British Foreign Minister to give way before American pressure. It was characteristic of Mr. Roosevelt to smother with praise, at their first meeting, the man against whom he had just been fighting. It was characteristic of the American diplomatic corps in Washington that they should give Sir Mortimer on his departure a magnificent send-off. The arranging of that send-off was not wholly grasped at the time by the American people. They took it to be merely a demonstration of the regard in which Sir Mortimer had been held. It was far more a

ambassadorship for protest against his treatment by the President.¹ The next day he was appointed Ambassador Extraordinary and Plenipotentiary to the United States by the outgoing British Foreign Secretary Lord Salisbury, who was setting off for Sir Mortimer Dugand. He wished to have a hand in nominating his successor. He had fixed upon the British-Liechtenstein Ambassador to Persia, Sir C. Spring-Rice, a former attaché at the Washington Embassy, as the right man for the post. He could not, however, of course, say so openly and officially, but it was perfectly well known that he was anxious to get rid of him. It might be said that he would be acquainted with his wishes. Many of them, at any rate, which if his information is correct, began to suggest to Sir Edward Grey, who took over the Foreign Office from Salisbury, that Sir C. Spring-Rice was preeminently qualified to take Sir Mortimer's place; that the President himself had forgotten Mr. Bryce. Mr. Bryce was not having an altogether successful time of it in America. His health was suffering, and his country had proved even less congenial than he had anticipated. He wanted to be quit of it, and he wanted to represent Great Britain at Washington. His qualifications were so overwhelming that it was merely a question of whether he cared to press his claim, and that Sir Bryce did care, with most reasonable success. In fact, he was completely satisfied with the result.

was appointed. The President's desire was almost constant. "It is not for me to do here," he would say, "but I will do it in England." The Roosevelt "set" in Washington at once began giving voice to its discontent, and Washington resounded with their complaints that Mr. Bryce was too "old" and "too professional," etc., to be a good Ambassador.

All this, however, did not yet appear to have reached in England. The several persons who were so late that they understand partial any rate, of what has been going on. The English are rather accustomed to do whatever Americans ask them; but when they fully grasp that a British Ambassador has been recalled practically through the intrigues of an American President, and for no other reason than that the English are not to be the champions of English interests as Americans expect their Ambassador in London to be of American interests, they will feel, unless I am mistaken, that the policy of compliance has been carried too far. It is rather a tradition among the better sort of English journals to say that the English are not to be the champions of English interests here and there which display a certain uneasiness and resentment. The inference has been made that Mr. Bryce has been appointed because he is not likely to take up the attitude which the President found so little to his liking in Sir Mortimer Durand. To put the matter twice as clearly, as English people are likely to do, the President has reached the conclusion that Mr. Bryce's mission is to give things away. Mr. Bryce, as we all know, has always been an ardent promoter of friendship and a better understanding between England and America. So was Sir Mortimer Durand; but Sir Mortimer, I should judge, as a result of a thorough knowledge of the mind of Mr. Bryce, has never displayed. During his three years in Washington he showed that he did not believe in pushing about Anglo-American relations or in sacrificing Anglo-Canadian or Newfoundland interest in order to secure American goodwill. It seems to me thought in England that Mr. Bryce looks upon Anglo-American relations as a thing to be done for the mutual interest; and several journals have accordingly implored him to lighten his backbone, and have accused him that we shall respect him just in proportion as he stands up for imperial rights. The matter, of course, is one of some immediate importance, as it touches the relations of the United States and Canada and Newfoundland. The reputation of magnanimity and anti-imperialism has always clung to Mr. Bryce, and Englishmen appear to think that it will be confirmed by his conduct at Washington. That is why they are so watchful of his friendship and his relations with the President and the British Government.

Mr. Bryce leaving the White Star Pier where he landed from the "Oceanic"

The new British Ambassador crossing the Pennsylvania Ferry on his way to Washington

THE ARRIVAL OF THE NEW BRITISH AMBASSADOR, MR. JAMES BRYCE, IN AMERICA

MR. JAMES BRYCE, WHO SUCCEEDS SIR HENRY MORTIMER DURAND AS BRITISH AMBASSADOR TO THE UNITED STATES, ARRIVED IN AMERICA ON FEBRUARY 21, AND PROCEEDED IMMEDIATELY TO WASHINGTON TO ASSUME HIS NEW DUTIES

WAR AND BOOKKEEPING IN JAPAN

THE "EXTRAORDINARY" AND MUCH-DISCussed \$28,000,000 AP-PROPRIATION FOR THE IMPROVEMENT OF JAPAN'S NAVY, AND WHAT IT REALLY SIGNIFIES TO THE PEACE OF THE WORLD

By WILLIAM INGLIS

SPECIAL CORRESPONDENT IN JAPAN FOR "HARPER'S WEEKLY"

Tokio, January 26, 1907.

EVERY day that passes hours one question repeated—why is powerful Japan arising herself so thoroughly? The question is resolved in this capital from every quarter of the globe. One finds it in most of the European newspapers and nearly all of the American newspapers that come in hand. Indeed, the members of the Progress, or Opposition, party of Japan are pressing the question very sharply upon the government ministers.

The answer is always the same—that Japan is obliged to keep herself in the position of a first-class power, now that she has attained that honor by her late Chinese and Russian victories, and that the numerous power being completed so quickly is merely enough to maintain her new dignity. Also that she intends to do her part in keeping the peace.

Just how far these assurances guarantee the continuance of peace is beyond a mere Japanese reckoning. But it has been possible to discern a few facts about Japan's fighting spirit, and in view of the latest alleged Japanese news from abroad, furnished in an interview by a "noted" but unfortunately anonymous English engineer, who declares that the shipyards and munition-shops are being worked continuously day and night. It will probably interest Americans to know what the newest world-power is doing to-day in preparation for combat.

Probably no one of the age of twenty-one years and upward will take too seriously the diplomatic reassurances of nation to nation concerning the emotions of esteem and affection that each feels for the other. An accurate cynic has said that there is no such thing as friendship between nations unless that friendship is based upon mutual material gain. It may well reassure those anxious souls who still cling to the old-fashioned San Francisco schools incident in a possible cause of serious friction between the United States and Japan, to know that in the opinion of every intelligent American in the East neither one of these nations can afford to fight the other. Each depends upon the other. Each finds in the other an excellent market for surplus products and manufactures.

Moreover, it appears to be as certain as anything can be in this land of enigmas that the school incident is dead so far as diplomatic exchanges go, and that Japan is resting in the calm belief that the United States will not let her citizens enjoy the whims of their treaty rights. As to the exclusion of Japanese soldiers from the United States there need be no disagreement, for the Japanese government would rather see them go to Manchuria and Korea.

Assuming, then, that our interest in the armament of Japan is purely academic, it is still interesting to discover how far this people is preparing for war and, if possible, the reason for the preparation.

Most absorbing to us at home is the state of Japan's navy, for whose improvement an "extraordinary" appropriation of some \$28,000,000 is included in the budget for 1907. In this case the word "extraordinary" is misleading. Careful search reveals the fact that it is a mere technical term of bookkeeping, whose full explanation would occupy more space than this and the rest of the attention of any but an Oriental mind. As a matter of fact, there has been such a shifting of charges from ordinary to extraordinary that this \$28,000,000 appropriation is actually needed to carry on the repairs and construction of the navy in accord with the programme adopted two years before the war with Russia and was to be completed until 1911 or 1912.

The most illuminating explanation is found in an address delivered last September by Minister Satto of the navy.

"With regard to our naval strength," he said, "I am content with the present displacement; but in order to keep pace with the civilized countries of the West we must replace old vessels with those of the newest type. For this we shall not be able to avoid a certain increase of expenditure. This is not, of course, expansion of our navy in any sense."

"As my personal opinion, I consider that our naval policy must be consistent with the tax-paying capacity of the people, and as their burden at present cannot be made to be very light, I have no idea of concentrating the expenditure for naval expansion on being so the efficiency of the navy is not impaired."

This utterance was made long before the San Francisco schools incident was thought of, and the present naval programme simply carries it out.

Japan lost two of her most powerful battle-ships and two of her strongest cruisers in the war with Russia. The effort to replace them is the cause of most of the activity in the Japanese navy yards to-day at Yokosuka and Kure. The first battle-ship programme, which was launched last November, is now being completed at Yokosuka and she will probably be put in commission by the end of this year. The armored cruiser *Katsuki* will prob-

ably be completed this year, and four or five Russian prizes are also being repaired at Yokosuka. At Kure the battle-ship *Itate*, a sister ship to the *Settsu*, will undergo war, together with the armored cruisers *Ikuta* and *Hoson*. Half a dozen Russian prizes are being repaired—almost rebuilt—out Kure, including six that were sunk in action at Port Arthur, but since refitted. Torpedo-boats and destroyers are also in course of construction.

Neither the resources nor the appropriations available will enable Japan to lay down one new ship before next summer. Evidently the government will go slowly in carrying out the Third Naval Expansion programme, of 1903.

A new battle-ship will probably be ordered in England within the year and three armored cruisers and two cruisers originally included in the programme are still unprocured for. If Japan's money holds out, her naval strength is expected to be by 1912 almost twice as great as it was at the opening of the Russian war last during 1905, and from the strain on the budget resulting from the late war, together with the construction of the dockyard, due to repairs of the Russian prizes, will tend to retard rather than hasten the completion of the old programme. There has been no proposition whatever toward increasing this programme or hastening it since the San Francisco Board of Education received the Japanese pupils from ordinary public schools. Incidentally it may be worthy of note that Japan's naval strength is less than ours. By the latest reports the great navy of the world stand in this order: 1, Great Britain; 2, France; 3, the United States and Germany, almost even; and 4, Japan.

It is difficult to tell with similar exactness the strength of Japan's army, for it is far easier to count battle-ships than fighting-men; yet it is certain that Japan's army comprises at least 200,000 men, and that she has a reserve of 200,000 more. It is difficult to tell with similar exactness the strength of the war with Russia, although at that time she had been preparing for ten years to take revenge and regain Manchuria. But these are divisions are not by any means received up to their full strength. They could be put in the field, however, at a few weeks' notice. How many soldiers Japan still has in Manchuria and in Korea is well known in the Japanese War Office—but no where else. The number of men under arms at home is, of course, more generally known. The estimates of the best informed persons I can find are that there are now 250,000 Japanese soldiers actually under arms, besides a reserve of 250,000 trained men, most of them veterans, who could be put in the field almost instantly. The army, it may be mentioned, receives an "extraordinary" appropriation of \$22,000,000 in this year's budget, so to which the explanation is similar to that of the navy fund.

Nevertheless the people of Japan are wondering why they are being taxed on a war basis while the country is on a peace footing. There was not one summer at the greatly increased burden of taxation during the war against Russia, for then it was a question of loyalty to the Emperor; but now that peace is established and the tax-paying power is strained almost to the breaking point there is a great deal of anxious inquiry, if not complaint.

Mr. Ochiai Yasuni, leader of the opposition party in the Diet, asked Dr. Sakataki, the Minister of Finance, at a meeting of the Budget Committee last Wednesday to explain the "extraordinary" expenditure of more than \$28,000,000 on the army and navy.

"From one point of view," said Mr. Ochiai, "this outlay may be euphemistically described as 'completing' our armament; but frankly they appear to indicate an expansion of armament. Does the Empire's position demand such expansion? I cannot decide anything so important to inquire unaided. There are two points of view, the chief cause of anxiety was that some strong European power might step in and rob Japan of the fruits of her successes; but that apprehension has vanished. There is no indication of an alliance between Germany and Russia, nor is there any prospect of Japan being forced to form a coalition."

"Russia may entertain more or less hostile feelings, but she would have to put her financial house in order before being in a position to attempt anything on a large scale; and as for her navy, though she might obtain ships quickly enough, two years would be needed to train crews for them. So there seems to be no indication that Russia will send an army to Manchuria for some years to come."

"Up to a certain point, I agree, the expansion of our armament is commendable, but I cannot discover any occasion for the rapid programme stipulated by the government. In my erect, so must consider the problem of how to raise the funds. They are forthcoming for this year, but from what source can they be derived next year? Are we not to be engaged in a programme of expenditures continued through a long series of years without (Continued on page 331.)

WHERE AMERICAN ENTERPRISE HAS FAILED

THE INSIGNIFICANT SHARE OF THE UNITED STATES IN THE TWENTY-SIX BILLIONS OF THE WORLD'S COMMERCE

By FREDERIC AUSTIN OGG

THE carrying of the world's imports and exports, never an insuperable task, has come to be a business of truly Heracleian proportions. In 1800 the total commerce between nations was valued at less than two billion dollars. During the first half of the century it barely doubled. By 1860, however, it was multiplied by three and a half; by 1870, by five; by 1880, by seven; by 1890, by more than eight; by 1900, by almost eleven; and in 1905, at its total of twenty-six and a half billions, by something over thirteen. To-day the exports of the United States alone are worth two hundred millions more than were the combined exports and imports of the whole world when Napoleon and his British antagonists fell in fighting for the mastery of the high seas.

All this, of course, has compelled an enormous multiplication of the facilities for trade at long distances. At no time in the world's history has so large a proportion of the water surface of the globe been tracked by the efforts of commerce. Never have such demands been made upon seamanship, never have such opportunities been opened up for emulment and profits along the great international highways of trade. Bowed by a common ambition, the nations have vied, through a wide variety of means, to absorb as large shares of this presumably lucrative business as they could lay hold of,—first of all, by assuring to themselves the carrying of their own imports and exports, and afterwards by making roads upon the traffic between their neighbors. The results have been in many ways curious.

If one will knock about the world long enough he may now be able to resist the fling of some fifty-five or sixty different nations flying from the masts of our international carriers. That is to say, there are upwards of thirteen hundred merchant marines of sufficient importance to have some sort of place in the records of trade. Of these, however, only fourteen are large enough to comprise as much as one per cent. of the total tonnage of the merchant marines of the world (37,806,609 tons), and only four reach as high as five per cent. The most striking phase of the matter is the enormous superiority of the British, which alone comprises forty-six and a half per cent. The German is just four per cent, with about one and a half, and the American third, with a little over eight and a half. Then follow the Norwegian, with five, and the French, with about four and a half.

Finding four remains to the man who can bring forward a fully convincing explanation of why things should have fallen out in just this fashion. It is easy to say that the physical and economic surroundings of the Englishman—particularly his insular position, centered with his possession of colonies in every quarter of the globe—have lured, even compelled, him to keep things afloat even in the foreground of his attention. But it is not so easy to explain why France, ever the peer of any nation in colonial possessions (the second in the world to-day, for that matter) and able to maintain for centuries an enormous carrying trade in the teeth of the keenest international rivalry and of repeated wars, should have fallen in this latter race of profound peace, to her fourth rank in the handling of the world's expanding trade. It is even easier to point to the fact that Great Britain was the first nation to adopt the paying of ship subsidies on a considerable scale, and to jump to the conclusion that the subsidy system explains all. But this only the insignificant proposition of four per cent. of British tonnage is subsidized today, and so far as that is concerned, the French merchant marine has been jeal-

ously protected for a century and heavily subsidized since 1861, with very insignificant results. The experience of France would seem to argue the impossibility of creating a merchant marine out of hand. But this conclusion, in turn, is at once invalidated by at least two notable examples of just the opposite thing: that of Germany, which since the beginning of the eighties has built up the second most important merchant fleet in the world, and that of Japan, which within the single decade since the China-Japanese war has increased her mercantile tonnage just 638 per cent. Both nations have made use of bounties, subsidies, and other forms of government encouragement, but in both instances it would be extremely difficult to prove that the policy has had any large and permanent effect. Its inimportance in Germany is indicated by the fact that at present it affects not over two per cent. of the total shipping of the empire. On the whole, it appears that the size and efficiency of any nation's mercantile marine, even more than of its navy, are determined primarily by the temperament and adaptability of its people,—particularly, of course, their taste for trade and for the life of the sea.

One striking fact to be observed is that the newer, rapidly expanding merchant marines of the world are relatively more efficient than their older rivals. This is particularly true of the German and the Japanese. The day appears to be near at hand when other peoples, if they hope to present superior merchant vessels, will be obliged to swallow their pride and resort to the German builders to obtain them.—As for the more remarkable when one considers that only thirty years ago the Germans themselves were regularly laying their ships' keels in British yards. The Japanese, similarly, are fast becoming not only their own builders, but the builders for all the Orient, and the output of their new and splendidly equipped ship-yards at Kobe, Nagasaki, and other places cannot be surpassed anywhere in the world, even by the Germans.

The case of the United States is notorious. In the youthful days of the nation our foreign shipping made a lame start. Not until 1842 did the percentage of our imports and exports carried under the American flag fall below eighty, and are still two decades later, not over seventy. By the beginning of the century, however, it was twenty-five, and thereafter the decline was marveled, until the lowest point—8.2 per cent.—was reached in 1901.

There recently there has been some recovery, the percentage last year being twelve. In the face of this far from brilliant record there are two somewhat considerations, one of which is that our sailing, lake, and river traffic is so vast as to compensate in a large degree for the absorption of the ocean trade by foreign merchantmen. The other is that, generally speaking, both our capital and our labor have been profitably employed during the last forty years in domestic business, and have been in such a position that they could afford, and indeed preferred, to ignore maritime enterprises. We have only just begun, however, to realize the possibilities of our foreign trade, and it is quite within the bounds of reason to maintain, with President Roosevelt, Secretary Root, and others, that the hope of answering up to our opportunities in this direction is positively conditioned upon the marked encouragement of our oceanic merchant fleet. Whether this latter end shall be attained to subsidies—whether indeed, as it is at present, upon which there is at present the most absolute division of opinion, and upon which, unfortunately, the experience of Europe affords us no clear light.

THE VARIOUS TYPES ARE INDICATED BY THE LETTERS A, B, AND C. ATTACHED TO THE MAP, THE CHARACTER OF THE EDUCATIONAL INSTITUTIONS OF COLLEGIATE GRADE IN THE DIFFERENT STATES.

THE UNIFORMLY SUCCESSFUL DIPLOMACY OF CIPRIANO CASTRO

By HERBERT W. BOWEN

Former United States Minister to Venezuela

CIPRIANO CASTRO, upon coming into power, found himself in the singular position of a ruler whose country was in revolution against him, and who was deposed in a suit brought by a majority of the nations of the world for a settlement of the wrongs Venezuela had inflicted on their respective citizens and subjects. The situation would have been absolutely appalling "to a brain unimpaired with nerve of steel"; but Castro never lost his self-confidence or courage. He set to work immediately to plan his campaign against the revolution, and at the decisive moment he took command in person of his handful of troops, had defeated his enemies so completely that those whom he did not capture fled to foreign shores, his return to his capital he announced with grim humor, that he had "pacified" the country, availing, of course, that he had exercised the spirit of the revolution and had crushed its body.

He was now free to give his attention to the rampant nations. Some of them he hardly knew by name, as his education had been barely rudimentary, and as he had never traveled beyond the enchanted isles of the Caribbean Sea. He "googled" himself, however, quickly and accurately, and then devised the simple but sagacious plan of separating his foreign enemies into two parties—one penurious and the other aggressive.

As he had learned that the United States would never join European nations in undertaking coercive measures against a sister American republic, he headed the list of his penurious enemies with the United States, and then added France, as he had been assured that the French Cable Company could restrain the French government from taking any steps that would make France unpopular in Venezuela, Spain, Mexico, and Belgium he now put down on the same list, as they were without navy, and he concluded it with Holland and Sweden and Norway, which he judged had had too little experience in the matter of aggression to undertake it, or short even in alliance with their powerful neighbors. To the diplomatic notes of those on the penurious list he sent answers that were at once deferential and dignified. To the three nations on the aggressive list—Germany, Great Britain, and Italy—the notes he addressed were distinctly defiant and plainly provocative. Their forthright reply with war ships, which seized his navy and blockaded his ports. A word to his pro-aggressors, and they informed the world that his navy consisted of only a few antiquated gunboats and pleasure yachts used for police purposes; that the blockade was simply causing the fishermen along the Venezuelan coast to suffer the tortures of starvation; and that a great alliance of mighty European nations against him was wholly unnecessary, as he was willing to pay all just claims, but could not meet properly exaggerated demands. The world read and sympathized with him, and the blockaders found their position ridiculous. Having no practical plan of their own for settling the controversy, the allies accepted Castro's proposal that plenipotentiaries of the parties in interest should meet in Washington. The result was that an equitable arrangement was duly made by virtue of which all claims of all nations were to be scrutinized carefully by competent mixed commissions, and the awards made by those should be paid by Venezuela in reasonable installments. Castro's war ships were now returned to him and the blockade was raised. His foreign enemies were now "pacified" also, although not in the same sense as the revolution had been. Up to this point in his career his diplomacy was thoroughly intelligible, as well as very remarkable, both in conception and execution. He kept himself substantially all the time in the right and his enemies in the wrong. The claims were mercilessly cut down by the mixed commissions, and an enormous sum of money was consequently saved to him and his country. All that now remained for him to do before settling down to regular work was to find the means of preventing wealthy foreign corporations holding valuable property and rights in Venezuela from promoting, aiding, or abetting conspiracies against him in the future as they had done during the recent revolution. His first step was to secure proof of complicity.

Rumor soon reported that his efforts had been successful even beyond his anticipation, and that he actually had in his possession documents that would, if published, convict the two principal foreign corporations—the American Asphalt Company and the French Cable Company—of having been hand in glove with the very leaders of the revolution. At all events he suddenly deprived those two companies of their immensely valuable property and rights in Venezuela. In doing so he took absolute personal control of his courts, and dictated to them what decisions they should render. The whole procedure was irregular and illegal, and caused the wires of telegraphic communication to vibrate to all parts of Europe and America. As it is the peculiar province and duty of every nation to defend the property and rights of its citizens from all plausible assaults, and not to tolerate illegal procedure even against a criminal, no one was surprised when Mr. Hay sent his so-called ultimatum in March, 1903, in which he stated "we United States Foreign Relations, 1903." The attitude of the Venezuelan government towards the government of the United States, and towards the interests of its citizens, who have suffered so grave and frequent wrongs arbitrarily committed by the government of Venezuela, require that justice should now be fully done, one for all."

Castro replied without delay, in his most defiant tone and manner, and then seemingly dismissed the subject from his mind. To his anxious friends, who expected to see American war ships lead troops within a fortnight at La Guayra, he showed without comment a cablegram he had received from his special agent in Washington stating substantially that his attitude would be ignored, or that conciliatory answers would be sent in reply. The diplomatic world was astounded, and rumors ascended to this day. All knew that Mr. Hay was not the kind of man to send an ultimatum unless it was absolutely necessary as a matter of national honor, and that having done so he would not have met a defiant reply with meekness of his high contents and earnestness of mind. The special agent's cablegram, nevertheless, was truthful and accurate, but he did not state from whom he had received the message. Mr. Hay's ultimatum should be considered nugatory. Castro evidently knew when the process was, and had evidently counted on him to act in his interests at the decisive moment. Mr. Hay, sensitive as but few jack-

the men are, now broke down completely in health, and no further steps were taken by the United States to secure justice for the Asphalt Company until his recovery. Mr. Root had made a careful study of the Venezuelan subject. Then Venezuela was informed (see *Foreign Relations*, 1903) that the cablegram should be used to settle the questions between the United States and Venezuela not in either of the ways (arbitration or force) suggested by Mr. Hay's ultimatum, but through the conciliatory channels of diplomacy. One who, however, preferred to keep possession of the asphalt property, and not even to discuss the matter. The French cable case was conducted in Castro substantially in the same manner as the asphalt case was. The property was seized, the French government protested and threatened to use force, and when Castro answered definitely, but so time in changing its policy in one of conciliatory impartiality. In this case, also, Castro allowed the rumor to spread that he had secrets in his possession that insured his success. Claiming as we very properly say, in the absence of direct proof, that the secret influence he claimed to have in Washington and Paris was wholly imaginary, the fact remains that it would be difficult to find in all the history of diplomacy two stronger cases than the asphalt and the cable cases are, and hardly anything more mysterious than the masterful manner in which they were managed by Castro.

The world has seen many diplomats of great ability, but would have been difficult to imagine one who could have been so and so firmly successful as Castro was in his conflicts, domestic and foreign, with the odds always greatly against him at the start. The main objection to his diplomacy is that it never uplifted either him or his people morally, and was never so noble and so just in its method as the welfare of the human race. His diplomacy, therefore, while exceptionally able, was painfully lacking in greatness and nobility.

Castro had seen many diplomats of great ability, but would have been difficult to imagine one who could have been so and so firmly successful as Castro was in his conflicts, domestic and foreign, with the odds always greatly against him at the start. The main objection to his diplomacy is that it never uplifted either him or his people morally, and was never so noble and so just in its method as the welfare of the human race. His diplomacy, therefore, while exceptionally able, was painfully lacking in greatness and nobility.

General Cipriano Castro
PRESIDENT OF VENEZUELA

ALEXANDER E. ORR

THE PANACEA OF PURCHASE

BY JOHN KENDRICK BANGS

DECORATION BY
DAN DAVRE
GROESBECK

I believe that the government of the United States should at once possess itself of the entire anthracite field of Pennsylvania, and retain it for national defence . . . about eighteen billion dollars would represent, at present values, the valuable anthracite deposits which the United States government should acquire to possess the entire store of this fuel.

—Rear Admiral Evans, in *North American Review*.

If war clouds arise in the burgeoning East

Far out in the realm of the Jap,

Its petty emoluments daily increased

Portending a terrible snap

Twice well to avoid every prospect of war

Upon this Bolshevik plan

Instead of manacled expending our purse,

Why, let us just purchase Japan

If trouble comes up, trust ourselves and the Japs

A chance that is happily given,

That threatens to rupture the status which we

Dispute all the week at the Hague

A bargain let's strike with the Romanoff great,

How charming the prospect of cash

And make In 1913 Russia an American State

For twenty six dollars an acre

Should Britain again wish confessions to us

With lively acquiescence

On any old thread that ignites in our sh.

From angles to quell her confusion

Instead of dispatching vast armies to war

And blow us off from their earth

Let's send for King Edward and give him a fair

For what should kingdom be worth

And so let it be with the twelfth of June

The African in drab attire

The Norwegians and Swedes and the Belgians

The Roman and son of a girl

The French and the to cross Atlantic and Pacific

The Swiss and the fast Portugueses

We'll buy 'em all up at no matter how much

And give a lead each upon Peace

JACK BY ELEANOR H. PORTER

Drawings by REMINGTON SCHUYLER

BOTH man and dog were motionless. In the man, blue-veined lids lay low over sunken eyes until the lashes made semicircles of black on the wasted cheeks; in the dog, two round spots of luminous devotion looked out from beneath silky black forelocks, and gazed with unswerving intensity into the face of the man lying back on the hay.

There was another long minute of troubled waiting, then a quiver shook the body of the small black dog, and a low whine broke the silence of the hayloft. At the sound the blue-veined lids fluttered a little, and a thin hand lifted itself from the hay and fell heavily on the small black head.

"It's a shame, old fellow—so it is," murmured the man. "In just a minute we'll go—in just a minute, old boy. You see, I wanted to rest—rest." The voice trailed off into silence.

There was a long pause, then the dog whined again. This time the man opened his eyes.

"And did you think I didn't know it?" he asked, trying to pat the dog's head, but barely succeeding in stirring his ear-finger-tips. "Of course I know you want your breakfast, old boy; and we'll have it—have it right away. If only it weren't for this weight, this dragging weight at my heels, Jack, and this—oddliness, I'd go now. Things are wrong with my head, somehow, but we're almost there—we must be. Yesterday we passed the brook where we used to fish—she and I. You remember, Jack—I showed you the deep black hole by the big rock. Oh, we're there, almost there!"

In his eagerness the man raised himself on his elbow. The dog, in quick response, quivered from head to tail, and told his joy in broken whines and one eloquent bark. He even turned and gave a sideways jump toward the stairway by which they had climbed to the loft the night before; but the man, breathing heavily, fell back into his old position and closed his eyes. For a minute the dog did not stir; then the tense muscles relaxed, the tail drooped, and the eyes lost their look of joyous anticipation. Very slowly the little creature crept back to the man's side and resumed his watchful, silent scrutiny of his master's face.

It was not long before steps sounded on the barn floor below. The steps ascended the stairs, and a head, red-haired and red-bearded, showed above the left door.

"By jingo," drawled a voice, "I did hear a dog bark!"

The head was followed by a long, bony built body, and the body by two big-headed feet which clumped across the floor and came to a pause about four paces distant from the man and the dog on the hay.

"Well, what you doing here?" drawled the voice again, but this time with a note of impatience.

There was no reply except a tentative move toward acquaintance and a conciliatory whine on the part of the dog.

The red-haired man frowned at the dog and took a step nearer.

"Come, come—drunk, be you?" he asked sharply, peering into the upturned face on the hay.

The dog, reading with unerring silence the frown and the sharp tone, looked toward his master with a series of short barks.

"Yes, yes, Jack, I know," murmured the man on the hay, faintly, without opening his eyes. "We'll go—we'll go, right away. I'm almost—rest—"

"Humph!" ejaculated the red-haired man, shambling across the floor and down the stairs. Five minutes later he reappeared, followed by a second edition of himself—scarcely less tall, but less bearded, less marked with the passage of years.

"Drunk, I suppose," the son was saying.

"Not a bit of it," retorted the father. "I tell you he's sick, and I ain't going to run no chances. Who knows but it's catching? It's mighty lucky I heard the dog before I clure out the yard. I'm going right by Shoom's, and I can leave him there as well as not. There ain't no place for sick men who nobody knows unless 'tis the postoffice. Anyhow, I can't keep him!"

Jack's master was unconscious when the two men lifted him and carried him down the stairway; and Jack himself was an animated bunch of distressed uncertainty whether to regard these strange red-headed men as friends or enemies. That his master

made no sound or motion of resistance evidently argued well to Jack's mind, for his barks and whines smacked more of excitement than of anger; but when the two men laid their burden on a pile of sacks in the bottom of the empty wagon, Jack flew to the side of the wagon in a frenzy of fear lest in some way he should become separated from him.

"Confused the little beast!" snarled the old man. "Here, I can't leave him alone. Take him off! Can't you?"

"Not much, I will!" grunted the son, rubbing his hands against his trousers as though he already felt the impact of those strong little teeth.

"Humph! I guess we can fetch him through his stomach," retorted the other, shuffling into the house to appear, a minute later, with a chicken drumstick. "Come, air, come—good fellow!" he roared, throwing the bone to the ground.

For one short instant Jack's great hunger made him forget all but that tempting morsel before him. With a bound he reached the edge of the wagon; then he paused, turned, and crept back to his master with a low whine and the touch of his tongue on the limp hand.

"Humph!" growled the old man again, picking up an empty sack and handing it to his son. "Catch the little devil off his guard and hold him tight," he commanded, reaching for the drumstick and thrusting it almost under the dog's nose. "Now!" he shouted, as the hungry little animal pounced on the bone.

The next moment, Jack, blinded and well-nigh smothered in the folds of the sack, was struggling in the young man's arms.

"Shut him up in the wooden shed and don't let him out until night," called a sharp voice as the wagon rattled out of the yard, "then set him adrift."

It was six o'clock that night when the young man opened the wooden door and attempted to set Jack "adrift." At first there was nothing but a frantic barking and whining, and a frenzied rushing over every inch of the yard, the barn, and particularly of the hayloft, all with a quivering, sensitive nose held low to catch a possible clue; but as time passed and it flocked as if "adrift" would mean nothing but this, the young man tried to drive the dog from the dooryard. To leave the place where he had just seen his master Jack stoutly refused, however; and not until the young man supplemented his persuasions with a pile of small stones and set the dog to trying about Jack's feet did the dog put his tail between his legs and run yelping with fright, up the road.

The sun dropped behind the hills in the west, and the shadows deepened. The long step road began to lead straight up, up, up, and the weary little black legs moved more and more slowly, stopping at last altogether. The wistful eyes crept the road behind and the road before, then scanned the pastures on the right and the woods on the left. A long ringing bark, followed by another and another, broke the silence of the twilight hush, and set small feet to scurrying among the underbrush. Then slowly, with hanging head and drooping tail, hungry, homeless, and miserable, Jack began to climb once more the long hill.

At dusk he reached a square white house with green blinds, flanked by a generous barn and a group of well-kept outbuildings. Creeping into an open shed he established himself in a corner under a wagon, and dropped his nose on his fore paws with a long-drawn breath of weariness that considered neither right nor expediency, but demanded rest.

A dozen hours later when Miss Emily Burbank opened her kitchen door to let in the fresh morning air she faced a small black dog sitting motionless on the broad step.

"Oh!" gasped the lady, faintly.

In lieu of a knocker the dog thumped his tail on the wooden step. His sparkling eyes grew lustrous with expectancy; then he whined softly.

The sound seemed to stiffen every muscle in the woman's body. She rose step forward and shook her apron with both hands.

"Shoo!—shoo!" she cried. It was a cut or a chicken that usually called forth the condemnatory wailing of Miss Burbank's apron.

"Hoo—hoo!" Hoo!" retorted Jack, quiveringly alert on the

instant, as he swept the yard with eager eyes. That he himself was the object of attack never entered his head; when Jack heard "swat!" he always looked for the cat.

"Tch!" shuddered Miss Burbank, retreating into the kitchen and slamming the door. "The horrid little beast—I believe he was going to bite!" Then she tiptoed to the window and looked out.

All the thrashing life and energy had fled from the little body and left it limp with griefed dismay. The dog stood motionless, his watery eyes fixed on the closed door.

"Go away," said Miss Burbank, sternly, from the window. Jack whined and took one leap toward the nearest speaker.

"Go away, I say," repeated Miss Burbank. "I don't want you. Go home!"

"Bow-wow!" protested Jack.

"Go home!" insisted Miss Burbank, and this time she stamped her foot.

Very slowly the dog turned and dejectedly walked down the slope toward the road. At the edge of the yard he paused and turned toward the house. A moment later he lay in the grass, his nose on his fore paws and his eyes fixed on the kitchen door.

"The dog!" muttered Miss Burbank, as she crossed the floor and went out into the woodshed for kindlings. "Just as if—I!"

"Not a dog, I see," said a whimsical voice from the bark shed stairs.

"Indeed I haven't," retorted Miss Burbank, sharply; and Tom Masterson chuckled as he continued his climb to the rear door.

Tom Masterson ran the barn "on shares," and lived in the upper part of the square white house with green blinds. Mr. and Mrs. Masterson had been there ever since old Silas Burbank died, leaving his twenty-year-old daughter Emily alone in the world. Emily was thirty-one now—healthy, self-reliant, and known to pride herself openly on being free from "nonsense." "Nonsense" to Emily Burbank meant tears, heart-stirrings, and the allowing of sentiment to tip the scales of justice by as much as a hair's breadth. Steady tramps, cats, and dogs were never fed at her door, though the men in her employ and the stock in her barn received full measure of food and care. Vagrancy and carelessness in looking out for one's pets—if one were so silly as to have pets—she could not countenance to the extent of distributing scraps and scraps at her kitchen door.

The children of her acquaintance greeted her appearance with a frightened silence, but the sick bailed her cool hand and good judgment with a joyousness that found no fault and asked no questions. Those who had known her as a young girl years before gloried in their stories of Emily Burbank's "bark," and vied with each other in giving the most detailed account of how she had dismissed poor Frank Wingate, son of a dissolute but well-born and wealthy father—dismissed him just because he had once broken his dog and drunk a wee little glass of wine; "and him with all his labored tendencies to fight, too," some would add, resentfully. However varied the stories were in the telling there was always the one ending—that young Wingate had gone West and had never been heard from, and that now Emily Burbank was getting her just deserts by being nothing but a "lonely old maid."

Tom Masterson was well aware of Miss Burbank's disposition toward stray animals in general and dogs in particular, and from the barn he had been an amused spectator of the little scene enacted at the kitchen door that morning; hence his teasing question as Miss Burbank bent over the kindling-wood pile. He was still chuckling when he reached the top step of the woodshed stairs and lifted the latch of his back door. Down stairs Miss Burbank heard the chuckle and understood.

"Just as if—I!" she said again, as she hurried into the kitchen and thrust the wood, with unnecessary violence, into the stove. "My dog, I said!"

After breakfast Miss Burbank carried a six-quart pan of corn-meal mush and scraps into the poultry-yard. Not until she had entered the enclosure did she realize that her visitor of the morning had trotted noiselessly after her so that now he stood close by, expectant and eager-eyed. If nothing else had told her of his presence, the squeaking and scattering of the hens and chickens would speedily have done so.

"Tch!" screamed Miss Burbank, springing quickly to one side. "Go home, sir."

Jack whined, and came upright on his haunches, with his master begging had been wonderfully persuasive.

"Go home—go home—go home!" reiterated Miss Burbank, flourishing her iron spoon and stamping her foot.

"Bow!" barked the dog,

erisply. Where begging had failed with his master, "speaking" had been all-powerful.

Miss Burbank jumped nervously and followed the hens in their retreat.

"Go home!" she commanded, with all the sternness she could muster.

Down on all fours dropped the dog at once. Head hanging and tail between his legs he slunk through the gate and peered just outside the wicket netting. With a spring Miss Burbank reached the gate and snapped it to; then she turned and began to throw spoonfuls of food among the hens and chickens.

Suddenly she became aware that the dog had shifted his position so that now he was at the right of the long narrow yard, and not ten feet away from her busy spoon. He was on his haunches, too, and Miss Burbank could not help seeing that his longing eyes followed every flying morsel of food or bread. She tried to turn her head to see nothing but the peeping, chuckling, clucking of the fowls; but her eyes refused to be diverted from that upright patient figure on the other side of the netting, and her hand began to make wild throws with the spoon.

Even to herself Miss Burbank would not own that she intentionally turned her wrist so that the small boiled potato flew over the fence at her right; but whether by design or by accident it made little difference to the hungry eyes that saw the potato coming, or to the red and white cavern that promptly opened and swallowed it up.

"Why, he caught it!" exclaimed Miss Burbank, her fascinated eyes never leaving the dog's figure—still upright, and now confidently awaiting favors to come.

Whatever it was that had sent the boiled potato over the fence, it certainly was not accident that sent the clover bit of beef on the same route.

Again the dog deftly caught the food, and again Miss Burbank's eyes grew wide with interest. The big iron spoon was turning the contents of the pan topsy-turvy in search of another piece of meat when a baritone voice from the barn roared forth in "When Johnny comes marching home." With a hasty movement and a guilty flush Miss Burbank tossed the remaining food to the chickens with one shake of the pan, and hurried through the gate. Try as she would not to notice, she was unpleasantly conscious that her every move was watched by a pair of grieved, watchful eyes. The low whine of disappointment was still ringing in her ears when Tom Masterson accosted her from the barn doorway.

"Best of friendly, ain't he—that dog?"

"He's very disagreeable," retorted Miss Burbank. "Why people can't keep their dogs at home, I don't understand," she added, as she hurried toward the house.

A breakfast consisting of a boiled potato and a square inch of beef does not go far toward satisfying an appetite that has been thirty-six hours in accumulating. But it evidently was sufficient to convince Jack that more would follow if he did but have patience. Patience, in Jack's mind, apparently consisted of long, soulless watchings on the kitchen steps, varied by occasional soft barks, pleading whines, and perhaps a gentle scratch or two on the door.

Three times Miss Burbank said "go home" from the window, and each time Jack disconsolately retreated to the edge of the grass by the road. That the dog obeyed her even to that extent brought a curiously pleasant sense of power to Miss Burbank.

Drawn by Berendsehn Schuyler

The brook where we used to fish—she and I

She remembered, too, that he had left the poultry-yard at her bidding; and his feat of catching his food while erect on his haunches was very vivid in her recollection. On the whole, the small black dog was scarcely out of the lady's thoughts all day. The third time Miss Burbank said "go home" from the window there was almost a smile on her lips in anticipation of another proof of her power over this curious little creature on her doorstep. The smile must have shown itself in her voice, for the dog hesitated as though not mere of her mouing, and she had to repeat her command before he finally obeyed.

By night Miss Burbank was strangely restless. To feed this dog was contrary to all her principles and habits; and even could she have set these aside there were still Tom Masterson's laughing eyes and winning smile in the way; that Tom Masterson should see the downfall of her vaunted scorn of tramps of all kinds, and of dogs in particular, was torture to her. It was very resolutely, therefore, that Miss Burbank forced her eyes to take one indifferent look at the dog on the kitchen doorstep before she shut the window, locked the doors, and prepared herself for bed. Hence Jack was still dimmer and surprier when, after a despairing glance at the silent, darkened house, he crept into the shed and under the wagon for his night's rest. Fortunately, thirst was not added to hunger in Jack's case, for there was plenty of water at the barn within his reach.

Miss Burbank could not sleep that night. Even the counting of white flecks of sheep, the reciting of the alphabet backwards, and the fixing of her thoughts on an imaginary yellow spot in the pit of her stomach, failed to close her eyes for any length of time. She tossed from side to side, and finally rose and went to the window.

It was bright moonlight and the workday world was turned to a fairland of loveliness. For a time Miss Burbank watched a fleecy cloud play hide-and-seek with the moon; then a step on the gravelly road in front of the house made her instantly aware that a rough-looking man had come around the bend of the road. She caught her breath with a low cry when the man paused and looked toward the barn.

Perhaps he was a tramp with an eye toward a good lodging-place; perhaps he was an artist with an eye only for the picturesque beauty of the buildings in the moonlight; whatever had roused him to pause on his way, appearances were emphatically against him in the estimation of Jack, who had been quick to detect the steps and their meaning. With a growl and a series of barks the dog sprang into the open and faced the man.

Whether the stranger's interest were practical or esthetic, it waned at the first bark. Pulling his hat over his eyes, the man hurried down the road and out of sight.

"Oh, you—dread!" cried Miss Burbank, softly, her eyes on the dog. Then she drew in her breath and threw a quick look toward the ceiling—Tom Masterson slept in the room above. For an instant Miss Burbank hesitated, then she slipped into a wrapper and a pair of felt shoes, and went swiftly, but softly, into the pantry.

Two minutes later, at least one small dog in the world had the surprise of his life. Out of that cruel kitchen door, before which he had spent hours of fruitless waiting, there came a soft-treading figure carrying a well-laden plate.

"Here, catch it!" commanded Miss Burbank in a hoarse whisper, pausing on the steps.

Jack heard, and bounded forward with a joyful bark.

"Sh-h!" cautioned the lady, with another guilty upward look, and a shrinking back toward the kitchen door. "Now—catch it."

she finished, raising her hand with a piece of meat lightly held in her finger.

Up on his haunches went Jack, and snap went his hungry little jaws. Once, twice, again and again, until the plate was empty and until Miss Burbank's eyes were shining like stars. Then the kitchen door softly closed, and the dog trotted back to his shed and dropped under the wagon with a dewy sigh of content.

In the week that followed it did not take Jack long to learn that while the days were a repitition of that first one—with nothing to eat, and nothing to krat but the periodical "go home, sir, go home,"—he had only to appear at the kitchen door after the house was dark, and silent, to be met again by that soft-treading figure carrying a plate heaped with good things.

It was on the seventh night, and after the seventh banquet, that his love for his new mistress broke bounds, and sent him to her feet in an ecstasy of frantic leaps, short barks, and efforts to reach and lick her hands. The onslaught was unexpected, and— to Miss Burbank—terrifying, though she soon saw that love and gratitude were behind it, and not a desire to crush and devour her. "Down, sir, down!" she cried faintly, and backed into the house; but after that night the dog always had, as a desert to his supper, a surreptitious pat on his head, and a low-spoken "nice doggy"—good fellow—in his ears—albeit ever given with that furtive glance toward the upper floor.

If Tom Masterson knew of those nocturnal banquets, or if he wondered why the dog staid day after day, he made no sign. He treated the whole affair with cheerful indifference. He made no attempt to second Miss Burbank's daily commands to "go home, sir," nor did he ask the dog to stay by feeding him—Tom Masterson had leava too long at the Burbank farm-house to begin now to feed stray dogs.

The weeks slipped into a month, and still Jack staid. He did not always see his mistress at night now, but the plate of food never failed to be waiting outside the kitchen door as soon as the darkness made it invisible to casual eyes. The "go home" sound less and less frequently; and Miss Burbank even forgot altogether to say it. People grew used to seeing a small black dog showing himself very much contented on the premises. Yet Miss Burbank, if questioned, invariably elevated her chin and retorted: "Indeed, no; it is not my dog. It is a stray one, and I wish whoever owns it would look after its property!"

It was on the Wednesday of Jack's fifth week at the farm that Miss Burbank came home from the Clayton's by crossing the field behind the Burbank barn. Miss Burbank had forgotten all about the bull which Masterson had shut up only that morning in the field, nor did she remember until she saw the animal, maddened by the red parrot she carried, charging directly toward her.

It was not far then to the barn-yard gate, and Miss Burbank did her best; but the desired goal seemed to her crazed eyes—to reveal as she ran. The animal was almost upon her, and a barking streak of black shot past her and pooned upon the low-bent head behind her.

That one instant's grace was Miss Burbank's salvation. She reached the fence and almost tumbled to the other side. Then at her feet she fell a crashed, pale, quivering thing, with tangled silky hair and agony-filled eyes; the bull had shaken himself free from his momentary madness.

"Oh! Oh—hi!" shuddered Miss Burbank, her eyes moist, and a lump coming into her throat. For an instant she hesitated, then she stooped and gathered the dog gently in her arms.

Half-way across the yard she met Tom Masterson. "The bull trood him—his hurt," she explained brokenly, in response to the gaping wonderment in his face.

"Himny! Here, I'll get my gun in no time," he cried, starting to run toward the house.

"Your gun?" gasped Miss Burbank in a tone that brought Masterson's feet to an abrupt stop.

"None—to put the little beast out of misery. Why not? Even a tramp dog ought not to suffer."

Miss Burbank drew herself erect. Unconsciously her arms tightened their clasp. For an instant her eyes blazed into the man's; then she spoke.

"A gun?—a gun? Tom Masterson, you go straight down to Seth Hackett's and tell him I want him to come up here at once. Tell him my dog has got hurt. Do you understand?—my dog! Now hurry, please. And without so much as a backward glance Miss Burbank strode across the yard and through the kitchen doorway.

"By Jove!" muttered the man, with a low whistle; then he turned and ran down the road.

In the house Miss Burbank was removing with gentle hands the collar around the

For an instant she hesitated, then gathered the dog gently in her arms

dog's neck. The engraving on the name-plate caught her eye, and she carried it to the window to read.

"Jack. Property of Frank A. Wingate," she breathed, and grew suddenly white. The next instant she was down on her knees at the dog's feet, sobbing and murmuring broken words; nor were the sobs lessened when a moist, feebly tongue touched her cheek, and a troubled whine sounded close to her ear.

During the days that immediately followed Jack knew what it meant to lie in a padded basket and be tended from morning till night. Just how Frank Wingate's dog could have come to her, Emily Burbank could not in the least understand; that he was there was sufficient. Where the master himself was, puzzled the woman even more. It seemed to her that he must be dead; in no other way could she account for the weeks Jack had spent with her, and for his condition when he came. The mystery of the living seemed to Miss Burbank almost to touch the supernatural, and as the days passed she could scarcely bear to have the dog out of her sight.

Jack's wounds were not quite healed when the toll, house-breaker rang the bell at Miss Burbank's door.

"Good morning," said the man, with a curious touch of restraint in his voice. "I called about a stray dog that I understand is here."

Miss Burbank stifled. Only the night before Tom Masterson had been telling her that some of the travelling-men at the hotel in the village had said that they were coming out to see the dog that didn't know the difference between a bull and a toy spaniel.

"There is no stray dog here, sir," she said, icily. "I own the dog."

"And you wouldn't sell it?" asked the man, still with that touch of restraint.

"Certainly not."

"There is nothing that would tempt you?"

"Nothing."

"But—I know a man who—wants it."

Miss Burbank shook her head.

"I can't help it. The dog is mine. He has been here for weeks, and I would not consider a separation under any circumstances."

"Upon my soul!" laughed the man, the restraint gone from his voice. (Miss Burbank started.) "You—" The man did not finish his sentence, for a series of frantic barks and whines interrupted. Mechanically Miss Burbank turned to open the sitting-room door.

The next moment she almost fell over backwards, so overwhelming was the rush of a small black body with two hemlock ends dragging at its heels.

Illustration by Benjamin Schreyer

"Frank, if you will bring—my dog in here, I'll put him in his basket"

"Frank!" she gasped an instant later, as Jack leaped into the man's arms and looked face and hands in ecstatic joy.

"Yes, it is 'Frank,' Emily," said the man, softly, as he crossed the hall to her side. "I've been sick. I was sick when I left 'Frisee' weeks ago; but I wanted to get to you, Emily. I thought I was going to die, and we started for the East—Jack and I; I wanted to see you—once more. When I reached the junction I suspect my head went back on me; anyhow, I started to walk here. I dropped somewhere by the way and was taken to the posthouse. Necessity is now here, you know, and he didn't recognize even my name on the papers in my pocket; but he gave me good care—just as good as he did afterwards when I came to myself, and he found out who I was. But I didn't die, Emily, after all, and—I'm here. Emily!"—the man's breath came hurriedly—"did you mean that, a minute ago? Did you? You said that you wouldn't consider a separation from Jack under any circumstances, and—I have Jack," he finished meaningly, reaching out for her hand.

"Oh!" cried Emily, flushing a bright pink and drawing hurriedly back. "Of course you can have him! He isn't mine any more. I—you—" She turned and fled through the sitting-room door.

The man stood motionless, his eyes glowing dark with misery; presently a voice, low, and not very clear, came from the sitting-room.

"Frank, if you'll bring—my dog in here, I'll put him in his basket."

A puzzled questioning swept across the man's face; then the light of a sudden comprehension set his eyes to dancing.

"Emily—sweetheart!" he cried, and strode through the door.

A NOTEWORTHY SHOWING BY AMERICAN ARTISTS

By EMMETT C. HALL.

MUCH interest has been aroused by the first annual exhibition of paintings by American artists now being held in the Corcoran gallery at Washington. The showing made by American artists in the four hundred paintings exhibited is distinctly good. Scarcely a prominent name among contemporary artists is missing from the catalogue.

Three prizes have been awarded by the Corcoran gallery to paintings exhibited: the first, of \$1000 (the W. A. Clark prize, carrying with it the Corcoran gold medal), going to Willard L. Metcalf of New York. This painting, entitled "May Night," shows an old Colonial mansion standing amid blossoming horse-chestnut trees, the scene softly illuminated by an unseen moon. The Charles C. Moore prize of \$500, and the Corcoran silver medal, go to Frank W. Benson, of Boston, for his picture called "Against the Sky," a painting of considerable attractiveness; it discloses a young woman in light summer costume, her wet tresses by a breeze, and seen against a dazzling summer sky. The third prize picture is the work of Edward W. Redfield, of Centre Bridge, Pennsylvania. This was awarded the V. G. Fischer prize of \$250, and the Corcoran bronze medal. It is entitled "The Lowlands of the Delaware," and expresses with understanding the charm of low-lying and barely marsh-lands.

Competition for these prizes was limited in very recent work by reason of the fact that only pictures owned by the artists were allowed to compete; nor were any eligible which had previously received a prize of equal or greater value, the idea of this limitation being to encourage continual effort, and so far as possible, to provide against a duplication of honors.

Nine of the paintings exhibited have been purchased by the

Corcoran gallery. They are: "Girl in Brown," by J. J. Shannon; "The First Snow," by R. M. Shattell; "The Delaware River," by Edward W. Redfield, winner of the third Corcoran prize; "A Light on the Sea," by Winslow Homer; "Ave Maria," by Horatio Walker; "Poem," by Wilton Lockwood; "Woman and Child," by Mary Cassatt; "Northeast Headlands, New England Coast," by Childs Hanson; and "The Land of the Hopi Indians," by Albert L. Groll. The gallery will also accept, if possible, the prize picture "May Night," and the painting "The Land and the Sea," by Paul Dougherty.

While the prize paintings are naturally the centre of interest in the exhibition, there are, nevertheless, some striking portraits exhibited, the one given the place of honor being Sargent's portrait of the four famous physicians, Drs. Kelly, Osler, Habbert, and Welch, recently completed for the Johns Hopkins University. This canvas ranks with any which this illustrious painter has ever produced. Near this large painting are four others by the same hand, of which the most interesting is that of the late John Hay, Secretary of State.

Some other portraits in the exhibition which might be regarded as fairly challenging the genius of Sargent, and not without good grounds, are by Wilhelm Funk, Carl Meibers, and J. J. Shannon, whose "Girl in Brown," purchased by the gallery, has earned much favorable comment. There is a remarkable charm about this somewhat enigmatical conception.

Some notable paintings are present as loans from other galleries, among them being "Carities," by Abbott Thayer, from the Boston Art Museum, and Albrecht's "Selva," which is the property of Senator Clark.

NEW YORK'S SECRET POLICE

By FRANK MARSHALL WHITE

THAT the city of New York has been compelled to adopt the secret-police system of Continental Europe is due entirely to the fact that a horde of European criminals—of a single nationality—have crept within our gates. Indeed, the so-called Black Hand Society's headquarters is not an offshoot of the Sicilian Mafia, transplanted to the metropolis of the Western Hemisphere, and it is to deal solely with those malefactors, mostly ex-convicts from southern Italy, that the special Italian detective service has been instituted.

Fully to appreciate the circumstances in which the "Black Hand" was enabled to flourish in the centre of Western civilization for a period of several years, however, it is essential to understand the conditions under which these hundreds of thousands of Italians have recently come into the country—conditions different from those governing the immigration of any other nationality, with the exception alone of a few Austro-Hungarian and Oriental races. Of the million and a half of Italians who have visited the United States during the last ten years, more than one million have entered since the beginning of the century; and seventy-five per cent. have already returned home.

The great bulk of the present Italian immigration is not of those that come to stay. Italy is perfectly willing that her people should visit America for short periods, and not only bring back American money, but relieve the congestion of her population; but for economic reasons she cannot afford to have all of these visitors remain permanently. While she might possibly spare a million and a half from her 33,000,000 if they were judiciously selected from different provinces, it would be a serious matter if even one million of that number were drawn from two provinces, of which the total population is only 3,000,000.

As, however, the most stupid Italian peasant could scarcely fail, in ordinary circumstances, to perceive the advantage of living in a prosperous republic, as against an overtaxed monarchy, even during a limited residence in the United States, it is essential that he be kept as much under Italian influence and as free from contact with republican institutions as possible. Consequently, the Italian immigrants now come to the United States under the auspices of their government. On every immigrant-ship leaving an Italian port for America is a so-called "royal commissioner," who preaches patriotism all the way across, and warns the traveller that by taking out satisfactory papers in a foreign country he loses the protection of his government.

When the immigrants arrive they are, so far as possible, taken to the Italian colonies in the larger cities and towns, where Italian priests teach them that to forsake allegiance to their king is a sin in the sight of God, and that Italian schools give the children instruction in Italian in Italian schools, while the parents do their utmost to prevent the little ones from learning English in the streets or elsewhere. (Indeed, the municipal authorities of New York seem to be assisting to bring about this commutation, since the regulations governing Thomas Jefferson Park, that famous one side of "Little Italy" in Harlem, are printed in the Italian language only.) The Italian immigrant is also discouraged from settling in the country or the smaller towns and villages, where he may be subjected to the contagion of free institutions. When he goes away from the cities to work on railroads or in mines, or for similar employment, it is invariably in gangs of his own nationality, and to points within reach of Italian priests.

Thus we find that the Italian government has unwittingly created ideal conditions under which her expatriate criminals may prey upon their honest countrymen in a foreign land—for the depredations of the "Black Hand" have been confined entirely to the Italians themselves. For nearly five years the police found it impossible to cope with these foreign malefactors, since their victims, who were kept in ignorance of American institutions, were ignorant of the power of the Mafia in Italy, and considered them where bound by the "code of honor" or obligatory of silence, so that in an circumstances would they appeal to local authorities for aid.

It is scarcely three years ago that the then Police Commissioner McAdoo created the special Italian service, under command of Detective-Sergeant Joseph Petrosino, to deal with these Italian criminals. The personnel of this force is known only to its chief, and not even to the Commissioner of Police or the chief of the Detective Bureau. Its members keep as far away from police headquarters as possible, and the arrests in cases in which they have obtained evidence are almost invariably made by members of the uniformed force, in order that the identity of the special detectives may not become known among the criminals, or even among the regular police and detectives. The secret-service men wear no badges; and when it is necessary to divert suspicion from themselves as detectives, submit to arrest and are locked up as prisoners, frequently getting as far as the Berrillon measurement-room at headquarters before being rescued by their chief. Many of them have other vocations, that they may the more successfully delude the criminals among whom they live.

With his little force of secret police, which the present commissioner only recently augmented to suggest, after the brief recrudescence of Italian crime last December, Petrosino has done wonders. The first year of its existence he made 700 arrests; between 500 and 600 in 1905, and something like 700 last year,

the diminishing total each year proving the efficacy of the service. The "Black Hand Society," which only one year ago was estimated to number 5000 in New York city alone, preying upon nearly 600,000 Italian residents, has been brought virtually under control. Petrosino believes that with the help of his Italian men, and the cooperation of other branches of the government, he will be able soon to exterminate those transplanted scoundrels.

Joseph Petrosino, who is of Italian birth, is a type of the efficient and conscientious public servant. His record of twenty-four years on the New York police force is without a blemish. For a decade he has been in terror to the Italian criminal, and he stands on the records of the police department with more convictions for murder—seventeen in one year—than any other five men in the Detective Bureau.

Among the former bandits of Sicily and Calabria in the Italian colonies of New York, Petrosino deals more without fear. For them he has only contempt in spite of their sanguinary history, since he knows that they have not the courage to offer him personal violence. For their victims he has even greater scorn, because he believes that but for their cowardice and ignorance the ordinary movement among the brotherhood of rogues would be impossible. Nevertheless, he finds it impossible to ignore the foreign-born Italians to give evidence against the outlaws among them, and hence it is almost impossible to convict his prisoners of crime when arrests are effected.

It should not be considered, however, that this relentless enemy of the criminals of the "Black Hand" is a mere bloodhound. Indeed, of the scores of murder cases he has dealt with during his long career on the detective force, many of which have ended with the electric chair, the one he likes best to tell about concerns his successful effort to save the life of a condemned man whom he believed to have been unjustly convicted.

In 1900 Nicola Carbone was condemned to death for the murder of Natalio Brogno, both Calabrians, as was their acquaintance, Alessandria Ceramella. Brogno had been found dying on the sidewalk in Baxter and Leonard streets, with a fatal knife wound in his back, one evening the previous July, with Carbone standing over him. After Carbone's conviction Petrosino was informed that two persons, a watchman and a messenger boy, who had witnessed a fight between the two men, had seen another man rush up while the others were struggling together, stab Brogno, and run away. They had given this information to the police at the time, they said, but no attention had been paid to them. After making inquiries among Brogno's relatives Petrosino came to the conclusion that the real murderer was Ceramella, who had been an avowed enemy of the dead man, and who answered the description of the man the two witnesses declared they had seen commit the deed. Ceramella had not been seen about his accustomed haunts since the time of the tragedy, which increased the probability of his guilt, and also made his arrest the more difficult. The evidence of the watchman and the messenger was not sufficient, from the legal point of view, to secure a reprieve for Carbone, who was sentenced to die on February 7, three weeks after Petrosino took up the case. The detective had to work against time. He tracked Ceramella to Jersey City, and then to Pittsburgh. The trail led thence to Milton, Delaware, and Halifax, Nova Scotia, and then to Baltimore. Here Petrosino ran his man to earth, and secured his confession that it was he who had murdered Brogno, two days before Carbone was to have been executed. Carbone was pardoned, and Ceramella was convicted of the murder and sentenced to imprisonment for life.

The story of Petrosino's achievements, apart from those connected with the secret police, would fill a volume. It was he who, cooperating with the secret service of the Treasury Department, broke up the gangs of counterfeiters that made imitation American money in Naples and shipped it to New York, to be used in the United States. It was he who fought the unending war of the "reservation insurance" frauds in this city in 1902, which raked for the most persistent work and the highest order of detective intelligence. With the hand of every lawless Italian against him, he followed up one clue after another, found men alive who had been pronounced dead and who were living on their shares of the proceeds of their own insurance, secured evidence that many bodies interred in graveyards had been sent there through the agency of police.

It was Petrosino who broke up the gangs of Italian confidence-men that infested the ocean steamship piers, for the purpose of deluding unsuspecting tourists of their own race. One hundred and thirty-two of those confidence-men are now behind the bars in Sing Sing prison.

In spite of his success thus far in dealing with crime among the Italians, Petrosino does not consider the existing law adequate to cope with the present situation. He advocates a Federal statute making it possible to deport foreign malefactors, even after they have effected a foothold in the United States. "I could put my hands on Italian criminals in hundreds of cities and hundreds," he says, "men who are living solely by crime, and who have never done a honest day's work in their lives, and yet, whom, under present conditions, I am obliged to allow to remain at liberty—a constant menace to property and life."

Raisuli, the Brigand Who Made Himself King

(Continued from page 338.)

has exacted unjust taxes, and grown wealthy by head-money, must be removed, and from his ill-gotten gains he must pay the ransom of the American," was Raisuli's ultimatum. And of course he was master of the board. The imperial government was checkmated, the advisers of Sultan in Fez were dead, and he feared that the decisive word would come from Washington, the blue-jackets be landed, and then, as an inevitable result, the long-ferred deluge of international scorn and how over Morocco. Abd-el-Sudik was disgraced and made to disgorge the eighty thousand pesos Raisuli demanded, and Mr. Picardier was turned over to Admiral Chabrick in all honor.

With the ransom-money Raisuli bought arms and built his great stronghold at Zinat in the mountains. Immediately he became the actual, if not the officially recognized, lord of life and death in northern Morocco. And it was not long before the Sultan, forgetting past friction, as because an Oriental ruler projected into the West, shored Raisuli many favors, and accepted him in return. When the Raisulids went on the rampage and threatened Tetuan, the Sultan of Fez wrote to Raisuli, calling him "My second in command, my right hand," and asked him to drive the British legation into the wilderness, when which they came. And Raisuli did it. Only six months ago, when another horde of robbers, whose boldness hastened the conference of the powers at Algiers, defeated the imperial troops sent against them and took up their position in the Atlantic port of Arzila, threatening all manner of complications with the outside world, the Sultan of Fez asked his great and good friend Raisuli to drive them out and restore law and order. And so it came about in the simplest way in the world, the Sultan not being able to rule northern Morocco without him. It was falling in with his nature through him, and of course no one was so tactful as to say anything about taxes or tribute-money.

Then suddenly a change came over the imperial power. Ben Haman, the pretender to the throne of Fez, who had looked so strong a few weeks before, began to lose power and prestige. The French in Algiers, who, whether authorized from Paris or not, had furnished him with such substantial aid a few months before, turned from him, and the Berber tribesmen, once his main support, grew fickle and lukewarm. With immense good-will, and in accordance with the traditional policy, the pretender, though well on in years, had taken a wife from each and every one of the twenty-eight tribes which had supported his cause; but up to the present not a child has been born to any of these plural marriages, and the Moors, who do not stand for race-misce, whether it be upon the throne or with a pretender, are falling away from Ben Haman. Even the priests throughout the land are saying the favor of Allah is not upon this man. Again, foreign influence, which counts for so much in Fez, may be strongly opposed to Raisuli. There may be other reasons for this opposition, but the most notorious is because the highland chief, with his loyal lions behind him, could make the policy of the Moorish Sultan, who was decided upon by the powers at Algiers, with the active mandate given to Spain and France, a very difficult and costly operation.

In personal appearance Raisuli has the cast of a pathfinder. He is tall, thin, and in full, trim across the hips, light and bright of eye, and of a complexion, it is said, that must have been quite fair before it was bronzed by the suns and weathered by the breezes of his highland home. In his every feature his parents of the tribe are emphasized. The highland Berbers of the petty class, from which Raisuli springs, wear the kards of Ber and Bedouin, have kept their blood uncontaminated from the women of the Sahara and Sonoran. Among them nowhere is to be found a suggestion of the negro type, so common among the

great lords of the imperial city. Raisuli is not only pure in type, but pure in thought and action. If you can bring yourself to judge him from the Berber standpoint, his life and his role have inspired the Berbers with something akin to national enthusiasm. In our eyes the Berber episode was an outrageous piece of brigandage, but the Berber sees it as a perfectly fair war measure, and one that secured him and his people immunity from further oppression for a long time to come. So we are making no mistake when we maintain that among his own people Raisuli is revered as a militant saint, raised up for their protection. Among the confederated tribes he exercises absolute power of life and death, and there is yet to be heard a voice saying that he has misused it. These poor mountaineers have placed their slender treasury at his disposal, and no one has yet arisen to say that a single peso has been selfishly used.

It would be a rash prophet who would venture to predict the outcome of this ugly quarrel. Perhaps the brigandage of international convention and the king of yesterday will be acclaimed emperor-to-morrow. Perhaps even now, for news comes as slowly out of Morocco now as it did in the days of the Raisulids, his blood-stained hands are reaching to the facade of the Sigismund gate in Fez, where the heads of so many traitors and so many patriots have hung before it. To me it seems that out of the pure crudity of the Berber race has arisen a leader who, who should be escape the many dangers that threaten him now, may live to make European intervention in Morocco anything but the military propaganda it is generally pictured in the French and Spanish papers.

War and Bookkeeping in Japan

(Continued from page 336.)

any apparent source of revenue to meet the bills?"

Mr. Nakamura replied that Mr. Gishi's question was not a mere question, but an inquiry.

"We have only four divisions of our army left in Manchuria and Korea," said the Minister of Finance. "That is the complete strength that we do not intend to provoke any renewal of the conflict. The completion of the Japanese army is in no sense an aggressive preparation, but is solely an insurance against a breach of the peace. A military force cannot be created in a day, but without an army a country's prestige and safety cannot be guaranteed. I wish to be most emphatically understood as affirming that no step contemplated by Japan with regard to her army is in any sense directed against any foreign power."

Mr. Gishi questioned Viscount Hayashi, Minister of Foreign Affairs, about Russia and China, and especially about the San Francisco school affair.

"The matter has not yet been made a subject of diplomatic discussion," said the minister. "Japan sees clearly that the sympathy of the American nation is with her, and that the President will exhaust every legal means to bring about a just settlement. If the suits brought by the United States government against Japan should fail—which I do not anticipate—it will be time enough to have recourse to diplomacy."

As a matter of fact, Japan is far less interested in the West than in the East at present. She has her hands full in taking care of her newly acquired interests in Manchuria and Korea, and these are likely to keep all her resources employed for several years. The Portsmouth treaty formally marked the making of peace between Japan and Russia, and there has been end-less hickering ever since over a series of petty details of adjustment, none of which in itself could be used as a cause of war, but all of which testify to the lack of brotherly love between the high contracting parties.

Russia, for example, has not yet paid Japan for the care and maintenance of the Russian prisoners of war in Japan, a matter of several millions of dollars. Probably she has not enough money to pay the debt

at once, but members of the Diet want to know when the matter is to be settled. Russia has not yet signified any intention of raising her legation at Tokio to an embassy. The Russians apparently have no opportunity to hamper Japanese trade in Manchuria. The Japanese newspapers tell every day of Russian interference with their commerce, and although no open suggestion of resentment is made it is easy enough to see that this continuous nagging may at last lead to a breach of the peace.

For many years Russia's influence in China has been paramount, and in spite of the fact that Japan has beaten both these powers in open warfare, Russia's influence still seems to prevail. The similarity in color, in facial proportions, in religion, and in literature, upon which exploiters of the Yellow Peril lay so much stress, does not appear to have modified in the least the bitterness between the Chinese and Japanese races which existed before, during, and after their late war.

How It Impressed Him

EX-Senator "BILLY" MASON tells of a political campaign in South Dakota, where in he had been called upon by the State Committee to take a part. When Mason arrived at his first town, where he was to deliver a speech the next day, he found that the two so-called hotels were crowded to the doors.

Not having telegraphed for accommodation, the Illinois man discovered that he would have to make shifts as best he could.

He was compelled for that night to sleep on a wicker cot that had only some blankets and a sheet on it. As Mr. Mason is a man of considerable aversiveness, he found his improvised bed anything but comfortable.

"Well," asked the proprietor, when the politician appeared in the morning, "how did you sleep?"

"Fairly well," answered Mason, "but I certainly looked like a waffle when I got up."

ADVERTISEMENTS

COFFEE THRESHED HER

15 Long Years.

"For over fifteen years," writes a patient, "I have suffered from Spinal Irritation and Nervous trouble. I was treated by good physicians, but did not get much relief."

"I never expected that coffee might be aggravating my condition. I was discouraged and discouraged, but prayed daily that I might find something to help me."

"Several years ago, while at a friend's house, I drank a cup of Postum, and thought I had never tasted anything more delicious."

"From that time on I used Postum instead of Coffee, and soon began to improve in health, so that now I can walk half a dozen blocks at a more with ease, and do many other things that I never thought I would be able to do again in this world."

"My appetite is good, I sleep well, and find life is worth living indeed. A boy of my acquaintance said she did not like Postum, it was so weak and tasteless."

"I explained to her the difference when it is made right—boiled according to directions. She was glad to know this, because coffee did not agree with her. Now her folks see they expect to use Postum the rest of their lives." Name given by Postum Co., Battle Creek, Mich. Borden the little book, "The Road to Wellville," in pages. "There's a reason."

MUSIC AND THE OPERA

DOMESTICITY IN MUSIC

By LAWRENCE GILMAN

A GAIN in this quarter of the musical world agree over the most fervently discussed orchestral work of the last decade—the "Domestic Symphony" of Richard Strauss. It was played at Carnegie Hall on February 23, after a three years' absence from local programs, by the Boston Symphony Orchestra, under the direction of Dr. Nuck, and it may as well be said, at the start, that it could not conceivably have had a more perfect, a more revealing, presentation. It was a far better performance than the original one under Strauss himself—one which exposed the qualities and the defects of the work in high relief. The score is a cruelly difficult one to set forth with any degree of adequacy—it demands, literally, an orchestra of virtuosi; and it is precisely what was lavished upon it the other day. It may be doubted if Strauss has ever heard this opus 33 of his accord so magnificently effective and brilliant a reading.

It will be recalled that Strauss, a year or two before the first performance anywhere of the work, at Carnegie Hall on March 21, 1904, made an unequivocal announcement of its realistic character. "My next tone-poem," he remarked to an interviewer in London, "will illustrate a day in my family life. It will be partly lyrical, partly humorous—a triple figure, the three subjects representing papa, mamma, and the baby." In December, 1904, when Strauss conducted the "Domestic" in Berlin for the first time, the programme, evidently with the sanction of the composer, elucidated the work to the extent of assuming that the music was wrought out of themes portraying "the wife," "the husband," and "the child"; that the *Scherzo* pictured the "parents' happiness" and "childish play," the clock striking "seven in the evening" after the cradle song; the *Adagio* was alleged to denote "drama, rage," and a "love scene"; the *Finale* to depict a dissipation, though "merry," awakening at seven the next morning. When the work was given in London in February, 1905, an elaborate "official" analysis was published two days in advance of the performance. It contained, in addition to much other edifying matter: an interpretation of a certain passage as "representing the child in its bath"; and in the score itself Strauss has printed these illuminating hints over a particular passage in the first section: "The Aunt: 'Just like his papa!'" (an emphatic ascending figure for clarinet and muted trumpet); "The Uncle: 'Just like his mamma!'" (an assertive descending figure for oboe, trombone, and muted horn). It is said, upon the authority of a friend of the composer, that when Strauss was deep in the composition of the music, the autograph score was "completely peppered over with notes and suggestions like this—they seemed to be the material out of which the music was secreted in the composer's mind."—Now all this is not very important, save as it illustrates a very characteristic procedure on the part of Strauss in regard to the presentation of his works. It is obvious, from the foregoing, that the "Symphonic Domesticity" is the frankest and most unmitigated kind of programme-music; that it is intended, from start to finish, to delineate a perfectly definite sequence of incidents and events; yet Strauss, at the time of the first performance of the work, though he disclosed to Mr. Richard Aldrich the significance of the different sections of the piece, refused to allow an elucidation of it to be printed until after the performance, saying that he wished his music to

be listened to "purely as music." His wish was fulfilled, and the work was presented merely as a "Domestic Symphony," in "one movement and three subdivisions: (a) Introduction and Scherzo; (b) Adagio; (c) Double Fugue and Finale."

This manner, a favorite one with Strauss, of offering programme-music tone-poems to an eager and attentive public, has been repeatedly characterized by Mr. Ernest Newman—who, it is worth noting, is quite the most judicious, penetrating, and sympathetic of Strauss's appreciators: "He writes," says Mr. Newman, "a work like 'Till Eulenspiegel,' that is issued from start to finish on the most definite of episodes, and then goes through the heavy farce of 'mystifying' his hearers by telling them he prefers not to give them the clue to the episodes, but to leave them to 'crack the nut' as best they can. All the while he is giving clue after clue to his personal friends, till at length sufficient information is gathered to reconstruct the story that Strauss had worked upon; this gradually gets into all the programme books, and then we are able to listen to the work in the only way it can be listened to with any comprehension—with a full knowledge of the programme. With such new work of Strauss there is the same tendency—one can use no milder word to describe proceedings that so doubt have a rude kind of German humor, but that strike other people as more than a trifle silly. So it is now with the 'Symphonic Domesticity.' That, undoubtedly, drives to the root of the matter. It is fatuous to set before the hearer as abstract music an elaborate piece of symphonic writing which has been conceived as a detailed exposition of a concrete series of situations and events. Yet there is this to be said on the other side: Music which is not in itself, as music, salient, telling, potent, individual (it need not, necessarily, be "beautiful" in the aesthetic sense), has an excuse for existence, as programme or no programme; thus there is some excuse for a composer desiring an estimate based upon the slight musical quality of his tone-poem, apart from its significance as a delineation. But it is, nevertheless, fatuous to withhold from one's hearers information as to the meaning of a piece of descriptive music, since, as Mr. Newman has acutely and truly observed, that information is "at once answerable for half our pleasure, and a justification of certain peculiarities of form which the music may now safely assume." It is this point which Strauss, and those who adopt his principles, entirely ignore.

There are then, legitimately, two ways of regarding the "Symphonic Domesticity": as a representation of a definite, extra-musical subject—in this case, a day in the life of a typical family; briefly, the domestic microcosm; and as sheer music—considering, that is to say, the quality of its inspiration and the art with which it is exploited. We have no wish to be taken either thus seriously in averring that it is possible to conceive of a kind of "domestic symphony" which should be unfailingly persuasive, affecting, dignified, acceptable, altogether delightful. Surely one need not enlarge upon the opportunities offered by such a theme for the largest, the noblest, the most laudating treatment—the subject is rich in possibilities of the tenderest and most delicate comedy, the sincerest emotion. It is with no appreciation of such opportunities that Strauss has approached his theme; frankly, he has despaired of it. There are moving and delicate episodes in the music, as the "cradle song" in the *Scherzo*,

A new Portrait of Emma Eames
as "TOM" in PUNCH'S OPERA

THE SEASON'S PLAYS

"JINKS" AND HIGH JINKS

By "I"

THAT New York would very much rather have Miss Ethel Barrymore back again in an old play than not at all, was clearly indicated when she returned to the Empire Theatre in a revival of Clyde Fitch's "Captain Jinks." There are very few actresses who can arouse as much enthusiasm as Miss Barrymore, and the warmth of the reception she received from the newspaper reporters in the first act of "Captain Jinks" was as nothing to the warmth of the greeting the Empire's audience accorded her, and it had nothing to gain, since Miss. Truett's arrival was for it no less.

The story of "Captain Jinks" is too well known for mention here, save as the story of the love of a young guardsman for an amazingly attractive opera-singer, a wager which, from being unfortunate, becomes most fortunate, and the desirable happy ending. Miss Barrymore has in this play an opportunity to display all the charm of her personality, and this is particularly marked in the act which presents her as arriving from the steamer. It must be a most calloused person indeed who does not actually fall in love with her then if he has never done so before, this latter being quite incomprehensible. There are a warmth and graciousness in her performance which are characteristic of her alone, and there is small wonder that "Captain Jinks" came to her first. All the praise which was lavished upon Miss Barrymore when she first appeared in "Captain Jinks" might be repeated here, save for one reason, her performance this season is even more delightful than when she first appeared in the Fitch play.

New York is, however, to see her in other roles. During her engagement at the Empire she will appear in "The Silver Fox," "His Excellency, the Governor," and in "Cousin Kate," which is one of her greatest successes.

"Captain Jinks" was the first play in which Miss Barrymore starred, and for this reason she is particularly fond of it, and no doubt her reason for opening her New York engagement with it. In a recent interview, Miss Barrymore said she thought "Captain Jinks" the cleverest play Clyde Fitch has written, and that she played it during this engagement just as she had played it before, when the play occupied her for two years in succession. She added, however, that she preferred playing new roles, creating new parts. Her auditions are great and high. "I was happy," she said, "when I first played 'Captain Jinks'—happy when I played 'Sunday'—happy when I played 'Cousin Kate'—happy when I appeared in 'A Doll's House'—I've almost no kind of role I wouldn't like to attempt. I should like to appear in a mystery-play—and I don't think that having a man for 'Kewyeman' is an improvement. I should like to appear in an ancient Greek drama—at some place like the Greek Theatre, at Berkeley—if only the managers would let me. I should like to do a great role like *Phédre*."

When the curtains rise upon the first act of "The White Hen," by Messrs. E. C. Vendall, Gustave Kerker, and Paul West, at the Casino, the eye is smitten with a gorgeous color-scheme of pink and green, which, if striking, is not soothingly esthetic. The comic and spectacular effect of gaudy pantomimes is so obvious that, although it undoubtedly serves to concentrate the attention, it scarcely figures well for the excellence of the play, artistically considered.

But in this respect the beholder is pleasantly disappointed, for it is noticeable that both scenery and costume grow more tastefully picturesque as the play advances. Another dread which one instinctively feels at first also goes unavailed. When the first act shows the combined office of Erick Wixia, attorney at law, and Rosa Matosoff, a Viennese marriage broker, each practitioner occupying one side of the stage, one fears that the action is to be divided, with woful symmetry, into two parts, each happening in one quarter having its exact counterpart in the other. We have seen operatic comedy constructed on this principle; but if *The White Hen* has an indisputably fragile plot, there is at least little of the mechanical in its comic devices. Whatever else it is, the play is certainly brisk in its action. From beginning to end, the acting of all the persons of the drama is characterized by a certain postscriptary vivacity—an effect that is increased by the antics of a pliantly boyish chorus. The entire cast performs as if galvanized; there is a pervasive jerkiness of gesture and a constant explosion of wit. The piece as a whole exhibits a singularly grotesque line of lines and curves; but this effect, doubtless intentional, is far from unpleasant, and it completely obviates any sense of languor in the audience. The music is perceptive, the airs are lively and stimulating, and the singing reasonably euphonious.

"The White Hen" is satisfactorily musical and spectacular, but it has a core of real comedy, which is vitalized by the acting of Louis Mann, who, as *Renar Blöcher*, the German lank-keeper, voluble, emphatic, and murky in explanation, scores a true comic success. Mr. Mann has the personality of a genuine comedian. The audience seems to feel the influence of real acting whenever he occupies the centre of the stage, and during the whole of the first act he successfully concentrates attention. His dialect is racy and natural almost to the point of unintelligibility. Louise Gunning, as *Pepi Glorckner*, acts with an abundance of nervous energy, imparting great spirit and a sense of rapidly changing moods to the interpretation of her rôle. Her masculine counterpart, Robert Schenkels, as *Paul Blücher*, labors under the disadvantage of having to be seriously sentimental in the midst of a grotesquely comic situation, but his rapid-fire luv-scrums and luv's quarrels with Miss Gunning are dramatically adequate. Indeed, in most of the secondary parts there is at least a trace of good acting, which is much to say of a musical comedy. R. C. Herz, as *Erick Wixia*, assumes with considerable success an exaggerated professional manner, running easily and naturally, as the part requires it, into a spasmodic nervousness that suggests the prebital decompensation here. His song, or rather recitative, in the second act consists of a series of very dubious puns which only his excellent manner makes acceptable to the audience. Carrie E. Perkins, in the rôle of *Rosa Matosoff*, achieves a judicious mingling of the professional and manfully air which shows an appreciation of the part. As *Lise Sommer*, secretary to Attorney Wixia, Lotta Faust is appropriately demure, and manages to be at once plaintive and pert. A certain degree of awkwardness and attention which she puts into her acting at certain times, in order to emphasize the peasant character of *Lise*, is well assumed, although the part in general requires her to be daintily graceful.

Ethel Barrymore, in "Captain Jinks"

Louis Mann, in "The White Hen"

Recess-time

There was a rush for the door, a holler, and a whump. The little schoolroom was empty; it was recess-time. The teacher drew forth a letter and commenced to read it.

"Say, teacher, is that letter from your feller?" Susie Jones's freckled face is peering at the teacher just above the edge of the desk. "Ain't you got no feller?"

The door is thrown open.

"Teacher, Billie Martin tripped me up and hurted my toe."

The teacher goes to the door.

"Billie, come here. Did you trip Sammie Osler?"

"No, I didn't; he fell down, and the cry baby tried to blame it on to me. I'll punch his face—"

"Stop. We won't have any talk like that."

"Teacher, can me and Mary go over to the woods and get some wintergreen?"

"No, not to-day."

"Well, I don't see why we can't go. Jim Osler and Billie Martin have gone."

"You know that those boys will have to stay after school to pay for it."

"I don't see why no girls can't never do nothing," muttered Mary, under her breath.

"Oh, teacher, come quick!" It is Sammie Osler again. John Hill has John Dennis down and is just plunging him something awful. (Oh, hurry!) he will kill him; I know he will."

The teacher finds that the two Johns have been wrestling.

"Say, teacher, what makes you wear your hair that way? Ma said that it made you look like an old maid," asked little Nellie Thurman in all seriousness.

"My ma said that she should think teacher would blow away near day, she is so thin. Why are you so thin?" Susie piped out.

"Teacher, how many more days of school?"

"My sister Dennis has a ring just like yours with red glass in it. Jennie got hers with gum. How did you get yours?"

"Teacher, can me and Jim go and get a pull of water?"

"Yes, but hurry; it is almost ice-time."

"Say, teacher, what is that little brown speck right back of your left ear? Won't it come off?"

"Oh, teacher, come here! Sammie is felled down in the mud and has lost his shoe."

The bell rings and school is resumed.

Easy

TEACHER. "Harry, a mother has five children and but four potatoes, how can she divide the potatoes so that each will receive an equal portion?"

HARRY (quickly). "Mash 'em."

"At the Market"

THERE is one jovial member of the Chicago Board of Trade who, despite his strenuous life, has attained the age of sixty-six.

One day a number of friends on the Exchange were congratulating the ebullient member upon his birthday. "You'll live to be a hundred," said one.

"No," said the old chap, with a sigh. "I'm going to die the very soon—I know it."

"What on earth makes you think that?" demanded the friends in chorus.

"Do you suppose that Death is such a fool," asked the old fellow. "to take me at a hundred when he can get me at sixty-six?"

Not of the Army

A Merriam negro exhorter shouted:

"Come up an' join de army of de Lord."

"Ise done joined," replied one of the congregation.

"What'd you join?" asked the exhorter.

"In de Baptist Church."

"Why, child," said the exhorter, "you ain't in de army; you's in de navy."

CRYSTAL Domino SUGAR

A Triumph in Sugar Making!

Sold only in 5 lb. sealed boxes!

IMAGINATION COULD NOT CONCEIVE OF A HANDIER AND PRATTLER TERM THAN IS PRESENTED IN 'CRYSTAL DOMINO SUGAR,' NEITHER COULD THE MOST PARTICULAR PEOPLE ASK FOR MORE PERFECT PURITY OR ECONOMICAL PEOPLE FOR LESS WASTE.

HIGHEST GRADE IN THE WORLD. BEST SUGAR FOR TEA AND COFFEE.

By grocers everywhere.

The Proper Motor Oil

means the oil exactly suited to your engine. This is imperative. Poor oil, or an improperly compounded one, or the wrong oil will wreck the finest engine in short order.

VACUUM MOBILOIL

comes in several grades. No matter what kind or make of automobile you own or what method of lubrication is used—there's a special grade of Mobiloil for your engine and no other should be used.

One hundred free 1500 booklets will tell you at a glance just what grade of Mobiloil for your engine needs. It's free to you. Mobiloil is sold in cans, barrels, and half barrels. Manufactured by VACUUM OIL CO., Rochester, N. Y.

SPENCERIAN

STEEL PENS

You will be satisfied with a pen that takes its place as a work of art. It is the only pen that is made of the best steel by expert hand workmen, and is made to order of pen and ink.

These Spencerian pens made famous by a life of service. We will send you a sample card of 12 pens, of various patterns, upon receipt of a small fee of postage.

The Call of the Blood

By ROBERT HICHENS

A wonderful new novel by the author of *The Garden of Fick*—a story dealing with the exultant joy of physical life. The scenes are laid in the most beautiful of the Mediterranean islands—Sicily. Here the hero and heroine come from England to spend their honeymoon. In the man's veins runs a strain of Southern blood, which is roused by the environment of his fathers' land and by the beauty of an alluring young Sicilian girl.

The story runs through a series of breathlessly intense and passionate climaxes. Every scene breathes the some wonderful mystic charm that made his former novel a marvel of romance.

Illustrated. Price, \$1.50.

HARPER & BROTHERS, PUBLISHERS
Swinburne's Lyrical Poems

This collection includes Swinburne's earliest volume, "Poems and Ballads," in which appeared the famous "Love Songs" and other lyrics that created a literary sensation in England. To them have been added many later poems. Collectively they are admirably representative of Swinburne's genius.

Price, \$1.50.

The demolished Portion of the Elevated Structure sagging into the Street

The Rear Truck of the wrecked Car lying across the Surface Car Tracks

THE "L" WRECK AT CHATHAM SQUARE, NEW YORK

THE FATALITY OF A PORTION OF THE ELEVENTH RAILROAD TRUCKS WRECKED AND LYING IN THE STREET REVEALS WAS PRESENT AT THE CHATHAM SQUARE STATION ON FEBRUARY 26. THE REAR CAR OF A SOUTH-BINDING THIRD AVENUE TRAM WAS CRASHED ON THE TRUCKS AT THE JUNCTION OF THE MAIN LINE AND THE CITY RAIL, REMAINING A PORTION OF THE STRUCTURE, AND DRIPPING THE REAR CAR'S TRUCK INTO THE STREET. ONLY SIX PERSONS WERE INJURED IN THE ACCIDENT

Old Miss Nemesis

By Robertus Love

MISS NEMESIS, a Circassian goddess,
Daughter of Night—they called him Nox—
Was wont to joke and prick and prod us
With pins and pebbles on our backs.
We carry scars of the eternal
And virgin hills of ancient Greece;
Pierced us as a hag eternal,
And never gave us any peace.

And yet the sons who followed after
Erected temples unto her,
And sang her name from door to door,
Creating quite a public stir.
Yes, Greece and Rome this winged goddess
Adored (my soul the memory shocks!),
Erected statues to her, bust and bodier,
Whom poster was the devil Nox.

And now, though gone the golden glory
Of Greece, the grandeur that was Rome,
Still runs this endless serial story
To fill full many a modern tome;
For sinners such as she was after
In ancient days are chased in blocks
Of five or so (the grates gruffer)
By Nemesis, the child of Knocks.

No doubtless those who come to-morrow,
The world we leave to have and hold,
With all that's left therein, will borrow
Suggestions from the days of old.
And raise to Nemesis pursuing
The serial sinners—great is Nemesis!
Temples for worship and for woeing;
And doubtless she'll be after them!

Purists

The wife of the professor of English has
been long known and feared in our college
community for the correctness and purity
of her language. It requires courage to
speak out unhesitatingly in her presence,
while to address her in writing would re-
quire a bold heart indeed.

Some time ago she visited our greenhouse
to see some rare plants, then in bloom.
Upon entering, she rushed to the flowers, ex-
claiming:

"Are those they?"
"Them's 'em, morn," replied the stolid
English gardener.

Living Expenses are Increasing

THAT the cost of living is steadily in-
creasing in other countries, as well as in
the United States, is undeniably true. In
many prices have advanced to such an ex-
tent that what were a few years ago taken
as a matter of course and regarded as
smallness, are now distinctly luxuries to
the middle classes. In a recent address, the
Mayor of the city of Stuttgart, which has a
population of 247,000, stated that during
the last twelve months the city's meat sup-
ply had cost about *thirteen* more than for
the preceding year. The agricultural
price consumed in the city cost at least
one million dollars more than the year be-
fore. During this great increase of cost,
the city was compelled to raise the wages
of all its laborers and employees. Reports
of this condition came from almost all other
German cities.

Obvious

"Let me see," pleaded the pickpocket.
"This is my first offense."
"Yes," replied the policeman, placing his
water back in his pocket, "I noticed that
you were just getting your hand in."

He Knew

"Pars," asked Hilde, "are all of us
men and just one and you and mamma?"
"All were mamma, my child; if she were,
she'd dry up once in a while."

A whole lot has been written about the Importance of Clothes

to both the Business and Professional
man. And it's mostly true. Some have
gone so far as to say that never giving
being equal, clothes
have often earned
the name of business
in selecting an
employee.

Now in clothes the
Circles and the
whole thing isn't
a mystery in part
it is. A good (Crest)
it will make better keep
its shape longer, and wear
better than an ordinary
one.

KEISER CRAVATS

are good Cravats, and
they are made of a fine
material. They are made
of a material that is
light, and they make
a good thing to wear
in every man's life.
The Kaiser label is
a guarantee of satis-
faction in the service.

American Diplomacy ITS SPIRIT AND ACHIEVEMENTS

by
JOHN BASSETT MOORE

Author of
"Retrospects and Prospects of the United States and
Digest of International Arbitration," Etc.

For years Professor Moore has been
regarded as being the highest living au-
thority concerning the history of Ameri-
can diplomacy. This series of papers
on American diplomacy has commanded
wide attention, not only in this country,
but in all the capitals of Europe as well,
and places many historical facts before
the reading public for the first time.
It shows how from the very first the
American policy has been to negotiate
treaties and carry on international busi-
ness fairly, squarely, and aboveboard;
and it unfolds and expounds in a clear
and connected form the distinctive prin-
ciples and policies the maintenance of
which has caused American diplomacy to
be acknowledged as one of the great formative
forces in modern history.

LIQUEUR
Pères Chartreux
—GREEN AND YELLOW—

This famous cordon, now made at Tarragon, Spain, was for centuries distilled by the Cistercian Monks (Pères Chartreux) at the Monastery of La Grande Chartreuse, France, and known throughout the world as Chartreuse; the above cut represents the bottle and label employed in the putting up of the article since the Monks' expulsion from France, and it is now known as Liqueur Pères Chartreux (the Monks, however, still retain the right to use the old bottle, and label as well, distilled by the same order of Monks who have securely guarded the secret of its manufacture for hundreds of years, and who alone possess a knowledge of the elements of this delicious ester.

Christian Science

By

MARK TWAIN

IN this great work Mark Twain devotes himself seriously and logically to a serious theme; the result is an earnest, painstaking, and impartial study of Christian Science in all the details of its growth and church organization.

This book is the result of years of careful investigation of Mrs. Eddy's cult and writings, and of the church which she has founded. It is an honest effort to seriously throw questions which the public generally has been asked about Christian Science.

The reader will like the way Mark Twain goes vigorously into details, writes plain English, and gets to the bottom of things. He is equally frank with praise or censure, as the case demands. And while his book must be ranked as the most serious and extended criticism of the subject that has yet been made, it is not without repeated tinges of humor which make it, while instructive, also deeply entertaining.

AUTOMOBILE
NUMBER

HARPER & BROTHERS
MARCH 16 1907

NEW YORK
PRICE 10 CENTS

Type XV, 50 H. P. Pope-Toledo
Price, Fully Equipped, \$4,250

*You can learn more about a really
high-class motor car in an hour's ride in the 50 H. P.*

than we could tell you in ten pages of "Harper's Weekly"

A demonstration will prove to you that this car is more powerful, faster, easier handled, easier riding and sweeter running than any car on the market.

Comparison will show you that its construction embraces more alloyed steel, more ball bearings, more of the world's best and latest practice in design, workmanship and material than any other American car.

All we ask is investigation and comparison. The more you compare, the closer your investigation, the more you'll become convinced your choice should be a Type XV Pope-Toledo.

COMMENT

Exit the Fifty-ninth Congress

THE Fifty-ninth Congress has come to an end, and its last session was not glorious. Its record is considered at some length on another page. Two new battle-ships have been granted, and on this achievement the country is to be congratulated and Mr. Roosevelt is to be thanked for his persistent and intelligent industry. The coast artillery has received an increase which gives it nearly enough men to clean the guns that are in place, but not quite enough to provide one crew for each gun. Stimulated by the San Francisco School Board and by the President's desire to avoid a difficulty with the State of California and the labor-union, Congress has increased the difficulties of Japanese immigration. The trouble is that California continues to believe that it has the right to deny to foreigners their treaty rights, if they have any. Congress has also made the jobs of cabinet officers, the Speaker, and the Vice-President, and its own job, more profitable—properly—by increasing salaries. It has passed an act allowing government appeals in certain phases of criminal cases—a law of such a nebulous character that accused persons need not fear and government will not rejoice. A service pension act has been passed. Nothing has been done for the Philippines, whom we rule with a paternal hand while we deny them admission to the father's business house. On the whole, it has not been a great nor a good Congress, but it has arrived at one distinction—it has been the most extravagant Congress known to history.

The Trouble with the Canal

THE President and Secretary TART are having trouble again about the canal, and so long as the work endures there will doubtless be opportunities for adverse criticism and for sad reflections. This is mainly because government is undertaking to do the work. Recognizing the comparative ineffectiveness and dilatoriness of government work, Mr. SPOONER favored the building of the canal by contract. He said, and said truly, that the contractors of the country possessed the tools, controlled the skilled labor necessary, knew how to get the most economical unskilled labor, and, in brief, could be making the "oil fly" while the government was looking about to find the necessary men and to procure the needed tools. Bids were offered by contractors, and then came a quagmire. One company of bidders—the OLIVER group—was very much under all others. The next wanted more than twelve per cent. profit, and the OLIVER people about six per cent. Experts say that twelve per cent. would be about fair, considering the hard circumstances of the work, but how was the government to reconcile the people

who would ask questions if the larger bid were accepted? As the President did not like some of the features of the OLIVER bid and concerns, all bids were rejected. This is the kind of thing a government does in a business transaction. A private citizen or a corporation would probably have accepted one bid or the other, having business instincts, being intent on getting the work done at the earliest possible moment in order that earnings might begin, and not being under the necessity of consulting the people. The government is forced, on the other hand, to consider the people, it must be borne in mind, because the people's representatives control the purse-strings. And so the most effective way of building the canal seems to have been abandoned. That strong men cannot work to their own satisfaction under government control seems to be demonstrated by the successive resignations of Mr. WALLACE, Mr. SPOONER, and Mr. STEVENS. Despite all the reasons given to the public for those resignations, dissatisfaction with hampering, obstructive, exasperating governmental control formed a large element in each one of them, and this is not necessarily a criticism either of the President or of Secretary TART.

Sore Experiences Ahead

Apparently the work of canal-building is now to be taken up by the engineers of the army; in other words, government is to do it itself. The army engineers will be honest and efficient; they will maintain the remarkable reputation of their corps. But they will be unmoved, reticent, criticised, unjustly in many instances, and will be unduly blamed for the cost of the work, which is bound to be at least three or four times greater than the estimates. Congress will be miserably, as it always is in providing money for the carrying on of great works, and a great deal of money and much time will be wasted on account of this misgovernment. In a word, we are about to have, on a grand scale, a repetition of experiences to which the engineers have become accustomed in their work on river and harbor improvements. The great cost of the work, too, will be a serious disappointment to the people, and will call forth much criticism, from which those who are spending the money will often unjustly suffer. It may be that this increase of cost will enter into political campaigns and will furnish food for demagogues. That the canal will cost more, much more, than the estimates, is known, and has always been known, to many men in authority. Here again we have an illustration of the weakness of government in carrying on great enterprises. It is afraid to face the facts; it dare not take the people into its confidence. Cost what it may, however, in time or in money or in human life, the country will carry the canal to completion; but we might as well, first as last, recognize the fact that we are to have sore experiences compared with which those from which we have already suffered are nothing.

Oklahoma's Constitution

A telegraphic despatch has stated that the Oklahoma constitutional convention will not insert a "Jim Crow" provision in its Constitution, because it fears if it does that the President will not approve the instrument; that he will not admit the State into the Union. The despatch or the convention must be in error. The President of the United States has no more power to refuse admission to Oklahoma for this reason than to expel each of the Southern States as have the provisions of law. By the law of 1890, Congress has already enacted that Oklahoma shall be a State on adopting a Constitution establishing a government "republican in form." It has made the President the judge as to whether this condition has been actually complied with, and it has given him no other power. To say, or to fear, therefore, that the President may refuse Oklahoma admission to Statehood is to accuse the President of ignorance of the meaning of the phrase "a republican form of government." That a government may remain republican in form and still have a "Jim Crow" law has been so often decided as to be beyond question. Possibly the explanation is that the Oklahoma convention, if the despatch be true, does not really believe that the President desires to be an arbitrary ruler, unimpaired of the legal limitations upon his power, but that it does not sincerely desire to obey the constituents of its Democratic majority and insert the "Jim Crow" provision. In such an event it would be natural for it to attempt to throw

the onus on the President; but assuredly Mr. ROOSEVELT has no such despotic notions as this would suggest.

The Country and the Railroads

Many of the States have joined the Federal government in making war upon the railroads—a war which, it must be confessed, the railroads have done a good deal to invite. It is much too early to discuss the results of this war; such results, in all their ramifications, are very distant, and it will always be too early to make specific predictions. It is inseparable from any such movement, economic or industrial or fiscal, that the war will be carried to a certain degree of excess; that is, those who have been guilty of wrong-doing will not only be punished, but their power of service will be crippled. Those commentators who sneer at the railroads for expressing fears of undue damage or for preparing for curtailment of service are not wise friends of the community. Admitting, as every one must, that justice to the community and respect for the laws require the punishment of railroad offenders and the enforcement of the laws providing for fair service to all, it must yet be recognized that hostility to railroads may find expression in legislation which will injure the roads not only as dividend-earners, but as servants of the people. When the roads, in response to the two-cent-fare laws which have been passed by several of the States, say that eighteen-hour and other special trains must be withdrawn, and that certain special fares, like excursion rates, can no longer be granted, abuse and sneers are no answer. It may be that the railroad men speak in anger and disappointment, but they nevertheless do not speak without warrant. That the country will pay something for its justice cannot be doubted; that it will pay more for excesses, natural and reasonable though they be, is certain. All public writers and others who encourage excesses by sneering at or denouncing all plans for the roads, and all predictions of evil and useless consequences from undue restriction, are foolish friends who, whatever else may be said of them, are not helping to a just settlement of the relations between railroads and the rest of the community. The country, of course, will not long continue without the exceptional service which railroads have rendered and for which we are all willing to pay a fair extra price, and what serious-minded and just men should aim at now is to bring about proper control of the roads while injuring their effectiveness as little as possible. Especially should we avoid the promotion of the pernicious doctrine of state ownership.

The Senate Loses Mr. Spooner

The departure of Mr. SPOONER from the Senate deprives the administration of one of its ablest advocates in Congress; indeed, on questions of law, especially of constitutional law, Mr. SPOONER is by far the ablest disputant on the Republican side. It is an open secret that Mr. SPOONER has not always agreed with the President on the subjects that are bound for some time to come to continue in the arena of public debate—the constitutional powers of the Executive and the relations between the Federal government and the States. It was clearly understood, for example, that Mr. SPOONER did not agree with Mr. ROOSEVELT's original proposition that the Federal government should fix railroad freight rates, nor with the developed proposition that there should be no judicial review of decisions upholding changes of the rates established by the roads. It is presumably the fact that if the administration had not met Mr. SPOONER's views, no rate bill would have been passed. More recently the President recognized Mr. SPOONER's usefulness as an advocate in the Brownsville matter by withdrawing, because it was unconstitutional, that part of his order which excluded the dismissed negro soldiers from civil employment in the future. Mr. SPOONER is, therefore, a man of remarkable power; power of mind and character; and the present Senate does not differ from its predecessors in not being able to afford the loss of such a man. He has helped the President over many hard places, and at the same time he has been of great service to the country. The Wisconsin Republicans have no man who can take the place which he leaves vacant, and the legislative majority has no inclination to give the country a man like him. A valuable and patriotic man is lost to the public service, partly because there is no place in our public service for a poor man of Mr. SPOONER's ability

and talent, and partly, perhaps, because public life in the near future might have become extremely disagreeable to him.

The Coming Duma

The new Russian Duma will not be controlled by real radicals, but by Constitutional Democrats. It is apparent that it will be opposed to the reactionaries by a two-thirds majority, and that it will be in favor of a constitutional government, perhaps limiting the powers of the Czar no more than he agreed to in his celebrated manifesto. At any rate, the best-informed English opinion—and England has the advantage of the opinions of its resident Russian revolutionaries—is that the Czar, if he will exhibit tact and patience, and will not expect the representatives to obey the ministerial policy, will help to the establishment of responsible government without any popular outbreaks. At the same time the representatives of the Russian peasants who are visiting this country, partly for the purpose of securing money aid for their cause, expect trouble. GARGAY GERSHBERG, the Russian terrorist, says that the new Duma will not go away, as the first did when it was dissolved, but that "they will proclaim the government a pack of usurpers; themselves the government. They will say to the bourgeoisie, 'Go!' They will say to the Czar, 'Go!'" Mr. ALAISH, the peasant leader in the first Duma, is more moderate, milder, and probably more authentic. He says that the work of the new Duma will be to "crystallize the aspirations of the Russians in the form of laws, and to present these laws to the State's Council and the crown, leaving the latter to decide as to the necessity of a conflict or a peaceful solution of all the outstanding questions." At any rate, it appears to be evident that the new Duma is determined to accomplish something for the establishment of responsible government, and it is certain that the reactionaries will do their utmost to persuade the Czar to prevent the overthrow of the autocracy.

Nicaragua and Honduras at War

The war between Nicaragua and Honduras goes on without apparent varying fortunes. As a war, this country is not much interested in it, but we must regret the failure of the well-considered efforts for peace which were led by President ROOSEVELT and supplemented by President DIAZ and by several other Latin-American governments. At the same time, as we have already said, the incident was not only creditable to the country and the President, but it illustrated the importance of Mr. Root's recent visit to South America. One other consequence of the conflict is the decision by Attorney-General BONAPARTE that people in this country have the right to sell arms to both, or to either, of the belligerents. This is old law, but its assertion is sometimes doubted when popular passion is aroused; and when Mr. HAY announced it when it injured the advantage of Great Britain during the Boer war, he was called an Anglophobe by a good many people who might do well to ponder on Mr. BONAPARTE's decision in the Nicaragua-Honduras controversy.

Mr. Harriman's Case

Public attention in the week in which February elapsed and March began veered away from the THAW trial and centered upon EDWARD D. HARRIMAN. There was nothing left to be settled in the THAW trial except the fate of THAW (which has all along been a matter of secondary interest), and in the opinion of the public no engrossing degree of uncertainty remained even as to that. Mr. HARRIMAN's case has seemed vastly more important and much more interesting. He is a man of the rarest abilities, whose services to the industrial side of our civilization have been of a value so great as not readily to be calculated, and whose mental processes have been so intricate, so penetrating, and so effective as to make them eminently fit to study and in very many particulars to admire. The gist of the inquiry about Mr. HARRIMAN has been as to his methods and purposes; whether his methods have been upright and his purposes lawful and proper. His testimony before the Interstate Commerce Committee has brought his whole career up for judgment. The newspapers and men in their private talk have not on his case, and have given in a verdict which, though not unanimous, represents a very remarkable unanimity of opinion. It is not a verdict to which a man of his qualities

can possibly be indifferent, for it is very far from being favorable. That he has broken the law in any case has not yet been demonstrated, nor even that he has done worse fiscal exploits than men have done before him without being either sent to jail or ostracized by their social peers. The verdict is simply that he has shown himself to be unscrupulous, voracious, and insatiable beyond even the ample wont of that region below Canal Street where the interpretation of the commandments is so liberally qualified by commentaries, quoted precedents, and *res adjudicata*.

A Working Man's Errors

There is that about Mr. HARRIMAN that makes one lament this verdict and hope that it will not stand. It is not only that his hat covers the best equipment of railroad brains, except one, in the country, but that in so many particulars of department and achievement he has been admirable, that one mourns to find his record befouled with incidents of indefensible profligacy. We do not share the opinion that his great fault has been mere greediness for money. He has indeed wanted money—likes it it—but he has seemed to want it chiefly to use as a tool to make his dreams come true, and to enable him to carry out the plans which have taken shape in his remarkable mind. We mistake the man if he cares especially, so far as personal indulgence goes, whether he has three million dollars or three hundred million. Indulgence is not his fault, nor do we think acquisitiveness is his vice. His play is work, like *ROMULUS*, and his use of money is to give him power to do the things in the railroad world that in his judgment are crying to be done, and must be done, first or last, in the interest of all the people. If we judge Mr. HARRIMAN rightly, a railroad is primarily of far more interest to him as a machine to haul goods and passengers to the best possible advantage than as a machine that will yield vast riches to the man who controls it. Yet he has grabbed at the riches at every chance. True, but he could not have accomplished what he has accomplished if he had not grabbed them. To our mind he is a *CICERO*. Rousing kind of a man, who cares not unduly for money as an end, but finds it an indispensable means.

Make Him Build Our Canal

He has overdone his job. He let his mind get the start of his compunctions, and in his ardor for achievement his judgment of right and wrong in methods has been obscured. He is a sinner, and so are the rest of us, but his sins look exceptionally heinous to us because they have been so enormously profitable. Moreover, he has let nobody stand in his way, and while he has shown himself skilled in addition and multiplication, he has consulted his own purposes in the matter of division. So he has few friends, and the pack that is after him is a big one and unusually vociferous. The kindest and perhaps the fairest thing that can be said about him is that he has been Napoleonish both in his aspirations and in his superiority to scruple. But that won't do. NAPOLEON is too dangerous. It is not so much that they break too many eggs, as that the omelet when they get it done is apt to be their omelet. Mr. HARRIMAN has made an omelet, but it is too much his. We wish he could be employed to make one for us. He ought to do penance for his misdeeds, and the particular penance we would choose for him would be to build the Panama Canal. If he could be put in charge of that, we would be willing to lend him the key of the United States Treasury, and ask him no more than to leave us the change when the job was done. We think that course would save our taxpayers several hundred million dollars, and the best possible canal would be built, and built in the least possible time. If it should turn out, when the canal was done, that the builder owned the whole of South America and had a blanket mortgage on Mexico and the United States, we would still have in Guam an island suitable for the residence of a man too smart to be left around. But we don't think he would ever have to live in Guam. Give him work enough of the right sort and he would be a safe man, and there is quite a bit of work in that canal.

Philosophical Reflection

When competent private enterprise does a job of work there is usually a profit, and the owner wants it. When public enterprise does the work there is usually a loss, and the taxpayers share it. Curiously, the average taxpayer seems readier to share the loss than to concede the profit.
